DEATH OF COL. HOLLISTER.—One of the prominent figures in the advancement of Southern California has passed away. Col. W. W. Hollister, of Santa Barbara, died August 8th and was buried on August 10th. He was one of the largest landholders in Santa Barbara county, and also the owner of much valuable city property, including the Arlington and Elwood hotels. He owned Glen Annie, one of the finest country places in Southern California, and has for years dispensed there hospitality to all comers. He was a pioneer in the introduction of many useful fruits and vines, and expended large sums in experiments regarding their culture.

RAILROAD MATTERS.—It looks very much as though the managers of the several overland railways were to have another serious falling out. Their association has not worked well because competition is so sharp that rules could not prevent cutting under, and so the arrangement fell to pieces. It is now possible that rate-cutting may prevail again, and the voice of the "out-rate tourist" may again be heard in the land. There seems, at any rate, to be a promise of music in the air, and those intending to visit the East should have an eye on the main chance.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

A HOME CANNERY.—*Reporter*, Aug. 7: Mr. H. C. Gregory had put up over 3000 cans of apricots at his house during the season, and intended to continue the good work. The apparatus used, we should judge, would not cost over \$100. It is located under a wide-spreading tree. Its capacity is on an average 1000 cans per day, though a long day's work will run it to 1500 cans. The cost for labor in putting up 1000 cans is \$6, or two-thirds of a cent per can.

## Colusa.

THE WAGER PEACH.—*Sun*: We were presented, by J. R. Totman, with a number of Wager peaches from some trees he has just come into bearing this year. This is a freestone peach, but harder and firmer, while still ripe, than any other freestone peach, and hence it is invaluable for shipping and canning. In 1883, Mr. Totman wrote to his brother in New York to send him some of the pits of the Wager peach, but he could not get them, and sent him some twigs, which were used as grafts. This is also the only known peach that will come true all the time from the pit, and the pits in New York in 1883 were worth \$20 a bushel. Peter Wager brought them to Bloomfield, New York, from Ohio 20 years ago. A nurseryman at San Jose has them advertised, and sets them down as ripening August 25th, but they ripen the first of August here. Every time we take a step in fruit around Colusa the superiority of the soil and climate is demonstrated.

## Contra Costa.

PEAR GROWING.—*Concord Sun*: There is no county in California where the pear flourishes to better advantage than in Contra Costa. Quite an acreage last year was set out in the best and earliest varieties. Among the fruit shipped East is to be found a fair proportion from this county. And it will not be many years before those of our grain-growers who fail to succeed in making advantageous crops will diversify their farming and raise a few acres in fruit.

## Humboldt.

ROHNERTVILLE NOTES.—*Editors Press*:—The crops in this county are rather light, not being over one-half the usual average—especially oats. Barley is a shade better. Large quantities of oats have been cut for hay on account of it being such fine straw, and would produce but little grain. We have only begun to harvest barley and oats. It is mostly done by self-binders. Our pea crop will only be a medium yield. Potatoes are scarce at present, at a cent a pound for home use. Fruit is abundant, especially apples. There is considerable improvement in this part of Eel river valley. The Pacific Lumber Company are building a large sawmill up Eel river, near Eagle Prairie, at the present terminus of their railroad; but I am told that they will extend their railroad up the river, on the north side, into the redwood forest, as timber is needed. It is said the mill will cut 80,000 to 100,000 feet per day when finished. They are working a large lot of men, pay good wages, and drive business in a business way. It is rumored that Mr. Heald, of Sonoma county, will be on Eel river in a few days to look for a mill-site near the banks of the river to build a sawmill on, and perhaps he will build some railroad. He has a large tract of redwood in this valley, about two miles below Eagle Prairie, on the south side of Eel river. Mr. Bowen is also putting up a sawmill near Eagle Prairie, on the south side of Eel river; so you can see that Eagle Prairie is having a boom in the way of sawmill building. The weather is very fine. Our hottest day was 87°, according to my thermometer. The thunderstorm did not reach this valley, but the thunder was in the mountains east of us. Up Eel river some rain was reported in the mountains.—J. H., *Rohnerville*.

## Los Angeles.

POMONA.—*Times-Courier*, August 7: Mr. C. L. Street left at this office, yesterday, some interesting samples of natural growth (without irrigation), consisting of a bunch of alfalfa and some peaches, we think, of the Crawford variety. The alfalfa stands about 35 inches in height, and is of the fourth crop. The peaches, which are large, luscious specimens, are from trees four years old from the bud. Growing alfalfa without irrigation, so successfully as is shown here, is something not laid down in the books.

ALFALFA AS GREEN MANURE.—*Anaheim Gazette*: For a number of years Mr. Bittner has had a couple of acres fronting on Center street in alfalfa. He plowed the alfalfa under this season and planted vine-cuttings, and the growth has been phenomenal. The vines are fully as large as the average two-year-old vines, and there are very few missing. The claim has heretofore been made that alfalfa is a rich fertilizer, and this instance seems to prove it.

HERDIO TREATMENT FOR SCALE.—*Telegram*, Aug. 10: Los Angeles County Fruit-pest Commissioners are finding all the lots of pears arriving here from up the country orchards badly infected with San Jose scale. It was determined to-day to quarantine all lots hereafter arriving. The commissioners say they will insist on the destruction of all infected fruit, and

further state that all arriving are more or less affected. This is a hardship to the population of this county, as the pear and apple crop is very light here this year. The citizens, however, prefer to do without fruit than run the risk of having their orchards infected with San Jose scale.

**THE OSTRICHES.**—It is almost a settled fact that the ostriches will soon be removed to North Anaheim. The spot chosen is a tract of 25 acres adjoining on the north what is known as the Fithian tract. These 25 acres are under the ditch and can be irrigated, and the hill land above the ditch will be used for corrals for the birds.

LAKE.

**EDITORS PRESS:**—Everything looks fine up here. The trees are loaded with fruit and the vines seem to be willing to give a fair crop. I saw a blackberry patch a few days ago still full, although having been picked over and over again. We are living up in the hills, and succeeded, without irrigation, in having quite a little vegetable garden this year, which has indeed been a good help to us. The peas and beans bore abundantly. The railroad is the principal thought of everybody, and we have good hopes for its coming through this time.—M. R., Lakeport.

**IMPROVEMENTS.**—Lower Lake Press, August 7: The improvements now being carried out within six miles of Lower Lake, in the vicinity of the old Calistoga road, are considerable and significant. We refer to the operations of Mr. I. Steinhart on his property of 1500 acres, which includes the magnificent summer pasture known as Dry Lake. It is no mere temporary output that is being lavished on this ranch, but a series of permanent, deliberate and radical improvements, such as evince a happy confidence in the future of Lake county. The erection of 11 miles of wire and board fencing, the building of a handsome barn, a dairy that is unique in its internal arrangements and fittings and other convenient farm buildings, experimental vineyards and orchards, extensive breaking up of new land, with prospective clearing "in extenso."

SACRAMENTO.

**LATE CRAWFORDS.**—Record-Union, August 10: One of the finest orchards of the late Crawford variety of peaches to be seen near Sacramento is that of M. Pike, at Saulsbury Station, on the American river. He has this year about 2000 boxes of this fruit, and many of the specimens measure nearly a foot in circumference.

**HOP-GROWERS' MEETING.**—Pursuant to call, the hop-growers held a meeting at Grangers' hall yesterday, to discuss the price to be paid for picking this season, and other matters of general interest. The meeting was attended by growers from the vicinity of Sacramento, the American river, the Cosumnes, Galt, Wheatland and Nicolaus, representing the counties of Sacramento, Yolo, Sutter and Yuba. E. J. Croly was elected chairman, and T. B. Lovdal, secretary. The meeting decided upon 70 cents per 100 pounds for picking, and that the contractor packing hops furnish his own foreman at his own cost and expense. A committee was appointed to draft a constitution and by-laws, and formulate a plan for a permanent organization of the hop-growers of this section, the committee consisting of Dr. Durst, of Yuba; Daniel Flint, Sacramento; T. B. Lovdal, Yolo; and E. J. Croly, American river. After a general discussion of the above and other matters of interest, the meeting adjourned, subject to the call of the committee mentioned.

SAN BERNARDINO.

**PREFERENCE FOR THE PRUNE.**—The Los Angeles Herald says: The extent to which deciduous fruit trees have been set out in the Southern counties during the past year may be appreciated from the fact that a single nursery in the young colony of Ontario, San Bernardino county, has sold this season over 55,000 prune, peach, pear, apple, apricot and cherry trees, prunes taking the lead by a very large majority.

SAN JOAQUIN.

**HARVESTER TRIAL.**—The contest between the different trials of combined harvesters that to have taken place in the vicinity of Stockton on Thursday and Friday, and which a committee from the State Agricultural Society was appointed to attend, has been postponed until Tuesday, the 17th, in order that it may not interfere with the reception to members of the G. A. R. on "Sacramento day."

SAN LUIS OBISPO.

**DARNEL NOT POISONOUS.**—Tribune: A few months since Prof. J. G. Lemmon contributed to the Tribune an article on a species of grass growing quite plentifully in this region called "poison darnel," or scientifically, "loium temulentum." Some specimens of this grass, with the article, Mrs. R. W. Summers, herself a learned botanist, sent to Prof. Geo. Vasey, botanist to the Department of Agriculture, at Washington, for his examination and opinion, to which the following reply is received: "With regard to your inquiry about loium temulentum, I would state that although it has the reputation of being poisonous, it is considered very doubtful if it really has that property. I think its reputation comes down to us from olden times, and probably was caused by a large mixture of its seeds with wheat used in making flour, and that the noxious qualities were from the ergotized

condition of the grains. At present we have no account of its hurtful effects, at least not as a pasture grass."

Santa Barbara.

**ANGORA CHEESE.**—Santa Maria Times: Mr. Newsom made \$150 worth of Swiss cheese from 20 goats during the season just closed. He has about 450 Angora goats, all told, which he raises mostly for the meat and pelts. He makes a very superior quality of Swiss and Mexican cheese, the former the product of his goats and the latter the product of his cows.

Sutter.

**THE CANNERY.**—Appeal: At last the Sutter Canning Co. have concluded that they will not start their machinery at all this year. Early in the season they began to make cans, and before they quit had on hand 150,000. They also had box material cut up for shipping the canned goods. When other canners began to bid for the larger crops and the great winds did their damage, it became a matter of doubt as to whether any work would be done at all, and a buyer for the material was looked for. General Bidwell, of Chico, has spoken for the most of it, and it is now being shipped to him.

Tulare.

**FINE STOCK.**—Tulare Register: Mr. H. C. Moore, 10 miles east of Visalia, is the owner of the finest herd of cattle in this section. The

given in, it would make in round numbers 8000 hives, which, averaging 150 pounds each, would give to the county 1,200,000 pounds, or 600 tons of honey. The quality of honey in this county was never better than the present crop. Near the coast the quality is not so good, and the amount only half as much as that produced 20 miles or more back from the ocean, where it was warmer and less foggy.

NEVADA.

**THE WOOL-GROWERS' MEETING.**—The Silver State has the following: Last evening a large number of wool-growers from this county and Elko met in the courthouse pursuant to call. E. C. Hardy, of Toano, called the meeting to order and stated its objects. G. F. Turritin was elected temporary chairman and Robert O'Neal, of Paradise, temporary secretary. On motion a committee on permanent organization was appointed, consisting of Messrs. Hardy, O'Neal, Nelson, Coleman and Wilcox. Thomas Nelson, D. M. Coleman, A. D. Wilcox, and others addressed the meeting on the subject of organizing. There was some discussion as to the status of the Wool-growers' Association organized two years ago, and the opinion prevailed that it had ceased to exist or at any rate failed to accomplish the purpose for which it was created, as no meeting had been held for some time. A motion that the organization be known as "The Nevada, Eastern Oregon and

## A Great Day in San Jose.

Never before were so many people gathered together in the Garden City of California as on Tuesday last. The Grand Army and its friends fairly crowded the fair city. The enthusiasm of both visitors and citizens ran high. Long processions of carriages carried gratuitously load after load of visitors from the railroad stations through the streets of the beautiful city.

Comrade C. W. Breyfogle, mayor, welcomed the immense concourse in front of the courthouse. Responses and speeches were made by Commander-in-Chief Fairchild, Past-Commander Burdett, Gov. Robie (Master of State Grange), of Maine, and Gen. Logan. After this the comrades and the Woman's Relief Corps and a multitude of citizens and friends partook of a fine lunch, prepared by a large committee of San Jose ladies. It proved rather a feast than a lunch. The tables were set, seemingly by the acre, in St. James' square, near the center of the city. They were well loaded and fully surrounded. It is estimated that 6000 visitors entered San Jose by rail, besides the great numbers coming in conveyances from all parts of the surrounding country.

A campfire was held in the evening, largely attended by the Grand Army and Woman's Relief Corps. Speeches by Comrade Paul Van Der Voort and Mrs. Kate B. Sherwood were much applauded.

## The Horticultural Exhibition.

The new horticultural hall just completed by a joint stock company of Grangers and horticulturists was completely filled with fine specimens of fruits, flowers, vegetables and cereals, the freshest and handsomest that it has yet been our lot to view. Gathered together suddenly and so early in the season, the display was fairly surprising.

Although San Jose fairs have merited high praise for their past decorations, the present is far more noticeable in its special decorative features than any former efforts.

Between 2000 and 3000 people were present on Tuesday night, when the literary and musical entertainment gave much satisfaction. Further mention of the fair will be made hereafter.

The whole city seemed to turn out to entertain the visiting strangers generously and joyfully, and the praises bestowed upon the comrades and people of San Jose were the highest that words could express and without stint. The day will long be remembered by both guests and entertainers. We shall say something further concerning "San Jose Day" in a future article.

## The Drummer Boy of the Rappahannock.

In the RURAL of July 31st we gave a sketch of the history of the Drummer Boy of the Rappahannock—Major R. H. Hendershot, of whom a crayon drawing appears on this page. He attended the Encampment in this city, as promised, and gave several exhibitions of his skill. At San Jose, during the visit of the Grand Army on Tuesday of this week, Major Hendershot appeared, and his drumming was one of the features of the entertainment given by the Daughters of the Veterans, in the Horticultural pavilion, on Tuesday evening. He was presented by A. C. Bane, who recited some of the points of his record as given in the RURAL, and then introduced him to the assemblage. His performance upon the drum was thrilling. Major Hendershot is attended by his son, who is now of the age at which his father gained his sobriquet, "The Drummer Boy of the Rappahannock."

**AGRICULTURE AT THE MECHANICS' FAIR.**—The Mechanics' Fair will open in the grand pavilion in this city on August 24th. We understand that notwithstanding the many distractions of this season the outlook is for a grand industrial display; and it is the more fortunate, for, no doubt, there will be more visitors from outside of the State than usual, and we desire to give them all a good idea of the various departments of California industry. The directors of the institute are in receipt of advices which indicate that very many counties throughout the State will send exhibits to the Mechanics' Fair. Butte county has been heard from, and Fresno promises a splendid display. Tulare and San Bernardino, as well as San Luis Obispo, will send large exhibits. Ventura county promises a better display than last year, and Shasta will send a collection of grains, grasses, vegetables, table fruits, numerous woods and the like. Sonoma will make a fine exhibit, and so will Placer.

LABOR strikes in Boston have delayed the building of the dredging machines to be used in the Carson river. Dr. Rice has a working model, however, with which he will soon begin to prospect the river bed.

FISHING boats fairly swarm on Monterey bay, trolling for sea bass. Barracuda are expected to be plentiful shortly.

THE DRUMMER-BOY OF THE RAPPAHANNOCK.

herd consists of 40 head of pure Durhams. They are certainly beauties. He has recently shipped a carload of the same stock for himself and other parties from Galesburg, Ill. Mr. Moore took the premium at Sacramento last year for the best yearling heifer, and will no doubt take a number of premiums this fall. He has also a herd of good grade cattle, and those wishing fine stock can do no better than to apply to Mr. Moore for them. This gentleman has also been experimenting in the different kinds of grasses. He has alfalfa, orchard grass, Australian rye grass, red top and the Johnson grass. Next to alfalfa, he prefers the orchard grass, which is better feed and stands the drouth better than any of the grasses excepting alfalfa; but they all seem to do well on his land.

Ventura.

**CORN.**—Signal, August 7: The corn in the vicinity of New Jerusalem beats all previous seasons, and the yield will be immense.

**BARLEY AT HUENEME.**—Between four and five thousand sacks of grain are now coming in daily. Barley all over the valley is turning out very well, in many instances much better than was expected.

**THE HONEY CROP.**—R. Wilkin in Free Press, August 7: As there have been conflicting reports published in reference to the yield of honey in Ventura county this season, I have obtained personal reports from about 30 of the leading bee-keepers. These reports give the number of hives of bees on hand before swarming; also the amount of honey each bee-keeper produced—most all extracted honey. The average yield per hive was 150 pounds. I then obtained from the county assessor the number of hives assessed before swarming, which was 7871. Supposing there were 129 hives not

Idaho Wool-growers' Association," was unanimously adopted. The following officers were elected: President, Thomas Nelson; first vice-president, E. C. Hardy; second vice-president, Charles McConnell; secretary, G. F. Turritin; treasurer, A. D. Wilcox. Executive committee, Thomas Nelson, E. C. Hardy, Charles McConnell, D. M. Coleman, I. Smelser, B. W. Stewart, Frank Martin, F. Silva, A. Pasqualle, James Curtis, Robert Welch, Robert O'Neal.

OREGON.

**NEW CHERRIES.**—Portland News: Mr. Lewellyn, of the Milwaukee orchard and nursery, brought to the News office two boxes of cherries of his own invention—the Lewellyn and the Oregon seedling—the former a deep, rich cherry color, large, firm and finely flavored; the latter black as jet, large and luscious. Measurement was made of one of the Oregon seedlings, giving a circumference of 3½ inches. This seedling surpasses anything ever seen in Oregon, and is even a surprise to Mr. Lewellyn, who is the originator of the famous Black Republican and the Abe Lincoln cherries, known all over the United States.

**SONOMA COUNTY FAIR.**—According to program, the county fair at Santa Rosa will open next Monday, August 16th, and continue during the week. The fairs at Santa Rosa have been pronounced successes since the new pavilion was constructed. The country tributary to Santa Rosa is one of the best pieces of land in California and is populated by energetic and successful people. We expect that this year's fair will bring out the best products of the region, and that its industrial and social features will be alike satisfactory to all who can attend.

### The Angelus.

[Written for the RURAL PRESS.]

Hark! 'tis the Angelus ringing its notes  
Out on the scent-laden air;  
In at my casement the sweet music floats,  
 wooing my spirit to prayer.

Year after year has this old mission bell  
Rung forth its soul-stirring chime;  
And many a story has it to tell—  
Its voice grown mellow with time.

I think, as I list to its silvery tones,  
Of those it has called to pray—  
The poor, the rich, the heart-weary ones,  
Young and old, the grave, the gay.

It has lifted all who have answered its call  
Into communion with God,  
Binding the senses in holy thrall  
Till the inner vision, broad,

Seemed e'en to behold the city of gold,  
With its glories all unfurled,  
That gleams with splendor that cannot be told,  
Beyond ev'ry starry world.

O Angelus bell! thou dost strangely thrill  
The depths of my quick'ning heart,  
Inclining my soul unto Heaven's will,  
Whose messenger true thou art.

And thou seem'st to bring a tender word  
From friends that are away—  
Friends whom I know would be also stirred  
By thy sweet, soulful lay.

Long, long, will thy melody float on the air,  
Holy, exalting and calm;  
And ever thy message, consoling and rare,  
Will be to my spirit balm.

San Gabriel.

### The Grand Army.

A Memory.

[Written for the RURAL PRESS by I. H.]

"Come and see the Grand Army," write dear friends in the city, and how gladly would one accept the kind invitation, but for the urgent claim of duties that cannot be laid aside. For it is good to feel the thrill and glow of patriotism that such occasions arouse; to have our hearts stirred by the sound of martial music and the sight of waving flags and glittering uniforms; to realize that we are a part of the nation whose debt of gratitude to her citizen-soldiers can never be estimated or expressed.

Very regretfully are we obliged to answer no. But, after all, we shall not wholly lose the inspiration of the time. Have we not already seen the Grand Army, and may not memory bring back the thrilling sight? The intervening years vanish at her magic touch. Can it be that they number 21? Again it is the 23d of May, 1865, the day appointed for the Grand Review of the victorious armies gathered in and around Washington, waiting to be disbanded, and to melt away into the ranks of peaceful and peace-loving citizens.

The very air is quivering with excitement. No familiarity with martial sights and sounds—alas, how common through those sad four years—has any power to check the eager anticipation of every loyal heart. It is a lovely spring morning. Nature is propitious. A heavy shower the preceding day has laid the dust and purified the air. Gloriously the sun shines out, and a fresh, cool breeze is fluttering the flags along the line of march.

Dense crowds on the sidewalks the whole length of the broad avenue, each window framing a cluster of eager faces; everywhere the hum and buzz of expectation. And now with a burst of exultant music they come, they come. Ah, who shall describe it? What words can do justice to the grand and thrilling scene?

"Who shall look on the like again  
Or see such hosts of the brave?  
A mighty river of marching men  
Rolls the Capital through,  
Rank on rank, and wave on wave  
Of bayonet crested blue."

Does any one weary as hour after hour passes and "still through the livelong summer day, regiment, regiment comes?"

Ah, no. It is the Grand Army, the Army of the Potomac, all that is left of it after the terrible struggle which has won for us peace. Eagerly one scans the faces of the heroes as they are pointed out—the men whose names are to go down upon the page of history; and then, with scarcely less interest, turns to the rank and file, to those who, with no such expectation, have borne the burden and the heat of the day in the simple fulfillment of a present duty.

There are wreaths of flowers on the necks of the officers' horses; there are garlands twined around the silent guns; there are whole regiments where every man has a rosebud in his cap or on his bayonet, the gift of the school-children assembled on the broad steps and por-

ticos of the capitol. But when at last they have all passed by and silence falls on the deserted streets, this is not all; it is only the beginning. Another day dawns to renew the scene. But now it is the "Western Army." It is "Sherman's boys" who are marching by; and, if possible, the enthusiasm rises still higher. There is something of wild romance attaching to the exploits of these men, to their wonderful march to the sea, and this is their first appearance in Washington. Some of us recall the early days of the war; we remember the trim and dainty appearance of the volunteers who first responded to the President's call; the bright new uniforms, the glitter and the gloss.

What a contrast! In no holiday attire do these war-worn legions come. It is whispered that their great commander has given stringent orders on that point. There shall be no brushing up for show, but just as they marched through Georgia; just as they came from the terrible battle-fields, the fatal trenches, the deadly swamps, so shall they present themselves for inspection to-day.

"Grandest of mortal sights  
The sun-browned ranks to view,  
The colors ragged in a hundred fights  
And the dusty frocks of blue!"

How the cheers ring out as some torn and tattered flag, blackened and begrimed with smoke, is held triumphantly aloft, eloquent witness to the work that has been done, and to the manner of the doing of it.

And now there is a burst of laughter echoed along the street, for strange and grotesque pets were picked up by the men on their weary march; and here is an ancient darkey on a dilapidated mule, and there is a goat keeping its place in the ranks, and heedless of noise or strange surroundings.

And yet behind the laughter and the echoing shouts, the waving handkerchiefs and scattered flowers, how close at hand are the unshed tears—what an aching pang is in every heart! For where is he who more than us all would have rejoiced in this day's delight? No need of the badge of mourning worn upon every arm, fluttering from every flag-staff, to remind the nation that its father and its head is gone. And alas for the countless multitude who helped to bring about this grand result, but who are not here to share its triumph, who will never return to their desolated and darkened homes.

"For every stripe of stainless hue,  
And every star in the field of blue,  
Ten thousand of the brave and true  
Have laid them down and died."

A cloud comes between us and the summer sun, the music falls into a minor key. War, war, this is thy fearful work!

For 21 years has peace brooded over the land, old wounds are healed, broken ties cemented, and to-day San Francisco welcomes the Grand Army. But even now, as then, there is a sense of pain and loss. The "Great Lieutenant" who looked on the first review, himself the central figure, the observed of all observers, he, too, is gone, and there is none who can fill his place. The ranks are thinning year by year, as that other silent army is gathering in its forces.

Perhaps it is better for some of us not to see the Grand Army now. Let the younger generation, who are not oppressed by sorrowful memories, stand forward with words of welcome. Let the flags flutter and the martial music roll and only smiling faces greet the soldiers of a day gone by. Scatter flowers in their pathway, gladden their hearts with words of love and praise, while we, who would scarcely trust ourselves to look on them once again, listen from afar to the echoes that reach us, and softly, amid our gathering tears, whisper, "God bless them."

Walnut Creek, August 3d.

### Life's Disappointments.

EDITORS PRESS:—The above subject is rarely touched upon by writers for the PRESS, for varied reasons. The writers capable of touching the true chord are those who have gone through the sorrows of disappointed ambition, whose hearts have been keenly lacerated by false friends, or whose affections have been blighted. But they are the very ones to brood in secret, stifling the heart's emotions, for fear the world should catch a glimpse of the skeleton within. This condition of mind is not reserved to any one class. It is found among millionaires and paupers alike. The merchant and mechanic feel its baneful influence, bend to its power and yield to its venom at last. The cause and cure may be different with different individuals; but the general reason is misplaced affection. The hearts of man and woman are capable of loving with a lasting love, and so sure as the truth dawns upon the mind that another has supplanted you, and torn from your heart the one you cherished, so sure does the dark cloud roll in upon the soul, to obscure life's brightest noonday, never to be fully raised until mortality is laid aside. And still, this disappointed heart must appear before the world as if the bark of life were sailing upon smooth waters.

Daily we read of broken household altars, and lives separated by law's mandates; but hardly a word concerning the bruised and broken hearts, the years of grief and repentance yet to come, the anguish of the sensitive spirits in thus coming before an unsympathizing

public. It is a fearful future to many who sacrifice honor, home and all the finer ties which that word implies, merely to gratify passion or some other fancy which fickleness may assume. Thousands carry around the specter of disappointment who deserve a better fate. Friends often betray, many are misnamed, and thus is planted the seed of present and future misery. Can you conceive of a condition worse than one unloved and yet compelled to appear in society as if heaven upon earth was your portion? Many may read these lines and thank God that they do not sail in that shattered boat. So you may be thankful your heart sings a joyous refrain; no pain there for fallen hopes and misplaced affection.

There is no fairer scene this side of Paradise than a loving household, in which affection and confidence abide; there is no sadder sight this side of Tophet than the breaking up of family ties and hearts weighted down by a silent despair. If men and women would only consider consequences, the smooth, winning voice of the charmer would go unheeded, and home would remain the pure temple which God designed it should be.

JOHN TAYLOR.

### An Essay on Babies.

EDITORS PRESS:—Many a day has passed by since I sent you my first "Household Notes." I have followed with great interest the different articles in the RURAL, but having been pretty busy I have in vain tried to find a quiet hour in which to have my little say. All seem to claim a space in your columns, from the little ones up to the old folks. Suppose, now, I ask leave to introduce the babies to you? They, too, certainly have something to tell us, though I expect if nobody takes the trouble of helping them along with the writing, their story would never be told.

If a newborn baby, that is, a sensible one, could speak, it would say to the young mother: "Do not spoil me, do not let me have it all my own way. If you give me a finger I shall take the whole hand by and by."

This kind of a tale it was that my first baby whispered to me when she was a few days old, and I took the hint. A patient baby she was pronounced by all. Now, to be quite honest, I think that it was more the following words, written by one of the great doctors of medicine in Germany, that put it into my head, than the little tiny thing lying by my side:

"A young mother must remember that she can just as easily raise a good baby as a little tyrant. Not all its cries are cries of pain; do not forget that this is its only means of airing its lungs."

"Do not take the baby up every time it thinks fit to cry; look first and see if everything is all right, and you will soon learn to distinguish between its cries, and tell which is which. Nothing is better than to time your baby's nourishment. It gives you more freedom to do the housework, and is so much healthier for the infant."

As I think it might be of some use for a young mother, I will give a tried receipt for raising a baby:

Before getting up in the morning, I used to nurse the baby and put her back in her own little bed until after breakfast, when she had her bath and was dressed, fed and put to bed again, where she enjoyed a long nap. Just before the dinner was ready to set on the table, I nursed the baby once more, and if the weather allowed it, two armchairs out on the porch were fixed for a bed. Here it would remain quietly till three o'clock, when it was again nursed. It was put to bed at six, nursing once more before going to bed, and only once during the night, which you can leave off after four or five months.

My baby used to wake up just at the right time—never any screaming or fussing. She and I had agreed upon the time, so there was nothing more to be said on that point.

At three months old they are put in short dresses. It is so much less work; besides, the baby enjoys having the feet at liberty to kick around on the pillow and on the floor, and you can use your time for sewing, reading or other purposes.

It certainly is not necessary to rock a baby to sleep. I never did; and it steals more time than anybody would think. I have found that it quiets your nerves wonderfully to pick up a book or a paper while nursing the baby, especially if you have a good lot of work on hand which you feel as though you wanted to get through in the shortest time possible.

Try to get along without any lamp at night, as the light is apt to make the baby too lively and conversational. A healthy baby ought always to be a good baby, except where there are quite small children in the house to disturb its sleep by crying or noisy playing.

I have always had to be pretty economical with my time, so I have tried to find the quickest ways of doing up my work, in order to utilize the leisure time in some other way. This summer I am busy with different kinds of studies, and with my two little babies—one three years old and the other 19 months. I find a good deal of time both for English and other languages.

In this hot weather we take a cold lunch, and I leave the dishwashing till night. In former years I have been engaged in different kinds of fancy work, or some other work more or less profitable. Now I feel proud of our corn-field. I have sowed every bit of 10 acres, including

beans and potatoes, while my husband did the harrowing. We took the babies along (bringing some blankets for them to sleep on), also the coffee-pot and our lunch. I did not feel much worse after it, I think, than an old horse having trotted along all day.

Highland Springs.

YOUNG MOTHER.

### Personal Superiority and Novel-reading.

EDITORS PRESS:—Philosophers tell us that like causes produce like effects. A sojourn at Pacific Grove has inspired "L" to pen some thoughts on personal superiority that have lately been much present to my mind—also a Pacific Grove sojourner. We are all so apt to consider it as due to some inherent virtue that we were not born Chinese. But the idea is so much better expressed by my favorite poet, Lowell, that I give you his words:

"Looking within myself, I note how thin  
A plank of station, chance, or prosperous fate,  
Doth fence me from the clutching waves of sin:  
In my own heart I find the worst man's mate,  
And see, not dimly, the smooth-hinged gate  
That opens to those abysses  
Where ye grope darkly—ye who never knew  
On your young hearts love's consecrating dew,  
Or felt a mother's kisses,  
Or home's restraining tendrils round you curled,  
Ah, side by side with heart's-ease in this world  
The fatal nightshade grows and bitter rue."

Then after enjoying the happy birthright of American childhood, and the home environments and school training of American youth, what a clapping of wings and crowing is indulged in over the attainment of full-blown American citizenship! What a tendency to despise instead of pitying others whose brains are less developed and whose political opinions are less advanced than our own! What a glorying in our profundity of knowledge and the elevation of our ideas! Our self-complacency attributes all to our individual personal merit. As we advance in life our experience is that of the matured poet:

"I sometimes think, the furdur on I go,  
Thet it gits harder to feel sure I know;  
An' when I've settled my ideas, I find  
'Twarn't I sheered most in making up my mind;  
'Twuz this an' thet an' t'other thing thet done it,  
Sunthin' in th' air, I could'n seek nor shun it."

Even supposing we are blest with brains beyond our fellows, are we thus favored and endowed that we may use our capacities as the shark does, to prey on those whose powers and capabilities are less? Is there no higher aim or purpose in life than self-aggrandizement? As Christians we profess admiration for Him whose highest powers were devoted to ministering to humanity. Apart from our Christian character do we not hugely admire and fervently follow those whose lives have just been one continuous ministry to, and exaltation of, their own mother's precious baby?

For this reason I cannot quite concur in "F. A. s." dictum regarding novels. A novel may and should contain a lesson to the reader full as valuable as any real biography, autobiography, or volume of history. The main characters on history's pages are not to be commended as models. Selfishness and personal ambition, thinly disguised as patriotism, are the ruling motives of most historical characters.

One does not rise from the perusal of such lives as Julius Caesar's in any special way ennobled or inspired. The immense cost to humanity of that great commander's military reputation, the sacrifice of 3,000,000 human lives and the destruction of 800 towns and villages, is in itself a valuable lesson; but it is as well conveyed in that trite statement as in the many books of Caesar the historian. His decision of character and dignity of deportment can be gathered as well from Shakespeare's drama, which is really a romance, as from history's pages.

Then, however useful facts may be, they are not elevating. One may be a walking encyclopedia and yet have no charity. It is fully as important to cultivate sentiment as to store the mind with fact. And the culture of all the finer feelings is the legitimate business of the poet and novelist. Novels, moreover, bring refining society to the cabin of the rudest ranchman. The recorded experiences of the book become almost as much part of his life as though he had been a living actor in the scenes depicted. The characters of the book people his solitude and relieve his life's monotony. A work on agricultural chemistry has no such magician's spell. Ranch-leisure is tired leisure; the novel is relaxation; the study of chemistry is work. Then place for the poet, place for the novelist, on the farm.

EDWARD BERWICK.

MEDICAL ADVICE BY TELEPHONE.—Husband (telephoning):—"My wife has a severe pain in the back of her neck and complains of a sort of sourness in the stomach." Physician:—"She has malarial colic." Husband:—"What shall I do for her?" [The girl at the "Central" switches off to a machinist talking to a saw-mill man.] Machinist to husband:—"I think she is covered with scales inside about an inch thick. Let her cool down during the night, and before she fires up in the morning take a hammer and pound her thoroughly all over, and then take a hose and hitch it to the fire plug and wash her out." Husband has no further need of this doctor.—Medical Journal.

## The Floating City—The Monarch of the Sea.

[Translated from the German of Hans Christian Andersen by Professor GRANVILLE F. FOSTER.]

I have described to you Pompeii, that corpse of a city, exhumed at last from its grave and set out, a relic of the past, amid the living cities of the world; but I know another and stranger one—'tis not a corpse, but a *phantom city*. Whenever or wherever I hear the sparkling waters of a fountain dashing, splashing into the marble basin beneath, methinks I am listening to legends of the floating city. Aye, indeed, every liquid jet, as it rises in the air, might unfold a curious tale of thee, and every wave or breaker, as it dashes upon the shore, might sing a song of thee! Over the surface of the sea hovers a cloud—'tis her widow's weeds; the bridegroom of the sea is dead—his tower and city have become his mausoleum! Do you know the city? Never heard the streets the roll of the chariot wheel, or were they ever pressed by the hoof of the passing horse; but creatures of the deep swim therein, and the black gondolas like specters glide almost noiselessly o'er the green-tinted waters. I will point to you the forum, and show the grand square, and you may imagine yourself wandering in the city of legends. The grass now grows up between the broad flag-stones, and in the morning twilight flutter thousands of tame pigeons and doves around the lofty but isolated tower—the Campanile di S. Marco. Here on three sides is one surrounded by arcades. There beneath them sits a lazy Turk, drawing in soothing comfort from his margileh, or long pipe; or here, leaning on one of the pillars, stands a fair and beautiful Greek boy intently observing the still-remaining trophies of an ancient glory—the lofty masts—mementos of a vanished power. The flags droop as though they were mourning crape. Near by rests a girl. Her heavy pails filled with water lie on the pavement, while the yoke that supported them still remains in its place on her shoulders, while she leans forward on the mast of victory. Yonder, behold! 'tis not a fairy castle, but a church, you see before you. The gilded dome, the glittering ball above, fairly dazzle in the clear moonlight; while the magnificent brazen horse in the vane above pursues restless journeys like the brazen horse in the legend, now here, now there, and back again. Look at these exquisite paintings on walls and window-panes! It seems as though some genius had yielded to the whims of a child when this odd-looking, fantastic temple of worship was decorated. Do you see on those columns the winged lions—the ancient city's coat of arms? The gold on it still glitters, but the wings are bound, for the lion is dead since the king of the sea is dead. The great halls stand desolate, and often, where splendid paintings shone forth in all their beauty, nothing but the bare, dingy walls can be seen. The lowest, laziest street-beggar now sleeps under the arcades where once the floors were allowed to resound to the tread of the noblest alone. Out of the deep fountain there, or those prisons close by the Bridge of Sighs, issue spectral lamentations as once they really issued forth, when formerly the music of the tambourine from gorgeous gondolas floated o'er the waters, or when the bride's ring was flung from the magnificent Bucentoro into the Adriatic—the wedding of the city and the sea—Adriatic, the queen of the seas! Adriatic, shroud thyself in clouds! Let the widow's weeds conceal thy bosom. Hang them over the mausoleum of thy bridegroom—the phantom city, the marble city, Venice.

Sunol Glen, July 21, 1886.

**JOSH BILLINGS' MONUMENT.**—Before Josh Billings died he expressed a desire that his monument should be a large boulder of Pittsfield marble, with his name in raised letters on the side. The Hoosac Valley News says Messrs. Fuller & Maslin, of Pittsfield, have accordingly obtained a stone which weighs about six tons, and will soon begin the work of preparing it for the noted humorist's grave at Lanesboro. It is oblong in shape, being about four feet through each way, and about six feet long. On one side it will bear in large raised letters:

JOSH BILLINGS.

On the top will be two panels on which inscriptions will be chiseled. A simple border around the top will complete as unique monument as there is in this country.

**AFTER SUNSET GLOWS.**—From his observatory, at Colmar, M. Faye has noticed the phenomena of crepuscular lights at an altitude far higher than that of the terrestrial atmosphere. Without deciding on the merits of the different theories advanced to explain the origin of the after-glows, he considers that electricity alone would be capable of retaining at such an altitude the particles of matter producing the effect, whether these articles had a terrestrial eruptive source or had come from interstellar spaces.

**MODERN CAVE-DWELLINGS.**—It appears that there are inhabited cave-dwellings in Saxony even to this day. They are dug in a sandstone hill, have different rooms, dark and light, as well as chimneys, windows and doors, and are said to be very dry and habitable.

## YOUNG FOLKS' COLUMN.

### From Our Young Folks.

**EDITORS PRESS:**—We live on a large farm and keep poultry. We have about 300 chickens, 150 little chickens and the rest old ones. We tried to raise some geese and turkeys, but didn't succeed very well. We sat four goose eggs and only one hatched, and then it died. We sat 18 turkey eggs and 14 hatched, but something was the matter with them; they have kept dying off until we have only six left. We do not keep any ducks, for father does not like them. We have a number of kinds of chickens—the Brown Leghorn, Langshans, Black Spanish, etc.

There are a number of birds' nests in our orchard. I know where there are nine. Some of them are swallows, gray birds, linnets and two or three other kinds. There is one in our apple-house with four little green eggs in it, and we don't know what kind it is. This is all I can write this time, for I am very much afraid it will be put into the waste-basket.

Santa Cruz Co.

GRACIE D. HARMON.

**EDITORS PRESS:**—I have been interested in reading the Young Folks' Column in your paper. We like the RURAL PRESS very much, and I don't think we could hardly do without it. I live near Madison, 14 miles from Woodland, on the V. V. & Clear Lake R. R. We have a nice home with 258 acres of land, and would have had a good crop this year if it had not been for the north wind; it shelled out the grain very much. I am 13 years old.

**Answer to question in RURAL:** If a man worked for \$1.25 per day, and paying 50 cents a day for board, should lose a day how much would he be loser? I answer, \$1.25; I don't think he lost what he paid for his board. My great-grandmother, who celebrated her 80th birthday on the 16th of last May, said that he did not make anything, therefore he did not lose any thing.

Madison, Yolo Co.

EMMA GILLIAM.

**DEAR EDITOR:**—I am a little girl of 13 and live on a ranch five miles north of Stockton. My father is a well-to-do-farmer. I raise chickens, turkeys and ducks in the spring, and when they get old enough for market mamma sends them in town for me and the money I get for them I save and go to school with it in the winter time. I attend a district school in summer, for in winter the roads are muddy and the scholars cannot come to school very well.

Can some of the readers of the RURAL PRESS publish a recipe for candy pop-corn balls?

FROM A LITTLE READER.

Stock'on, Cal.

### A Morning Call.

[Written for the RURAL PRESS by BECCA M. SAMSON.]

Be careful, my son; do not sit in that arm-chair; do you not see that it is occupied?

No, it is not a bundle of rags; look again; don't you know your little friend Bobby Slocum? Well, I do not wonder at your astonishment; but I have told you the truth—that miserable little object muffled in red flannel and soaking in liniment is really Bobby.

Where are all his pretty yellow curls?

They are upstairs in his mamma's bureau drawer; poor Bobby had such a dreadful fever in his head that the doctor ordered his hair to be cut off.

Oh, no, he wasn't pleased; he made a great fuss about it, but it had to be done.

Why doesn't he open his eyes?

Because they are too weak to bear the light; they are so inflamed and swollen that if you saw them you would think they had been boiled.

Poor Bobby has not seen the sun or the pretty flowers for nearly two weeks.

I thought you would be sorry to hear that, but you need not try to console your unhappy little friend by offering him molasses peppermint drops; he can eat nothing but mush and milk toast.

Every tooth in his head is aching—that's why he is crying.

Poor boy! it is so painful to cry with inflamed eyes.

His mamma is doing all she can to relieve him; she has wrapped his face up in hot cloths and has just put on a steaming poultice of bread and milk. If that does not do any good, then the doctor will have to come with a sharp instrument called a lance, with which he will cut poor Bobby's swollen gums.

Of course it will hurt, but it won't do Bobby any good to kick and scream, because doctors always have their own way.

There is no use in asking your little friend if he feels better.

He cannot hear you; his ears are stuffed with sweet oil and cotton wool; that's the way they try to ease the dreadful pain in them.

Oh, dear! oh, dear! just hear the poor little fellow scream.

Wouldn't you think somebody was pinching him?

It's the rheumatism nipping his toes and fingers; but for that he might take a walk in the

fresh air, which would do him a great deal of good.

Isn't it awful the way he coughs?

Yes; it does sound just like your big dog, barking.

Here comes Bobby's mamma with a bottle of medicine for him.

I hope it will do Bobby good.

Ugh! what a face he makes.

It must be very bitter stuff.

Poor boy! there is still half a bottle left, besides a box of pills and any number of horrible powders, all which he must take to get well.

I'm afraid there is no use in inviting him to your birthday party. He won't be able to get out of that chair for a long time to come. Let us go home, then, and see if we cannot find some little dainty to send your suffering friend.

Now, my son, that we are safely out of the house, would you not like to know how poor little Bobby Slocum happens to be spending the beautiful summer in that dark room, with nothing to keep him company but aches and pains?

Perhaps it will surprise you to know that it is all his own fault. Yes, if during the long, cold winter Bobby had obeyed his good mother he would to-day be as well and strong as you are. He is simply being punished for all the foolish, wicked things he did.

I have no doubt that you were among those who applauded the day he threw away his rubbers and waded home through the gutter. I am sure you laughed when he ran out into the rain, without hat or umbrella, and thought himself wonderfully smart to hide the warm comforter his mother had knit for him, because, as he said, only "men Mollies" wore such things.

Perhaps Bobby would have behaved himself if he had known that all this time Mr. Rheumatism and Mr. Earache and Mr. Toothache and Mr. ever so many other disagreeable things were waiting to pounce upon him, which they did the first chance they got.

Now they have hold of him, good and tight, and it will take a lot of medicine to get rid of them. Let us hope that when Bobby does get well again he will be cured forever of his foolish, imprudent habits and will listen in future to what wise people tell him.

Alameda, Cal.

## GOOD HEALTH.

### What Science Says.

The Wonderful Mechanism of the Human System.

In the editorial columns of the New York Analyst H. Lassing, M. D., editor, writes the following beautiful description of the laboratories of the human system. We think we have never read a finer or more trustworthy one:

"Man is the greatest of all chemical laboratories. Magnify the smallest cell of the body and what a factory is spread before the eyes. Countless chambers in which are globes of air, masses of solid matter, globules of dying liquid; a flash comes and the whole is consumed and needful heat is carried into every part of the system. Electrical forces also generate and are conveyed to the brain, the muscles and the various nerve centers.

"In another set of a million chambers we see various classes and vapors. By chemical action these are changed and purified in the lungs and the skin. The blood, we often say, is a great living river. In its current are masses which the air in the lungs did not affect; blocks of chalk, slabs of tartar, pieces of bone-ash, strings of albumen, drops of molasses and lines of alcohol. How are these waste masses disposed of? Begin where you will in this great stream, you must come to the purifying places of the system. Here is all activity and an invisible force reaches out into the stream, seizes and carries this mass of waste into vast trenches, thence into a smaller reservoir, and finally into a larger reservoir, which regularly discharges its contents.

"This separation of lime, uric acid and other waste material from the blood without robbing it of a particle of the life fluid, passes human comprehension. In health, this blood-purifying process is carried on without our knowledge. The organs in which it is done are faithful servants whose work is silent as long as health remains.

"People strangely wait until pain strikes a nerve before they will realize that they have any trouble. They do not know that pain concerns chiefly the exterior, not the interior, of the body. A certain set of nerves connect these blood-purifying organs with the brain. They may not gnaw and bite as does the toothache or a scratch, but they regularly, silently report. When these organs are failing these nerves indicate it by drawing the blood from the face and cheek, leaving the lip and eye blanched, by sending uric acid poison into the smallest veins, the skin then becoming gray, yellow or brown. They also prevent the purification of the blood in the lungs and cause pulmonary difficulties, weariness and pain. Who enjoys perfect health, especially in this land where we burn the candle in one mass? The athlete breaks down in the race; the editor falls at his desk; the merchant succumbs in his counting-room. These events should not have been unexpected, for nature long ago hung out her 'lantern of alarm.' When the 'accident' finally comes, its fatal

effect is seen in a hundred forms—either as congestion, chronic weakness, as wrong action, as variable appetite, as head troubles, as palpitation and irregularities of the heart, as premature decay, as dryness and harshness of the skin, causing the hair to drop out or turn gray; as apoplexy, as paralysis; as general debility, blood-poisoning, etc.

"Put no faith, then, in the wiseacre who says there is no danger as long as there is no pain. Put no faith in the physician, whoever he may be, who says it is a mere cold, or a slight indisposition. He knows little, if any, more than you do about it. He can neither see nor examine these organs, and depends entirely upon experimental tests, that you can make as well as he.

"If the output is discolored or muddy, if it contains albumen, lymph, crystals, sweet or morbid matter, is red with escaped blood, or roily with gravel, mucus and froth, something is wrong, and disease and death are not far away.

"These organs which we have described thus at length, because they are really the most important ones in the human system, the ones in which a large majority of human ailments originate and are sustained, are the kidneys. They have not been much discussed in public, because it is conceded that the profession has little known power over them. What is wanted for such organs is a simple medicine, which can do no harm to the most delicate, but must be of the greatest benefit to the afflicted."

## DOMESTIC ECONOMY.

### Recipes.

**EDITORS PRESS:**—In the last RURAL I saw a Scotch way of making "Curd and Cream." Here is ours: Take some clabbered milk, pour it gently into a flour-bag; hang it up over night, so as to let all the whey run off. When being used, work in a little sweet cream. Chopped almonds will improve it wonderfully. It is to be eaten with milk or cream, sugar and cinnamon.

Napoleon Soup.

For a small family, slice up two large onions with three good-sized carrots. Let them simmer in butter (or lard), taking care not to let it brown. When soft, mash them, putting in one or two tablespoons of flour. Pour in some weak "stock," give it a boil, and you will have a soup worth eating. If you only want the taste of the onions or carrots in the soup, and not the vegetables themselves, strain it through a sieve before sending to table. This will require, however, a stronger "stock" of soup.

Macaroni and Ham Pie.

For a small family, take some handfuls of macaroni, boil in water until tender; chop some pieces of ham up very fine, mix with the macaroni, and when cool add one or two eggs. Put in a baking-dish and bake it in the oven till brown on the top. This is a very nice and quick dish for luncheon.

YOUNG SCANDINAVIAN.

### Jam and Potatoes.

**EDITORS PRESS:**—As this is the fruit-canning season, perhaps some one would like to know how to make a nice jam. After I made my plum jelly I took the pulp (which is generally thrown away) and added what peach juice I had left after canning peaches, stirred together, pressed through a colander, added sugar, boiled 30 minutes. I had the nicest jam, the peach juice giving the right flavor. If any one is willing to try this, I will warrant her a nice jam, and makes pies fit for a queen to eat.

Potatoes for Supper.

A nice dish for supper: Grate six large potatoes, add three well-beaten eggs, one tablespoonful of flour, or one coffee-cup of bread-crumbs, one-half teacupful of sweet milk, and salt to taste; fry in butter over slow fire.

Berlin, Colusa Co.

JENNIE FRAME.

**SCALLOPED CODFISH WITH CHEESE.**—Soak a pound of salted codfish six hours in tepid water, then boil it. When cold, pick into flakes with a fork and season with pepper. Heat a cup of milk to a boil, stir into it a tablespoonful of butter rolled into two of prepared flour; mix with the picked fish and pour into a bake dish. Strew grated cheese thickly on top and bake in a quick oven to a delicate brown. It is yet nicer if you add a raw egg to the mixture before cooking it.

**TOMATO SALAD.**—Peel ripe tomatoes with a sharp knife, slice crosswise, lay in a salad bowl and season on the table with salt, a little sugar, pepper, oil and vinegar. Keep the tomatoes on ice until actually served. They cannot be too cold. Never loosen the skins by pouring boiling water on them, and refrain as scrupulously from serving them with the skins on.

**GRAHAM BREAD.**—One and one-half cups of buttermilk, three cups of Graham flour, two tablespoonfuls of molasses, one teaspoonful of salt. Bake in cake-pan or deep tin, in a moderately hot oven, for one hour.

## The Week.

The city streets are as dull this as last week they were gay. The wind-torn decorations are being gathered in. The stirring sounds of life and drum and the sonorous notes of brazen instruments are hushed. The city is endeavoring to recover from the indulgence in holiday idleness, and to fix its energies again upon its accustomed work. Another week, and the last banner will have disappeared, and the great event will be safely stored in the municipal annals.

This week the country gains what the city has lost. Oakland was fired with enthusiasm and surcharged with visitors on Monday. San Jose passed through a similar experience on Tuesday. To-day, Wednesday, the hosts are partakers of the rare hospitality of the Napa valley, and to-night the capital city will receive the multitude with a display of bunting and with floral decorations which will excel any similar garb which the city has ever donned. The State Capitol will be ablaze with light from dome to foundation, and the grand agricultural pavilion will be thronged at the official reception. Thus in a grand way will the State take leave of its distinguished guests.

## The Extra Session.

The legislators seem to be getting warmed up to their work, and something of importance may yet be accomplished. They have had many distractions. The unexpectedness of their coming together was in itself a disadvantage, and it has taken time for them to get their seats warm. Then came the senatorial question, which has been settled; then the impeachment of two of the Supreme Court judges on the ground of general physical and mental debility, and that has been defeated. Just now the issue seems to be between a desire to adjourn and a desire to do something. On this issue it seems to us that Senator Steele's position is the true one. He did not, he said, sign the call for the extra session, but now that the Legislature had been convened he believed in honestly trying to accomplish something. It would be bad indeed for the Legislature to accomplish nothing by their extra session. It would be worse for them to do something not in the public interest, but if there could be certain plain and necessary enactments which would foster the general irrigation interests of the State, it would be best of all. We have not lost hope that this result can yet be attained, and the coming political campaign in a measure freed from the issue which is now imminent.

The Assembly on Tuesday passed a resolution embodying an amendment to Section 25, Article 4, which opens the way for special legislation in the different districts according to their special needs. The form in which it was passed is as follows:

But nothing in this section shall prevent the Legislature from passing laws having local application, regulating the division and use of water for irrigation purposes, and for the construction and regulation of canals, ditches and other works therefor, as the same may be required in any county or counties, or in any district created by law for that purpose; provided, however, that such laws, having a local application, shall not grant to any private corporation or individual any special or exclusive right, privilege or immunity.

It had been expected that the bill might receive the opposition of the radical appropriators and the vote of 63 to 7 in its favor was something of a surprise. By its provisions the question of irrigation may be fought out in the separate districts. The riparianists have no objection to it, and the appropriators express themselves satisfied with it, if they can secure no other of more radical character.

The measure which has been pushed farthest forward is one looking to the annulment of the English common law and providing for appropriation. It was introduced by Goucher, amended in committee, and after a heated debate was ordered to engrossment as follows:

The water of every natural stream within the State of California is the property of the public and is dedicated to the use of the people of the State. Such water may be appropriated, diverted and used for irrigation or other beneficial purposes. The right to divert unappropriated waters of any natural stream to such beneficial purposes shall be regulated by law. Prior appropriation of water to any such use, whether heretofore or hereafter made, so long as applied to such use or other beneficial purposes, shall give the better right to the extent of the amount of water actually diverted and applied, and the right of appropriation, diversion and use shall be exercised under legislative regulations, provided that the navigation of navigable streams under the control of the United States shall not be impaired. The English common law of riparian rights, so far as it conflicts with this act, shall not be recognized as a rule of decision in any of the courts of this State.

As we go to press on Wednesday the situation is somewhat uncertain, and though adjournment may be taken, it seems rather more probable that the enactment of several measures will be secured.

AGRICULTURAL SCIENCE.—A circular from the Secretary of the Society for the Promotion of Agricultural Science announces that the 7th annual meeting of the society will be held at Buffalo, N. Y., next Tuesday and Wednesday, August 16th and 17th. There is a long list of addresses from prominent agricultural scientists, among others one from Prof. E. W. Hilgard, Ph. D., on the "Effects of Lime in Soil on the Development of Plants." Another paper, which will no doubt be of much importance to California, will be by Prof. W. G. Farlow, on the "Diseases of Fruits." As Prof. Farlow is eminent as a fungologist, his statements will no doubt be of much interest to our readers, and we shall expect to give them place in the RURAL.

## More of the County Exhibits.

Beside the exhibits we told somewhat of last week, made on occasion of the G. A. R. mustering in San Francisco, a neat collection of Shasta county's products was shown at No. 10 California street, under the supervision of Mr. D. N. Honn. We found the wall, at the south end of room 18, covered with an orderly array of grain and forage-plants, bound in small sheaves to the number of 40. There were wheat, rye, oats and barley, alfalfa and white clover, millet, Egyptian corn, and timothy six feet high; also, flax and broom-corn. Flanking these were maize, 13 feet or more in height, and bamboo nearly as tall, that came up on the 20th day of May. Leafy twigs of olive, palm-leaves, and a section of grape-vine, 30 feet in length, helped to frame the picture.

Below these were laid out choice peaches—half a dozen varieties—plums, Gloria Mundi apples, great green Bartlett pears, grapes of several kinds, both white and purple (with one sample of raisins), and golden oranges. Peach and plum shoots of the season's growth stood by, seven and eight feet long. The brown beans and potatoes, good enough in themselves, were quite dwarfed by their associates, the monstrous onions. Other noticeable items were a cotton plant from Redding; a very handsome urn-shaped card-receiver, nearly eight inches across, turned from manzanita; nine or ten varieties of natural wood; three or four specimens of coal; gray marble, ores, numerous ammonites, large and small, and other fossils.

Portions of the Tehama and Butte county exhibits, spoken of in our last issue, have been removed from Platt's hall to the same apartment; and Fresno, too, here makes a fine little show of wheat—about a dozen bundles—with millet, wild oats and tobacco.

An exhibit of Solano fruit well worth inspection was made during Encampment week and is still maintained by Messrs. Lyon & Platt, of Vacaville, at No. 339 Kearny street. The products displayed are all from Vacaville and its immediate vicinity. They were grown by various parties, and embrace choice plates of French and Hungarian prunes, Yellow Egg plums, Ooe's Golden Drop, Kelsey's Japan plum and Bartlett pears. The specimens of Crawford and Sequoia peaches are superb; and the clusters of grapes—Muscat, Malaga, Zinfandel, Tokay, Rose of Peru, Black Hamburg, etc.—fitted to arouse admiration, not only in Eastern tourists but in long-time Californians. One branch of a White Syrian vine, hung like a chandelier in the center of the room, must have borne nearly 30 pounds of berries.

There are also boughs of an orange tree, carrying green Mediterranean Sweets of this year's crop, and of green gage plums, heavily laden. Japanese persimmons, white figs, Northern Spy and other apples are sparsely represented. A single large ear of yellow corn is noteworthy as having been planted and raised since the rains ceased.

The dozen jars of assorted fruit in glass are very choice, and the apricots and white peaches, both evaporated and sun-dried, are as handsome as any we have ever seen.

The entire display, select, compact and tasteful, is pleasing to the beholder and creditable to the exhibitors.

MINISTERING TO VICE.—There are on our statute-books, we believe, nominal laws against gambling, which our police are reported to make occasional shows of enforcing, especially in the case of petty Chinese tan-games. Meanwhile it is a burning shame that papers claiming to be respectable keep on publishing the artful advertisements, both avowed and covert, of the biggest lottery swindles and complimentary notices of the gilded dens of professional gamblers. It is well-nigh appalling to find the press thus selling their influence to debauch the moral sense of our young men and women, and venally misleading them to "trust to luck" instead of guiding and cheering to useful, persevering, honest industry. Many of our city dailies continue from time to time this infamous practice. Where is the Society for the Suppression of Vice, that it does not bestir itself to have them—as they might be legally—excluded from the United States mail? We again emphasize our hearty detestation of all such journalistic bunko-steering.

## Look Out What You Sign.

We judge from our Eastern agricultural exchanges that there never was a time when swindlers were so numerous in the rural districts as at present. They are working ingenious schemes of almost every kind to fleece the unsuspecting farmer. A common way is to offer some kind of merchandise or farm tool, and, being exceedingly glib of tongue, they soon convince the listener that their material or tool possesses some great value. Their game is to secure the farmer's signature to what purports to be simply an order for one of the tools, but the document is so arranged that it is an order for a large quantity of useless stuff, which is shipped to him and then he is obliged to pay for it because his name appears signed to the document. Sometimes the simple order is manipulated so that it becomes a promissory note for a considerable amount. In either case the farmer is beset by some shyster of a lawyer who threatens suit, etc., and in most cases the farmer is frightened into settling rather than stand the suit at law. These games, and many others, are being constantly worked at the East to the great loss of farmers. We have not heard of their cropping out in this State yet, but we advise our readers to look out for them very vigilantly, because the East is pretty well worked out and the swindlers are very apt to seek new fields. It is a very good rule to refuse to sign your name to anything for an utter stranger. No matter how good a thing is made to appear, it will be much safer to take other counsel than that of the agent before fixing one's name to paper which may appear again in a very undesirable form. We can but emphasize the general caution: look out what you sign.

## California Forestry.

We have received many valuable trees and plants from Australia and the distinguished director of the Melbourne Botanic Gardens. Baron von Mueller has done us service which will cause his name to live in the history of California agriculture. The latest contribution he has sent to the California State Board of Forestry is seeds of about 30 varieties of eucalyptus, some of which have never been introduced in this country. In consequence of the difficulties experienced by the State Board in establishing the experimental farm in Merced county, these seeds will be planted by the commission, but turned over to the care of the gardener at the State University. Certain rare forest seeds will be sent to Baron von Mueller in exchange.

Abbot Kinney writes from Los Angeles that the School of Forestry lately established by the University of Southern California is progressing finely and growing in popularity. A lecturer has been secured on the "Sanitary Value of Forests" and one on "The Native Trees of the Country." The canvas signs printed by the board and posted in the southern counties offering a reward for the arrest of parties setting brush fires on public lands, are having good effect, and sheepmen and hunters are much more cautious since the warning has been given.

Herbert Vischer, the engineer who is preparing the forest map of the State, is at present in the extreme northern counties and meeting with great encouragement in his work.

RABBITS IN AUSTRALIA.—Rabbits are quite a serious trouble to our agriculturists and rabbit-proof fences are a desideratum in orchard and vineyard planting in some parts of the State. The rabbit-shooting excursions in different parts of the State have also reduced the supply somewhat. But our affliction, as we have remarked before, is a light one compared with the condition of affairs in Australia. The colonial governments have a steady expenditure to provide for in rabbit destruction. As an instance of the expenditure thus involved it may be mentioned that in Victoria alone, during the year 1885-86, the sum of £33,000 was voted by the Government, and that Parliament will be asked to grant at least £25,000 for the same purpose for the ensuing year. Similar sums of money have also been spent by the adjacent colonies, and the governments have had under consideration for some time other costly schemes for the limitation of rabbits within certain infested areas, by imprisoning them within wire fencing extending over many hundreds of miles of country. One proposition is a rabbit and dog-proof fence, along the boundary, for they have wild dogs which are injurious to the flocks,

## A Glimpse of San Francisco.

We present our readers on this page a glimpse of a portion of San Francisco which one might gain by standing on California street hill and looking toward Oakland. There is but a small segment of the bay included in the view, for San Francisco bay is a grand sheet of water, stretching from north to south about 60 miles and having an area of 480 square miles. And yet this view includes some of the most important points of interest connected with our commerce and passenger traffic. The outgoing and incoming ships are seen plying upon the channel which constitutes the harbor proper. Within this area most of the great wheat fleets anchor, and across this water ply the steamers which go down on the coast and across the Pacific ocean. The large island a little to the left of the center of the picture is Goat island, which won some Congressional fame a few years ago. Just to the right of Goat island, about two miles to the eastward, lost in the haze of the distance, are the wharves of the Central Pacific Railroad, where the vast host of travelers from the interior and the East take the ferry-boats for San Francisco. The city is fixed as the natural center of commerce of the whole west coast of North America. The great rivers, valleys and mountain passes lead unerringly to this main point, and thus converge the channels of inland trade from all the surrounding States and Territories.

Before the discovery of gold in California the State was merely a vast cattle range and in a state of semi-civilization. The population was scant and made up mostly of Mexicans and Indians, the few scattered missions being the only settlements. San Francisco was then known as Yerba Buena, and had the appearance shown in the lower one of the engravings on this page, which was made from a sketch taken in 1847. There was a great cove extending along the water front to the point where Sansome street now is, all that portion of the city between that street and the bay having been "filled in" since then. In 1847 there were 79 buildings of all kinds. In 1848 emigrants began to arrive, and early in 1849 the population had increased to 2000, and by July there were 5000 people.

The large engraving shows a portion of the city as it now appears. The view of the city taken in 1849 from Clay street hill covers nearly the same territory as the large engraving. In each, one gets a view of Goat island, but much of the city shown in the large engraving, as stated above, has been constructed where the tides ebb and flowed in '49.

SAN FRANCISCO IN 1849, FROM HEAD OF CLAY STREET

VIEW IN SAN FRANCISCO IN 1886.

PRIMITIVE SAN FRANCISCO.

## State Horticultural Society.

## Pear Growing in California.

The regular monthly meeting of the State Horticultural Society was held July 31st at Irving hall Parlor, 139 Post street, San Francisco, President Hilgard in the chair. There was a good attendance of members, and among the visitors was Prof. W. A. Henry, of the Wisconsin State University, and Mr. Buell, of Michigan.

Dr. Gustav Eisen, of Fresno, was elected to membership and the resignation of Dr. John Hastings, of Fresno, was accepted.

The death of Dr. S. R. Chandler, of Yuba City, was announced by the secretary and R. B. Blowers, of Woodland, was appointed by the president to draw up a suitable memorial.

A motion was made by Leonard Coates, of Napa, that a State exhibit of horticultural products be gotten up under the auspices of the society, but so many difficulties were found in the way of such a project, at least for this year, that the motion was finally withdrawn.

Judge Blackwood, of Haywards, asked permission to introduce a resolution upon the irrigation question, but most of the members evinced an aversion to entering upon the discussion of a question which might be interminable, and it was decided to take up first the discussion of pear culture.

## Pear Growing.

The discussion on pear growing was introduced by Mr. Jas. Shinn, of Niles. He said the pear would grow well on any strong, rich soil, and pears can be successfully grown in almost all parts of the State. The codlin moth he considered the greatest drawback the grower had to contend with. He thought there were better

pears than the Bartlett, though this variety pleases the shippers and the canners, and the fruit-grower does not propose to dispute with his customers. The Bartlett, however, does not pay so well as some other varieties in the coast valleys, because it ripens so late. He finds the Duchess d'Angouleme a satisfactory pear in his region; trees 30 years old are still growing vigorously and yielding 25 to 30 boxes per tree per year. The Vicar of Wakefield bears large crops and is healthy and vigorous, but the fruit is not of first quality. Varieties which he could recommend for regions near the coast, fruit suitable for shipping, would be the Beurre Hardy, which ripens just after the Bartlett; the Beurre Clairgeau, a standard favorite with shippers; Beurre d'Anjou, good, desirable and large; Duchess d'Angouleme, equal to the best and a great bearer. This variety, Mr. Shinn remarked, does very well on quince stocks, but he sees very little use of working on quince stocks in this State. The Louis Bon de Jersey is a good pear, and the Howell also worthy of attention.

Prof. Hilgard thought the Bartlett grown near the coast lacks flavor.

Mr. Shinn said correct taste would rate the Bartlett low in flavor, wherever grown. The Duchess d'Angouleme is much superior in this

regard. The Vicar of Wakefield is good for shipping and profitable, and large if thinned out. The Glout Morcean is good. The Winter Nelis is superior, but a defective bearer in some regions. Mr. Shinn remarked also the different habit of growth with different varieties of pears, the Bartlett having an upright habit and the Beurre d'Anjou spreading like a Rhode Island Greening apple tree. Thus, on soil that will stand it, the Bartlett may be planted closer than some other varieties. He deprecated, however, too close planting. He looked upon pear growing upon this coast as holding out good prospects of success and profit.

Leonard Coates, of Napa, spoke of the time of ripening with Bartletts. The earliest come from Suisun and Santa Clara valley. Vacaville, which gives very early fruit of most kinds, has late Bartletts, because they stop growing for a time in midsummer, and then start a second growth and mature well. Mr. Coates spoke of the interest he takes in watching the many kinds of pears now growing in the University orchard. The De Tongres, which has been favorably mentioned in the reports of the College of Agriculture, he finds better looking than the Clairgeau. He had grafted over 2000 Winter Nelis with this variety. The grafts sometimes bear fruit the first year. We need, said Mr. Coates, a good early pear and a very late and good-keeping variety. The Easter Beurre is a stand-by, but the quality is inferior. The P. Barry, one of the seedlings of the late B. S. Fox, of San Jose, is coming into wide favor for near-coast situations, as it does not mildew. The Easter Beurre ripens in Napa, though there is complaint of its not ripening in some places.

Mr. Coates also spoke of an advantage which seems now to be clearly appearing from mixing varieties in an orchard. The Bartlett, which is often a shy bearer when by itself, bears well when associated with the Beurre Clairgeau. Planters are now adopting the practice of alternating rows of different varieties when laying out pear orchards. It seems that sometimes when there is something the matter with the pollen of one variety, it can have its flowers fertilized from another variety near by.

As for pruning the pear, Mr. Coates said that the old way of using a single upright leader is giving way to, low heading sending up several main branches, shorting in laterals and pinching. With say four upright stems and the fruit borne in short laterals, better crops are borne and there is much less danger of sunburn. Some orchards started on the old plan are being re-formed that way.

Dr. Gibbons, of Alameda, spoke of the defects of the Easter Beurre in his locality. It softens and rots on one side—does not ripen evenly.

Mr. Coates said the Easter Beurre was a success in Suisun valley. It ripens in Napa, but shrivels afterward.

Mr. Shinn thought from the discussion that it might be inferred that it was desirable to have many varieties. He believed that with the pear, as with the apple and peach, a planter should confine himself to few varieties. The list of varieties is too large. Four or five sorts, which do best in the locality, would be enough for a large commercial orchard. As to the Easter Beurre, up to 15 years ago it grew smooth, large pears; now, on older trees, the pears are knotty, but the crops are large. He has no trouble in ripening them. When they decay it begins on the outside, which is much better than the Flemish Beauty, which may have a beautiful exterior and be all rotten within. Among varieties which he considered not desirable is the Souvenir du Congres.

W. G. Klee, State Inspector, being called upon, said his experience led him to pronounce the Winter Nelis not adapted to the coast region, and the Bartlett objectionable, because of its deficiency in flavor. He had found that on the coast the winter pears, as a rule, did best, and he mentioned favorably the St. Germain, Seckel, Howell, De Tongres (but is not sure of its keeping qualities), the Conseiller de la Cour (ripening in October), Josephine de Malines, Beurre Clairgeau, Beurre gris d'hiver Nouveau, Jaminette, Andre Desportes (ripening in September, but rather dry), Anne Ogereau, handsome but not fine quality, but standing shipment well.

Mr. Klee spoke of the fungus which is becoming so troublesome on the pear, causing black patches on the leaves, fruit, and on the

bark of the new growth. This disease has been especially severe on the Winter Nelis. The malady has been quite effectually checked in the University orchard, as described by Mr. Klee in his "Bulletin No. 3" of the State Board of Horticulture, and which we printed on page 74 of the RURAL of July 24, 1886. We repeat the remedy:

Dissolve 30 pounds of whale-oil soap (80 per cent soap, at the most costing five cents a pound) in 60 gallons of water, by heating the two together thoroughly. Then boil three pounds of American concentrated lye with six pounds of sulphur and a couple of gallons of water. When thoroughly dissolved it is a dark brown liquid, chemically called sulphide of soda. Mix the two—the soap and the sulphide—well, and allow them to boil for half an hour. Then add about 90 gallons of water to the mixture, and it is ready for use. Apply it warm, by means of a spray pump. Used warm its effect is better and less material is required than when cold.

Prof. Hilgard spoke of the good qualities of this wash. It is really a very simple method of intensifying the well-known fungus-killing property of sulphur. The sulphur is made soluble, and thus acts directly without having to be rendered gaseous by the heat of the sun. It is quite possible that this form of using sulphur may be found to have very wide application. In making the compound it is desirable to be sure that the sulphur is in excess of the alkali, to guard against the danger of free alkali when applied to foliage. The effect of the wash described by Mr. Klee upon the black smut of citrus trees is very satisfactory, the smut scaling off completely and leaving the leaves bright and clean.

#### Remarks by W. W. Smith.

Mr. Smith, of Vacaville, had been appointed to open the discussion on pear-growing, but was detained from attendance at the beginning of the meeting. He stated that good, rich and rather heavy valley land was best for a pear orchard. There should, however, be sand enough in the soil to make it work freely. Before planting the trees the land should be thoroughly prepared. There is no reason to fear getting it too fine; if it be as fine as a dust-bed it will be all the better, and will give a better growth of trees. There should be care in selecting the best stocks on which to bud the pear. California grown seedlings he thought the best, and the seed from the Seckel or the Bon de Jersey gives good seedlings to bud or graft other varieties on.

In handling the young trees great care must be taken not to rub off the buds. After the trees are all planted, they should be cut off to a height of 16 inches, as uniformly as possible—of course looking to see if there are sound buds to form the head where the cut is made. The best tree to plant is a yearling, which comes from the nursery as a straight switch; cutting such trees off at about a uniform height starts all the growths at about the same point and enables one to have a handsome, uniform orchard. At the second year's pruning he cuts back all the branches to about eight inches, cutting to an inside or an outside bud, according as the habit of the tree is too spreading or too upright. If it is desired to send a branch forward without changing its direction, you can cut to an outside bud one year and to an inside bud the next, and so on. Mr. Smith shapes his pear trees on the vase or goblet form, just as he does his stone fruit trees.

In handling the roots of young pear trees, he believes in cutting off the tap root, for this encourages the growth of small lateral roots. The pear is disposed to make a few large roots, and this is especially undesirable in a shallow soil. A deep soil should be had for a pear orchard if possible. It should not be less than six feet deep, and from that up to 30 feet in depth is all the better. Pear roots do not penetrate the hard-pan or rock crevices like vine roots, hence a deeper soil is more necessary for the pear than the vine.

Mr. Smith gave at length the peculiar behavior of the Bartlett in the Vacaville region. The Vacaville Bartletts are clean and as good as any, but they come very late. This is desirable because it brings them to market after all other Bartletts are gone, both here and at the East, and they bring a high price. He has picked Bartletts as late as Nov. 19th, but that is later than usual. The trees were on stiff adobe soil and very dry. They remained very small during the hot weather and then began to grow again in the fall, and grew large and handsome, until picked in November. The explanation given of the behavior of the Vacaville Bartletts is that in the hot weather of July and

August they become, as it were, dormant; they hang on, but do not increase in size. Afterward, when the moisture begins to rise in the soil, they start growth again and ripen up finely. Madeline and Doyenne d'Ete ripen, but Bartlett and winter pears are retarded as described. This peculiar manner of growth could be changed by irrigation, but it is more profitable to have them come in late, as they naturally do. It is true that Bartletts are now being shipped from Vacaville, but they are green.

The Winter Nelis pear does well in Vacaville, but few trees are yet in bearing. The Bartlett generally does best in warm valley situations. Clapp's Favorite ripens before the Bartlett and is a good shipping pear—selling for the Bartlett. Two years ago Mr. Smith grafted Clapp's Favorite into Winter Nelis, and this year he gets a good crop. The variety is a very early bearer.

Pears should be picked at the first indication of ripeness, the first sign being a tendency to let go at the stem, when the pear is gently raised up. This test applies especially to the Bartlett. Picking at this stage and laying away in the dark ripens up the Bartlett well. Sending them East when picked at this stage, they ripen en route and the boxes open well on the Eastern markets.

Mr. Klee commended Clapp's Favorite for canning. This variety does much better than the Bartlett on the coast. In Berkeley the two varieties ripen almost simultaneously. Clapp's bears earlier, however, than the Bartlett, and gives a crop the third year from planting.

Dr. Gibbons spoke of the soil as of great importance in pear-growing. The Winter Nelis does well in Alameda. The Flemish Beauty follows the Seckel, and bears uniformly and heavily. The Vicar is enormous.

Mr. Smith commended the Vicar as a cooking pear. Well baked and allowed to cool, it is delicious, but to eat raw it is no good.

Dr. Kimball, of Haywards, thought the fungus on the pear could not be attributed alone to the coast winds. Up to recent years the pears were clean and healthy, even though the winds blew just as they do now. He had checked the fungus by sifting on air-slaked lime before blossoming, and again when the pears were large as peas. The fruit came clean and good, but the fungus appeared again afterward, and the treatment must be continued.

#### California Fruit at the East.

Dr. W. P. Gibbons, of Alameda, read a short paper, giving the results of his observations on the sale of California fruit at the East. [This paper was published in last week's RURAL.]

Professor W. A. Henry, of the University of Wisconsin, was invited to address the meeting. He spoke of the hardships of the Northwestern fruit-grower because of the unfavorable climate he had to contend with. A few hardy fruits do well, and they have hopes to gain new hardy varieties from the systematic tests which are now being made with Russian fruits. There will, no doubt, be great consumption of California fruits in the large towns and prosperous rural communities of Wisconsin providing good fruit is sent and it is sold at a reasonable figure. The hard, green and tasteless stuff which is now too often sent does not commend itself, and so long as a farmer has to take all the money he can get for a bushel of potatoes to buy a single pound of California fruit he is not apt to buy much of it.

Professor Henry spoke glowingly of the progressive disposition of the Wisconsin farmers and of the liberality with which the State Legislature encouraged agricultural investigation and experimentation. He showed the advantage to the practical farmer of demonstrating the truth about agricultural materials and processes which could only be gained by careful scientific investigation. He appealed to all present to advance such work in California and to stand by Professor Hilgard and his assistants, who are doing this work at the University experiment station. Professor Hilgard, he said, is looked upon by Eastern investigators as at the head of the profession, and unless the continuation and extension of his work is generously provided for in California there are plenty of places at the East which would be glad to secure his services.

Mr. Buell, of Michigan, being called upon, spoke also of the poor quality of much of the California fruit placed upon the market at the

East. He had found by examination that we did grow good fruit here and we must get more of it at the East and sell it cheaper. He upheld the credit of his own State as a fruit region and invited California growers to exhibit their fruit at the State fair, in Jackson, in September.

#### Buds for Budding.

In answer to a question, Mr. Smith said that in taking buds for budding it was desirable to take them from one or two-year-old trees, because then you get leaf buds alone, while if you take them from older trees you are apt to get a leaf bud with fruit buds also. He thought good buds could be had from trees in nursery row provided you took those which are well filled out and mature. Taking buds from a bearing tree may give you fruit sooner than by taking from a young one not yet in bearing.

#### Resolutions on Irrigation.

Judge Blackwood offered the following resolution on irrigation:

*Resolved*, That the State Horticultural Society of California, recognizing the necessity of irrigation to the prosperity and welfare of the State, is in favor of a well-considered plan of irrigation which shall prevent the waters of the State from flowing past the lands of riparian owners to waste, and which shall prevent the appropriators from impairing vested rights without compensation to riparian owners, and which shall give to such appropriators no exclusive right to the water diverted, but which shall provide just means for its fair distribution to all who need it.

After considerable discussion an amendment, introduced by Dr. Kimball, was adopted. It reads as follows:

*Resolved*, That the climatic conditions of this State demand the use of water in all our interior valleys for the most productive agricultural and horticultural results; that the waters of all streams not navigable should be declared for public use, and that any legislation tending to private ownership or monopoly in water will produce untold disaster and oppression.

At the next meeting, on Friday, August 27, the culture of plums and prunes will be discussed. Judge Blackwood will lead the discussion.

#### Grape-growers' Meeting.

A regular meeting of the Grape-growers' and Wine-makers' Association of California will be held at the rooms of the State Board of Viticultural Commissioners, 204 Montgomery street, San Francisco, on the 17th day of August, 1886, at 11 o'clock A. M. A meeting of the directors will be held at 9 o'clock. All in the grape interest are invited to attend the meeting.

**ORIGIN OF CARRIAGES.**—The oldest carriages used by the ladies of England were called whirlicotes or turning coaches. These became unfashionable after Ann, the daughter of Charles IV and Queen of Richard II, about the end of the 14th century, showed the ladies how gracefully they could ride on a side-saddle. Coaches were first known in England in the year 1530. They were introduced from Germany by the Earl of Arundel. They came into general use among the nobility in the year 1605. The celebrated Duke of Buckingham was the first who rode in a coach and six horses; to ridicule this pomp the Earl of Northumberland put eight horses to his carriage. Coaches to hire were first established in London in 1625. There were only 20 of them kept at the principal inns. In the year 1637 there were 50 hackney coaches; in 1654 there were 200; in 1694 they were limited to 700 and in 1755 to 800; there are now 1100.

**NEW YORK DAIRY COMMISSION.**—The State of New York is doing much for its vast dairy interest through its Dairy Commissioner, Hon. Josiah K. Brown, whose second annual report we have just received. It is a closely printed pamphlet of 424 pages, and gives full information of the progress of the work against adulterated dairy products. It has extended appendices which give the results of most careful study and compilation of all that has been ascertained of the materials used in debasing milk and milk products and ways to detect them. The report is, in fact, a compendium of information on these subjects and will be of inestimable service to all students of the subject.

**THE tires on the wagons used for hauling soda from the two soda lakes in Churchill Co., Nev., to Wadsworth, lately made, are immense. The tires are an inch thick and 10 inches wide. Those for the large wheels weigh 750 pounds; those for the small wheels 500 pounds. The wheels for each wagon weigh about 3500 pounds.**

**THE Santa Rosa woolen mills turn out on an average about 26,000 yards of flannel a month. All is sold from the mill, no contracts being taken.**

**THE Manufacturers' Association, of this city, will shortly appoint an agent to permanently represent it at Washington.**

## THE IRRIGATOR.

## Storage Reservoirs.

## One Mistake of the Late Irrigation Convention.

EDITORS PRESS:—I have read with much interest the report of the proceedings of the late Irrigation Convention which you, with your usual enterprise, published in full in the RURAL PRESS.

The action of the convention, in the main, was broad and wise; and I believe so large and intelligent a body of men speaking so ably and so earnestly for the most vital interest of our State cannot fail to produce a profound impression on the public mind, and largely influence legislation in the right direction.

I beg, however, to respectfully protest against the action of the convention in reference to the subject of storage reservoirs. It was sought by delegates from my own county—San Bernardino—to so modify one of the resolutions as to prevent injustice to individuals and companies who have constructed, or who may hereafter construct, reservoirs for storing winter water for summer irrigation. An amendment to this effect was unfortunately voted down through, I believe, a misapprehension of the nature of the storage reservoirs referred to. Mr. John Brown, of San Bernardino, who defended the amendment, made special mention of the Bear valley reservoir, one of the greatest and most beneficent irrigation enterprises ever attempted in California.

Space will not permit me to give an extended description of this great work, now happily finished and ready for use; but I would refer all those who care to know more of the value and nature of mountain reservoirs to a very full and interesting paper on "Bear Valley," published in the RURAL PRESS of April 10, 1886. The facts, briefly stated, in reference to the Bear Valley reservoir, are these:

## The Situation.

Bear valley is the bed of an ancient lake situated in the heart of the San Bernardino mountains, at an altitude of about 6300 feet above the level of the sea. The ancient lake, once confined in this valley, discharged its surplus waters northward into the Mojave desert. By some convulsion of nature ages ago the southern rim of the lake was violently rent asunder, and its waters escaped into the Santa Ana river through a narrow outlet thus made. All that remained of the ancient lake was a shallow pond during the wet season, which dried up altogether in very dry years. The waters of the ancient lake were collected from a watershed or catchment basin, containing an area of 60 square miles. This drainage area, owing to its great elevation, receives three times as much rainfall—including snowfall—as the San Bernardino valley, which lies 5300 feet lower. During the years 1884-5 the rainfall and snowfall of Bear valley was equivalent to 100 inches of rainfall.

## The Water Supply.

I now wish to call special attention to a statement, on the truth of which this defense of the owners of the Bear Valley reservoir depends, viz: That the large precipitation of water in rainfall and snowfall in this large mountain valley has heretofore run, unused to the sea before the beginning of the irrigation season, through a rocky canyon which, during the summer months, is practically dry. On the highest peaks of the San Bernardino mountains, 10,000 feet above the sea, snow remains all the year round, feeding the Santa Ana river and other streams and maintaining a perpetual flow. The snow which falls in Bear valley, at a much lower altitude, melts every year before the irrigation season begins.

It seems to me a reasonable proposition that if this vast amount of water which has heretofore escaped in great floods to the sea in the winter season, when nobody wanted it or could use it, can be kept back by an artificial reservoir, it is an unmixed blessing to the State.

## Now What has been Done?

Mr. F. E. Brown, a civil engineer largely interested in the Redlands colony scheme, determined to find out if a reservoir, on a large scale, for the storage of winter water could be constructed in the San Bernardino mountains. Bear valley was suggested to him by Dr. Ben Barton, of Old San Bernardino, one of the oldest settlers of our county. When Mr. Brown, accompanied by Mr. Hiram Barton, visited Bear valley on a prospecting tour, it was instantly apparent to the practical eye of the civil engineer that the desired locality had been found and that nature had already done the greater part of the work, only a comparatively small outlay being necessary for the construction of a very large reservoir.

The violently rent passage through which the ancient lake had escaped was so narrow that a dam 50 feet wide at the bottom, 300 feet wide at the top and 60 feet high in the center would restore, to a great extent, the former lake, making a reservoir over five miles long, about three-fourths of a mile wide in average width, and of an average depth of about 14 feet, and capable of storing the enormous

quantity of 8,000,000,000 gallons of water. This amount of water will furnish a flow of 6000 inches for 100 days without even then exhausting the supply. It has been estimated that after leaving enough water in the reservoir to guard against extremely dry seasons, enough may be used annually to double the present irrigated lands of the San Bernardino valley. The increased population and wealth made possible by this improvement may be imagined.

Immediately after this important discovery, Messrs. Judson & Brown, founders of the now prosperous and famous Redlands colony, the Messrs. Barton & Son, and other owners of dry and desert lands, formed a company to build this reservoir. They purchased, for \$22,000, about 4000 acres of land covering the site of the reservoir, and erected the dam at a cost of nearly \$100,000.

The reservoir lies wholly within the 4000 acres of land owned by the company, and covers at the present time about 2000 acres.

The Bear Valley Company has not encroached upon the rights of anybody. Neither riparianists nor anti-riparianists have been injured in the slightest degree by this great public improvement. I say public improvement because, directly and indirectly, the whole State is benefited by it.

The water formerly precipitated in Bear valley was sometimes an injury to the State rather than a blessing, because it sometimes rushed out of the mountains in destructive winter floods, sweeping away bridges, roads and everything in its path on its violent passage to the sea, as was the case in 1883-4, when a thousand times the present ditch capacity of San Bernardino county could not have carried this raging torrent.

Now this formerly unused water is held back till the dry season begins, when it may be spread out over lands which, but for this enterprise, might have remained forever a barren desert. Tens of thousands of desert acres have been added to the irrigable area of the county, each acre of which may be made to "blossom as the rose," adding millions of dollars to the taxable property of the State. "Blessed is he who makes two blades of grass to grow where only one grew before," is a beautiful saying, here realized in a most wonderful degree.

Nor is there anything resembling monopoly in this beneficent scheme. The water is owned in shares by a large number of farmers, who use it on their lands, and whose lands would be worthless without its use. It is distributed in such a manner that it can never be absorbed by any great ring or monopoly.

## Who Owns the Water?

Now, in right and equity, who owns the water of the Bear Valley reservoir? Does it belong vaguely to the million individuals who compose the State? Does it belong to the State as a commonwealth? Does it belong to the persons who live on the banks of the Santa Ana river, and who, like the dog in the manger, might insist, under our present law, that this precious water shall go to the ocean in a winter torrent?

Or does it not rather belong, in all justice, to the men who conceived the scheme, and the many farmers who with them invested and risked their money in good faith and for the public good in the accomplishment of this noble work, and whose farms would relapse into deserts were they deprived of its benefits?

The resolution of the Irrigation Convention to which I object would deprive the owners of Bear valley of their property, if it were embodied in legislation such as the convention recommended. This resolution was passed without due consideration of the nature of reservoirs like that in Bear valley, and it is to be hoped that the Legislature now in session will very carefully consider the facts in this particular case, which is only one of many possible cases of the same character.

Adverse legislation would not only ruin hundreds of farmers now interested in Bear valley water, but it would prevent similar enterprises from being carried out, and would greatly retard the material progress of the State of California.

WM. P. ROGERS.

New York, Aug. 1st.

TOKOLOGY.—What is this new word? It means birth-science. It is the title given by Dr. Alice B. Stockham to her "Book for Every Woman"—a work grounded in the conviction that women do not need to suffer so in bearing children, that pain in pregnancy and childbirth is unnecessary and can be escaped by proper living. To teach this proper living, practically, and save needless ailments and agonies, is the purpose of the earnest, motherly author, a Chicago physician, with many years of successful experience and with grown-up children of her own. The photograph which serves as frontispiece is an excellent likeness of the good woman. Her directions as to dress, exercise, diet, marital relations, mental influences, etc., are wise and explicit; the printer has presented them tastefully, and the illustrations in the cover-pocket are suitable. In this revised edition we note marked improvements upon that which we read approvingly a year ago. The work is issued by the Sanitary Publishing Co., Chicago, can be obtained of them, or if desired, through this office. We are pleased to learn that it has reached its fiftieth thousand, and heartily echo the wish of an enthusiastic lady reader that it could be put into the hands of every marriageable girl in the land, as well as every mother, young and old.

## The Legislature.

## Various Propositions on the Irrigation Question.

The distractions of Encampment week broke in upon our report of the propositions brought before the Legislature, looking to a solution of the water problem; so, in this issue, we go back a few days so as to introduce a few points which should be known to those who desire to preserve the chain of legislative thought and action:

Fifth Day—Wednesday, July 28th.

## SENATE.

Senator Reddy offered the following:

The Legislature of the State of California, at its session commencing July 20, 1886, hereby propose that Article XIV of the Constitution of the State be amended by adding the following new section to said Article XIV, two-thirds of all the members elected to the Senate and Assembly respectively voting in favor thereof; The Legislature shall have power, anything to the contrary in this Constitution notwithstanding, to provide for the acquisition by the State of any and all waters, water rights, or water-works within this State, either by donation, purchase or the exercise of the right of eminent domain in the manner provided by law, and to provide for the storage of any and the distribution of all the waters which are now or may hereafter become the property of the State for the purpose of irrigation and other beneficial uses, and may establish or provide for the establishment of irrigation or water districts, and delegate to the directors, trustees or other governing body in such districts, the power to fix the boundaries of and provide for a system of drainage for such districts, to make by-laws and regulations for the government thereof not in conflict or inconsistent with the laws of the State; the power to levy taxes on property in the district for district purposes, to fix the limits and places of holding elections for district purposes. The Legislature may also confer on such irrigation or water districts the power or right of eminent domain and such other powers as it may deem necessary, not in conflict or inconsistent with the laws of the State.

Referred to Committee on Irrigation.

## ASSEMBLY.

Edwards, of Los Angeles, obtained permission to withdraw his constitutional amendment to district the State with regard to irrigation, and introduced a substitute to conform to constitutional provisions, but without making any material changes.

## FIREBAUGH'S RESOLUTION.

The special order of the day was Assembly Concurrent Resolution No. 1, relative to the sale of public lands. It was taken up, and its author, Firebaugh, argued at length in favor of its passage. The preamble and resolution are as follows:

WHEREAS, The great valley of California, between latitude 34 deg., 50 min., near Fort Tejon, and 40 deg., 40 min. near Shasta with an extreme length of 550 miles, and an average width of 60 miles, lying between the Coast Range and Sierra Nevada mountains, and containing an area of nearly 35,000 square miles, or more than 22,000,000 acres of land—an area nearly equal in extent to half of all the Middle States—possesses all the elements of fertility, except moisture, and has a climate agreeable in winter, hot and desiccating in summer, but yet not enervating nor unfavorable to industry; and Whereas, all of this great domain is wonderfully fertile, and capable of being made to yield what, in other countries, would be considered fabulous crops, of all the useful grains, fruits, berries, vegetables, nuts and grasses, if stimulated by water, applied by irrigation to bring out its fertility and make it useful; and

Whereas, The sources from which water for irrigation may be obtained belong, in the main, to the United States, being situated upon, arising in, and flowing through the mountains bordering this great valley, which mountains are largely public land of the United States; but, under the existing laws, the innavigable streams and lakes, the sources in question, will, when the land is sold, pass to the purchasers, and render very difficult, if not impossible, the application of these waters to the greatest good—the irrigation of the valley; and

Whereas, If said waters are dedicated to the State for public use, under legislative control, for irrigation, mining, manufacturing and other beneficial uses, they will be devoted to the general and greatest good in changing sightless deserts into fruitful farms and perennial loveliness, while otherwise they will be grabbed by monopolists and held to their individual use, to the detriment of the general public and the injury of the State. Therefore, Resolved by the Assembly of the State of California, the Senate concurring, That our Senators and Representatives in Congress be requested to urge the amendment of the United States statutes relative to the sale of public lands in the State of California, so that hereafter the innavigable streams and lakes therein will not be conveyed with the land; and to obtain, if possible, a dedication to the State of such streams and lakes for public use, under legislative control, for irrigation, mining, manufacturing and other beneficial uses.

Resolved, That his Excellency, the Governor, is requested to transmit to our Senators and Representatives in Congress a copy of these resolutions.

Dr. May said that if the resolution should pass, there would be nothing left for the House to do but to adjourn and go home. "The passage of that bill," said May, "would leave nothing for us to discuss. Whether or not when land is purchased bordering a river, the river is included in the purchase, I am in doubt."

Firebaugh—The purchaser purchases the right to have the river run there.

May—I differ with the gentleman, and am inclined to the belief that the purchaser purchases only the dry river bed. My own judgment of the resolution is that it will not hold water. I shall vote in favor of transforming the branding-iron into the pruning-hook, and in favor of the thousand small farmers who are building up our great State. I do not believe that it is a fact that our waters are to be grabbed by monopolists.

(Weaver took the chair and Parks the floor.)

## SPEAKER PARKS' REMARKS.

I suppose that some time during the session each member, either by vote or word, will give an opinion on this subject of the ownership of water—it seems to me that is the entire question, the ownership—and when the ownership is determined it will be easy to invent a plan for its distribution. I go farther even than the doctor. I think it is to be regretted that we are called on to take sides on this question at a time when there is such a controversy going on between different interests. It is to be regretted that it could not have been settled before such large expenditures were made for the distribution of the water, that the parties could have had a better understanding of their rights. It won't take me but about five minutes to lay down a proposition that will govern me in my vote, and I think I shall close before that. In the first place, I deny the right of property in water to any one or to any government until it is appropriated. There is no such thing as property in water until it is appropriated, in my judgment. Water is an element so changeable in its nature that it is impossible to be in the possession of any man for any given time, any specified time. It is finding its way to the sea, it is taken up by evaporation and by percolation. The water that runs in the Mississippi to-day does not run to-morrow. The water that falls on the 40-acre tract the gentleman proposes to reserve from Government sales this season does not fall next. The Government had no title in the land until it appropriated it. Governments appropriate land by discovery or otherwise, and make proper provisions for its distribution. Water must be appropriated the same as land before title can be given. There are many ways of appropriating water. If I live on the bank of a stream and have a thousand head of cattle to water in it, the appropriation is in this, in my cattle drinking the water. If I fail to use it to-day it passes on to my neighbor below me, who can then appropriate it. In my judgment, sir, the doctrine of riparian ownership is not a true doctrine in a country like this. Now, the Government may itself appropriate, it may provide for individual appropriations. When our riparian doctrine grew up it was on the question of the use of water for power. The common-law doctrine rests upon the fact that the first appropriator has the first right. That is to say, if Dr. May built a woolen mill on the river and appropriated so much water, he would be entitled by his appropriation to the use of such water, but he could not sit still and let the water pass by him and continue his ownership till it got to the sea, nor has he any power to say to the man who owns the land on which the rain and snow fall that makes the water that he shall not use it. The man living at the mouth of the Mississippi cannot dictate to the man in Minnesota what he shall do with each little rivulet that flows through his land. There is no ownership, except by appropriation, in my judgment. It is one of the elements, and you cannot have a property qualification without appropriation; you cannot sell, you cannot undertake to say you have a property right in the air we breathe. It is the appropriation of the air that makes it property. Each time I inhale a breath of air it is my property, but not before. A man may have property in air, the doctor in his chemical skill might compress air, and might bottle it up if he could not use it; but if I have appropriated 160 acres of air I cannot say that not another man shall use it after it passes my door, or shall bottle the air passing him. The doctor could not say because the trade winds, blowing in from the sea, pass his door I must not have the benefit of the breeze. A man must use his property so that it will not infringe on the rights of others, and a man's right in water is as sacred as his right in any other property.

The resolution is so impracticable that I imagine the man introduced it merely to bring about this discussion. What would any man give for a section of land if another man controlled every drop of water that passed over it? According to that resolution the Government sells water that she has not got. She discounts in the future. We depend upon an unerring law that distributes the water, and no man has any right to it until he makes use of it. I concede this, that the State has a right to appropriate water. We must regulate how individuals can appropriate. But we must make a law which will detain a man from infringing upon the rights of his neighbor.

The Government does not pretend to own the water which flows through the land. It only owns the river bed through which the water flows. If water is worth more for irrigation than it is for navigation, then let us use it for that. Let the navigation go. This is a day of railroads. When the water leaves the channel it covers a large area of land. I only throw this out to show you what might happen if we appropriate too much of it. This is an element

which cuts a large figure in this question and must be carefully thought of.

I should not have discussed this matter today, and would not, only that I think it is full time that each member declared himself on this question.

McGlashen—The water belongs to the people if we can get it there. We are here to legislate on that question.

Firebaugh—I move that further discussion on the resolution be made a special order for Friday, at 11 o'clock.

The motion was carried. Adjourned.

Sixth Day—Thursday, July 29th.

#### SENATE.

Senate Bill No. 1 (Del Valle) was reported back from the Irrigation Committee without recommendation. Del Valle then withdrew the original bill and introduced a substitute, which was referred to the Irrigation Committee, as follows:

"The waters of all natural streams within the State are hereby declared to be the property of the public and dedicated to the use of the people of the State. Such water may be diverted for irrigation or other beneficial purposes, under regulations prescribed by law; provided, that navigation in navigable streams under the control of the United States shall not be impaired; and provided, that the rights now acquired to appropriate, divert and use such water shall not be impaired so long as such water is applied to the purposes for which the same has been appropriated."

Boone offered the following concurrent resolution:

WHEREAS, We as a body are aware of the great necessity which exists in a large portion of this State for a just and equitable system of irrigation that will equally distribute the waters of the State so that the dry and unwatered sections shall be supplied with a proper share thereof for agricultural purposes; and

Whereas, It is apparent to the members of the legislative body that any extended legislation enacted at the present time on the subject of irrigation would be likely to result in the committing of the State to a policy that might result in great injury to large public and private interests; therefore be it

Resolved, That it is the sense of this Legislature that the best interests of the State will be subserved by limiting the action of this extra session to the submission to the people of the State a constitutional amendment in relation to water rights and irrigation matters, and that the plans and details for inaugurating and carrying out such irrigation system or systems be left to the people and to subsequent legislative action.

Referred to the Committee on Irrigation.

#### ASSEMBLY.

Goucher introduced an amendment to the Constitution relative to the public waters of the State. [The amendment is a copy of the one introduced by Senator Reddy, in the Senate on the 28th.]

Moffitt's bill to repeal Section 1422, Civil Code, was reported back to the House, with the recommendation that it pass.

Walrath offered the following substitute to Assembly bill No. 2: An Act to amend Section 1422 of an Act entitled "An Act to establish a Civil Code," approved March 21, 1872, relative to water rights.

Section 1. Section 1422 of an Act entitled an Act to establish a Civil Code, approved March 21, 1872, is hereby amended so as to read as follows: "1422. Nothing in the foregoing sections shall in any manner be construed to interfere with a proprietor's natural right, which shall be construed to be water for family and domestic purposes, for the purpose of watering live-stock, and water for irrigation purposes to such an extent as shall have been appropriated and used up to the time of the passage of the act." Referred to Committee on Irrigation.

Adjourned.

Seventh Day—Friday, July 30th.

#### SENATE.

Nothing was done as to irrigation. Adjourned to Monday, August 2d.

#### ASSEMBLY.

Walrath, Chairman of the Committee on Irrigation, reported back without recommendation Bill No. 7, relative to water and water rights.

Goucher introduced a bill entitled, "An Act concerning the ownership of water in natural innavigable streams."

Assembly Concurrent Resolution No. 1, relative to the sale of public lands in California, was taken up under special order, and Firebaugh, the author, discussed it at length. No other speeches were made, and when a vote was taken, Firebaugh alone voted for it.

Adjourned to Monday, August 2d.

Eighth Day—Monday, August 2d.

#### SENATE.

Nothing done as to irrigation.

#### ASSEMBLY.

The following bills were read the first time: Moffitt's Assembly Bill, No. 2, an Act to amend an Act to establish a Civil Code, approved March 21, 1872.

Section 1. Section 1422 of the Civil Code is hereby repealed.

Section 2. This act shall take effect from and after its passage.

Walrath's Assembly Bill, No. 7, an Act to amend Section 1422 of an Act entitled "An Act to establish a Civil Code," approved March 21, 1872, relative to water rights.

Section 1. Section 1422 of an Act entitled

"An Act to establish a Civil Code," approved March 21, 1872, is hereby amended so as to read as follows:

1422. Nothing in the foregoing sections shall in any manner be construed to interfere with a proprietor's natural right, which shall be construed to be: Water for family and domestic purposes, for the purpose of watering live-stock, and water for irrigation purposes to such an extent as shall have been appropriated and used up to the time of the passage of this act.

Section 2. This act shall take effect and be in force from and after its passage.

The Irrigation Committee reported back Assembly Bills Nos. 3 and 8. The latter, Goucher's bill, was amended and substituted for No. 3, and its passage recommended. The amended bill is as follows:

An Act concerning the ownership of water in natural innavigable streams, and providing for the acquisition thereof by appropriators.

The people of the State of California, represented in Senate and Assembly, do enact as follows:

Section 1. The water of every natural stream within the State of California is the property of the public, and is dedicated to the use of the people of the State. Such water may be appropriated, diverted, and used for irrigation or other beneficial purposes. The right to divert unappropriated waters of any natural stream to such beneficial uses shall be regulated by law. Prior appropriations of water to any such use, whether heretofore or hereafter made, so long as applied to such use or other beneficial purposes, give the better right to the extent of the amount of water actually devoted and applied, and the right of appropriation shall be exercised under legislative regulations; provided, that navigation in navigable streams under the control of the United States shall not be impaired. The English common law of riparian rights, so far as it conflicts with this act, shall not be recognized as a rule of decision in any of the courts of this State.

Section 2. All acts and parts of acts in conflict with this act are hereby repealed.

Section 3. This act shall take effect immediately.

The amended bill was ordered printed.

Ninth Day—Tuesday, Aug. 3d.

Both houses met shortly after midnight, elected A. P. Williams U. S. Senator, and adjourned to enable members to attend the G. A. R. parade in San Francisco.

Tenth Day—Wednesday, Aug. 4th.

#### SENATE.

Nothing done as to irrigation.

#### ASSEMBLY.

Britt introduced an Act proposing an amendment to the Constitution relative to water and water rights. It was referred to the Committee upon Constitutional Amendments. The text of the bill is as follows:

The right of appropriating to public uses the waters of any lake, river, stream, canyon or ravine in this State is reserved to the State and the inhabitants thereof; such public uses shall be deemed to include the use of said water for irrigation, mining and manufacturing purposes, the supplying of any city and county, manufacturing town, or the inhabitants of the same, with fresh water, and such other purposes as the Legislature may by law permit. All persons or corporations appropriating any of the waters of this State for any other purposes above mentioned do so as agents of the State, and as such are subject to legislative control. Any right acquired by any appropriation of said waters for such public uses shall be deemed an interest in real property. The common-law rule of riparian rights, in so far as the same may be inconsistent with the right of appropriators of water, as herein allowed, is hereby forever abolished in this State.

Eleventh Day—Thursday, Aug. 5th.

#### SENATE.

Cross offered the following: "Resolved, That all the committees of the Senate be instructed to report next Monday all bills referred to them." He thought it about time to do something. It was desirable that a test vote be taken at an early day on some proposed irrigation measure, to determine whether or not the Senate is disposed to pass any bills relating to that subject. If not, the members had better go home. He thought the committees could all act on the bills before them by Monday; but, if not, further time could be granted. Most men need spurring up to act promptly in this superheated weather. In his opinion, every Senator knows already how he would vote on any of the bills on the file. Another branch of the State Government is resting, and disposed to do nothing until the Senate shows its hand.

Lynch spoke in favor of the resolution. For his part he was ready to vote in favor of adjourning sine die, and he thought the people of the State would prefer to have the Legislature do so at once.

On motion of Kellogg, the resolution was amended by inserting Tuesday instead of Monday, and was then adopted.

By McClure—An Act to propose an amendment to the Constitution relative to the Legislative Department. [The bill re-enacts the present provisions of the Constitution, and adds the following addition: "But nothing in this section shall prevent the Legislature from passing laws having a local application to regulate the diversion, distribution, and use of water for irrigation purposes, and for the construction

and regulation of canals, ditches, and other works therefor; as the same may be specially required, in any county or district created by law for that purpose."]

#### ASSEMBLY.

Hollister, of Sacramento, presented a memorial from Pomona Grange, Sacramento, which expressed profound alarm at the proposition to reorganize the Supreme Court.

Firebaugh introduced a bill to amend Section 1238 of an Act entitled "An Act to establish a Code of Civil Procedure," approved March 11, 1872, as amended and in effect July 1, 1874, and relating to eminent domain.

Hazard introduced an amendment to Edwards' amendment to Section 25, Article IV, of the Constitution relating to special legislation.

Watson, of Alameda, introduced a proposed Constitutional amendment relative to water and water rights. The bill provides that non-navigable lakes and rivers, not wholly on the lands of one proprietor, shall be the property of the people and subject to diversion and distribution, under laws hereafter to be made.

Assembly Bill No. 2, entitled "An Act to Amend an Act Entitled an Act to Establish a Civil Code," came up for second reading. Firebaugh offered an amendment to Sec. 1 by inserting "in so far that said Sec. 1422 shall not hereafter apply to any of the following counties or any lands or waters therein, to wit: Fresno, Tulare, Kern, San Bernardino, Los Angeles and San Diego; but nothing in this act shall be construed to take away or impair any vested rights to land or water."

Munday opposed the amendment, and said that it had been introduced for the purpose of securing an unconstitutional provision.

May also opposed the amendment, and claimed that if Sec. 1422 was repealed vested rights would not be interfered with.

Upon voting upon the amendment, Firebaugh's voice was alone heard in favor of its passage, and it was lost.

Walrath offered an amendment which he asked might be made a special order for Monday next.

Munday said the amendment was an exact copy of the original Walrath bill, and he hoped that something might be done at once. All that the amendment implies is to put back into the code in different language the purport of Sec. 1422. By a vote of 31 to 29 the further discussion of the matter was made a special order for Monday.

Adjourned.

Thirteenth Day—Monday, August 9th.

#### SENATE—COMMITTEE REPORTS.

Taylor, from the Committee on Irrigation and Water Rights, reported back Senate Bill No. 16, entitled "An Act concerning the ownership, appropriation, diversion and use of waters in this State" (introduced by Del Valle), with a majority recommendation that it pass, and an adverse minority report.

Also, Senate Bill No. 12 (Saxe), "An Act to define riparian rights," with a majority recommendation in favor of and a minority report against its passage.

[The following is the bill: Riparian rights are hereby declared to consist of the right to use of so much of any body of water flowing through or contiguous to the lands of any proprietor as is necessary for domestic use, the watering of stock, irrigation when practicable, and mechanical purposes, provided the water for such mechanical purposes is returned into its original channel, and all surplus of said waters may be used by the others for the same purposes.]

Also, Senate concurrent resolution No. 3, "relative to limiting the action of the extra session to the submission of a constitutional amendment relative to water rights," with the recommendation that it do not pass.

Day, of San Francisco, introduced an amendment to the Constitution providing for five new sections to Article 14 of the Constitution. The measure, in effect, provides that all waters in non-navigable streams and natural courses are to be the property of the public, subject to being leased for a term not exceeding 20 years. Ordered on file.

Senate Bill No. 16 was read the first time.

Day presented a resolution instructing the Judiciary Committee to see what action was necessary to give proper relief to people desirous of irrigation, to ascertain what individual rights to the waters of the State, if any, had accrued under the laws and decisions, and what effect the repeal of Section 1422 would have on the right acquired by the appropriator and riparianist. The resolution was referred to the Judiciary Committee.

Adjourned.

Twelfth Day—Friday, Aug. 6th.

#### SENATE.

Kellogg introduced an amendment to the Constitution, relative to the waters of the State. Section 1 provides that the waters of every natural or artificial innavigable stream within the State, and the use of all such water, is dedicated to the people of the State for irrigation, mining, manufacturing and other beneficial purposes, subject to the control and regulation by the State in a manner to be provided by legislative enactment.

The water of all such streams and the right to the use of such water is subject to condemnation for such uses and purposes upon compensation thereof being made to all persons whose claim to such water or use thereof, either by prior appropriation or otherwise, has been estab-

lished by law, or the decisions of competent courts, or otherwise.

Section 3 says that the State shall be divided into five districts, and that in each district three commissioners shall be elected, the salary to be \$250 per month each. The term of office shall be four years.

The Legislature shall provide by law for the suitable and equitable division and distribution of the water of the natural or artificial innavigable streams of the State so as to secure the greatest beneficial use.

The Legislature is authorized to pass laws providing for the issuance of bonds of the State not exceeding the sum of \$70,000,000, said bonds to be payable 20 years from date.

The Legislature shall have the power to district the State into State Irrigation districts, but until such apportionment is made the following shall be the districts:

District No. 1—Del Norte, Siskiyou, Trinity, Shasta, Modoc, Lassen, Plumas, Sierra, Nevada, Placer, El Dorado, Anador, Alpine, Calaveras, Mono, Inyo.

District No. 2—Humboldt, Mendocino, Tehama, Colusa, Butte, Yuba, Sutter, Lake, Sonoma, Napa, Yolo, Sacramento, Solano, Marin, Contra Costa.

District No. 3—San Francisco, Alameda, San Mateo.

District No. 4—Santa Clara, Santa Cruz, San Joaquin, Stanislaus, Tuolumne, Mariposa, San Benito, Monterey, San Luis Obispo, Santa Barbara, Ventura, Los Angeles.

District No. 5—Fresno, Tulare, Merced, Kern, San Bernardino, San Diego.

#### COMMITTEE REPORTS.

Taylor, from the Committee on Irrigation and Water Rights, reported back Senate Bill No. 16, with a majority and minority report. Placed on file.

[The following is the bill: An Act concerning the ownership, appropriation, diversion and use of waters in this State. Section 1. The waters of all natural streams within the State are hereby declared to be the property of the public and dedicated to the use of the people of the State. Such waters may be diverted and used for irrigation or other beneficial purposes under the regulations prescribed by law; provided, that navigation in innavigable streams under the control of the United States shall not be impaired; and provided, that the rights now acquired to appropriate, divert and use the water shall not be impaired so long as such water is applied to the purposes for which the same has been appropriated and for other beneficial purposes.]

#### ASSEMBLY.

On motion of Heath, the rules were suspended and Constitutional Amendment No. 7, as amended by the committee, was read the first time. It is an amendment to Section 25, Article IV, and provides that special legislation shall not be had upon certain subjects, and concluding: "But nothing in this section shall prevent the Legislature from passing laws having local application, regulating the diversion, distribution and use of water for irrigation, and the construction and regulation of canals, ditches and other works therefor, as the same may be specially required, in any county or counties, or in any district created by law for that purpose."

Assembly Bill No. 8, introduced by Goucher, was read first time. All the other bills upon the first reading file were passed.

#### San Luis Obispo Lands.

The West Coast Land Company has entered upon a great work for themselves and for San Luis Obispo county. It involves the settlement in our borders of at least 10,000 persons, necessarily citizens of the most valuable character in point of means and intelligence. From the character of the enterprise and the reputation of the gentlemen who are to conduct it, a brilliant success must certainly follow. Its directors comprise Mr. George C. Perkins, recently the Governor of California; Mr. John L. Howard, a principal executive of the Oregon Improvement Co., which embraces the principal lines of steamships on the coast and several railroad lines; Mr. R. E. Jack, the president of the banking house of Jack, Goldtree & Co.; Mr. Isaac Goldtree, the head of the mercantile house of Goldtree Brothers, established here for 20 years, and Mr. C. H. Phillips, whose name is a synonym for energy and business sagacity. It is a notable combination, only possible in the face of so great a work, and their representations will have the strongest possible effect upon all intending immigrants. — San Luis Obispo Tribune.

#### Consumption Cured.

An old physician, retired from practice, having had placed in his hands by an East India missionary the formula of a simple vegetable remedy for the speedy and permanent cure of Consumption, Bronchitis, Catarrh, Asthma and all throat and lung affections, also a positive and radical cure for Nervous Debility and all Nervous Complaints, after having tested its wonderful curative powers in thousands of cases, has felt it his duty to make it known to his suffering fellows. Actuated by this motive and a desire to relieve human suffering, I will send, free of charge, to all who desire it, this recipe, in German, French, or English, with full directions for preparing and using. Sent by mail by addressing with stamp, naming this paper, W. A. Novas, 149 Power's Block, Rochester, N. Y.

#### Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$500 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey &amp; Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey &amp; Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING AUGUST 3, 1886.

- 346,716.—ANTI-FRICTION BEARING—L. W. Boyer, S. F.
- 346,473.—WASHING MACHINE—Gooch & Olsen, Bellingham, W. T.
- 346,547.—PORTABLE BOOK-HOLDER—Mary J. Holt, S. F.
- 346,589.—WHIFFLETREE CLIP—G. C. Johnson, Fort Bragg, Cal.
- 346,590.—WHIFFLETREE HOOK—G. C. Johnson, Fort Bragg, Cal.
- 346,766.—GANG-PLOW—E. H. Nicholson, Santa Maria, Cal.
- 346,682.—BOOT-JACK—Wm. Quinlan, Punta Arenas, Cal.
- 346,776.—BOOT-PROTECTOR—L. C. Rodenberger, Medford, Ogn.
- 346,624.—VEHICLE SHAFT—W. L. Walker, Brooks, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by Dewey &amp; Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

## The Coming State Fair.

The State Board of Agriculture met last evening, with the following members present: Messrs. Finigan, Shippee, Chase, La Rue, Green, Shafter, Hancock, and President Carr. Much of the preliminary business of the coming fair was agreed upon.

A communication was received through Governor Stoneman from the Governor of Minnesota inviting the board to suggest the names of eight delegates to the Farmers' International Congress, to be held at St. Paul, Minn., August 25, 26 and 27, 1886. The matter was referred to President Carr, with power to act.

The secretary was instructed to advertise for bids for hay and straw.

Messrs. Green, La Rue, Finigan, Hancock and Chase were appointed a committee to examine combined harvesters in the field, in the vicinity of Stockton, on Thursday and Friday of next week.

The usual amounts in premiums were appropriated for special floral displays during the coming fair.

The sum of \$150 was appropriated toward a State pigeon-shooting tournament during the fair, the same to be under the direction of D. J. Stevens, of Elk Grove.

The entries for races were opened and considered and found to exceed the expectations of the board in point of numbers. The running races contain from 9 to 28 entries each. The trotting and pacing races filled in every case except the 2:22 class, which was referred to the Speed Programme Committee for action. Our limited space prevents publication in full this issue.

The board resolved not to permit book-making upon the track.

The outlook at present is very encouraging in every department. Much space has already been engaged in the pavilion. The large number of stalls engaged at the park insures a successful exhibition there. Over 300 cattle stalls have already been engaged, and the horse stalls in proportion.—Record-Union, August 5.

FARMERS' THRASHERS.—Many grain-growers who cultivate comparatively small farms in the valleys, and others who are out of the great grain region of the State, can often make money by owning their own thrashing outfit and using the time of their own hands and animals. Especially in the hilly districts of the State it is very desirable to have a small thrasher which can be easily moved from place to place, and neighbors can often combine to advantage and help each other get out the grain. While in this State we can use to advantage the grandest harvesters in existence, we have also many situations where a small machine is very handy and profitable. On the last page of this issue there is an advertisement by G. G. Wickson & Co. of the latest styles of small thrashers and horse-powers.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Idaho and Montana.  
Geo. McDOWELL—San Luis Obispo and Santa Clara Co's.  
FRANK W. SMITH—Montana, Utah and Colorado.  
M. S. PRIME—Alameda Co.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## Government Seeds.

Senator Stanford has sent to the German Land & Cattle Co. a quantity of seeds for distribution, which will be sent, free of charge, to any one applying for them. Address, German Land & Cattle Co., 123 California street, San Francisco, Cal.

## FLOWERS, BOUQUETS, ETC.

With the many improvements inaugurated at my Nurseries during the season, I am now better prepared than ever to furnish all manner of designs for exquisite Bouquets, Flowers for Marriage Ceremonies, private and public Parties and all other Entertainments. Will also rent shrubs in pots or boxes for Hall or House Decorations. Mourning Wreaths and other Funeral Designs to order at the shortest notice, and on reasonable terms. EMIL BOURGUIGNON, Naissevain Villa, near Narrow Gauge Railroad, 1/4 mile from Depot. Telephone No. 34 free to all patrons. Floral Depot, 72 N. 1st St., San Jose.

ALL misfits, ocularly demonstrated errors of refraction, carefully diagnosed. C. Muller, the leading optician, 135 Montgomery street. x

## ARE YOU USING

## Wellington's Improved Egg Food For Poultry?

## IF NOT, WHY NOT?

NOTE.—Eggs have now doubled in price and will continue to advance to 50 or 60 cents per dozen, and from this time on every one should feed this Egg Food in order to have plenty of Eggs to sell at those food prices.

## Excelsior Improved Hot Water Incubator.

NOTE.—This is the only Incubator in the world which is run literally without any expense whatever, saving the full price of the machine every year used—in oil alone. We use NO LAMP, no oil, no heating apparatus with the machine, and guarantee it to run strictly to any degree.

## EGG TESTER. The long-needed Tester just patented. Testing six eggs at a time, as quick as one at a time by the usual process, and six times as effectually.

## SEEDS. Alfalfa, Grass, Clover, Vegetable, Flower, Fruit, and Seeds of every variety.

B. F. WELLINGTON, Proprietor, Inventor, and Importer and Dealer in Seeds, 425 Washington St., San Francisco, Cal.

## THE GOAT-BREEDERS' ANNUAL MEETING

Will take place on Thursday, September 16, 1886, at Pioneer Hall, SACRAMENTO, at 8 o'clock P. M. of said day.

All Goat-breeders invited to attend at that meeting, and also requested to exhibit specimens of their flocks at the State Fair. C. W. SCHLEIFFER, Chairman. July 29, 1886.

## Educational.

## MILLS SEMINARY.

The next term of this well-known Institution will commence on

Wednesday.....August 4, 1886.

For Circulars giving particulars, address

MRS. C. T. MILLS,  
Mills Seminary P. O., Alameda Co., Cal.

## VAN NESS SEMINARY

San Francisco, Cal.

## A BOARDING AND DAY SCHOOL

—FOR—

Young Ladies and Children,  
1222 Pine St., San Francisco.

Thorough training in practical studies and accomplishments, and pleasant surroundings, are the principal advantages offered.

Fall Term Opens July 26, 1886.

For Catalogues and particulars, apply to MRS. S. B. GAMBLE, or MRS. E. H. WOOD.

REFERENCES.—Rev. W. I. Kip, Bishop of California; Rev. C. O. Tillotson, Santa Cruz; Hon. C. H. Hartson, Napa; John D. Yost, San Francisco; F. A. Hihn, Santa Cruz; E. J. Wilson, Vallejo; Capt. A. D. Wood, San Francisco; Eugene Sherwood, San Francisco.

## California Military Academy, Oakland, Cal.

Special Feature—Commercial Department. Next Term begins July 19, 1886. Send for circular.

COL. W. H. O'BRIEN, Principal.

## MISS BISBEE'S SCHOOL

FOR YOUNG LADIES,

1020 OAK STREET, - - OAKLAND.

WILL RE-OPEN

WEDNESDAY, JULY 28th, 1886.

## BOWENS ACADEMY,

BERKELEY, CAL.

First-Class Boarding School for Boys.

Preparatory, Commercial, and Academic Classes. Preparatory Department, \$30 per school month. Commercial and Academic Department, \$35 per school month. Next Term will begin Monday, August 2, 1886. Send for Circular.

T. STEWART BOWENS, A. B., T. C. D., Principal.

## STOCKTON

Business Telegraph Institute and NORMAL SCHOOL.

Open day and evening for both sexes. Expenses less than one-half the usual rates. Excellent board in private families from \$4 to \$10 per month. Address, for College Journal and Circulars, J. C. BAINBRIDGE, Principal, Stockton, Cal.

## UNIVERSITY OF THE PACIFIC,

Between San Jose and Santa Clara.

(Founded in 1851.) Twenty-two Professors and Instructors. Courses of study embrace the regular college curriculum, four years; Conservatory of Music course, Post-graduate course leading to degree of Ph. D.; Business course, and complete Preparatory courses leading to and connecting with College Classes. All classes open to both sexes. \$250 per year includes ALL REGULAR EXPENSES. Fall Term begins Aug. 11th. Address, C. C. STRATTON, Pres., SAN JOSE, CAL.

## TRINITY SCHOOL,

1534 MISSION ST., SAN FRANCISCO.

CHRISTMAS TERM OPENS

Monday.....August 2, 1886

REV. E. B. SPALDING, Rector.

## HEALD'S BUSINESS COLLEGE,

24 Post St. S. F.

Send for Circular.

CUTS FOR SALE. Duplicates of most of the Engravings appearing in this journal will be sold, after thirty days from date used, at very reasonable prices.

—THE—

## MONARCH PRESS.

MONARCH CAR PRESS  
10 TONS BOX CAR \$600 20

Puts 10 Tons in a Box Car.

Bales from 10 to 15 tons per day.

Any young man can earn more on an investment of \$600 in this press than can be earned in expending \$2000 for any other machine.

Sold on Easy Payments. Address

TRUMAN, ISHAM & HOOKER,

SAN FRANCISCO, CAL.

WE SELL:

BALING ROPE,  
STEEL BALING TIES,  
BALING WIRE

AND THE CELEBRATED

HOLLOW IRON AXLE WAGONS.

SEND FOR CATALOGUE.

## CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.  
TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for

COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions: To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.

JESSE D. CARR, President.

EDWIN F. SMITH, Sacramento.

## TWENTY-FIRST

## Mechanics' Institute Fair,

SAN FRANCISCO, 1886,

Opens August 24th, Closes September 25th,

—IN THEIR—

IMMENSE PAVILION ON LARKIN ST.,

L. U. SHIPPEE, Stockton, Cal. Importer and breeder of Spanish Merino Sheep, Durham Cattle, Red Duroc and Berkshire Swine. High graded Rams for sale.

### BEEES.

J. D. ENAS, Napa Cal., breeds pure Italian Queens. The best honey and wax extractor; manufactures comb foundation, sections & hive material; send for circulars.

## Calf Feeders

AND WEANERS

For Rearing Stock by Hand.

Both Proved Successful and Indispensable.

Funk's Calf Nipple is just as important for calves as the nursing bottle is for children. The saliva fluid is necessary for proper digestion of the food, and without the Nipple the calf drinks too fast, takes the milk in bulk and causes bloating, scours and indigestion. The Feeder was invented to raise better calves with less trouble. No air swallowed, no fingers chewed, no ears sucked. It teaches the calf to feed from the pail without assistance. The Nipple always connects with the milk and the calf will soon wean itself. Price, 75 cents; post-paid, 85 cts.

## Rice's Patent Calf Weaner,

AND SUCKING-COW MUZZLE,

Prevents Calves and Cows Sucking Themselves or Each Other.

Habits most injurious to the animal and costly to the owner. It is no hindrance to either eating or drinking, does the animal no injury, has been thoroughly tested, is used and endorsed by the best stock raisers in the United States and England, approved of by the Royal Society for the Prevention of Cruelty to Animals, and acknowledged by all to be the best thing ever made for the purpose.

PRICES.—For Calves, 50 cents; post-paid, 55 cents. Yearlings, 75 cents; post-paid, 80 cents. Full-grown animals, \$1.00; post-paid, \$1.12.

## TEBBETS' IMPROVED MILK TUBE,

Has proved an entire success, for the relief and permanent cure of Garget, or stoppage of Milk, or when from any cause the teat cannot be handled in the usual way. Farmers are well aware that cows' teats are frequently injured by being stepped on in the stable, or torn in the pasture; they are also liable to be troubled with cracked teats when first turned out in the Spring, making milking a very painful operation; and injurious experiments are too frequently resorted to, from the result of which many valuable animals are rendered worthless, because their owners have not the means at hand to give the needed relief. The article which we offer is a simple instrument and can be applied by any person. Will quickly give relief and permanent cure in all cases without the slightest injury to the animal. We guarantee them to be made of COIN SILVER. A single tube answers for an entire herd, and is cheap insurance against loss. Price, 75 cents each, post-paid.

## Edson's Cream Tester.

A DAIRYMAN'S PRACTICAL INVENTION,

Consists of a frame holding six glass tubes graduated at the sides of the glass so as to show the per cent of cream in freshly-drawn milk. The frames are substantially made of wood, carefully graduated, and the glasses easily removed for cleaning. Actual tests prove that common or grade cows give equally as good results in cream and butter, when pains have been taken in selection, as Jerseys, Holsteins, or other imported stock, but in order to have common stock do this, they must be bred from deep and rich milkers, the bull as well as the heifer, and the best authorities place more dependence on the bull than on the heifer, thus showing that we should take great care in the selection of cows to raise bulls from. It is calculated that 20 pounds of milk will make one pound of butter, but instances have been known where 12 pounds made one of butter, thus showing that it is not the cow that gives the largest flow of milk that produces the most butter. It should be our aim to get a large flow of very rich milk. How should we do this? By testing our milk, and only keeping and raising stock from cows that give not less than 15 per cent, and it would be better to say 20 per cent of cream. By this method, you would soon have a dairy of cows that would be a pleasure as well as a profit to you. Price of Testers, \$1.00 each; Large Size, \$2.00. ADDRESS

G. G. WICKSON & CO., 38 California St., San Francisco.

## MARTINEZ, } ALHAMBRA POULTRY YARDS { JASPER J. JONES,

### HIGH-CLASS POULTRY.

Clean sweep on Plymouth Rock Chickens at Great California Poultry Show at San Francisco, Jan. 11th to 16th, 1886. The Best is the Cheapest. ## SHEEP AND SHEEPWASH.

## THOROUGHbred SPANISH MERINO SHEEP.

Have taken the First Premiums at the State Fair for the last three years.

CHOICE

BUCKS AND EWES FOR SALE.

ORDERS PROMPTLY FILLED. Address FRANK BULLARD, Woodland, Cal.

## LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to \$1.25

PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scabs in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO., San Francisco, Cal.

### FOR SALE.

## 40 head SPANISH MERINO BUCKS

Bred by Mr. J. H. Strobbridge. Sired by his imported Vermont Registered Buck, and out of his premium flock of breeding ewes.

TERMS REASONABLE.

ADDRESS

MILO KNOX, Haywards, Alameda Co., Cal.

## The American Churn

Excels in the art of Churning,  
Washing, Salting and  
Working Butter.

THE AMERICAN IS PERFECTLY CYLINDRICAL IN FORM, leaving no possible opportunity for cream to stick to corners (as is invariably the case with other than round churns); thus works easily, rapidly, and will not make streaked butter. There is no partially churned cream mixed with the butter to make it streaked or impair its keeping quality. The dasher follows the radius of churn body loosely while the blades give the cream a rapid counter-current to and fro movement, agitating the cream thoroughly and making granular gilt-edge butter in from 2 to 10 minutes.

TRY AN AMERICAN CHURN.

We Guarantee Satisfaction,  
And will send on trial to responsible parties

## S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday  
the date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, August 11, 1886.

The produce markets are rather stronger this week. The details of the course of each item will appear in our reports below.

The latest by cable is as follows:

LIVERPOOL, Aug. 11.—WHEAT—Not much inquiry. California spot lots, 6s 5d to 6s 3d; off coast, 3s 9d to 3s 3d; just shipped, 3s 6d; nearly due, 3s 3d; cargoes off coast, quiet; on passage, not much demand; Mark Lane Wheat, slow; Maize, steady; English and French country markets, generally firm; Wheat and Flour in Paris, firm; quantity of Wheat on passage to Continent, 340,000 qrs.; Wheat and Flour to U. K., 2,025,000; weather in England, finer.

## English Wheat Markets.

LONDON, Aug. 7.—The wheat market is firm, but not quotably higher. The weather is favorable to the crops. At present, trade is in an expectant attitude awaiting the definite outcome of the crops in Europe and America. In Europe the promise is for generally fair, if not large, crops. And, as regards America, notwithstanding the recent unfavorable reports from the Atlantic side, which are believed to have been exaggerated for speculative purposes, a crop of not less than 400,000,000 bushels is reckoned upon. Consequently there seems no reason at present to anticipate any deficiency in the world's supply, and with California off coast at about 3s 6d, the only inclination to pay a premium of 1s and 1s 6d for distant positions is founded upon the possibility of a wet harvest. The buying power of the trade has been seriously curtailed by long-continued losses.

## Foreign Review.

LONDON, Aug. 9.—The *Mark Lane Express* in its review of the British grain trade for the past week says: The weather has been unfavorable for wheat. Prices are steady. Sales of English wheat during the week were 41,123 quarters at 3s, against 38,070 quarters at 3s 6d during the corresponding period of last year. Oats are rather dearer. Barley and corn are slow of sale. Mixed American corn is scarce and 6d dearer. Four cargoes of wheat arrived; four were sold, including one of California at 3s, one of Oregon at 3s 6d, and one remained. Trade in forward suffered from apathy. The market to-day was quiet. There was only a very small supply of English wheat, which sold at full late rates. English flour was steady and not in favor with buyers. There was an excessive supply of foreign, and the market for it was depressed. American mixed corn is very scarce and brings 21s ex ship. Oats were steady. Barley was firm but quiet. Beans and Peas were 6d dearer.

## New York Wheat Market.

NEW YORK, Aug. 8.—Wheat prices are firm; options were 1/4 higher at close; September, 86 1/2 cents; October, 87 1/2; November, 88 1/2; December, 89 1/2.

## Eastern Wool Markets.

NEW YORK, Aug. 8.—The general distribution of stock has been somewhat irregular, as operators are not all in close accord as to the policy most desirable in conducting the market. The differences, however, are hardly sufficient to make a positively disturbing element. There is, however, reason to believe that in some cases the future was anticipated in the investments made, and two or three large sales were put through of which no report is given. Sales include 200,000 pounds Valley Oregon at 24c; 10,000 pounds unwashed Colorado at 20c; 2000 pounds Colorado pulled at 17 1/2 @ 28 1/2 c; 2000 pounds same at 27 @ 30c; 1000 pounds scoured spring California at 60c. The Philadelphia market is quieter. Buyers have been unable to meet the extreme views of sellers, and, as far as practicable, have been holding off. The market, in fact, has shown very stubborn firmness in the face of the bearish talk that interested parties have indulged in to depress prices. Sales include 50,000 pounds California at 22 1/2 c; 3200 pounds California at 23 1/2 @ 24c; 3500 pounds California at 22 1/2 c; 3200 pounds California at 23 1/2 @ 24c; 3500 pounds California at 18 1/2 c. The Boston market is less active, with smaller sales and less interest from manufacturers. Sales include 35,000 pounds California spring at 23 @ 25c; 25,000 pounds California spring at 37 1/2 c.

NEW YORK, Aug. 10.—Wool is quiet and firm. Domestic fleeces, 30 @ 38c @ lb; pulled, 14 @ 35c; Texas, 9 @ 25c.

BOSTON, Aug. 7.—There is a more quiet market for all kinds of wool than last week, the sales of the week amounting to 247,200 pounds. The prices show very little, if any, change. Fine wools were a trifle easier earlier in the week, but at the close firm, under the influence of higher markets abroad for all good and medium wools. Holders are stiff in their views, and will accept only the full asking prices. These stocks cannot be duplicated at interior points at prices which will permit them to be sold at the present prices quoted on the seaboard. The California wool market has been comparatively quiet, but prices are firm, as previously noticed. The sales here for the past week have been 35,000 pounds spring at 19 to 25 cents and 100,000 pounds spring, part choice, at 28c. There has been considerable movement in Oregon wools with prices at 23 @ 25 1/2 c. The receipts of the week have been 20,540 bales domestic and 1376 bales foreign.

BOSTON, Aug. 10.—Wool is firm with fair demand. Ohio and Pennsylvania fleeces, 32c @ lb; do XX, 35c; do XX and above 36c; Michigan X fleeces, 31 @ 37c; medium washed wools, 36 @ 38c; unwashed wools, 25 @ 30c.

PHILADELPHIA, Aug. 10.—Wool is quiet and prices steady. Ohio, Pennsylvania and West Virginia medium, 37 1/2 @ 38c @ lb; New York, Michigan, Indiana and Western coarse, 37 @ 38c; fine washed delaine and XX, 36 @ 38c; medium washed combing

and delaine, 38 @ 40c; coarse and unwashed combing and delaine, 29 @ 30c.

## New York Hop Market.

NEW YORK, Aug. 8.—Dealers seem still to be very cautious, with a marked disinclination to part with hops with good body, flavor and keeping qualities. Brewers are showing more interest. Several were in the market for fine goods previously offered at 25c, but were unsuccessful in finding the same, except at a good margin over that rate, and 27 @ 29c was as low as they could secure a desirable article. For comparatively few really choice goods holders will not get below 30c. Letters from the interior state that some New York dealers are offering to sell fine goods at 25c, but withdrawing when met by offers to take stock. Several contracts were made by brewers for 1888. Pacific Coast hops at 25c. Cable advices from Europe report increased strength, both in England and on the Continent. One cable stated that the estimates of the German crop were reduced to one-half of last year's crop, and that the estimates of the English crop had been modified. Pacific Coast crop of 1885, common to choice, 20 @ 27 1/2 c.

NEW YORK, Aug. 10.—Inquiry among the hop dealers to-day elicits the fact that the market is dull and stagnant. The full prices quoted some time ago are now hard to obtain. Very few, if any, orders were in from brewers. Local dealers do not appear as buyers, and offerings are moderate, with only fair and medium qualities shown, for which full quoted prices are asked. For the moment the situation is such that anything in the way of round lots could be placed only at concessions, while any spirit to demand would be very apt to stiffen the market materially. The quotations are as follows for New York State crop of 1885: Prime to choice, cash, 28 @ 30c; medium grades, 23 @ 26c; low grades, 15 @ 20c. New York State crop of 1884: Fair to prime, 18 @ 22c. Pacific Coast crop of 1885: Common to choice, 20 @ 27 1/2 c.

## California Fruit at the East.

CHICAGO, Aug. 7.—The special fruit train of six cars from California, which arrived here yesterday, was for Butts & Frye, Earl Bros. and Thacher Bros. Porter Bros. also received a special train from the same State. There is one fact of which shippers should not lose sight, which is, that while fruit may appear in fine shape when it is loaded into the cars in California, much of it has a very different appearance on its arrival here. Take Bartlett pears, for instance, large portions of which are "cooked" or "baked" (a term used by fruitmen) on their arrival here. Pears in one part of the box appear all right, while in another part they have become so heated that they have all turned black, and are almost worthless. This is one reason why Chicago will undoubtedly, through necessity, always have to be the principal distributing point for all California fruits, as it is necessary to overhaul all fruit here, and open it up and select out that which is green and in good condition for Eastern shipment, and sell the remainder here for what it will bring. It is reported that some cars which have been consigned direct from California to Eastern markets have arrived in such poor condition that the prices have been but little if any more than the freight charges. In fact, some cars consigned to Chicago have arrived in such poor order during the last ten days that, taken in connection with the low prices, there must be serious losses to growers and shippers, and to have consigned them further East would have resulted in almost a total loss. Bartlett pears are mostly in bad condition, and on this account are selling at low prices at 1 1/2 @ 2 per box. Muscat grapes arrived in fine order, and bring 1 1/2 @ 2 per box, but with increased receipts it is expected they will share the same fate as that of the Bartlett pears, and prices will decline materially. It is doubted by commission men if Muscat grapes will bring 1 per crate when the crop arrives freely, and the same may be said of Gros pines, which are at present selling at 1 1/2 @ 2. Peaches are doing very well and bring from 1 1/2 @ 1 7/5 per crate, owing to condition, but as the Delaware and Michigan peach crop is near at hand, it is probable lower prices will have to be accepted for those now in. It is getting late in the season for nearly all early varieties of plums, for which prices are ruling low.

CHICAGO, Aug. 7.—Plums, 20-lb crates, \$1.00 to \$1.50; Nectarines, \$1.50 to \$2.00; Crawford Peaches, 20-lb crates, \$1.75 to \$2.25; Bartlett Pears, 40-lb box, \$1.50 to \$2.50; Grapes, 20-lbs Fontainebleau, \$1.25 to \$1.50; Muscat, \$1.75 to \$2.25; Black Hamburg, \$3.00 to \$3.75.

## Local Markets.

BARLEY—The market is strong and rates about 5c higher all around than last week. Call sales to-day were as follows: Spot—100 tons, 88c; 100, 85 1/2 c. Seller 1886—200 tons, 85c; 100, 84 1/2 c; 200, 84 1/2 c; 100, 84 1/2 c; 100, 84 1/2 c. Seller 10 days, on cars or afloat—100 tons, 86 1/2 c @ ctl. Buyer 1886—300 tons, 90c; 400, 90 1/2 c. Seller 1886—500 tons, 84 1/2 c; 100, 84 1/2 c; 500, 84 1/2 c; 300, 84 1/2 c @ ctl.

BEANS—Beans are not materially changed, though there have been slight fluctuations in white and pea beans.

CORN—Corn is higher; about 10c per ctl. on all good lots.

FEED—The best hay has sold up to \$13, but the general tendency is lower. We quote: Alfalfa, \$6 @ \$9; Oat, \$7 @ 9; Barley, \$5 @ 8; Wheat, \$9 @ 12.50 @ ton.

OATS—Oats have advanced. For the choicest there is no price, as the supply is small and prices irregular, up to \$1.75 @ ctl.

PROVISIONS—Prices are advancing. Hams are notably higher this week.

WHEAT—Wheat rules about the same as last week. Call sales to-day were as follows: Buyer season—100 tons, \$1.33 1/2; 400, \$1.33 1/2; Seller, 1886—5900 tons, \$1.24; 100, \$1.24 1/2 per ctl. Buyer season—1200 tons, \$1.33 1/2. Buyer 1886—100 tons, \$1.29 1/2; 100, \$1.29 1/2; Seller 1886—200 tons, \$1.24 1/2; 700, \$1.24 1/2 per ctl.

[COMMUNICATED.]

## Market Information.

## Live-stock.

Beef cattle are barely steady for choice, but fair to good are weak, with a strong selling pressure reported. Cows sold as low as 4 cts the past week. Mutton sheep are weak, with the offerings reported to be in excess of the demand. Lambs are barely steady. Hogs on spot are weak, but for delivery in November they are firm at an advance on quotations. The large and excessive supply of fruits, together with warm weather, appears to be against the meat market. Horses continue to be reported unchanged. Good draft horses are wanted, but small-sized, suitable for street cars, are slow and hard to sell. Matched horses, of fine carriage, easy movement, and gentle, are in good demand and fetch former prices. Saddle horses are only in fair request, with single footers given the preference.

The following are to-day's meat prices: Beef—Stall-fed 7 @ 7 1/2 c @ lb; grass-fed, extra, 6 @ 6 1/2 c; first quality, 5 1/2 c @—; second, 5 @ c—; third, 4 @ 4 1/2 c. Calves, small, 8 @ 9c; larger, 6 1/2 @ 7 1/2 c @ lb. Mutton—Ewes, 4 1/2 c; wethers, 5c. Lamb—Spring, 6 @ 6 1/2 c @ lb. Pork—Live hogs on foot, 3 1/2 @ 4c for grain and dairy fed; 2 1/2 @ 2 3/4 c for soft; dressed, 6 @ 7c for hard, and 4 @ 5c for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Cereals.

Crop estimates for this State have lowered very materially. Wheat is now placed at from 850,000 to 1,000,000 short tons for export. The last named is the estimated surplus of those who claimed six weeks ago that there would be all of 1,500,000 tons for export. The barley crop is placed at from 450,000 to 500,000 tons. The last is the estimate of persons who in June last claimed a crop of 900,000 tons.

Export buyers, aided by a small ring of mining stock-brokers on call, made desperate efforts to break wheat; but owing to the large fleet of engaged tonnage in port, with a very large number under charter to arrive, and holders of wheat not selling, the efforts were futile. On Friday \$1.27 1/2 was paid for choice No. 1 shipping and again on Saturday; but the sellers were bound to secrecy, so that the advanced price on the bids should not be known. On Monday the price was freely paid, and yesterday \$1.28 1/2 was paid.

Farmers' firmness in not offering their wheat on the market has kept Call Board manipulators from putting the price of choice No. 1 shipping to \$1.25 and even lower, as was their intention.

Barley has gained strength throughout the week under moderate receipts and an increased consumptive demand. The consumption of the State this season is placed at from 375,000 to 450,000 tons, with the crop about 500,000 tons. This will leave only a small quantity for export, and a very small quantity for each farmer to have at the end of the season to feed in harvest time.

Continued wet weather in England makes it morally certain that the wheat will be damp, and consequently heavier imports of America's dry wheat will be required for mixing.

In ry and buckwheat nothing of moment can be ascertained.

Oats have ruled exceedingly strong, with fancy prices obtained. It is claimed that choice No. 1 feed sold at \$1.80, and poor at \$1.25 and even higher. Light receipts, still lighter stocks, and a good demand are assigned as reasons for the advance.

Oregon advices report that the supply of oats and barley for feed is short in several sections for harvest purposes, and consequently drafts had to be made in districts having fair supplies. It is also claimed that never before at the close of the season was the supply of barley and oats so light. Some shipments of barley have been made from here.

Corn has ruled strong and high throughout the week under light, available supplies. Some choice was sold at an advance.

Eastern advices report that the damage to the corn crop in the West, where the drought was worst, varies from 20 to 40 per cent.

The sample market for wheat, barley and oats closed very strong to-day, with few sellers in the market.

## Dairy Product.

Contrary to general expectations, cheese continues to hold to firm prices. This is conceded to be due to dairymen sending only enough here to feed the market, thus keeping back any excuse for breaking prices by an undue selling pressure.

The consumption of butter the past fortnight has been exceedingly large, causing better prices to obtain, particularly for gilt-edge. Toward the close fair to good is pressing the market at concessions, owing to the hot weather being against its keeping. Retail dealers have commenced on the better grades of pickled butter, claiming it to be superior to most of the fresh received.

The stock of eggs has been fairly well cleaned, but owing to hot weather, receipts are put on the market as soon as received, with only strictly choice fresh laid from near-by places fetching 27 to 28 cts a dozen. Eastern eggs continue to arrive, but the quality is poor, necessitating low prices to clean up consignments. It is claimed that the ventures netted a loss to shippers.

## Vegetables.

Potatoes under light receipts and a large consumptive demand have been gradually advancing, with extra choice Peerless scarce and fetching as high as \$1.20 on the wharf since Monday last. Garnet Chilis have sold for more money, as have Early Rose; the latter did not fetch over \$1.15 for extra choice on the wharf. River Reds are in good demand at 70 cts to \$1 in sacks on the wharf. Sweet Potatoes have ruled low and weak throughout the week, with a wide range in values, owing to a wide difference in the quality. Some yams were in the market on Tuesday last and sold at 2 to 2 1/2 cts.

After a fortnight's depression in tomatoes with very low prices ruling owing to heavy receipts, prices began to strengthen on Monday, with a decided advance yesterday. Choice sold on the wharf at 60 cts in large boxes against 35 cts on Saturday last. The advance was due to light receipts and a good demand. To-day they were weaker. Cucumbers, summer squash, green peppers, green

okra, and egg plants have ruled weak throughout the week under heavy receipts and a strong selling pressure. Some parcels of the first three had to be dumped.

Red onions have ruled dull and heavy, but silver-skins have ruled firm with the market well in hand throughout the week. The inquiry at the close is fairly active.

Cabbages and root vegetables have ruled weak, and in buyers' favor, with receipts generally free.

String beans have been sold with considerable difficulty. Green Lima beans, under free receipts, have weakened off until 3 1/2 cts is the top for very choice.

## Bags.

The bag market is unsettled, with prices continually slipping down under light buying and a fairly strong selling pressure. Sales are reported to have been made as low as 6 1/2 cts for Calcuttas; but this low figure cannot be verified. It is known that 6 1/2 cts was paid, cash, for some on spot.

## Fruits.

The demoralized fruit market continued up to Tuesday, when a general better feeling was noticeable, resulting in slightly better prices for choice pears, plums and peaches; but grapes were weaker, with the very best from Fresno fetching only 75 cts a box.

Figs closed slow and lower, with 75 cts hard to obtain for the very best in large boxes.

Choice peaches fetched \$1 to-day; but the general run was from 60 to 85 cts, with carry-overs sold as low as 25 to 40 cts.

Blackberries broke to \$1.25 a chest, then rallied on Monday to \$2 to \$3; at this price they sold yesterday; to-day they are weak, at \$1.50 to \$3, with canners paying from \$1.50 to \$2.

Strawberries advanced to \$3 to \$5 per chest, but have since fallen to \$3 to \$4.

Raspberries, after going up to \$9 top price, closed weak to-day, at \$6 to \$8.

Fair to good apples are in heavy supply, with a strong selling pressure; but extra choice continue scarce.

Huckleberries are generally small and of poor quality, yet they sell at from 4 to 5 cts per pound.

Plums have been in overstock with considerable dumped; but to-day, under lighter receipts, there was a firm feeling, as canners cleaned up the market for the better varieties.

Pears, after going to \$1 to \$1.25 for choice varieties, closed to-day firm at a slight advance.

Large quantities of canteloupes were dumped the past week, which, with warmer weather and only moderate receipts, to-day caused a better feeling, with a slight advance obtained. Nutmeg canteloupes move off at \$1 and \$1.25 per cwt.

Watermelons are in heavy receipt, but warmer weather creates a better demand.

It is reported that \$20 to \$22 per ton has been paid for Zinfandel grapes, and \$16 for common wine grapes.

Nectarines are slow of sale.

## Hops.

It is difficult to get at the true condition of the hop market, for buyers talk down while paying well up for all choice parcels offered. It is said that higher prices were paid the past week than have been paid for all of three years past. It appears as if buyers have their wants met for the immediate future, and are waiting developments before buying more.

## Wool.

About all of the spring wools of this State have been marketed, and all that are now for sale are from Oregon. Fall wool is beginning to come forward, but, as yet, receipts are not sufficient to establish prices. It is generally claimed they will rule higher than last year. The feeling is one of strong confidence.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	311,251	233,281
In port, disengaged.....	58,690	102,774
In port, engaged.....	59,855	14,572

Totals.....429,796 350,627

The above gives a carrying capacity as follows: 1886, 687,673 short tons; 1885, 561,003 short tons; increase over last year, 126,670.

The exports by sea from this port from July 1, 1886, to date, compared with the like time in 1885, are as follows, in cents:

	1886.	1885.
Wheat.....	819,339	569,411
Barley.....	81,016	5,683
Oats.....	1,441	3,011
Corn.....	3,704	642

Poultry, after selling down to very low prices, began to improve on Tuesday, with slightly higher prices paid to-day for choice stock. Some fair-sized large hens sold at \$8; but the general run of the market was \$6 to \$7. Young fowls, also, did better.

Choice gilt-edged hay continues scarce, with \$13 readily obtainable afloat; but poor to good is in over-supply and weak.

Mustard seed continues to be purchased for Eastern account.

Ships are very weak for both spot and to arrive; indeed, for the latter no one will make a bid. The latest spot charter was made at 325 6d U. K.

DANIEL BEST'S

HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 25-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other food seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished.

We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to

DANIEL BEST,

513 Fifth Street, Oakland, Cal.

## THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions. This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by 6 inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms offer the best inducements to those seeking homes on any part of the Pacific Coast.

The field work of the subdivision of the famous

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now being prepared, and will be sent free on application. This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map

## FOR LEASE AND FOR SALE, 40,000 ACRES

Of good land in Fresno, near the County Seat. Some of this land is already irrigated, and all can be easily irrigated. It is adapted not only to grain, but also to Alfalfa, Fruit and Vines.

### 1000 ACRES

Of the above land for sale at the low price of \$20 per acre.

Apply to

E. B. PERRIN,  
402 Kearny St., San Francisco.

## CHEAP LANDS FOR SALE.

**5680 Acres** of rolling adobe hills, situated in Tehama County. Well watered by numerous springs, etc. Several thousand acres suitable for cultivation. Good two-story House, Barn and other out-buildings. Seven miles of fine wire fence.

**FIRST-CLASS CATTLE OR SHEEP RANGE.** The Cheapest tract of land in Tehama County. Price, \$6.00 per acre. Fair time and interest. Apply to

J. E. CROOKS, Benicia, Cal.

N. B. Upon timely notice, intending purchasers will be taken from Cottonwood to the ranch and returned free.

## \$125 PER ACRE

IN TRACTS TO SUIT; adjoining the site of the great Stanford University at Menlo Park; one hour from San Francisco, in Upper Santa Clara Valley; one mile from station; fine climate; beautiful scenery; excellent roads; title perfect; easy terms; first-class location for a home or investment.

Maps and particulars of

N. O. CARNALL,  
26 Montgomery St., San Francisco.

## \$500 to \$50,000.

JOHN B. GEMMILL,  
Red Bluff, or Tehama, Cal.

## HAPPY CHILDREN IN MUSICAL HOMES.

A sweet voice and a good repertoire of songs are valuable aid where juvenile humanity must be entertained. How convenient and useful, then, are such collections as the following:

### MERRY-MAKING MELODIES.

BY WADE WHIPPLE.

Price in Boards, 80 cts., in Paper, 65 cts.

By a child-lover, who, in his choice of subjects and his genial treatment of them, displays a happy talent for making home cheerful. "Chubby Little Chatterbox," "Grandpa," "Three Little Loafers," "Jollity Jack," "Teeter-Tauter," "Pink-a-Pank," are songs full of kindest humor, and there are others of higher grade. Sheet Music size; Piano or Organ accompaniment; 20 Songs; 9 Pictures.

### RHYMES AND TUNES.

BY MARGARET PEARMAIN OSBORN.

Price, \$1.50 in Cloth; \$1.00 in Boards.

A larger book than the other, and has, in many cases, German and English words. A true HOME BOOK, with such songs as "Snick Snack," "Tooreltoo," for nonsense; "London Bridge," "Perri Meri Dixi," "Lavender's Blue," etc., for Mother Goose wisdom; "Sandman," "Sleep, Darling," and other nursery songs, romantic songs, Star, May, Flower, Morning, Bird and all other varieties of song that children love. Full Piano and Organ accompaniments.

Mail for retail price.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., 867 Broadway, NEW YORK.

## VETERINARY SURGEON.

Late Veterinary Inspector of Cattle for the State of Kentucky.

Operative Surgery and Treatment of Chronic Lameness Specialties.

DR. S. B. SWIFT, San Jose, Cal.

## FRESNO COUNTY.

## BRIGGS' SELMA TRACT.

### THIS COLONY

Has been subdivided into 20-acre lots with convenient ROADS AND DITCHES on the land.

Situated 1½ miles N. W. of SELMA (a fast-growing Railroad town 15 miles S. W. of Fresno and the second in the County) and 2 miles S. of Fowler, also a Railroad town.

IT IS FIRST-CLASS

**Fruit,  
Vine, and  
Alfalfa  
Land,**

Some of it being specially adapted to Gardening. It has

### SUPERIOR WATER PRIVILEGES,

Having a main Canal 60 feet on the bottom, running through the land and all necessary main distributing ditches, making it a very desirable location for a Colony, as its

### WATER AND RAILROAD FACILITIES

Cannot be surpassed in the County.

**TO BE SOLD CHEAP,  
AND ON EXTREMELY EASY TERMS TO ACTUAL SETTLERS.**

## HOME SEEKERS!

DON'T MISS THIS OPPORTUNITY!

Correspondence solicited and lands shown free of charge.

L. SHARPE, Selma, Cal., or O. J. WOODWARD, Fresno, Cal.

## San Diego County! El Cajon Rancho!

16,500 acres, known as the Jarvis Tract, situated 13 miles from San Diego, surrounded by high hills, protected from winds and fogs—the most equable climate in the world—rich soil and lovely surroundings. Will be offered as a whole or in subdivisions, from 10 acres upward, at prices according to desirability, from \$10 to \$75 per acre, part cash, balance on time. The wonderful Raisins and Olives grown in this valley command the admiration of every one. Water from 6 to 12 feet. No irrigation, and Fruit and Raisins cured by solar heat. All the Semi-Tropical Fruits raised to perfection.

Also 1000 acres, the Smith Tract, adjoining, now in grain.

G. W. FRINK, General Manager Pacific Coast Land Bureau,

618 Market St., opp. Palace Hotel, and 15 & 17 Post St., San Francisco.

## The Triumphal Arch.

One of our younger correspondents thinks we have not given enough of the grand parade in this city August 3d. If we have been remiss in this respect we shall try to square the account by the crayon sketch, which we give on this page, of the triumphal arch, erected on Market street, and which was the cynosure of all eyes during the encampment. The structure con-

feet. Over its center a golden eagle, whose extended wings measure over 30 feet from tip to tip, perched on crossed cannon, below which hung the badge of the G. A. R.

Farragut above, with figures below representing the soldier and the sailor, respectively.

The design was by Wright & Sanders, architects of San Francisco; the carpenter work was

THE CANADIAN PACIFIC.—Englishmen are not in the least scared by the enormous cost of the Canadian Pacific Railway, so long as it may result in building up British trade. The London Chamber of Commerce petitions the Government to support the railway and the proposed steamship line to Australia and the East.

THE GOVERNMENT SILK STATION.—The U. S. Silk Station, at Piedmont, was recently sold

CRAYON SKETCH OF THE GRAND ARMY PARADE.—[PASSING THE GRAND ARCH, S. F., AUG. 3, 1886.]

sisted of a strong timber frame, heavily ballasted, and covered with canvas; but painted so skillfully as to impress the eye like a massive pile of granite.

The towers on either side were nearly 80 feet in height and surmounted with stacks of mimic but gigantic muskets and groups of national flags. The main arch had a span of nearly 60

The east side bore above the keystone the motto: "E Pluribus Unum." To the left, as you looked at it, was a statue of Washington 12 feet high, and to the right a corresponding effigy of Lincoln. Below these were colossal typical figures of a mechanic and a miner.

On the western side the motto, "The Union Forever," was flanked by statues of Grant and

done by Jos. R. Willcox; the painting by Longley & Johnson; and the statuary by F. Marion Wells. About 40,000 feet of lumber and 2000 yards of cloth were used in the building, and the total cost exceeded \$3000.

The structure as a whole was at once pleasing and majestic, and was greatly admired by the thousands who gazed upon and passed beneath it.

by order of the Commissioner of Agriculture, as the appropriation for work at that point had been exhausted.

THE amount of lumber coming up to Los Angeles from San Pedro daily is far heavier than ever known before in the history of the city.

## THE IRRIGATOR.

### Irrigation and Water Rights.

EDITORS PRESS:—The matter of irrigation and water rights is evidently the next big thing demanding the thought and action of the Legislature and people of California.

That it is an elephant of huge proportions is beginning to be seen and confessed. Very likely Governor Stoneman and his advisers will admit by this time that this is even so. So far as one can judge from published speeches, writings, resolutions and reports on the subject, no one has yet mastered it or has matured a satisfactory plan of legislation thereon. All agree that something ought to be done. Just what, who knows? That is where the writer stands, looking, listening. Yet the truth and the right cannot be far off, and with patient and conscientious thought we shall reach it in due time. In making the new departure it is important that we start right. And to suggest something on that point is the object of this article. And the first point I make is this: We must be careful in our effort to be generous to holders of desert lands, to large water corporations and to the State, not to be mean and unjust to the people who have bought farms and established homes on the streams whose waters it is proposed to divert from their natural channels. To be generous at the expense of justice is not generally regarded as a virtue. The lands bordering on nearly all the streams in California, little and great, were bought and occupied by settlers long before lands remote from them. And the pioneer farmers of our State bought their lands and located their homes there for the obvious reason that they supposed that they thereby acquired riparian rights. And they did acquire them—according to all previous English and American legislation; according to all decisions of courts, up to the present time. And the extra price asked and paid for such lands shows the universal belief in riparian rights. Just the extent of these rights has often been a matter of dispute. But up to this time I know of no court or legal authority which has questioned the right of such riparians to water sufficient for stock and domestic purposes. And if for any public use it has been found necessary to deprive said riparian of that amount of water, never have the courts denied him full indemnity for the loss. Let it be borne in mind, also, that the riparian is annually exposed to great inconvenience and damage from overflow and wash of lands. The writer of this article has lost within three years not less than \$2000 worth of property from this cause, and some of his neighbors even more. And it is no more than even justice to accord to him the perpetual right to water for stock and domestic use.

And would it not be the rankest injustice to allow a corporation to put across the river just above me a cement dam, and divert every drop of water from the natural channel during the summer, and then in winter allow the flood to rush down again upon me and sweep away my property, and all without one cent of indemnity? Is it possible the doctrine of such a right as that can be put into our Constitution? Is it possible a court of justice will sustain and indorse it?

Perhaps it may be replied by the anti-riparians that the companies or persons diverting the streams for irrigation purposes cannot afford to indemnify riparians for loss of water, for stock and the house; cannot afford to pay them enough to pipe water or dig wells, etc. If they take this ground, then we reply: This is a confession that the advantages of these irrigation schemes are small—not enough to pay for the damage it works! But if, on the other hand, the advantages are to be immense, as they claim, enriching individuals, corporations and the State, then what excuse is there for refusing to pay the damages entailed upon those whose waters they take away?

It may be said, "The irrigationists are not opposed to proper indemnity," etc. Then why have they studiously avoided all allusions to it in all their speeches, conventions, manifestoes, etc.? They have been asked to define their position on the matter in the public prints, but to this day they are silent, and because they have been thus reticent on this most important matter they have aroused against them the suspicions and opposition of pretty much all farmers living on the banks of rivers throughout the State.

Some years since some farmers above me on the Santa Clara river obtained a charter to divert a portion of the waters of the river for irrigation. Since that time the franchise has fallen into the hands of the man who owns the most land of any one living in the county. And that will be the fate of nearly all the great irrigation franchises in our State.

Other companies, still further above, have been organized, till now, in ordinary seasons, water ceases to flow in mid-summer by my place, and my neighbors and I have had to haul water for our stock, etc., from a distant spring. Two years ago, a neighbor and I went to the owner of the ditch first mentioned (the large land-holder), and asked him to let enough water pass down the river to supply the house and the barn-yard. He replied: "Perhaps I may do it as a favor, but not as a right!" We talked about a lawsuit; but what can a poor

man do in a lawsuit against the rich, with "the law's delay," the venality of judges and juries, and the ingenious deviltry of well-paid lawyers, against him?

Brother farmers living on the banks of rivers, are you ready to make the Constitution and laws such that you can be snubbed after the above manner? Let me not be misunderstood. I am in favor of irrigation; I am in favor of the appropriation of the waters of our rivers and streams so as best to develop the resources of our State; I am in favor of legislation indispensable thereto—but I claim that proper indemnity shall be made for loss of water to riparians injured thereby.

S. BRISTOL.

San Buenaventura, Cal., Aug. 5, 1886.

## HORTICULTURE.

### Fruit and Grapes in the Mountains.

EDITORS PRESS:—I had promised you in the spring to send you some notes on the condition of the fruit crop in this part of the State, but I was glad I did not; otherwise, I should have to take back a good deal of what I might have reported then.

Of course you saw, in our local papers, about the time the fruit trees were out full of blossoms, the same old stereotyped phrase, "The fruit crop in the mountains will be immense this year." I am very sorry to say that such is not the case, for our fruit crop—everything bearing taken in, frost, gum and insect pests—will be rather slim in the mountains, and in the foothills and valleys it will not be "immense."

To start with, we had a frost on the night of the 11th of March that killed the almonds and apricots and half the peaches and early plums. But, on the other hand, the "gum" that has for the last 10 years played such great havoc among our stone fruit was not so bad this year, our cherry and plum crop having been an average, and the peach crop—notwithstanding frost and gum—better than was expected.

The pears were so far advanced, though not yet out, on that frosty night of the 11th of March, that the stems got badly injured by the frost, and for that reason they fell off badly after being just formed. We reckoned then on a good average, but we reckoned without that greatest of all pests, the codlin moth. Our apple crop, I must say, was promised to be immense, so full were the trees, but, at this time of writing, that crop may be well regarded as annihilated, so great have been the ravages of the codlin moth—greater than I ever saw it before. Two-thirds of the crop have already dropped off, and the remaining third is all wormy. The worst is, that the second brood of the codlin moth, having no more sound apples to ruin, fell back on the pears, of which from one-fourth to one-half, especially Bartlett's and Clairgeaus, are already attacked by the worms and falling off badly. I find three-fourths of my Bartlett's wormy, and still I use "bands" of sack-cloth on my trees, but nobody else around me does. It must be said that the ravages of that terrible pest, the codlin moth, are this year simply appalling, and its ravages are far from being confined to the mountains, for foothills and valleys are, I am told, as badly affected, and more particularly so where nothing is done in checking the breeding of the pest. I intend, when time will permit, to discuss in your columns those two most important questions so vital to the fruit interest of California, the insect pests of California and the remedies to check their ravages, and the "gum," which this year seems to have spread all over the State. It is no use to disguise the truth; we have to do something or the fruit-grower's business, so precarious already, will have to go to the dogs. I presume that by this time every fruit-grower in California is satisfied that our indolent Board of Horticulture is only an ornament to the State, and the office of Inspector of Fruit Pests, whether the latter be a competent or incompetent horticulturist, a mere sinecure. What is the use of having the Legislature pass laws in regard to the enforcement of rules and regulations for the destruction of insect pests, and not have the law enforced? Better abolish the law, Board and Inspector of Fruit Pests, and save the State \$10,000 a year. [There has no doubt been much ground for criticism of the State Board, but we expect better of it through the work of the present inspector. It may be well to hold judgment in abeyance until the Sacramento Fruit-growers' Convention in November.—EDS. PRESS.]

As to grapes, the crop will be very large in the mountains, notwithstanding a little coulure with certain varieties, such as Black Prince, Muscatels and other sorts; in fact, the coulure was very mild, and nothing to compare with what it had been in the counties around the bay. Zinfandels are looking splendid.

The small fruit crop has not been so large as usual, except gooseberries and currants.

On my own place I have a 15-year-old Missouri Paw-paw loaded with fruit; and in nursery rows a couple of hundred two and three-year-old Proporturiens walnut trees with one to four nuts on. My larger trees have not a large crop this year. Black mulberries and medlars never fail to have a good crop, also chestnuts, as they all bloom very late in the spring.

FELIX GILLET.

Nevada City, Aug. 13, 1886.

## THE DAIRY.

### The National Oleomargarine Law.

The following is the full text of the new U. S. law on the manufacture and sale of oleomargarine, as passed by both Houses of Congress and signed by the President:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for purposes of this act the word "butter" shall be understood to mean the food product usually known as butter, and which is made exclusively from milk or cream, or both, with or without common salt, and with or without additional coloring matter.

Sec. 2. That for the purposes of this act certain manufactured substances, certain extracts and certain mixtures and compounds, including such mixtures and compounds with butter, shall be known and designated as "oleomargarine," namely: All substances heretofore known as oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine and neutral; all mixtures and compounds of oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine and neutral; all lard extracts and tallow extracts, and all mixtures and compounds of tallow, beef, fat, suet, lard, lard oil, vegetable oil, annatto and other coloring matter, intestinal fat and offal fat made in imitation or semblance of butter, or when so made calculated or intended to be sold as butter or for butter.

Sec. 3. That special taxes are imposed as follows:

Manufacturers of oleomargarine shall pay \$600. Every person who manufactures oleomargarine for sale shall be deemed a manufacturer of oleomargarine.

Wholesale dealers in oleomargarine shall pay \$480. Every person who sells or offers for sale oleomargarine in the original manufacturer's packages shall be deemed a wholesale dealer in oleomargarine. But any manufacturer of oleomargarine who has given the required bond and paid the required special tax, and who sells only oleomargarine of his own production, at the place of manufacture, in the original packages to which the tax-paid stamps are affixed, shall not be required to pay the special tax of a wholesale dealer in oleomargarine on account of such sales.

Retail dealers in oleomargarine shall pay \$48. Every person who sells oleomargarine in less quantities than 10 pounds at one time shall be regarded as a retail dealer in oleomargarine. And sections 3232, 3233, 3234, 3235, 3236, 3237, 3238, 3239, 3240, 3241 and 3243 of the Revised Statutes of the United States are, so far as applicable, made to extend to and include and apply to the special taxes imposed by this section, and to the persons upon whom they are imposed: Provided, that in case any manufacturer of oleomargarine commences business subsequent to the thirtieth day of June in any year, the special tax shall be reckoned from the first day of July in that year, and shall be \$500.

Sec. 4. That every person who carries on the business of a manufacturer of oleomargarine without having paid the special tax therefor, as required by law, shall, besides being liable to the payment of the tax, be fined not less than \$1000 and not more than \$5000; and every person who carries on the business of a wholesale dealer in oleomargarine without having paid the special tax therefor, as required by law, shall, besides being liable to the payment of the tax, be fined not less than \$500 nor more than \$2000; and every person who carries on the business of a retail dealer in oleomargarine without having paid the special tax therefor, as required by law, shall, besides being liable to the payment of the tax, be fined not less than \$50 nor more than \$500 for each and every offense.

Sec. 5. That every manufacturer of oleomargarine shall file with the Collector of Internal Revenue of the district in which his manufactory is located such notices, inventories and bonds, shall keep such books and render such returns of materials and products, shall put up such signs and affix such number to his factory, and conduct his business under such surveillance of officers and agents as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may, by regulation, require. But the bond required of such manufacturer shall be with sureties satisfactory to the Collector of Internal Revenue, and in a penal sum of not less than \$5000; and the sum of said bond may be increased from time to time, and additional sureties required at the discretion of the collector, or under instructions of the Commissioner of Internal Revenue.

Sec. 6. That all oleomargarine shall be packed by the manufacturer thereof in firkins, tubs or other wooden packages not before used for that purpose, each containing not less than 10 pounds, and marked, stamped and branded as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe; and all sales made by manufacturers of oleomargarine and wholesale dealers in oleomargarine shall be in original stamped packages. Retail dealers in oleomargarine must sell only from original stamped packages, in quantities not exceeding 10 pounds, and shall pack the oleomargarine sold by them in suitable wooden or paper packages, which shall be marked and branded as the Commissioner of Internal Revenue.

with the approval of the Secretary of the Treasury, shall prescribe. Every person who knowingly sells or offers for sale, or delivers or offers to deliver, any oleomargarine in any other form than in new wooden or paper packages, as above described, or who packs in any package any oleomargarine in any manner contrary to law, or who falsely brands any package or affixes a stamp on any package denoting a less amount of tax than that required by law, shall be fined for each offense not more than \$1000 and be imprisoned not more than two years.

Sec. 7. That every manufacturer of oleomargarine shall securely affix, by pasting, on each package containing oleomargarine manufactured by him, a label on which shall be printed, besides the number of the manufactory and the district and State in which it is situated, these words: "Notice.—The manufacturer of the oleomargarine herein contained has complied with all the requirements of law. Every person is cautioned not to use either this package again or the stamp thereon again, nor to remove the contents of this package without destroying said stamp, under the penalty provided by law in such cases." Every manufacturer of oleomargarine who neglects to affix such label to any package containing oleomargarine made by him or sold or offered for sale by or for him, and every person who removes any such label so affixed from any such package, shall be fined \$50 for each package in respect to which such offense is committed.

Sec. 8. That upon oleomargarine which shall be manufactured and sold, or removed for consumption or use, there shall be assessed and collected a tax of two cents per pound, to be paid by the manufacturer thereof; and any fractional part of a pound in a package shall be taxed as a pound. The tax levied by this section shall be represented by coupon stamps; and the provisions of existing laws governing the engraving, issue, sale, accountability, effacement and destruction of stamps relating to tobacco and snuff, as far as applicable, are hereby made to apply to stamps provided for by this section.

Sec. 9. That whenever any manufacturer of oleomargarine sells, or removes for sale or consumption, any oleomargarine upon which the tax is required to be paid by stamps, without the use of the proper stamps, it shall be the duty of the Commissioner of Internal Revenue, within a period of not more than two years after such sale or removal, upon satisfactory proof, to estimate the amount of tax which has been omitted to be paid, and to make an assessment therefor and certify the same to the collector. The tax so assessed shall be in addition to the penalties imposed by law for such sale or removal.

Sec. 10. That all oleomargarine imported from foreign countries shall, in addition to any import duty imposed on the same, pay an internal revenue tax of 15 cents per pound, such tax to be represented by coupon stamps as in the case of oleomargarine manufactured in the United States. The stamps shall be affixed and canceled by the owner or importer of the oleomargarine while it is in the custody of the proper custom-house officers; and the oleomargarine shall not pass out of the custody of said officers until the stamps have been so affixed and canceled, but shall be put up in wooden packages, each containing not less than 10 pounds, as prescribed in this act for oleomargarine manufactured in the United States, before the stamps are affixed; and the owner or importer of such oleomargarine shall be liable to all the penal provisions of this act prescribed for manufacturers of oleomargarine manufactured in the United States. Whenever it is necessary to take any oleomargarine so imported to any place other than the public stores of the United States for the purpose of affixing and canceling such stamps, the collector of customs of the port where such oleomargarine is entered shall designate a bonded warehouse to which it shall be taken, under the control of such customs officer as such collector may direct; and every officer of customs who permits any such oleomargarine to pass out of his custody or control without compliance by the owner or importer thereof with the provisions of this section relating thereto, shall be guilty of a misdemeanor, and shall be fined not less than \$1000, nor more than \$5000, and imprisoned not less than six months nor more than three years. Every person who sells or offers for sale any imported oleomargarine, or oleomargarine purporting or claimed to have been imported, not put up in packages and stamped as provided by this act, shall be fined not less than \$500, nor more than \$5000, and be imprisoned not less than six months nor more than two years.

Sec. 11. That every person who knowingly purchases or receives for sale any oleomargarine which has not been branded or stamped according to law shall be liable to a penalty of \$50 for each such offense.

Sec. 12. That every person who knowingly purchases or receives for sale any oleomargarine from any manufacturer who has not paid the special tax shall be liable for each offense to a penalty of \$100, and to a forfeiture of all articles so purchased or received, or of the full value thereof.

Sec. 13. That whenever any stamped package containing oleomargarine is emptied, it shall be the duty of the person in whose hands the same is to destroy utterly the stamps thereon, and any person who willfully neglects or refuses so to do shall, for each such offense, be fined not exceeding \$50, and imprisoned not less than 10 days nor more than six months.

And any person who fraudulently gives away or accepts from another, or who sells, buys or uses for packing oleomargarine, any such stamped packages, shall, for such offense, be fined not exceeding \$100, and be imprisoned not more than one year. Any revenue officer may destroy any emptied oleomargarine package upon which the tax-paid stamp is found.

Sec. 14. That there shall be in the office of the Commissioner of Internal Revenue an analytical chemist and a microscopist, who shall each be appointed by the Secretary of the Treasury, and shall each receive a salary of \$2500 per annum; and the Commissioner of Internal Revenue may, whenever in his judgment the necessities of the service so require, employ chemists and microscopists, to be paid such compensation as he may deem proper, not exceeding, in the aggregate, any appropriation made for that purpose. And such commissioner is authorized to decide what substances, extracts, mixtures or compounds which may be submitted for his inspection in contested cases are to be taxed under the act; and his decision in matters of taxation under this act shall be final. The commissioner may also decide whether any substance made in imitation or semblance of butter, and intended for human consumption, contains ingredients deleterious to the public health; but in case of doubt or contest his decisions in this class of cases may be appealed from to a board hereby constituted for the purpose, composed of the Surgeon-General of the Army, the Surgeon-General of the Navy, and the Commissioner of Agriculture, and the decision of this board shall be final in the premises.

Sec. 15. That all packages of oleomargarine subject to tax under this act that shall be found without stamps or marks as herein provided, and all oleomargarine intended for human consumption which contains ingredients adjudged, as hereinbefore provided, to be deleterious to the public health, shall be forfeited to the United States. Any person who shall willfully remove or deface the stamps, marks or brands on a package containing oleomargarine, taxed as provided herein, shall be guilty of a misdemeanor, and shall be punished by a fine of not less than \$100 nor more than \$2000, and by imprisonment for not less than 30 days nor more than six months.

Sec. 16. That oleomargarine may be removed from the place of manufacture for export to a foreign country without payment of tax or affixing stamps thereto, under such regulations and the filing of such bonds and other security as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe. Every person who shall export oleomargarine shall brand upon every tub, firkin, or other package containing such article the word "oleomargarine" in plain Roman letters not less than one-half inch square.

Sec. 17. That whenever any person engaged in carrying on the business of manufacturing oleomargarine defrauds, or attempts to defraud, the United States of the tax on the oleomargarine produced by him, or any part thereof, he shall forfeit the factory and manufacturing apparatus used by him, and all oleomargarine and all raw material for the production of oleomargarine found in the factory, or on the factory premises, and shall be fined not less than \$500 nor more than \$5000, and be imprisoned not less than six months nor more than three years.

Sec. 18. That if any manufacturer of oleomargarine, any dealer therein, or any importer or exporter thereof, shall knowingly or willfully omit, neglect or refuse to do, or cause to be done, any of the things required by law in the carrying on or conducting of his business, or shall do anything by this act prohibited, if there be no specific penalty or punishment imposed by any other section of this act for the neglecting, omitting or refusing to do, or for the doing or causing to be done, the thing required or prohibited, he shall pay a penalty of \$1000; and if the person so offending be the manufacturer of or a wholesale dealer in oleomargarine, all the oleomargarine owned by him, or in which he has any interest as owner, shall be forfeited to the United States.

Sec. 19. That all fines, penalties, and forfeitures imposed by this act may be recovered in any court by competent jurisdiction.

Sec. 20. That the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may make all needful regulations for the carrying into effect of this act.

Sec. 21. That this act shall go into effect on the ninetieth day after its passage; and all wooden packages containing 10 or more pounds of oleomargarine found on the premises of any dealer on or after the ninetieth day succeeding the date of the passage of this act shall be deemed to be taxable under Sec. 8 of this act, and shall be taxed, and shall have affixed thereto the stamps, marks, and brands required by this act, or by regulations made pursuant to this act; and for the purpose of securing the affixing of the stamps, marks and brands required by this act, the oleomargarine shall be regarded as having been manufactured and sold, or removed from the manufactory for consumption or use, on or after the day this act takes effect; and such stock on hand, at the time of the taking effect of this act, may be stamped, marked and branded under special regulations of the Commissioner of Internal Revenue, approved by the Secretary of the Treasury; and the Commissioner of Internal Revenue may authorize the holder of such packages to mark and brand the same and to affix thereto the proper tax-paid stamps.

### Wilder's Dairy.

The Santa Cruz Sentinel gives the following particulars concerning the Wilder dairy at Santa Cruz, of which we gave an account some months ago: About three miles from Santa Cruz, in one of the many canyons that cross the coast road, is one of the most noteworthy and extensive dairy ranches on the Pacific Coast, the property of D. D. Wilder. On this ranch are employed 16 men, who twice a day milk nearly 300 cows. Each man has certain cows to strip of the lacteal fluid, some to the number of 25. As soon as the pail is well filled, the milker goes to a strainer close by and pours in the milk, which runs through a tin pipe and empties into a tank of 200 gallons capacity in the interior of the large milk-room, wherein is a "De Laval" cream separator of wonderful power. The centrifugal force is so great that the cream is separated from the milk, thence emptying into a large can, while the creamless milk passes off, empties into a trough and is carried through an underground pipe to the pig-pen, a distance of 200 yards. This separator has a capacity of working 120 gallons per hour, and a six-horse power is used in running it. When regulating the revolutions, a period of 15 minutes is consumed to bring it up to the proper motion, and a sensation similar to the shock from a galvanic battery is experienced by the bystander.

This is said to be the only cream separator in operation in this county, and Mr. Wilder speaks highly of its merits, and says that with it, since October 1st last, a period of nine months, he has turned out over 50,419 pounds of butter, while from October 1, 1884, to October 1, 1885, a period of 12 months, by the old process, he turned out only 43,984 pounds. At present he makes 140 pounds of butter per day, all of which finds a ready market in San Francisco. In a clean and capacious room, adjoining the milk-room, is a large churn which is turned by steam and it is said as high as 300 pounds of butter have been churned at one time. With the use of an ice-chest to cool the animal heat from the milk, and by the new process, butter can be made in one-half an hour after the milk leaves the cow. All the appointments about this dairy are perfect. Of the 2330 acres of land owned by Mr. Wilder, 80 are in the cereals now ready for the thrasher and 80 are in hay, and a number of acres are in corn, pumpkins and beets, while the greatest portion is pasture and waste land.

Mr. Wilder is yearly improving his stock by working in the Durham breed, and in time will make his dairy second to none in the United States.

## SHEEP AND WOOL.

### Wool-growing and Its Manufacture.

From the earliest period of history, the growing and manufacture of wool has been one of the leading industries of the world. Sheep husbandry has also been considered as the highest type of agricultural employment. It affords abundant opportunity to its followers for study and reflection—opportunities which, in early days especially, were most profitably employed in advancing both the moral and the intellectual condition of mankind. In addition to the most valuable, most healthy and most easily wrought material for clothing, the sheep also furnishes the most nutritious animal food. This class of agriculture has ever been encouraged as a profitable source of employment, and the one above all others best calculated to preserve the original fertility and productiveness of the soil—so unlike the cultivation of the cereals and most other products which constantly deteriorate the land which is devoted to their culture.

While very little improvement has been made in the husbandry of the business even from its earliest inception, its manufacture has been made the subject of great progress and improvement. That has been brought fully under the influence of the material sciences. Every step in its progress from the back of the animal through its clipping, washing, carding, spinning, weaving, and dyeing, has been carefully studied by the scientist and inventor until its manufacture may now be considered almost perfect.

It would seem that with our increased population and needs, such a great and important industry would meet with a most encouraging hand from both people and Government—to the end that our country may be placed as far as possible above dependence upon any other land for its supply of one of the most important necessities of life. But, whether from lack of proper appreciation, interest or knowledge, it cannot be told, the facts are that there is a great spirit of distrust and unrest in regard to the manner in which our legislators have treated this industry, whether in connection with field or loom.

Legislation ought to be so devised, as foreshadowed by the fathers of the Republic, that the wool-growers of the United States might supply our manufacturers with all the varieties and to the fullest extent of their demands; while the manufacturers should, at the same time, be placed in a position to supply all our people with all the woolen goods needed for home consumption. The interests of wool-growers and wool manufacturers ought to be

made identical, and the combined industry of the two the chief corner-stone that should underlie all our varied systems of industry. Such a course of legislation would relieve our people of the heavy burdens of bulky transport of the raw material, and under foreign flags at that, and a like cost with duties added upon much of the same material imported in a different shape. Manufactures and agriculture should ever go hand in hand to the end that we may build up prosperous communities and secure employment to the incoming and increasing thousands which are annually added to our industrial ranks.

### The Mohair Industry.

Closely allied to the wool industry is that involved in raising of the beautiful, long-haired goat of Angora, and of all States in the Union, California is the one best calculated by location and climate for this industry. The first essential of a mohair goat ranch is climate. In Western Asia, some 200 miles inland and 4000 feet above the sea level, lies the native home of the Angora goat, with a climate and surroundings somewhat peculiar, but almost identical with those of the interior of California. No better place exists in the wide world, outside of its native home, than among the foothills of the western slope of the Sierras for establishing the mohair industry. We have no time in this connection to enter largely into a discussion of this question, but propose to refer to it more fully at some future time. The business is not new or altogether unknown in this State. It has already, so far as the production of the fleece is concerned, passed the experimental stage here. It should and might be made an important California industry. There is now a good market for the fleece and the demand must largely increase in the early future.

### Wrinkled Sheep.

A. B. Allen, in the New York Tribune, discusses the subject of wrinkles in sheep, and evidently thinks they might be dispensed with. He says: It is admitted by those who favor them that in what they call the old-fashioned, less-improved merinos, wrinkles are injurious to the fleece, and that with them the staple or fiber of the wool is shorter, coarser, and abounding more or less in hair. This renders the fleece quite uneven, and materially lessens its value. Yet suppose it to be the case that two wrinkled sheep shear as much wool as three smooth ones, I think the cost of it from the former would be quite as much as from the latter, and I doubt whether it can ever be grown of so even a length of staple. In addition to this, the smooth-skinned sheep can be sheared in one-third to one-fourth the time of the grossly wrinkled, and their skins are never painfully and badly cut, as is unavoidable with huge folds.

Although the contenders for these monstrous folds or wrinkles assert that the sheep bearing them are as hardy, prolific, thrifty, and make as good mutton as others, it is not in the nature of things that they should. They will endure cold, perhaps, as well, but when it comes to hot weather how can it be the case with such numerous thick folds of skin and wool covering their bodies? The extra growth of these must consume the most food, and necessarily draw from the juiciness of the flesh and leave it comparatively dry and unsavory. I cannot conceive how the carcasses of such sheep can properly fatten and abound with tender, lean, nicely-marbled, savory mutton, as it is said the well formed smooth-skinned make. Many of the merino flockmasters are strenuously opposed to these huge folds and wrinkles, and only cultivate those of moderate form. They say that the motive of the breeders of the monstrosities is to enable them to boast of the superior weight of their fleeces, and thus give this sort of sheep the fashion and a preference, at much higher prices, in the sale of them.

## THE APIARY.

### Muth-Rasmussen's Device.

EDITORS PRESS:—Your engraving of my device in the RURAL PRESS of July 31st is very good, except that the two guide-posts should come up even with the top edge of the guide-back, as mentioned in the description. Otherwise they cannot accomplish their object, viz., guiding the frame sidewise. As the three up-rights, which are the principal part of the implement, are hidden from view by the frame, filled with sections, lying upon them, it is necessary that the frame should be accurately guided both ways before you begin pressing down upon it, as well as during the operation.

As the article was written nearly a year ago, it is consequently now the second season in which I am using the device, and I may say that I am as well pleased with it to-day as I was on the first day of its invention. In fact I do not see how I could get along without it with my present system of management.

I now smoke the bees out from under the separators and brush them off from the opposite side of the combs, and I very seldom have any cells uncapped by the bees, as but few are left to do any mischief.

WM. MUTH-RASMUSSEN.

Independence, Cal., August 4, 1886.

## THE STOCK YARD.

### A Nevada Man's Experience with Shorthorns.

We find in the Inyo Register a letter from W. J. Marsh of Fort Churchill, Nevada, which gives what the writer describes as "a few plain, common facts regarding the improvement of cattle." There is a general feeling among farmers and stockmen that to pay more than \$50 for a sire is the prelude to financial ruin. They go on supplying three-year-old beef steers to the butchers that weigh 500 pounds, and are elated if a few reach 550 pounds, and fail to see that by the expenditure of \$200 to \$300 for a sire that is purely bred, and worth something to their herds, they could sell two-year-olds as heavy as their three-year-olds now average, saving a year in time and the cost of keeping and all attendant risks for a year. I recently sold 30 beef steers, all three years old but six, which were four years old. Among them was a one-half Shorthorn steer, three years old, and in no way superior to the average half-breed steer, that weighed alive, after driving 26 miles in one day, 1284 pounds. The other 29 made an average live weight of 1049 pounds, and dressed only 50 per cent of live weight, or 524 pounds, while the grade Shorthorn dressed 730 pounds, or 57 per cent of live weight. He dressed 80 pounds more than the best four-year-old, and 206 pounds more than the other 29 head averaged. This steer ranged in the mountains with the others and fed with them, showing his contempt for the stale and false notion that Shorthorns cannot rustle for a living, and proving their ability to outgrow other animals under equal conditions. All this is simply the result of using a pure Shorthorn sire. This steer did not cost me any more than the others, and on the butcher's block brought me over \$15 more than they did. Now, I should like to ask such of your readers as think they cannot afford to buy thoroughbred sires, how many half-breed Shorthorn steers it will take to pay for even a \$500 bull, out of the extra pounds of meat they will dress over and above the animals they are now raising? The first 40 steers raised will cover the price. When there are 40 steers there will be 40 heifers that will be worth \$25 a head more than their mothers as a foundation for further improvements. To all intents the sire is half the herd in determining the force for good or evil within it. No breeder of cattle can afford to use a common sire. To do so is a bad type of economy—a penny wise and pound foolish practice. The man who does not improve his stock will get left. Breed from the best forever, which is the only road to success.

### Meat Supply of Great Britain.

At a "conference on the supply of meat" in London last month, Major Craigie read a paper, of which the following is a summary: Although the 36,000,000 people of the United Kingdom have not for many years raised all the meat they consume, home produce still forms by far the largest section of the whole supply. On the basis of the estimates commonly employed, it is supposed that 25 per cent of our cattle, 40 per cent of our sheep, and 116 per cent of the enumerated pigs of each year go annually to the butcher. If so, the home produce of 1885 may be put at 1,361,000 tons of meat. The imported supplies were of two sorts, live animals and dead meat, the former representing 129,000 tons, and the latter 335,000 tons of meat. The entire consumption of the country was thus 1,825,000 tons, or 112 pounds to each inhabitant.

Analyzing this total more closely, so as to discover how much comes from Colonial sources, the proportion does not appear to be absolutely great, the supply being made up as follows:—

	Tons.	Per ct. of whole.	Lb. per head.
Home produce.....	1,361,000	74.6	83.9
Imported from Colonies..	67,000	3.7	4.1
" " U. S.....	293,000	16.0	18.0
" " Europe....	96,000	5.3	5.9
" " S. America	8,000	.4	.5
	1,825,000	100.0	112.4

In this calculation the several sorts of meat are combined. If it is preferred to distinguish beef, mutton and the products of the pig—bacon, ham and pork, a rough classification may be made, assuming that the undistinguished tinned meat imports are about equally divided between beef and mutton.

	Beef.	Mutton.	Pig meat.	Total.
Home produce.....	728,000	376,000	257,000	1,361,000
Live imports.....	107,000	21,000	1,000	129,000
Dead meat ...	71,000	42,000	222,000	335,000
	906,000	439,000	480,000	1,825,000

The Colonial import of dead meat represents 44,000 tons, whereof only 2000 tons are distinguished as beef, 17,000 tons as mutton, and 15,000 as pig meat, leaving 10,000 tons in the unenumerated class. Almost all the latter comes from the Australasian colonies, and is, no doubt, chiefly mutton.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## The Irrigation Question.

We gave recently the views of Bro. J. V. Webster on some features of the irrigation question. One of our Riverside readers, Mr. James Boyd, who has been long known and respected by us, sends us a communication, which we print below, contesting some of the points made by Mr. Webster. We believe that frank discussion by those honestly moved in this matter will be for the general benefit, and lead to a correct understanding of the problem sooner than anything else. Mr. Webster studied well the Constitution of the State while he was a member of the convention which made it. We are sure that a comparison of views by such earnest and intelligent students of the question as Messrs. Webster and Boyd will be of mutual advantage to them and to others who follow the discussion:

EDITORS PRESS:—In your issue of August 7th is an article on the "Water Question" from the *Patron*, by Bro. Webster, which, being written under a total misapprehension of facts, I propose to set him right from our standpoint here in Southern California. To quote from Mr. Webster: "It is rather late in the history of the world to make many converts by misrepresentation, and he who endeavors to foist a fraud on his neighbor is usually the first to bite the dust."

Such is the quotation, and it is applicable to Mr. Webster in an eminent degree—not that we accuse him of willful misrepresentation, but he has taken his facts (?) from papers interested on the side of the monopolists.

Mr. Webster says "there is no alternative left the producer in the irrigated districts but to pay the price demanded for water or to perish." Now, Mr. Webster, the shoe is just on the other foot; for if this doctrine of riparian rights is to prevail, we will have no alternative but to pay the price demanded by the riparian proprietors "for water or perish."

If Mr. Webster had studied the Constitution of the State he would have found that it was mandatory on the part of Boards of Supervisors of the several counties to annually fix the rates to be paid for water for the ensuing year, so that we are not by any means at the mercy of any corporation. If he had also posted himself on the true status of land ownership here in Southern California he would have come to a very different conclusion to what he has done.

The average resident of the upper portion of the State is as ignorant of the true state of affairs in Southern California as the average Eastern man is ignorant of the Chinese question on the Pacific Coast, and they seem to be just as unwilling to learn.

## Water and Land.

The proprietors of the PACIFIC RURAL PRESS are well aware of how matters are conducted in Redlands, and it may stand as typical of all the newer fruit-raising settlements in Southern California, and we refer Mr. Webster to them for confirmation of what we say. The owners of land in Redlands are also the sole owners of the water, and in place of selling the water they simply levy assessments to pay running expenses. As long as there is plenty of water each one has all he wants to use, but should a scarcity occur, it would be divided *pro rata* according to acreage. In Los Angeles city and suburbs, the city authorities own the water, and by law they are the ones to fix the rates. Riverside is the only place that I know of in this county where the rates are fixed by law, and that is only because the plan of selling the water with the land had not been evolved by the necessities of the case.

Redlands profited by Riverside's example and advice, and adopted her present satisfactory system. Nine-tenths of the owners of the land in Riverside also own the water, but because the other one-tenth will not purchase stock, we are perforce compelled to submit to having our rates fixed by the "powers that be."

The Bear Valley reservoir, which has a capacity of water enough to irrigate 12,000 or 15,000 acres, is owned by a corporation. But who is the corporation? Simply the owners of the lands to be benefited, and where stock is held by outsiders, it is only because Mr. Brown, the projector, could not induce the land-owners to take hold. I think it is safe to say that it does not enter into the head of any one to sell water for use. Stock can be bought which will give the holder a right to his *pro rata* of water, and I would say that stock can yet be bought at one-tenth of its value, as will be seen in a few years.

## Land Monopoly.

Our troubles on the riparian question do not come at all from water monopoly, but from land monopoly. We would here call Mr. Webster's attention to Sec. 2, Article 17, of our State Constitution, which says: "The holding of large tracts of land, uncultivated and unimproved, by individuals and corporations, is against the public interest and should be discouraged by all means not inconsistent with the rights of private property."

In Southern California we went to work to carry out these principles and bought out large ranches and dug ditches and sold the land and water with it in 5, 10, 15 and 20-acre lots, and where there was nothing to be seen but cactus and sagebrush, and nothing heard but the howl of the coyote, we have rose-embowered and vine-clad cottages and the busy hum of industry on every hand. Take, for instance, the Riverside of 1870 and the Riverside of 1885-6, and mark the contrast. In 1870 there was only 20 miles of railroad in all of Southern California, and everything one used (except farm produce raised in the county) had to be hauled from Los Angeles, 60 miles distant, by wagon. For years we had nothing to sell. At that time it took us longer to get the PACIFIC RURAL PRESS than it does now to get papers from the Eastern States, and there were no telegraphs or telephones; but we had faith, and that faith which removes mountains. In our innocence we did as has been done from time immemorial, and which we always believed we had a right to do, that right being guaranteed by the United States by treaty with Mexico. We set to work and appropriated water and built ditches and ran it on to land which had no actual value, and what is the result to-day? The land is being covered with a network of railways until they foot up hundreds of miles in Southern California. What was once a barren desert is covered with homes until we have really the city in the country. The whole of Southern California is becoming like the suburb to a large city. We have not any available statistics at hand for Southern California, but we will give a few figures from Riverside, premising that Riverside is only one of a score of settlements, new ones being projected at intervals. With the exception of Anaheim, Riverside is the oldest colony in Southern California, and has a population of say 4000. All told, less than 6000 acres are in cultivation, and not one-half of that being in full bearing. Not much more than 1000 inches of water per day are used in summer, which is sold at 7½ cents per inch for 24 hours, involving a current expenditure of \$1000 per month on ditches, besides from \$100,000 to \$200,000 to be expended in permanent improvements on our ditches and water supply within two years, and what do we find on the assessor's books?

Our real estate is valued at .....	\$ 625,254
Improvements .....	641,855
Cash .....	19,059

Showing a total of .....

.....\$1,286,168  
In less than 16 years, and it is safe to say that the property could not be bought for three times that amount. In 1885-6 Riverside produced one-fourth of the oranges of California and one-eighth of the oranges of the United States, and our total productions brought the producers nearly half a million dollars for the season of 1885-6.

Now, the riparian owners propose, if they can, to carry this exploded English doctrine of riparian right into our midst, and what does it mean? Simply, that we shall pay them for something which they had not the slightest hand in making valuable. When we first started our enterprise here our land had no actual value, neither had the water. By our industry we brought the two together, and look at the change! And we say right here that we do not propose to pay riparian owners one cent, practically giving something for nothing.

## The Monopolists' Quarrel.

The whole trouble comes from holding land in large tracts. If Miller & Lux and Haggin & Carr had not held large tracts of land, and had made money out of something which they never gave value to and expected to make more, we would not have heard of this suit. The State Committee on Irrigation have been working for the rights of appropriators for two years or more, and we had the support of the press and people of the State and a fair prospect of a peaceable settlement of the same. But two sets of public robbers get to quarreling, and what do we see? a scattering of the forces and a changing of sides on the part of many papers that would indicate some powerful interest at work. Because Haggin & Carr are on our side should we be deprived of our rights? We ask for nothing but our rights, the fruits of our own labors, the values we have created, and we are willing to accord the same to any other man. If Haggin & Carr appropriate water and build ditches they will be obliged to sell their lands in small tracts, for land will then be too valuable to farm in large tracts. They cannot sell the lands without selling the water with them. Small tracts of land mean a dense population—a yeomanry, the solid support of a stable State.

## Political Action.

In regard to Mr. Webster's remarks on political action, we would say that the people of Southern California are sound on the doctrine of appropriation, and no judge can get any support who will not support the state of things as they exist here at the present time. The Supreme Court is by no means unanimous on the riparian issue. If our judges are antiquated and fail to catch the spirit of the age, they ought not to stand in the way of our progress. What are our laws for, anyhow; are they our masters or our servants? If they are helps, all is well; but whenever they get the mastery, then are we the veriest slaves. What says the higher law?—that we have "certain inalienable

rights, among which are life, liberty and the pursuit of happiness." \* \* \* "That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it."

Article 1, Sec. 2, of our State Constitution says, "All political power is inherent in the people. Government is instituted for the protection, security and benefit of the people, and they have the right to alter or reform the same whenever the public good requires it."

This, in our estimation, covers the whole ground. In the first place, the doctrine of riparian rights has never prevailed in Southern California; and now when Mr. Webster and others of like opinion insist on foisting that issue on us we reply that it is destructive to our "life, liberty and pursuit of happiness," and we will have none of it. JAMES BOYD.

Riverside, Aug. 12, 1886.

## Grange Resolutions on the Water Question.

Besides the resolutions we have hitherto republished, action has recently been taken by a number of subordinate Granges in the State, as follows:

Alhambra Grange, Aug. 7th.

*Resolved*, That the proceedings of said extra session, so far, indicate that no satisfactory adjustment can be reached. That the questions of irrigation and reorganization of the Supreme Court are of momentous interest to the welfare of the people and cannot be hastily passed upon. That the coming election will offer facilities for intelligently scrutinizing legislation required and selecting adequate representation; therefore, that we unanimously indorse the resolutions of Eden Grange. MRS. M. B. LANDER, Secretary.

## Two Rock Grange.

*Resolved*, That we call on the Legislature now in session to adjourn at once, and leave the legislation of the water question until the regular session.

*Resolved*, That we urge upon farmers and all good citizens the urgent necessity of nominating and electing members to the coming Legislature of comprehensive judgment, and those who are above being influenced by self-interest or a personal consideration; men of mature thought, and who are able to grapple with the great question of a fair and equitable distribution of water for irrigation purposes.

*Resolved*, That we believe the waters of the State should be public property, for the use of the people, and its appropriation should be sacredly guarded so that another grinding monopoly be not fastened upon this State. HOWARD ANDREWS, Sec. pro tem.

Washington Grange, Aug. 7th.

*Resolved*, That the waters of all innavigable streams belong to the people, and no law should be enacted to confer vested rights to any man, or set of men, but the State should retain the power to legislate on the matter from time to time as experience might dictate, but always for the greatest good to the greatest number. CHAS. BAMERT, Sec.

Wheatland Grange, Aug. 7th.

*Resolved*, That we are in favor of a just distribution of the waters of our rivers under the control of the State only, and not by any individual or corporation whether called irrigationists or riparianists, and that equitable distribution of the waters of our rivers is absolutely necessary to the progress and development of our State; that we are determinedly opposed to all monopoly in water, whether the monopolist lives on the river or 20 miles more or less from it. FRANK KIRSHNER, HUGH MORRISON, J. M. C. JASPER, Committee. J. W. HUFFACKER, Sec.

Roseville Grange, Aug. 7th.

*Resolved*, That we are in favor of the State taking control of all the innavigable waters of the State, and passing laws for the equitable distribution of the same for agricultural purposes.

*Resolved*, That we oppose the monopoly of water in any form, and that a distribution of the waters of the State is indispensable to the progress and development of the resources of the same. S. J. CROSS, Sec.

## Not so Moribund.

That moribund Order, the "Grangers," has been aroused out of its cerements to indorse riparianism and the common-law doctrine.—*Fresno Expositor*, August 11.

Our contemporary is very much mistaken about the moribund portion of his able essay on the water question which we print above. The Grange may make less noise than it did 10 years ago, as a matter of fact the noisy element has been quite completely eliminated, and much to its advantage, too. The reaction which came from over-exertion and unwise expansion has long since passed away. For the last few years the Order has been steadily and healthily growing, and it may now claim to hold the balance of power in this State—a force which may be trusted to be turned irresistibly against the aggression of monopolies or other menace to the public welfare. Since the water question seemed to have fallen between the upper and nether millstones of two monopolies, the Grange has been alert to rescue the public interest from its perilous position. The result is a large increase in membership. For example, just as we write there comes a cordial invitation to attend a meeting of Valley Grange, Pacheco, on Aug. 28th, which says the "4th degree will be conferred upon a class of 20."

Whatever parties who think the causes they serve are endangered by Grange influence may say about the Order, they deceive only themselves when they say it is a moribund institution.

## Delegates to the Farmers' National Congress.

The State Board of Agriculture has written as follows to Governor Stoneman:

Governor George Stoneman—DEAR SIR: Yours of the 28th ult., containing copy of letter received from Governor Hubbard, of Minnesota, asking you to name delegates to the Farmers' National Congress to be held at St. Paul, with request from you to the State Board of Agriculture to suggest names of persons qualified to act, received. In compliance therewith we would recommend the appointment of the following named:

At large—Hon. William Johnston, Master of the State Grange; Hon. S. T. Coulter, Past Master of the State Grange.

Alternates—Hon. A. L. Chandler, of Sutter; Hon. George Steele, of San Luis Obispo.

First Congressional District—G. N. Whitaker, Santa Rosa. Alternate, A. D. Logan, Colusa.

Second Congressional District—Dr. Grattan, Stockton. Alternate, George Ohleyer, Sutter.

Third Congressional District—George W. Hancock, Sacramento. Alternate, Joel Russel, Alameda.

Fourth Congressional District—Amos Adams, San Francisco. Alternate, George W. Meade, San Francisco.

Fifth Congressional District—I. A. Wilcox, San Jose. Alternate, B. Pilkinton, Santa Cruz.

Sixth Congressional District—Dr. Thomas Flint, San Juan South, Monterey county. Alternate, Hon. J. F. Clark, Los Angeles.

Governor Stoneman has appointed the above, as recommended by the State Board.

## Call for a Farmers' Convention.

Three prominent Granges of the State have made a call for a farmers' convention at Sacramento during the last week of the State Fair, beginning Wednesday, September 15th, next.

All Granges are requested by them to appoint one delegate for each 10 members.

The appeal is to every farmer in the State to act with the Granges in making the representation general. Matters of deep interest to farmers and producers of all classes will be discussed, and such political action be taken as to them shall seem advisable.—*California Patron*.

LIQUOR AT THE FAIRS.—The Ohio State Fair having taken a decided and advanced position on the sale of intoxicating liquors on its grounds, and prohibited them, it stands the farmers of Ohio well in hand to sustain this commendable action by giving them an attendance this year unheard of in the days of free liquor. The new grounds, the grand displays and large attendance all will warrant the attendance of the farmer and his family from every county of the State.—*Grange Bulletin*.

VALLEY GRANGE.—We learn from Bro. Geo. P. Loucks, Master, that Valley Grange, No. 279, at Pacheco, will give a harvest feast on Saturday, the 28th inst., when the fourth degree will be conferred on a class of 20. All Patrons from abroad will be received with welcome. The members of this young Grange are evidently doing excellent work and setting a worthy and cheering example for many older in the Order.

TEMESCAL GRANGE meets at 2 P. M. to-day.

## Fairs to Come.

For the information of our readers, we give below a list of the coming exhibition on this coast in the order of their occurrence:

Fourth District—Sonoma, Marin, Solano and Napa counties—Petaluma, Aug. 23d to 26th.

Seventeenth District—Nevada and Placer counties—Glenbrook Park and Pavilion, Nevada City, Aug. 24th to 26th.

Mechanics' Institute Fair, San Francisco, Aug. 24th to Sept. 25th.

Golden Gate Fair, Oakland, Aug. 30th to Sept. 4th.

Thirteenth District—Sacramento, Yolo, Yuba and Sutter counties—Marysville, August 31st to September 4th.

Eighth District—El Dorado, Amador, Alpine and Mono counties—Placerville, August 31st to September 4th.

Contra Costa Agricultural Society, Pacheco, Sept. 6th to 10th.

State Agricultural Society, Sacramento, September 6th to 18th.

Oregon State Agricultural Society, Salem, September 13th to 18th.

Eleventh District—Plumas, Lassen, Sierra and Modoc counties—Greenville, September 20th to 24th.

Second District—San Joaquin, Calaveras, Tuolumne, Stanislaus, Merced, Mariposa, Fresno, Tulare and Kern counties—Stockton, Sept. 21st to 25th.

Ninth District—Del Norte and Humboldt counties—Rohnerville, Sept. 21st to 24th.

Fifth District—San Mateo and Santa Clara counties—San Jose, Sept. 27th to Oct. 2d.

Seventh District—Monterey, Santa Cruz, San Benito and San Luis Obispo counties—Salinas City, Sept. 28th to Oct. 2d.

Tenth District—Siskiyou, Trinity and Shasta counties—Yreka, Sept. 29th to Oct. 2d.

Nevada State Fair, Reno, Oct. 4th to 9th.

Santa Barbara Agricultural, October 5th to 8th.

Twelfth District—Lake and Mendocino counties—Lakeport, Oct. 5th to 8th.

San Diego Horticultural Society, Oct. 6th to 8th.

Sixth District—Los Angeles, Santa Barbara, Ventura, San Diego, San Bernardino and Inyo counties—Los Angeles, Oct. 11th to 16th.

Ukiah Park Association, Ukiah, Oct. 14th to 16th.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

**PRUNES AND PLUMS PLENTY.**—San Lorenzo correspondent *Haywards Journal*, August 14: Telegram received last Monday evening that the last carload of Hungarian prunes shipped East brought \$1.25 to \$1.50 per box of 20 pounds. Four cars of Hungarian prunes have lately been shipped from this station by the Fruit Union, and three will be shipped this week. A carload is composed of about 900 boxes. Three carloads of plums were shipped East from this place last week, and several more of plums and pears were shipped this week. How's that for insignificant little San Lorenzo?

## Butte.

**GOOSEBERRIES UP A TREE.**—*Chico Enterprise*: It is not generally the case that oak trees bear fruit, but we have before us a handful of gooseberries that grew on such a tree 20 feet above the ground. We plucked them a few days ago near Forest ranch, or rather knocked them down with a pole. From the side of the tree a branch had broken off at some time in the past, leaving a little recess where it had joined the trunk. In this recess a gooseberry seed had lodged and taken root. The bush was growing finely and bore large, fine fruit. The sight was a strange one, and it was some time before we understood how it happened.

## Fresno.

**EDITORS PRESS.**—The heat here is intense, the thermometer being at 112° in the shade, which makes it a little hard on the farmers engaged in hauling grain to market. Most everybody is selling in preference to storing, as they did last year. A disease has broken out near here which is killing a good many cattle. Some say it is the Texas fever, and was brought in with some cattle from Texas.—C. J., *Kingsboro*.

**SCALE INSECT-KILLING.**—From the report of Commissioners J. H. Braly and George E. Freeman: This commission has done considerable in the way of experiment during the past few months, especially upon the San Jose scale in its hatching, active state. Several of the washes recommended for spring and summer use have been carefully tested. Of these, some have been proved to be very efficient. This is true of the kerosene butter prepared from Professor Riley's formula, and also from the weak lye solution. There seems, however, to be a weak point in both of these washes as related to our hot, dry climate. They evaporate, or dry up, too quickly for best results. The kerosene is hardly on the tree before it has evaporated, or the lye before its caustic elements have crystallized and its power ended. The danger to the tender foliage in the use of lye is also an objection to it as a summer wash. The best results with these various washes we have found in the use of whale-oil soap and sulphur, and it may be a small quantity of lye or potash added. The sulphur is very offensive and destructive to the scale in its active stage, as is also the soap, and the latter adheres to the tree and maintains its killing power for a considerable time. We are convinced that this is one of the very best summer washes in this locality. A good formula for it may be one pound of soap to two gallons of water, with as much sulphur as can be dissolved in this mixture while boiling; one pound of American lye, or potash, may be added to 8 or 10 gallons of this; applied to the tree as hot as convenient.

## Humboldt.

**DAIRYING DEPRESSED.**—*Standard*, Aug. 14: Reports from Ryan's slough say that the bottom has fallen out of the dairy business in that vicinity. A dairyman who rented a dairy of 60 cows has been obliged to discharge all hands and cease milking. The small quantity and quality of the grass, we understand, is the cause of this unfortunate occurrence.

## Los Angeles.

**BANANAS.**—*Pasadena Union*, Aug. 13: Dr. Rigg hands us a finely-matured banana grown on his Marengo avenue place, and from the increase in this fruit here it looks as though it was coming to be a regular and successful product of the country. It used to be considered that we were too far north for bananas, but they are found to stand some frost, and we look forward to ultimately seeing the home market supplied with home production, and that, too, of a better quality than the green-plucked fruit that comes from abroad.

**SOME PUMPKINS.**—*Anaheim Gazette*, Aug. 14: On the farm of Mr. A. McDermont, of Orangethorpe, there is a pumpkin vine which bids fair to go down into history as the most prolific of its kind. Over 500 pounds of pumpkins have been picked from it already, and Mr. McDermont thinks it will yield at least 2500 pounds more. He will keep an accurate record of its product and report the result at the end of the season. The vine covers an area of 40 feet. Another instance of the fecundity of the soil of this farm is the fact that the walnut trees thereon have made, so far, a growth of eight feet this season, though they were unusually late in starting.

**SELLING THE PLUME CROP AFOOT.**—From Superintendent Reid, of the Ostrich Farm, we learn that the birds are doing well. Two nests of 12 and 8 eggs respectively are now being

hatched. The owners of the farm have given permission to the superintendent to sell the feathers, a permission which has been fully availed of by one lady who has already engaged, at a stated sum, a feather that is still growing on the bird. The price of feathers ranges from \$2 to \$8 each.

## Napa.

**BROOM CORN.**—*St. Helena Star*, Aug. 13: E. R. Wood has raised a small patch of broom corn of finest fiber and longest that has ever been grown in the county. It has been irrigated, and the hot weather has caused an exceptional fine development of the plant.

**SORGHUM FODDER.**—Parties who have a limited amount of land and cows to feed should examine a small piece of sorghum or sugar-cane grown by Mr. Mayfield. It is yielding an immense crop of very palatable feed, that turns an extra quality, as well as quantity, of milk.

## Nevada.

**PEARS FOR THE EAST.**—*Grass Valley Union*: Edwin T. Earl, of Sacramento, who is now in Grass Valley for the second season purchasing and shipping fruit for the Eastern market, made his first shipment of Bartlett pears yesterday. These go to Sacramento, where they will help to make up the 15 carlots that are sent as special trains by the Fruit Union. Mr. Earl has made contracts for the pears of a number of orchards. The pear crop of this region is less than half of that of last year, and is somewhat affected by worms, and in order to insure sound fruit it is necessary that it be picked early. The apple crop, though fair in quantity, is seriously affected by worms, and it is doubtful if any considerable quantity can be shipped. The shipments of pears will be fair as to quantity; but a light crop this year holds out the promise of a heavy one next season.

## San Benito.

**MONEY IN MUSTARD.**—*Free Lance*, Aug. 13: This plant, which is such a pest to our farmers, and has for years untold grown and flourished in the rich soil of the California valleys, and which nowhere in the State attains such gigantic proportions as in San Benito county, is a highly important article of commerce, always commanding a ready sale and a good price, and the enterprising Celestial coins many a dollar in gathering and marketing it. It is a matter of surprise to a thoughtful man that farmers should not harvest their own mustard and at least make it pay for the trouble it gives them in separating it from their grain. There can be no doubt that it would pay, and pay well. As it is now, where mustard is so high and strong as to prevent heading the grain, the rancher must do his cutting with a reaper and then pick out the heaviest of the mustard therefrom, in order that it may be thrashed. In some fields that have come under our observation this year, the mustard will make more and larger stacks than the grain. Here is the Chinaman's opportunity. Following up the stackers, he straightens out the piles of mustard, turns the heads all one way, repiles the stalks on a large canvas, and then, with a rudely-constructed flail (a regular man-killer), proceeds to pound out the seed. Taking this year as a sample, there is money in it. One Chinaman will thrash out and clean an average of 100 pounds per day, and not work more than half his time at that.

**GRAIN AND HAY.**—*Independent*, Aug. 10: Wheat is coming in in vast quantities. Yesterday morning 13 wagons were unloading at one time. The heavy losses by fire recently have frightened our farmers considerably, as well they might. But little is being sold, however, the price being only \$1.06½. The hay crop is coming in more slowly, the teams being all at work on the wheat crop. Hay is quoted at from \$4 to \$7.50 in Hollister. Mr. Lathrop has 600 tons in his barn and 200 tons in his yard, and ships two carloads per week.

## San Joaquin.

**COTTON.**—*Lodi Cyclone*: Charley Neal, living some four miles northeast of Lodi, has been experimenting in the growth of cotton seed the present season, and is satisfied from the result that cotton can be grown in the Live Oaks almost as successfully as in the cotton States. In the yard of Mrs. S. J. Riggs, near the Methodist church of this place, may be seen several plants in full bloom and well supplied with branches, which have never been irrigated.

## San Luis Obispo.

**GOOD GRAIN GROUNDS.**—*Tribune*, Aug. 13: A gentleman who has been traveling through the northeastern part of the county, heretofore so utterly condemned by the sheep and cattle-grazers as too dry for cultivation, says there is corn growing in different places without irrigation, now bright and green, and promising as good a yield as corn in the Eastern States. He also reports a field of five acres of Propo wheat on the top of the Palo Prieto hills, having a growth of about eight feet in height, and promising a yield of 50 bushels per acre. Those settlers who arrived last fall in time to get in a crop are now harvesting from 18 to 20 sacks, or 35 to 40 bushels of wheat per acre. Many wells have been sunk, obtaining water at from 15 to 40 feet in depth. No failures have been reported. Settlers are elated over their possessions and prospects of comfortable homes in the future.

## Santa Barbara.

**LOMPOC APPLES.**—*Record*, August 7: In no

portion of the coast do deciduous fruits do better than here. The apples grown in Lompoc valley took the first prize at the late New Orleans Exposition for the best varieties produced in the Pacific States and Territories; and at the Mechanics' Fair, held in San Francisco last year, the first premium was awarded to apples from Lompoc over those exhibited from all other portions of the State. The climate is too cool in the valley to grow semi-tropical fruits; but at various points in the canyons they are growing and fruiting with good results. We do not claim success in this latter experiment, as the temperature is generally too low, while this condition conduces to the perfect growth of most other varieties of fruit.

**HONEY CROP.**—The yield of honey this year in this section will not fall much short of 150 tons—about one-half of what was anticipated when the season opened. The time is not far distant when in a favorable year 400 or 500 tons will be extracted. The samples sent from Laughlin & Merritt's apiaries, under the management of J. A. Bailey, to San Francisco, were considered the best from all parts of the State.

**MUSTARD.**—Few people have any idea of the amount of labor required to thrash and sack the 2500 acres of mustard estimated to have been sown the present year. It is calculated three men can, on an average, thrash, clean and sack two acres per day. If this be the correct estimate it would take one man 3750 days to do the work, or 75 men 50 days, the time in which the crop must be housed in order to avoid the danger of early rains.

## Santa Clara.

**CHEESE HOOP PATENT.**—*Gilroy Record*, Aug. 14: The cheese manufacturers have this week been confronted with a claim that in the present stage of business is anything but pleasant and agreeable. It appears that in 1870 a patent was issued for a cheese hoop, and after some litigation the patentee's right was in every way confirmed. These hoops have been sold in the East at \$7.50 each, while here in Gilroy they have been made and furnished for \$1.75. The manufacturer here, Mr. A. Robinson, was not aware that in the manufacture he was infringing upon any patent, and the parties to whom he supplied them were in the same state of blissful ignorance as to their infraction of the law. The demand now made by the agent representing the patentee is one dollar for each hoop for every year of its use. As some of the parties have used these hoops for a long period, the claim is rather an onerous one, but apparently legal, and will have to be met by payment or compromise. The amount involved is probably upward of \$3000, Reeves Bros. being probably more interested than others, although Messrs. Furlong, Davison, Rea, Mason, and many others suffer to a considerable extent. Probably if it is conclusively proved that the patent is a valid one and the claimant's right justly equitable, the issue will be met by payment of the amount demanded, as by litigation the demand would be largely increased, not only in royalty but the expenses of suit would make the costs much greater.

**THE VITICULTURAL SOCIETY.**—*Herald*, Aug. 16: The regular annual meeting of the Santa Clara County Viticultural Society was held last Saturday at G. A. R. hall. The principal business transacted was the election of officers for the ensuing year, as follows: President, D. C. Feeley; Vice-President, Daniel Wright; Treasurer, Frank Dunn; Secretary, L. D. Combe; Steward, Julius Portal, Jr. The Secretary presented his report for the year, which showed the balance on hand to be \$94.45; number of members on the roll, 72.

## Solano.

**VACAVILLE FRUIT NOTES.**—*EDITORS PRESS*: The weather is rather warm but not uncommonly so. The main business here now is the disposal of the peach and grape crops, which are being gathered and sold for good prices. F. H. Buck has contracted 150 tons of peaches at 4½ cents per pound, delivered in Vacaville; the peaches to be 2½ inches in size. J. W. Gates has contracted about 5000 boxes to the Napa cannery at four cents per pound, the peaches to be delivered at Suisun, and to be two inches in size. These peaches are put in 60-pound boxes, and all expense of paper, packing, commission, drayage and steelage is saved, which makes a large difference in the net proceeds of the crop. H. Bassford has bought the grapes of several vineyards, paying from \$35 to \$40 per ton, purchaser to take the grapes on the vines. J. Collins sold his crop of grapes for 65 cents per crate, delivered in Vacaville, crates found by purchaser. Last year the grapes from the same vines sold in San Francisco for from 40 to 60 cents per box, and all expense to come out of that, which amounts to from 15 to 25 cents per box. From three to six cars are loaded daily at Vacaville to go East. Several men have loaded cars with fruit raised by themselves. There is more fruit going East from Vacaville now than is sent to San Francisco; probably more than half is shipped through the Fruit Union. There is some complaint made about the sales made by the Union, but I notice that the men who have a large amount of fruit to ship, employ experienced packers and see that none but first-class fruit is put up, complain but little, and show large profits returned. Poor fruit well packed will bring a better price and look better than good fruit poorly packed. Help is quite scarce just now. Many of the Chinamen have gone off to pick hops (it would be a good thing for Vacaville if they never re-

turned) and some of the fruit-raisers have been forced to employ white help. H. and J. Bassford employ none but white packers, and they have found out that white help is much the cheapest in the end. The main topic of the day in town is the coming election. The Prohibition party seems to be gaining strength and several old whisky-drinkers are in favor of the party. If the party could form some plan to start free reading-rooms in town, so that men and boys could pass away their idle time without going to the saloons, it would help the party more than anything else. Vacaville is making preparations for a grand barbecue on Admission Day. The Suisun Pioneers will attend.—G., *Vacaville*.

**PERILOUS PAVING.**—*Dixon Tribune*, Aug. 14: T. N. Buckles, of Batavia, who lives near the public road, had straw to the depth of two feet scattered in the road before his residence, to prevent annoyance from the dust of passing teams. Last Saturday the straw caught fire from the cigar of a traveler, and but for the prompt assistance of the warehouse men and others in the vicinity, his house would certainly have been destroyed. As it was, he escaped with only badly scorched pickets, damaged shrubbery, and a few yards of fence burned.

## Sonoma.

**CHINESE WATERMELON.**—*Cloverdale Reveille*, Aug. 14: H. W. Barham raised one of the finest watermelons in his garden we have seen this year. The seed was brought from China by Dr. Burdell. It was of a nice even shape. The pulp was of a creamish color, and most delicious.

**A USEFUL SNAKE.**—*Petaluma Courier*, Aug. 11: F. M. McGrew, who lives in this township, killed a blow snake 15 inches in length. Upon cutting it open he found three full-grown mice. It is said the larger blow snakes are very destructive to rats and gophers, which they first crush by a twist of their bodies, and after sliming them over swallow even the largest of them with ease. Blow snakes are not poisonous, and as they help destroy mice, rats, gophers and other farm pests, they should be protected when found. They sometimes grow to the length of three and a half feet.

## Sutter.

**GOOD BARLEY.**—*Farmer*, Aug. 13: Conrad Schuler thrashed for Conrad and George Gottwalls, whose grain turned out the largest reported this year. From nine acres they secured 207 sacks of barley—about 45 bushels per acre. On Wednesday of last week Mr. Schuler thrashed on the same place 1040 sacks of barley before noon. Mr. Gottwalls informs us that from his 80 acres of barley he secured 1600 sacks.

## Yolo.

**SWINE DYING BY HUNDREDS.**—*Yolo Mail*, August 14: A hog epizootic, supposed by some to be the hog cholera, is raging with fatal effect in the farms west of Woodland and along Cache creek. Among the heavy losers thus far is Mr. Reynolds, who has lost 150 head since the epidemic began, Mr. Lowe about 150 head, Mr. Eakles 130 and Mr. Hiller 20 head.

**ORANGE PLANTING.**—*Democrat*, August 12: Drs. Parramore and Clarke have turned their attention to the cultivation of orange trees. They have nurseries of several thousand seedlings now 12 or 14 inches in height. It is their intention to have them budded by an experienced horticulturist at the proper season of the year.

**WHEAT-HAULING.**—The storehouse conducted by Bidwell & Wright will be filled to its fullest capacity—about 3000 tons—by next Monday. At Hunt's there are several still hauling, this warehouse being much larger than the other. No wheat is being shipped at the present time, as the price is ranging very low, being about \$1.17 or \$1.18 per cental.

## NEVADA.

**STATE LANDS IN DEMAND.**—*The Free Lance* says: The present sales of State lands are unprecedented in the history of Nevada. Last month there were sold by General Preble and Deputy Noteware over 40,000 acres. The receipts from these sales amount to \$50,000, thus swelling the school fund to this extent. The selections of land are made principally from Humboldt, Elko and Washoe counties.

## OREGON.

**BEEVES FOR THE EAST.**—W. B. Todhunter and L. Godchaux, two prominent stockmen, were lately interviewed by a *Silver State* reporter relative to the extent of the cattle-shipping business of Southeastern Oregon and Southwestern Idaho to Chicago and other Eastern markets, and gave it as their opinion that at least 25,000 head of cattle, from sections which until last year found a market for their beeves on this coast, would this year be shipped East. Todhunter & Devine will ship about 9000 head; Peter French about 4500; Hock Mason, from the Overfelt ranch, about 4500; Stauffer & Sweetser 1000, and T. R. Davidson and Smith Bros. several hundred each. Besides those mentioned, all of whom have their ranges in Grant and Baker counties, Oregon, W. F. Somercamp, John Shrode, David Hyde, H. Myers and others, in Southwestern Idaho, will ship East. Heretofore nearly all the beeves from the localities mentioned were driven to the Central Pacific Railroad at this and other points and shipped to San Francisco.

### The Nurse's Poem.

[By JOHN E. McCANN.]

She told it to me in a sweet, low tone,  
In the hospital ward to-day;  
We two were standing together alone,  
Near by where the sufferers lay,  
And a nameless thrill shot into my heart—  
From my heart to my brain it rose—  
When she said, 'twas worthy the poet's art,  
And should never be told in prose.

An orphan was he, about three years old,  
When they carried him senseless in,  
With starry blue eyes and tresses of gold,  
And soft dimples in cheeks and chin.  
His poor little back was broken in two,  
And he moaned far into the night;  
Till he saw the nurse's eyes moist with dew,  
Then he said: "I'll be soon all right."

"Don't cry," said he, "for I'm going to sleep,  
And I guess I want to be kissed—  
But not on the mouth! right there—to keep,"  
And he put up a tiny fist.  
So she kissed the fist, and he went to sleep,  
With the fist 'neath his dreaming head;  
And they found it there, 'neath his golden  
hair,  
When the dear little fellow was dead.

—John Swinton's Paper.

### Milly's Marriage Contract.

"Well, for my part, I don't see why folks call Milly Morrison a strong-minded girl," quoth to himself the stalwart young farmer, John Armstrong, as he strode homeward in the sunset glory after a charming Sunday afternoon with the said Milly on the river. "It appears to me a good deal like jealousy, because there ain't a girl in these parts that can hold a candle to her. The little daisy! She knows well enough how much I think of her, and if I'm not mightily mistaken, she likes me pretty well, too. And, confound it all, I'm not going to take anybody's word for it. I'm just a-going to go in and win, and let her strong-mindedness go to the dickens. I guess it will never hurt me." And whistling blithe, "Ye Banks and Praes o' Bonnie Doon," valiant John cleared the fence at a bound and disappeared in the gloom of the woods beyond.

Yes, everybody said Milly Morrison was strong-minded; but however it got about, or who first said it, Mrs. Grundy didn't know. Pretty Milly, with her rose-leaf cheek and her tender brown eyes and her golden braids, strong-minded! Preposterous! Surely no girl in the county or town of Glenville had half as many beaux nor half as many offers, as everybody knew. But certain it was that, no matter how bold and confident the swain might be who tried his fate with Milly, he was always known to come away wonderfully disconcerted, with never a word as to why and wherefore.

"What could it mean?" wagged the gossip tongues. "Why, maybe she's strong-minded; yes, to be sure, Milly must be strong-minded, else why did she let so many good chances slip?"

And thus it came to the ear of John Armstrong, the most energetic, the most enterprising young farmer in Glenville, as was commonly agreed. At first he gave credence to the story, and cultivated her acquaintance out of curiosity, merely to see what manner of human kind a strong-minded woman might be, but Milly put forth no startling ideas in his presence; and, finally, when he found himself subdued by her maidenly charms after sitting opposite those innocent brown eyes and watching the fluttering bloom of that lovely face for one long delicious summer afternoon, he settled in his mind that it was a malicious falsehood about her. And now the die was cast. He, John Armstrong, would ask Milly for her love, and in his heart of hearts he had no doubt that he should win the prize.

"Just to think of her going around the country speechifying and proclaiming woman's rights!" he exclaimed to himself, as he drove home the cows. "Why—ha! ha!—she's as innocent as a gentle lamb. And as for having a will of her own, or standing up and fighting it out on her own account, stuff and nonsense! I'd as soon expect Brindle here to kick over the milk-pail. Nobody need talk to me about Milly Morrison's being a woman's righter. I never see anything of it."

Time sped as time has a way of doing, until nearly a week had elapsed. It was a summer night, and John and Milly stood by the river bank. All things were propitious. The wind sighed softly through the tree-tops. The young moon gazed at her image in the sparkling water. John felt that the time had come for him to unburden his heart.

"Milly," he said softly, as he caught her hand, "I have something to tell you to-night.

I think you have guessed how much I love you, Milly darling, because it was something I couldn't conceal. But I want to know—do you think—I mean, do you love me a little, Milly?"

"Yes, John," faltered she of the downcast eyes and rosy cheeks.

"My little Mayflower! And (ecstatically) will you marry me, dear, and help me make a home—a little home to ourselves?"

A pause. Then slowly, "I don't know, John. I love you dearly, but—but—it seems like a great undertaking—a great responsibility. I don't believe I am fitted for it."

"Fitted for it!" he laughed gleefully; "why, Milly, you know, as well as I do, that there isn't a smarter girl in the whole country than you are," and he helped himself to a kiss from the rosy lips.

"You said help to make a home. I don't think I quite understand. Won't you explain, John, what you expect of me—that is, what would I have to do?" she said hesitatingly.

"Why," a little impatiently, "strange you don't understand, Milly. Make a home as other people do who get married and live together. You run the house and I run the farm. Of course you would be willing to do your share of the work, wouldn't you? You know I am not rich."

"Oh, I see," answered Milly; "you would raise the crops and sell them, and take care of the stock."

"And," put in John, "you would do the cooking, the dairy work and the laundry work, and the rest."

"Yes, to be sure; I quite understand you now," she replied.

"Well, then," he said fondly, "will you marry me, Milly? You haven't said yet that you would."

The long lashes drooped upon the rose-leaf cheek for an instant, and then a pair of innocent eyes were raised to his face, and she asked timidly:

"But you haven't said yet what you would give me for doing my share of the work, John."

"Give you!" he cried in amazement; "why, Milly Morrison, what do you mean?"

"Why, just this. Don't you see, John, that your work brings you in a fair profit; so much money every year? But mine would bring me in nothing."

"Why, Milly," he answered reproachfully, "you would have a home and enough for your needs."

"That is," she replied with dignity, "I should have my board and clothes! But bear in mind, John, I can earn more than that any day. Deacon Jones has wanted me to keep house for him ever since his wife died, and I could have my board and clothes there and money in the bank every month."

"But, darling," protested John, "do you think I would be so mean as to ever deny you money when you asked me for it?"

"But that's just what I would not do," she answered. "If I do half the work, why shouldn't I have half the profits?"

Half the profits! John was dazed at her audacity.

"I should do the work that you would have to pay some one else to do," she continued, "and if I work as many hours a day as you do, and do my work as faithfully as you do yours, why should you have all the profits and I nothing?"

John's amazement culminated in a white heat of passion.

"Well, Miss Morrison," he said with superb scorn, "if you are not willing to marry me as other folks marry and do like other folks do, you can wait till some fellow comes along who is willing to take you on your terms."

"I suppose you think me very mercenary, John," said Milly, gently; "but truly I don't care half so much for the money as I do for the principle of the thing."

Seething with rage and disappointment, he led her home across the dewy meadows. At the gate she held out her hand and said, sadly: "Good-by, John. Remember I still love you dearly, and if you had been disposed to treat me justly, you would have found in me a good wife."

John muttered something between his teeth, jammed his hat down over his eyes and strode off in the darkness. But he said to himself when he had stilled the tumult in his soul, that after all, folks were right. Milly Morrison was most decidedly strong-minded.

Somewhat it got noised about that Milly had refused John, and all Glenville was agog as to the reason for it. Many a professional gossip declared that "sure's she lives, Milly Morrison'll repent the day she ever gave such a proper young man as John Armstrong the go-by." But through it all, though perfectly aware that she was the theme of every tongue, Milly bore herself with smiling unconcern. Not so John. In a moody and unhappy frame of mind, he shunned his young friends, and carried about an expression so severe that there were none so brave as to test his good-humor with a jest.

On a large farm on the outskirts of Glenville lived Milly Morrison, youngest child of Rufus and Martha Morrison. The elder son and daughter having married and set up homes for themselves, only Milly was left at home to help "mother" with the farm work.

One midsummer afternoon, as the two sat busily sewing, Mrs. Morrison looked up and said: "Everybody is saying, Milly, that you have refused John Armstrong. Is it true, dear?"

"No, mother," said Milly, with a smile; "he refused me."

"Why, what do you mean, child? Of course

you didn't propose to him?" questioned her mother.

"Oh, no. He asked me first, but when I mentioned my terms he refused me or my terms, I don't know which."

"You talk in riddles, Milly. I really can't see any reason why you should not marry John; you know he thinks a deal of you."

"Why, mother mine, it wasn't my fault. I just asked John what he was going to give me for my share of the farm work. I told him if I did half the work I thought I ought to have half the profits, and he got mad, that's all. Oh, I never shall forget his face," and she ended with a peal of laughter.

"Milly, Milly!" cried her mother in surprise, "where did you get such ideas?"

"Mother," said Milly, seriously, laying aside her work and seating herself at her mother's knee, "I got them here in our everyday experience. Think of how you have slaved all your life, think of how you and I have slaved every day of our lives, and then tell me what compensation we have. Look at this house. Are there a dozen articles of luxury in it? Look at the clothes we wear. Are they much better than the poorest people in town wear? Do we ever have any money to spend for our own pleasure? Is there a book or magazine or picture that we are ever able to buy? Now, mother, don't stop me. I am not going to say a word against father. I've no doubt he's as good as most men. But if you think it's right to slave day in and day out for your board and clothes (and poor ones at that), I don't. I've heard you say many times you'd sooner go with barely clothes enough to keep you warm rather than ask father to give you the money. And you know, mother, it takes me a week to get up my courage to ask him for a new dress. I feel as if I were facing the judge of a criminal court. Now, mother, confess that you think these things are not right."

"Yes, Milly," answered her mother, wiping away the persistent tears, "I have felt this injustice all my life. Your father seems to think that, hard as we work to help him make his money, we have no right to any of it."

"No, I shan't soon forget the day, mother, when you asked him for a dollar and a half to buy your winter flannels, when he wanted to know if you expect to spend all the money that was made on the farm in a year!" added Milly, indignantly.

"Hush, Milly, hush! Remember he is your father."

"I didn't forget that; but I've said nothing that isn't true. And now, mother, do you blame me for not wanting to put myself in such a position as that for the rest of my life? No," clenching her hand, "I'd rather live an old maid all my days with a little hard-earned money in my pocket and my sense of independence, than be the wife of the richest farmer in the country, if I had to go to him like a trembling beggar for every little necessity."

And burning with indignation, Milly sprang from the room and "had it out" in the old cherry tree in the orchard.

The summer days waned. The September haze hung upon the hills. The autumn leaves were falling, when late one afternoon as Milly was walking home from town, following the old familiar path by the river's bank, she came suddenly face to face with John Armstrong. She smiled and bowed, and would have passed on, but he put out a detaining hand.

"Aren't you going to stop and speak to me, Milly?" he asked humbly, as the color surged over his face.

"Why, John," she answered, gently, "I have always been willing to speak to you. You know it is you who haven't wanted to speak to me since—"

"Since I made a fool of myself," blurted out John. Then he added: "Come and sit down here a moment, won't you? I want to set myself right with you."

When they were seated on the trunk of a fallen tree, he continued:

"I've thought it all over what you said to me that night, Milly, and I have come to see that there is a good deal of justice on your side. At first, I couldn't see it, because, you know, I was blinded by prejudice and custom, and—tradition. But I finally came to look at it like this: You see, marriages between folks like you and me is a kind of partnership. Now, says I to myself, John Armstrong, you wouldn't go into partnership with any man, agree to do half the work, or work as many hours a day as he does, and expect to get nothing for it except your board and clothes. You'd expect to get half the profits, wouldn't you? Well, then, says I to myself, let's put the shoe on the other foot. Now, if I was a woman, would I go into partnership with a man, and agree to do half the work and not get half the profits? Of course I wouldn't. Then, thinks I, a woman has just as much right to what she earns as a man. There ain't any difference except in the kind of work. And so at last it came to me what a blamed fool I had been, and—why, Milly, what's the matter? Oh, don't cry, darling! Don't you see that it was all along of loving you so much that made me come to look at it just as you do? And if you'll only take me, Milly, love, I'll promise to give it all to you. I'll promise you anything if you'll only take me, Milly. Will you, dear?"

And who wonders that she did take him then and there into her tender, womanly heart?

The church bells were pealing one rare, sunny morning in late October, and there was a holiday look to the passers-by in Glenville town,

for everybody was crowding into the little church to see John and Milly married. Speculation was rife. An air of mystery pervaded the usually slumberous community. An indefinable something was going to happen. At last suspense was ended, and down the aisle, proudly stepping, came bride and groom, with sunshine in their faces and sunshine in their hearts. But what are they doing? Where's the minister? What's the table for? And, for mercy's sake, what are Lawyer Cobb and those other men doing with that paper? It looks like a will.

But all agitation was summarily quelled when Lawyer Cobb, in his most diffusive oratorical style, read the following remarkable document:

Know all men by these presents, I, John P. Armstrong, being of sound body and mind, do this day, in the year of our Lord 18—, and in this month of October, and 25th day of the same, enter into a civil contract of marriage with Millicent H. Morrison. And I do hereby declare that our civil union shall be governed by strictly business principles, to wit: All money, personal and landed property, accruing to me after this date, as financier or business manager of the same, shall become the joint property of both parties to this contract, on condition that said Millicent H. Morrison faithfully performs a share of the labor necessary for the acquiring of said property. An equitable division of the same to be made yearly, reckoning from the date of this instrument.

In case of separation or divorce, this contract shall be literally adhered to. In case of death, the property shall revert to the remaining partner to the contract, or to his heirs at law, unless otherwise decreed. In witness whereof I hereby affix my hand and seal, this 25th of October, 18—.

(Signed) JOHN ARMSTRONG,  
MILICENT H. MORRISON.

Witnesses: Thomas Wiggins, William Brown,  
John Pettengill.

In breathless silence waited the wedding guests while the signatures were made. The civil service then being complete by the presentation of a copy of the document to both bride and groom, they turned to the altar to be made one by the man of God.

At last it was all over, and as Milly walked down the aisle she realized the consternation she had caused. A bombshell exploded in the midst of the sacred edifice could scarce have created a greater excitement than this. The telling of it spread like a prairie fire. One good mother in Israel was heard to declare to an eager crowd of listeners: "Wa'l, I allus thought Milly Morrison was queer, but now I'm certain on it, and (sententiously) if Bedlam don't reign in that house afore five years, then I don't know nothing about human natur'!"

And so it came to pass that just as tourists abroad are pointed out the place famous in legend or history, strangers in Glenville are shown the little church where Milly Morrison signed her marriage contract.

### Fields, Brown and Bare.

[Written for the RURAL PRESS by ETHEL B.]

June, July and August! June came with cloudless skies, red, glowing sunsets and hazy twilights, lingering long after the stars were out; with yellow fields, some patched with brown, striped with long windrows, or dotted with yellow haycocks that cast longer and longer shadows as the day departed—shadows that stretched farther and farther across the fields until they melted into the night.

Then came July and August. All the fields are brown now, shorn of their golden, waving beauty. There is nothing but tawny stubble as far as the eye can reach, acre after acre, thousands of them, across the broad valley and covering the hills beyond, until they meet the blue of the distant mountains. It is a harmony of browns—soft, velvety browns, shading and blending into each other, with here and there a deeper band or stretch of tan. There is a quiet, mysterious beauty in the vast expanse of stubble, while it leads the thoughts far away, and leaves them on the calm, blue heights.

A close inspection of the brown, bare fields reveals beauties little guessed. See, along the edges is a narrow strip left untouched by the sharp blades. The tall wheat heads still wave and bend in the wind; the empty oat husks quiver and rustle; the grasses have taken on reds and russets, and the long stem and calyx of a fluffy dandelion head are blotched and mottled with the same colors. Between the stubby tufts are dry, brown things that flourished months ago, perhaps; a bunch of skeleton leaves, the musky odors still lingering in the frail tracery of vein and stem. Here is a dry flower pod or seed vessel, or perhaps a pitiful little blossom, that has just escaped having its head cut off, looking up to the cloudless sky.

Struggling up through the sun-baked soil are bits of greenery that are not to be cheated of their share of life, although the days of growing and blooming are long past. A new crop succeeds the one just gone; fine oats and grasses, tiny and far between, and an abundant one of small, bright, yellow thistles, promising a harvest of thorns at least.

Oh, fields, bare and brown, are there not lives that, like you, seem shorn of all that makes life beautiful, yet keeping alive the bits of green that grow in spite of the lack of tender nurture?

The red glow in the west tells of the day just departed, and we stand in that dim medium between daylight and dark—twilight—the earth still warm and flushed, still alive and quiver-

ing with the day's pulsations, and yet her great nerves and pulses slowly relaxing, sinking to rest like a tired child.

Below and far away stretches a dusky hillside field. There is the shrill sound of crickets in the air, making the stillness more intense. At a little distance a sparrow-hawk flutters a few feet from the ground, now poised motionless with outstretched wings, and now again steadying himself for a new attempt. The oaks that lie below in the near foreground look black and grim in the fading daylight, they and their shadows melting into one; the dun haycocks stretch their shadows far out to meet the coming night, and over all that indescribable something that fills the heart with awe and wonder—is it not the presence of the Creator of all?—making the soul feel its utter helplessness and dependence upon a mightier will.

There are no harsh lines, no abrupt meeting of hill and sky, no flaring contrast of form and color. Departing day left behind a misty veil to cover the earth, softening but at the same time adding loveliness to the charms she seeks to dim—making them all the more beautiful because of their indistinctness.

The hazy twilight has taken on a faint rose color from the light yet bright in the west; and the beauty of the dim hayfield, stretching far away, with its grim oaks, its mounds of hay and their long shadows, enters deep into the heart. It forgets its vain longings and repinings, and only the best comes surging into it, filling it to overflowing. It remembers how much it has had, instead of how little. And if the thoughts go out toward the future, it is not in blind conceit of the great deeds it has hoped to accomplish, but with tears and a prayer that its life may be worthy of what is given.

The crickets suddenly cease their chirping, and the big round moon springs into sight over a hilltop. Close by, a lark lifts its head and pours forth a liquid note, then sinks into silence. Deluded bird! he awoke too soon. Did he think the dawn had come? A gentle wind comes up over the valley and lodges, with a sigh, among the oak leaves. Give one long, lingering look at the scene before you, now so weird in the moonlight, belonging neither to this earth nor yet of heaven. Truly, this is an enchanted land, subject to the spells of a magician's wand. The long shadows have almost disappeared, or huddled themselves in small compass at the foot of the oaks and hay-mounds, and over the dim, brown field the silvery sheen of the moonlight, still tinged with the light in the west, rests like a benediction.

Pleasanton, Alameda Co.

### Studies at Home.

The purpose of this society, which was founded in Boston in 1873, is to induce ladies to form the habit of devoting some part of every day to study of a systematic and thorough kind. Even if the time devoted daily to this use is short, much can be accomplished by perseverance, and the habit soon becomes a delightful one.

Nearly 200 ladies give their services in the instruction by correspondence, each one attaching herself to one department. There are six special courses: History, science, art, German, French and English literature.

A branch of Associate Correspondents was established in San Francisco in 1876. Since that time many students have availed themselves of this favorable opportunity for home study. The term for correspondence will be from October 1st to June 1st. Any further information as to the work of the society can be obtained by addressing the Secretary of the Associates for the Pacific Coast, Mrs. E. B. Barker, 14 Stanley place, San Francisco.

**HOW TO ARRANGE A BOUQUET.**—There is much skill and taste to be used in arranging a bouquet, which any one may learn by attending to a few simple rules which may be given as follows: Arrangement of color is the principal item of success in a bouquet. The best known primary colors are red, blue and yellow, and among the compounds are orange, green and violet. To combine all these well we must turn to the artist, and he will tell us that good contrasts are orange and blue, yellow and green, yellow and purple, red and blue, red and violet, red and green, etc. White may be termed a dead color, and can come in almost anywhere, except between a very dark and bright color, where gray is better. Black does well to divide conspicuous colors like red and orange, for it does not produce such a violent contrast as white would do. If the bouquet is to be entirely shades of one color, red is valuable; commencing with deep scarlet in the center, and putting round it rings of brick-red, deep carmine, pink, pale red, rose, and a boundary of white or green. Care has to be taken to choose flowers that will keep their petals, and for this, flowers in bud or just opened are the best. It is bad to see a bouquet of flowers like full-blown geraniums or primulas, for in a very short time the bouquet will be a mass of vacancies. In putting the flowers together, it is better to start with a substantial central flower, like a rose or camellia, and bind the others round it, keeping the size, shape and arrangement well in view. If the stalks are short, lengthen them with wire, and never put on a fresh flower till the last is well secured, or often, just as the bouquet is finished, the center will fall out.

## YOUNG FOLKS' COLUMN.

### Wings.

[Written for the RURAL PRESS by DORCAS KINGSBURY.]

While traveling across the overflowed lands of the Sacramento valley, I was struck by the variety and beauty of the birds that inhabit this watery country. As we advanced farther into the marshy lands I noticed cranes, storks, swans, curlews, divers, hawks, buzzards, and wild ducks and geese. There were several other varieties, but here my ornithology failed me, so I cannot give their names.

The first ponds we passed were peopled by ducks floating contentedly and leaving V-shaped silver wakes in the blue waters. Suddenly one would shoot under and come up several yards distant. The length of time they can stay under is really surprising. The pleasantest part of our ride was an avenue more than a mile in length, bordered on each side by a row of willow trees. The road is raised, and beyond each bank lie quiet little lakes. Passing over the road one has a good opportunity of seeing the water fowls at home.

Splash! a crane seizes a fish and, slowly flapping its huge wings, rises with it to the trees. The wings of these birds are very noticeable from their size and strength. A dead crane that a hunter gave me measured over five feet from tip to tip. This leads me to notice the wings of other birds.

Those of the curlew excel in beauty, being a most brilliant green. Geese wings are plain gray, while those of the ducks are often beautiful.

"How happy the life of a bird must be  
Skimming about from tree to tree."

The verses in the old reader come back to me, and I feel an unexpressed wish to try the wings of a bird for an hour or a day. One quotation usually brings another, and a sentiment from our beloved Longfellow comes to me:

"We have not wings, we cannot soar;  
But we have feet to scale and climb,  
By slow degrees, by more and more,  
The cloudy summits of our time."

If we all made use of the wings we have, there would be fewer failures in the world. I have read of a little boy who said: "I sing 'I want to be an angel' when the others do, but I don't want to be one, for their pictures look as though they had turkey wings." Though not many admire turkey wings, few would disdain a pair of swan pinions.

There are wings more desirable than those of feathers, and surely those which have borne our great poets in their "flights of fancy" are among the most valuable. The conclusion reached by our greatest American poet is that those who would rise must climb, and not depend on the wings of fortune.

"The heights by great men reached and kept  
Were not attained by sudden flight,  
But they, while their companions slept,  
Were toiling upward in the night."

The "Ladder of St. Augustine" should be to us as a poem what "Home, Sweet Home" is as a song. For should we not build our homes on the highest rounds of the ladder? Holland's lines show that he climbed toward the heaven which we feel sure he has reached.

"Heaven is not reached at a single bound,  
But we build the ladder by which we rise  
From the lowly earth to the vaulted skies,  
And we mount to the summit round by round.  
Marysville, Cal.

### G. A. R. Procession.

[Written for the RURAL PRESS.]

MY DEAR BOYS AND GIRLS:—In reading last week's RURAL PRESS I did not see one word about the procession of the G. A. R. which took place in San Francisco some two weeks ago, and I think it is a shame that you little country folks should have been so neglected. I don't know who is to blame, but I do think some one deserves a good scolding. However, "it is never too late to mend," so I am going to tell you all about the procession as well as I can.

The city looked magnificent; the stars and stripes floated from every building, and from the depot at the foot of Market street to the other end festoons of flags and bunting were thrown from window to window, forming sort of arches. But the masterpiece was a grand arch erected in the center of the city. Although only of wood, it was massive looking, being covered with canvas painted to represent stone. At the four corners were life-size statues of Washington, Lincoln, Garfield and Grant. It really looked very imposing, especially when the soldiers were passing under it. All the buildings, public and private, were draped in our national colors. Some even had paintings of different battle scenes. At intervals along the streets were shields bearing the words, "Welcome," "Honor to the brave," and dozens of other pretty greetings. Even the millinery establishments had taken out their fashionable bonnets and made their windows gay with streamers of red, white and blue. In one place there was a miniature tent arranged just as all the tents were during the war. There was a narrow,

hard-looking bed, one three-legged stool (company was supposed to sit on the bed), a table, on which was placed a bottle of water and somehardtack, and a couple of muskets in one corner. It did not look very inviting or comfortable, I assure you.

The city was crowded with people, and every available place was taken; stoops, windows, and even the house-tops were thronged. Enterprising men built raised platforms and sold seats from one dollar and a half to two dollars. But all this is not the procession, and I know that is what you are most anxious to hear about.

Well, like all other processions, it was to begin at half-past 10, which, of course, meant 11 o'clock, and, precisely at that hour, it did commence. First came the mounted police with their silver stars glittering in the morning sun, then bands of music playing patriotic airs. When the carriage containing Generals Sherman and Logan passed, all the spectators burst into prolonged cheers, and some enthusiastic people flung bouquets into their laps. The two generals bowed and smiled very pleasantly from side to side. The different delegations next passed in rapid succession, each wearing a different badge. Iowa carried a Grand Army badge of brass, with the portraits of the different officers placed in the rays of the star. Indiana had a magnificent banner of navy-blue silk, the coat of arms embroidered in gold and silver. In the department of Maine there was a little girl, not over 12 years old, dressed in red, white and blue, carrying a pennant of some color. She did not belong to the G. A. R., but hearing so much about it, she became so enthusiastic over it that her parents allowed her to join the encampment. The six-year-old son of one of the generals also marched in the parade. At the head of the New York delegation six men bore a handsome banner; one side was of yellow silk, the other red.

But the most interesting feature of all the procession were the old, tattered flags. How the people cheered and shouted as they saw them. Some were so old that only a few, ragged shreds remained; others were full of bullet holes, and again others were so torn that they could not be unfurled. But what did the people care for that? all they saw were the flags around which their forefathers fought, the real flags which had been borne through the fire and smoke of the battle. The veterans were greeted with hearty cheers and the waving of hats and handkerchiefs.

Of course, a great many amusing incidents occurred. At one time, during a halt in the procession, people in the windows threw candy and fruits to the soldiers in the line. The procession went on like this for over two hours and a half and then disbanded. If I wanted I could tell you a great deal more about everything, but if my letter is too long I am afraid it will be thrown into the waste-basket and you will not see it at all, and then you will be just as badly off as before; so good-by.

## GOOD HEALTH.

### Sleep Habits of Children.

Many habits and customs, the deleterious effects of which are recognized, would become things of the past if a practical and simple remedy could be devised. I have never met with any plainly written advisory articles on the training of children in proper sleep habits, except as to time. A recent experience has led me to "study up" on the subject, in the most practical way, by asking questions of mothers and nurses. My little patient, whose habits and conditions led to this investigation, is 10 years old. A serious and chronic affection of the kidneys has resulted from excessive use of sweets, and consequently lack of appetite for, and assimilation of, nutritious food. She persistently sleeps prone on the back with the arms flexed above her head. Watching results in seeing her turn on one side from eight to ten times every night, but, of course, a further result is diminished sleep, although it is not more restless than usual. Whether the habit can be permanently broken up is difficult to say. From her birth she exhibited a preference for that position, and had been indulged in it, with the inevitable results of catarrhal affections, dry throat, enervating, restless sleep, and aggravation of the kidney difficulty, as the spine was unduly heated by constant contact with the bed.

From the hour of birth a babe should be laid down to sleep with great care; never should it be permitted to lie on the back while sleeping. After it begins to play, the restless limbs are very beneficially exercised while lying so; but so soon as sleep comes the little one should be gently lifted and placed on the side, with the head raised only sufficiently to insure the spine from any curvature, seeing that there are no folds in the clothing to torture the tender flesh, especial care being taken to lay the ear smoothly back. Alternate the sides, or there will be an unnecessary unevenness of contour when the child is grown. Do not permit the knees to be so flexed as to crowd the viscera. Lying on the stomach occasionally is not injurious if the arms lie at the side and the face is free to the air. Frequently that proves to be a very restful position to a play-weary child.

It is not a difficult matter to teach a child to

sleep with the mouth closed and without snoring or "gritting the teeth." A lady of 35, who had habitually gritted her teeth from their first possession, was cured of the habit in a fortnight by persistent waking at the first indication of the sound. The habit has not been resumed during the five years since passed.

If mothers could realize how many people suffer from bad sleep habits contracted in childhood, they would pay a little attention to their children at night-time, beyond the "hustling off to bed, out of the way," and the "keeping covered," which is a sort of "dim religious duty" kept sight of out of fear of the doctor's bill rather than of any other consideration.—*Exchange.*

**REMEDY FOR COLD FEET.**—The following remedy for cold feet is recommended for sedentary sufferers, as well as policemen, car-drivers and others who are exposed to the cold: All that is necessary is to stand erect and very gradually lift one's self up upon the tips of the toes, so as to pull all the tendons of the foot at full strain. This is not to hop or jump up and down, but simply to rise—the slower the better—upon tiptoe, and to remain standing on the point of the toes as long as possible, then gradually coming to the natural position. Repeat this several times, and, by the amount of the work the tips of the toes are made to do in sustaining the body's weight, a sufficient and lively circulation is set up. A heavy pair of woolen stockings drawn over thin cotton ones is also recommended for keeping the feet warm.

## DOMESTIC ECONOMY.

**SPOTS** in varnished furniture are often removed by rubbing them with essence of peppermint or spirits of camphor, and afterward using furniture polish or cold linseed oil.

**TO KEEP INSECTS OUT OF BIRD-CAGES,** tie up a little sulphur in a bag and suspend it in the cage. Red ants, it is said, will never be found in a closet or drawer if a small bag of sulphur be kept in these places.

**TO REMOVE CLINKERS.**—To remove clinkers from the stove, sprinkle common table salt on the linings when the stove is cold. Use plenty of it. Build a moderate fire—wood and coal—and in a day or two the clinkers will be gone.

**CUSTARD AND RASPBERRIES.**—Put ripe raspberries, slightly crushed, into a granite or porcelain stewpan, and cover them lightly with powdered sugar. Set the pan on the back of the stove where there is only enough heat to cause the juice to flow freely. When all the juice is extracted strain it and measure it. For each pint of juice allow three well-beaten eggs, one gill of rich cream and one tablespoonful of lemon juice. Add the beaten eggs gradually to the raspberry juice and set the mixture on a gentle fire, stirring constantly for seven minutes. Then turn it in a dish and when cool add the lemon juice and the cream, mixing well together. Serve cold in custard cups or glasses.

**PEACH VINEGAR.**—A correspondent of the *Home and Farm* says a good, healthy vinegar, made from peaches, can always be kept on hand for table use. Procure a large stone jar, which must be kept for that purpose alone. During the peach season fill it with good clingstone peaches; do not peel them, but wash thoroughly. Make up sweetened water (rain-water is best) of good molasses or brown sugar and pour over the peaches till they are well covered; tie a single thickness of cloth over the jar, and soon it will be vinegar. Draw off, and fill again with sweetened water, as before, which will be ready by the time the first is used up, and so on until the next peach season, when fresh peaches may be put up for another year.

**TO RESTORE INJURED MEAT.**—When the brine sours or taints the meat, pour it off, boil it, skim it well, then pour it back again on the meat, boiling hot; this will restore it even when much injured. If tainted meat is immersed in the solution of chloride of lime prescribed for rancid butter, it will restore it. Flyblown meat can be completely restored by immersing it a few hours in a vessel containing a small quantity of beer, but it will taint and impart a putrid smell to the liquor. Fresh meat, hams, fish, etc., can be preserved for an indefinite length of time without salt, by a light application of pyroligneous acid applied with a brush; it imparts a fine, smoky flavor to the meat, and is an effectual preservative against its loss.

**SUBSTITUTES FOR TEA.**—The dangerous adulterations of teas in China and in this country have induced much experiment in search of a substitute for the tea leaf from some of our native leaves. Each of the following is said to possess the merit of being cheaper and more healthy than common tea, while the appearance is nearly the same. The young leaves of the pea plant, or the young leaves and flowers of the strawberry, or the first leaves of the currant bush, or the hard spring grass (anthoxanthum odoratum), or the leaves of speedwell, wild germander, syringia or mock orange, purple spiked willow herb, sweet brier, cherry tree, sloe, etc. The above should be dried on tin in the shade, and afterward rounced up with a little calcined magnesia to impart a bloom. Black currant leaves similarly treated make a good tea.

## The Week.

We are fairly launched upon fair times. What though the legislators are doing nothing but filling their own pockets; what though the politicians are doing nothing but emptying theirs—for the time, the buoyant spirit of the people rises above legislatures and political conventions, and revels in the social delights which the fairs bestow. Nor are the fairs only a relief from public ills; they drive from the mind the too frequent clouds of individual ills or apprehensions. Who can don his best clothes and go among the fruits and flowers and lovely women in the pavilion and remember that the wind shelled out the wheat, or that the worms ate the apples, or the brindle heifer may possibly get blown in the alfalfa? And if the tender delights of the pavilion are so engrossing, what shall we say of the races which make a man forget the whole world, including milking time? It is well to enjoy such rests and respites from toil and care, which come too seldom in the farmer's life. We are glad to see in our goings about that our fairs are continually improving. Objectionable features are not being subdued as rapidly as we could wish, but the desirable

features are becoming more prominent. Greater interest, larger displays, new pavilions, more music, song, and a fuller participation of the ladies (God bless 'em), are vastly improving our fairs, and we are glad of it.

## The World's Wheat Surplus and Requirements.

The telegraph is a great promoter of business enterprise, for by it the large operator or merchant can ascertain within a few hours the requirements of and also the surplus of any article in all civilized countries, and having this knowledge, from trusted agents, act accordingly. That which takes a few hours to learn took, a quarter of a century ago, fully as many weeks, and then it was not as trustworthy as now. Every year certain large wheat-operating firms in England make a virtue of necessity, in finding out, at as early a date as possible, the world's probable wheat requirements, and also the probable exportable surplus, and on this knowledge act more intelligently. Last year's estimates, made in August, turned out quite correct, excepting with Australasia, where a drouth set in during the most critical period for crops, thus causing an almost total failure. This year they have made their estimates as usual, which, for the sake of comparisons, we give with last year's estimates:

PROBABLE EXPORT AVAILABLE FOR SURPLUS.		
	1885. Bushels.	1886. Bushels.
United States.....	88,000,000	.....
India.....	52,000,000	40,000,000
Austria-Hungary.....	8,000,000	8,000,000
Russia and Roumania.....	40,000,000	40,000,000
Australia.....	8,000,000	*12,000,000
Chili and La Plata.....	8,000,000	8,000,000
Sundries.....	4,000,000	4,000,000
Totals.....	214,000,000	112,000,000

\*After January 1, 1887.

PROBABLE REQUIREMENTS.		
	1885. Bushels.	1886. Bushels.
United Kingdom.....	132,000,000	*145,000,000
France.....	12,000,000	*55,000,000
Belgium and Holland.....	20,000,000	24,000,000
Germany.....	16,000,000	13,000,000
Switzerland.....	8,000,000	10,000,000
Italy.....	12,000,000	12,000,000
Spain and Portugal.....	8,000,000	8,000,000
Greece.....	4,000,000	4,000,000
West Indies, China, etc.	16,000,000	17,000,000
Totals.....	228,000,000	288,000,000

\*It is claimed by well-informed parties that France and the United Kingdom will require more than given in this estimate for 1886-87.

The estimated surplus and requirements were made so as to allow each country to carry over at the end of the season the usual normal stocks, but it appears that while the visible stocks are about the same, the invisible in each and every country is reduced to a lower point than known for over a decade; so that this season is entered by all nations with a smaller supply than at the commencement of last season. In this season's estimate of the probable exported surplus, the United States is left blank, owing to the continued uncertainty at this time of the yield on the Pacific Coast, and also in the large wheat-growing belt at the West visited by the drouth. The estimate shows a shortage of 176,000,000 bushels, to be made good by the United States, and allow stocks in each country at the end of the season of 1886-7 to be only a fraction less than they were at the close of the season of 1885-6. The best way to arrive at the probable exportable surplus of the United States is by the following estimated production and stocks in bushels on July 1st compared with the like time in 1885:

	1885.	1886.
Visible supply.....	45,000,000	36,000,000
Crop.....	357,000,000	*399,000,000
Invisible supply.....	80,000,000	45,000,000
Totals.....	482,000,000	471,000,000

\*Prime, of Illinois, and several other good authorities estimate.

For the season of 1885-86 the exports from the United States, in wheat and flour (flour reduced to wheat) did not aggregate 100,000,000 bushels—going very little above 90,000,000 bushels—but the exact quantity we cannot give, as the Government's official statement of exports is not at hand. In exporting say 100,000,000 bushels last season, the visible and invisible supply was reduced 50,000,000 bushels, so that, with a shortage of 11,000,000 bushels to start with, to export the like quantity this season will reduce the stock to a point barely equal to the demand of speculators on the various call-boards of the country. Saying that the United

States is able to export 100,000,000 bushels, which appears impossible without sending values to very high figures, still there is a shortage in the world's supply of 76,000,000 bushels, so as to leave a fair carry-over into the next season, and to meet this the world's stock will be extremely light. Another thing must be taken into consideration, viz., that the corn crop of the United States is estimated at 364,000,000 bushels short of last year's crop. With a lessened production of corn the consumption of wheat with us is larger, which, if the case this season, will still further lessen our exportable surplus.

## Viticultural Legislation.

C. A. Wetmore, Chief Executive Officer of the Viticultural Commission, made an interesting verbal report at the meeting of the Grape-growers' Association on Tuesday, concerning the progress of viticultural legislation in Washington. Although there were no enactments actually secured, there was progress made which promises results next winter. The bill which the makers of sweet wines most desire, Mr. Wetmore said, was nearly as good as secured and can be had soon after the Senate reassembles in December. The spurious wine bill, which served as a model for the drafting of the oleomargarine bill, will require more work, but the outlook looks promising, especially as the President has approved the principles involved in it by his indorsement of the oleomargarine bill.

There is, however, a great power to fight, as all those engaged in manufacturing bogus wines are doing their best to preserve their nefarious industry. Mr. Wetmore found that the producers of pure wines could count upon the aid of all those engaged in legitimate liquor manufacture, but must fight to the end all kinds of adulterators. This fight, he said, would be long and constant. The chief reason why the desired enactments were not secured was that the genuine wine interest lacked concert of action and influence. He thought great steps had been taken in securing this, and upon this fact he trusted in accomplishing the work in future. There was a unanimity of sentiment in the meeting that Mr. Wetmore must continue his work in Washington, and a committee will be appointed to devise ways and means toward that end.

**HOP LEAVES AS FODDER.**—Hop vines are plentiful in some parts of the State and we would like to know if the growers have tried using them as fodder for stock. If not, will some one make some experiments and report? We read in a foreign exchange that from analyses of the foliage of hops, Wein finds that this material closely approximates to the composition of meadow and clover hay and rye, and as regards the percentage of protein it is not far behind wheat and rye bran. As compared with the ordinary green fodders, green hop leaves appear to be a better food. The coefficients of digestion are: Albuminoids 60 to 70 per cent; fat, 70 to 80; non-nitrogenous matter, 60 to 75. By the coefficient of digestion is meant the percentage proportion of the food which is actually digested; the remainder passes through the intestine and escapes digestion.

**WILLOW-GROWING IN GERMANY.**—Now that osier willow-growing is obtaining a foothold in this State, and the basket-makers are drawing their supplies from home-grown stocks, it will be interesting to know the way the basket industry is being encouraged abroad. In order to encourage the culture of willows, the Government President of Frankfort-on-der-Oder has been requested by the Minister for Trade and Industry to procure information as to the number of basket-makers, and the number of hands and apprentices employed by them; also as to the quantity of material used by them, and where they procure it. A basket-weaving school, to be built on the estate Kriescht, has been proposed as one means of improving this branch of industry. It will be built by the Government.

**ADDRESS AT SAN JOSE FAIR.**—The address by Mr. A. C. Bane at the reception to the G. A. R., at the San Jose fair, was briefly mentioned last week. It was a masterly speech, of which we have received a correct copy, and we shall seek early opportunity to give it to our readers.

## Sonoma County.

The holding of the county fair this week at Santa Rosa, and the district fair next week at Petaluma, turns the mind to thoughts of Sonoma county, one of the grandest in resources, most eligible in situation and delightful in climate of the counties of California. Less than a year ago we gave an excellent map of the county and quite a full description of its valleys and towns, its forests and mountains, and a moderate estimation of its material and climatic resources. It will not be necessary to go over that ground again so soon. And yet we would like to impress upon our readers the eminent desirability of the county, both for the satisfaction of those who are resident within its borders and for the information of those who may be scanning California with a view to settlement. We have many applicants coming to us to know whether such and such a county is desirable. We always try to give a fair outline of the claims of the county inquired about, but invariably end with the injunction, "Go and see for yourself; do not decide until you see if the county commends itself to your own taste and judgment, and is adapted for the special work which you desire to do." We give the advice with the fullest confidence when a man comes to ask about Sonoma county, because Sonoma by her great variety of resources and adaptations can hardly fail to interest and to please, and offers the fullest satisfaction to any one who brings skill, energy, and sufficient means for the effort contemplated.

Sonoma is an old county. The State of California may almost be said to have found birth within her borders, and her age seemed to work against her until new life was infused a few years ago. Her people seemed to have settled down to a very serene and comfortable, but not a very progressive, state of existence. The result was that new counties came into notice, were heralded with the blare of trumpets, and into their ranks rushed streams of wide-awake and energetic newcomers, drawn from the uttermost parts of the earth by the accounts sent out of peculiar resources and advantages. Now and then a few would stray almost uninvited into Sonoma. The result was that for many years the growth of Sonoma was exceedingly slow, while many other counties advanced rapidly. If Sonoma had had the advertising and promotion which other counties had, we doubt not she could measure progress and development and advance in values with any of them.

The last few years have brought most gratifying development to Sonoma county. Her towns are models of thrift, energy and beauty. Her farms will compare with any in the State. Her transportation facilities are continually improving and extending, and it is but fair to presume that her progress from this time forward will compare with any area of the State. The fact that there is apparently such good opportunity for investment, because of the outlook for growth ahead, will of itself draw in the elements most needed for the achievement of that growth. An exponent of the progressive spirit now strong in the county may be seen in the work which Sonoma has done at the fairs, not in this State alone but in distant parts, by the grand displays of her products which have been prepared and sent out under the auspices of her Pomona Grange. These should go on. There should be a far more generous use of printers' ink. Where Sonoma has spent a dollar in these efforts some other counties have spent thousands, and the results have appeared in increased population and taxable wealth.

Sonoma has a most excellent foundation; now let her proceed to build upon it. Mr. R. A. Thompson, one of the best-informed writers on the industrial matters of the county, recently wrote in *Groose's Land Register*, of Santa Rosa, as follows:

Sonoma county has about forty millions of dollars taxable wealth, upon which there are not more than three million dollars of mortgages, which shows a most favorable financial condition of the people. The public debt is less than \$300,000, and the annual tax-rate not much over \$1 on the \$100 of property valuation. The county has about 1,000,000 acres of land and is capable of supporting three times its present population, which does not now exceed 33,000.

There is the opportunity; now let us see what will be done with it during the next few years.

## California Fruit for the Conclave at St. Louis.

A profusion of California fruit was one of the pleasing features of the Triennial Conclave of Knights Templar held in San Francisco in 1883. Aside from its service as expressive of our hospitality, this fruit made impressions upon the visiting fraters and did much to spread abroad our pomological fame at the East. There now appears an opportunity to repeat, to a certain extent, the good work of three years ago, and to do it with much advantage to our reputation and our interests. There will be a good representation of the California Sir Knights at the Conclave which will open in St. Louis on September 21st. They will have commodious headquarters at which they will dispense generous hospitality to their guests. They greatly desire to make a creditable display of California fruits, hoping to send one or two carloads for this purpose. It would seem quite proper that this fruit should be donated for such a purpose by the fruit-growers. To bring this subject to the attention of the growers, a circular has been issued by Sir Knights R. Beverly Cole, S. F. Black, J. P. Allen, and a copy sent us, from which we make the following extract:

In view of the approaching Triennial Conclave of Knights Templar, to be held at St. Louis September 21, 1886, the Order in California, as represented by the Grand Commandery of the State, through their Purveying Committee, beg to state, for the information of fruit and vine growers, that we consider this a golden opportunity for a proper and effective exhibition of their products, and announce that we shall take great and special pleasure in making a proper display of all fruits and grapes donated to us for that occasion. One car, and possibly two, will be dispatched from San Francisco on or about the 14th of September, and such as propose to utilize the opportunity for introducing their products to the attention of the multitude of representatives from every State of the Union who will be assembled at St. Louis, as well as to contribute to the reputation of the State for its liberality and hospitality, are cordially invited to communicate with the undersigned at once (or as early as possible), stating the character, variety and amount proposed to be donated, when specific instructions will be forwarded as to when, how and to whom they are to be shipped. Full credit and public announcement will be given to and of such as respond to this appeal.

We commend the matter to the generous consideration of our fruit-growing readers. A few boxes of choice selected fruit from such as are disposed to send would make a fine collection, which would do the State much credit at the coming meeting in St. Louis. As we understand the announcement, transportation will be provided for, and all that is asked from the growers is the fruit. All interested are invited to correspond with the Chairman of the Committee of the California Grand Commandery, Dr. R. Beverly Cole, 218 Post St., S. F.

**FRUIT AT THE SACRAMENTO RECEPTION.**—At the reception and banquet given to the G. A. R. and their guests at Sacramento there was an extensive and artistic display of fruits and California products. It was placed in the north wing of the pavilion on tables, with a pyramid in the center 16 feet high, tastefully arranged. These offerings were made by the fruit-growers and farmers in and around Sacramento. Mrs. Sol. Runyon contributed the fruit for two tables, each over 30 feet long, and in variety and quality was worthy of special mention, as it was the best display made.

**BRAIN POWER AND MACHINE WORK.**—The day of brute force in the industries has gone by. The entire operations to-day are more of the brain than of the muscle, and since some one must furnish the brain work, it is a pertinent question for the individual producer whether he shall educate himself to supply the larger part of it, and get paid for it, or whether, on the other hand, he shall put himself nearer the level of the machine he operates and allow some one else to get paid for thinking. This is a matter the worker has to settle for himself.

**DEATH OF H. H. BERGER.**—We regret to hear of the death of Mr. Berger, of the firm of H. H. Berger & Co., well-known importers of Japanese trees and plants. Mr. Berger has been in delicate health for some time, and died aboard ship on his homeward journey from Europe. We are informed that the business will be henceforth carried on under the same firm name by his widow and her associates. A representative of the firm is now in Japan selecting stock for importation for the coming season's trade.

## Horticultural Fair at San Jose.

Last week we gave a few notes of the opening of the Second Annual Exhibit of Santa Clara Fruit and Vine Products, which began August 9th, in the new Horticultural Hall, San Jose. The occasion specially mentioned last week was the visit of the G. A. R. and the reception tendered them. After the throng which filled the pavilion upon that occasion had scattered, there was a better chance for a longer look at the chief features of the horticultural display, and they well rewarded the study. It is quite true that it was a little too early for the best show of Santa Clara valley fruit, but the opportunity to show some of the products to the thousands from abroad had to be embraced when it offered itself.

### The New Pavilion.

We have mentioned from time to time the commendable co-operative enterprise which has given the rich fruit district in and adjacent to San Jose a proper structure in which to display its produce. It has taken much effort to marshal the forces and secure the building, and the result is the greater credit to those concerned in it. The "Horticultural Hall Association" was organized April 17, 1886, by the election of a board of nine directors from the 94 stockholders, a majority of whom are farmers and fruit-raisers, and the remainder citizens of San Jose. The Board of Directors are Cyrus Jones, Frank Dunn, A. R. Woodams, I. A. Wilcox, Sylvester Newhall, H. G. Keesling, G. W. Tarleton, Mrs. Sarah T. Ingalls and Mrs. Nannie A. Sanders. The officers are Cyrus Jones, president; Frank Dunn, secretary; Hon. C. T. Settle, treasurer. The capital stock has been placed at \$12,000, divided into 480 shares of \$25 each. Under the auspices of the Building Committee, consisting of Cyrus Jones, chairman, G. W. Tarleton and Mrs. Nannie A. Sanders, and Messrs. Jacob Lenzen & Son, the architects, the erection of the structure was begun on May 15th last. It has a frontage of 80 feet, a depth of 166, and is a single story in height, 26 feet in the clear. The materials used principally in its construction are redwood and Oregon pine, and the roof is of corrugated iron. In the rear of the hall is a large stage, 21x36 feet, with spacious dressing-rooms, toilets and other necessary appendages on each side. There is also a kitchen at the rear end of the building to cook and serve refreshments during the fairs.

### The Decorations.

The opening of the new pavilion, the coming of the distinguished visitors, and the special buoyancy which now seems to characterize the industries of the neighborhood, seemed to fill the hearts of the people with sentiments which must find some form of expression, and the most natural one was the adornment of the pavilion with masterpieces of decorative art, expressive of cordial welcome, patriotic sentiment and loyalty, to the splendid industries which lie at the foundation of the prosperity of the region. We are sorry that we have not space for a detailed description of the various "pieces" which won the admiration of all. Several days of earnest work from at least a score of enthusiastic ladies were needed to complete the undertaking. We dare not try to name them lest some unfortunate omissions should condemn us. As one entered the hall and turned to the right to receive the kindly greeting of Capt. Frank Dunn, the secretary, he was brought face to face with "Ceres." In a chariot of classic design stands a beautiful lady, clad in a white tunic, her head garlanded with ears of grain and a bouquet of the same upon her bosom. Behind her, in the chariot, is a shock of grain of different kinds just cut with the sickle, which hangs upon the prow of the chariot. Upon the front of the chariot there is a wreath of grain ears most artistically arranged. As one looks closer he sees that the body and wheels and pole of the chariot are all thickly covered with various grains and seeds, more than 25 kinds being used in the adornment of the chariot, the wood of which the vehicle is made, being entirely concealed. There was also lettering, key patterns, etc., put on the different colored seeds. The designer was Mrs. E. O. Smith, who also planned a beautiful "Flora" which occupied a place upon the right of the stage. There was an altar of flowers and foliage, surmounted by a bust of Flora, garlanded. The whole design was at least 6x12 feet, and was a mosaic of bloom and verdure.

Occupying the place of honor in the center

of the wall at the back of the stage was a colossal G. A. R. badge, made, all save the eagle, with the feather spikelets of pampas grass, dyed to suit the colors of the badge, gold, red, white, blue, etc. The coloring was perfect, and the fabric wrought of the plumes rich and uniform. The eagle was made of beautiful feathery grass from the Santa Cruz mountains, of an ashy-gray color and excellently imitating the plumage of a bird. Under the trying electric lights the badge was most beautiful. It was designed by Mrs. N. A. Sanders, who also had upon the left of the stage another masterpiece in a different style. It was "Ruth the Gleaner," a girlish figure with an armful of grain, mounted upon a lofty pedestal, covered with red fabric, paneled and garlanded with grain-heads.

In the rear of the hall was another of the decorative triumphs of the occasion, called "The Golden Gate." It was a gate of the style which lovers hang upon, made of golden marigolds, supported by gate-posts of green. Toward this gate a ship laden to the yards with ripe fruit was sailing in a green sea. The foreground was filled with interesting articles, and the background, done in oil, was quite effective. The piece was very elaborate and gave much satisfaction. It was the work of Mrs. Morgan Niles and daughter.

Properly belonging to the decorative department were some very handsome floral pieces by Emile Bourguignon, the San Jose florist. One which attracted most attention was a sitting bear, done in white blooms.

### Plants and Flowers.

Through the center of the main floor of the pavilion were three grand groups of flowering and foliage plants as handsome as any we ever saw in the State. They were from the well-known establishments of John Rock, R. D. Fox and E. Bourguignon, of San Jose. There were well-grown plants of kinds enough to keep a plant-lover entranced all day, and some rarities seldom brought to public view. There were also creditable displays of cut flowers here and there, adding much to the general beauty of the exhibition.

### The Largest Fruit Exhibit

Was by John Rock, and it was almost a fruit fair in itself. There were 100 varieties of apples, 24 varieties of pears, mostly new; 40 varieties of plums, including some promising seedlings, one of which—No. 9—is a very prolific fruit, resembling in color the so-called Hungarian prune, but far sweeter than that variety and quite free in parting from the pit. It would seem to be very promising for drying as a pitted plum. There were 20 varieties of peaches. A Persian mulberry, very large and of excellent flavor, was shown, packed in trays and on branches. There were a number of new olives, some bearing at two feet high in pots. A display of apricots in gallon glass jars included many new varieties, especially the Mongamet, a fine, firm fruit, said to stand shipment well after being fully colored—a beautiful, large fruit. There were also the Large Early Rivers and the St. Ambrose apricots—the latter the largest apricot of the lot and excellent for home or near-by use.

### Jellies.

The largest display of jellies was the work of Mrs. Newhall, which included nearly 300 glasses of jelly from 15 kinds of fruit, and all showing high art in their construction. Their beautiful, sparkling, prismatic clearness was charming to the eye.

Mrs. L. J. Watkins exhibited a few of her trophies, tantalizing us because of the many more that she held concealed from view.

Mrs. S. P. Sanders showed conclusively that her talent was not all executive, but vied with her sisters in a display of beautiful jellies arranged in a most unique manner upon a sort of conch-shell whirl in the way of a standard, glass following glass up the spiral until at the top one gleamed in glory upon the others. Such triumphs in this branch of domestic art are worthy of especial notice, and we fancy that not a few of San Jose's fair ones have an impetus now to press forward and show themselves competitors.

### Silk.

A very excellent exhibit of silk and silk goods was made by the Pacific factory of H. X. Van de Castele. The factory is located at the corner of Delmas avenue and San Salvador street, San Jose, and was established four years ago. There are now seven hands em-

ployed and about 50 yards of silk woven daily. About three-fourths of the silk is California grown and the other fourth imported. The fabrics shown were of exquisite quality and generally admired. M. Van de Castele wishes very much to encourage the industry of silk culture in our State. The process is so simple, if one could keep cool-headed and not be too ambitious, until experience has taught him sufficiently to be a guide, that the results would be all encouraging. To our fair women of California, what a distraction from our homely cares! To our azure-minded sisters, what an awakening that life is worth the living, and our mother Earth, where California lies, a joyous place to live. It seems a precious thought for consideration.

### The Inner Man.

We have no room for proper notice of the many handsome booths and other apartments for dispensing delicious viands. Ice cream seemed to nestle behind every bouquet, and square meals would be encountered at nearly every doorway. When one remembers that about 6000 strangers, with two-ply appetites, had descended upon the neighborhood the preceding day, the abundance still in sight spoke well for the resources of the region. There was a small army of beautiful girls and dames engaged in the refreshing work, under the general leadership, we were informed, of Mrs. L. J. Watkins.

### Other Exhibits.

Besides the special features of the fair to which we have alluded there was the grand rank and file of exhibits which constituted the strength of the display. We regret that we have not space to characterize each exhibit more at length and as its merit would make proper. We must content ourselves with such running notes as we were able to make as we strolled along. We did not attempt to note anything but the agricultural material; the fine art, the fancy work, the curios, etc., all of which was fine and abundant, we are not able to include in our review. In the notes those exhibitors who have no locality named have their habitations in San Jose and immediate vicinity.

J. G. Clendenning, Milliken—Wheat and barley in grain and sheaf.  
D. B. Fuller, Evergreen—Exhibit of cereals.  
A. R. Woodhams—Large collection of grains and grasses and several varieties of fruit.  
Alex. Hildebrand—Display of dried fruits.  
Powell Bros.—Good samples of various grains, also display of vegetables and fruits.  
L. W. Parsons, Los Gatos—Fine display of dried fruits made with Parsons' dryer.  
C. D. Gladewitz, Berryessa—Grain and fruits.  
B. Schultz—Good display of fruits and vegetables.  
M. C. Park, Saratoga—Orchard fruits and grapes.  
F. D. Ballard, Guberville—Beurre Clairgeau pears.  
A. N. Van Vleet—Fine display of fresh and dried fruits.  
James McWilliams, Saratoga—Excellent oranges and lemons, and orchard fruits in variety.  
H. Shadinger—General display of fruits.  
D. M. Ross—Pears and plums.  
Mrs. E. A. Willett—Canned fruits and jellies in large variety, also vegetables and fresh fruits; a fine exhibit.  
C. Schofield—Peaches and fine sack of barley.  
H. L. Stevens, Evergreen—Excellent chevalier barley.  
Wm. Boots, Alviso—Apricots and plums.  
Ludovico Gaddi, Guberville—Beautiful display of olive oil.  
M. M. Shaner, Los Gatos—Orchard fruits, nuts and Japanese lemons.  
Daniel Wright—Well-grown fruits of different kinds.  
P. Miller and F. Tartan, Santa Clara—Beautiful wheat in sheaf.  
G. W. Stewart, Santa Clara—French prunes.  
C. J. Gibson, Santa Clara—Exhibit of plums.  
Evans Dent and R. E. Dent—Prunes and plums.  
E. A. White—Splendid onions, result of 10 years' selection of seed.  
Mrs. Statler—Eight bottles jellies.  
A. M. Ogan, Berryessa—Display of orchard fruits.  
J. A. Statler, Campbells Station—Fruits and vegetables.  
Mary A. Scott—Greenhouse plants, nuts and various fruits.  
W. C. Kerr, Los Gatos—Fruits in variety.  
Mrs. A. M. Ross—Currant jelly.  
Blake & Ross, Santa Clara—Squash grown in 1885, in excellent condition.  
Capt. J. Aram, San Jose—General display of fruits and nuts.  
W. A. More, Los Gatos—Field crops and vegetables; good display.  
Wm. Ross—Orchard fruits.  
J. H. Kelly—Pears, plums and grapes.  
W. M. Statler—Fruits, and a fine specimen of Russian sunflower.  
C. C. Smith, Evergreen—Fine lemons.  
Mrs. Henry Sillick—Five varieties (27 glasses) jelly, also jams and canned fruits; a creditable exhibit.  
C. R. Williams—Silver and French prunes, and other fruits.  
J. C. Day—Orchard fruits.  
A. Dennis—Pears and peaches.  
W. L. Northern—Good display of apples in variety.  
H. A. Boysen, Saratoga—Orchard fruits.  
G. W. Tarleton, San Jose—General display of fruit, including new Wager peach; Crawford peach-

es from tree 28 years old and still vigorous and healthy.

Wm. Cox, Saratoga—Pears, apples and peaches.  
John Morse—General exhibit of fruits.  
Ernest Conant—Peaches and almonds.  
G. Casella, Milpitas—Early Crawford peaches.  
Wm. Ginty—Fine wheat and barley in sack.  
Dr. Lewis—Fine cluster Yucca blossoms.  
A. L. Chapman, Santa Clara—Fine corn in variety, also fruits and vegetables.  
Mrs. M. Elder—Grapes in variety, and prunes.  
John Calker, Los Gatos—Plums and almonds.  
I. A. Wilcox, Santa Clara—Fine general display of fruit, also forage plants in bundles; very interesting.  
L. Conant—Good exhibit of best varieties of orchard fruits.  
E. C. Halm, Guadalupe—Grapes and pears and apples in variety.  
J. Cunningham, Saratoga—Fine display of fruits, including excellent citrus fruits.  
S. H. Leach—Fruits and vegetables.  
Jesus Fathers—Fine branch of egg plums.  
S. S. Paul—Apricots, plums and peaches.  
Mrs. C. D. Horne, Santa Clara—General display of fruit.  
E. M. Cunningham, Saratoga—Excellent corn in variety, and vegetables.  
W. Pfeiffer, Guberville—Fine collection of best wine grapes.  
Z. A. Riggs—Sack of excellent white Australian wheat.  
E. M. Thomas—General display of fruits and nuts.  
B. L. Bartlett, Los Gatos—Orchard fruits.  
Perry Curtis, Santa Clara—Fruits and vegetables.  
Wm. Brundage—Good citrus fruits, also deciduous fruits and other products.  
Wm. Beauchamp—General display of fruit, including some very excellent samples.  
E. B. Pierce—Peaches and plums.  
Joseph Bohnett—Grapes in variety and fine wheat.  
S. P. Stockton—Wine and table grapes; good samples.  
Waldo Allen—Peaches and prunes.  
A. E. Gish, Los Gatos—Display of nuts and fruits.  
J. G. Withey, Los Gatos—Zinfandel and Corinth grapes.  
B. Griswold—Pears and apples.  
Ben. Shuter, Santa Clara—Orchard fruit in variety and large sunflower.  
H. Davidson, Guberville—General display of fruits and vegetables, including fine grapes.  
Santa Clara Cheese Factory—Good samples of this year's cheese.  
J. W. Easton, Santa Clara—General display of fruits and vegetables.  
Miss Lida Shadinger—Canned Foster peaches; fine specimen.  
C. W. Cutter—Peaches and prunes.  
Mrs. Keeler—Pampas grass.  
Mrs. W. D. McCash—Display of jellies, fruits and nuts.  
F. H. Babb—Excellent general display of citrus and deciduous fruits.  
D. E. Gish—Fine specimens of pears.  
Mrs. G. W. Snyder—Early Crawford peaches.  
H. Tilloston, Berryessa—Display of fruits and grains.  
E. M. Weaver—Fruits in variety.  
D. G. Brewer, Coyote—Prunes and Jefferson corn on stalk; very fine.  
W. D. Pollard, Saratoga—Fruits and nuts, canned apricots of 1885, well preserved.  
G. W. Gardner—Dried peaches and fresh fruits in variety.  
W. B. Sanders, Gilroy—Cumberland Triumph strawberries and peaches.  
W. H. Swope—Fine Marblehead squashes.  
Mrs. Swope—Display of canned fruit and jellies.  
F. M. Richter—Apricots.  
S. G. Rodeck—Peaches and apricots.  
Mrs. Ben. Campbell—Jellies and canned fruit in variety.  
Thos. Osborn—Three varieties of rhubarb.  
Ellsworth Bros., Saratoga—Grapes in variety and silver prunes.  
W. H. Stewart, Saratoga—Yellow egg plums.  
H. L. Stevens, Evergreen—Plums, prunes and grapes.  
W. D. Reed—Fruits and nuts.  
S. P. Hagman—Apricots and silver prunes.  
A. Agnew, Agnews—Strawberries and pears.  
J. F. Kennedy, Los Gatos—Promising seedling peaches and pears, silver and Bulgarian prunes.  
R. A. Thomas—Fruits in variety.  
Hugh Cameron—Prunes and plums.  
Johnson Kerr, Los Gatos—Silver prunes.  
James Kerr, Los Gatos—Plums and peaches.  
Roy Bicknell and Clyde Bicknell, Los Gatos—Plums and grapes.  
James Canney—Dried apricots and prunes.  
J. W. Zuver—Red nectarines.  
P. G. Keith, Santa Clara—Display of fruits, including seedling peach.  
L. D. Woodruff—Peaches, pears and apricots.  
G. F. McLoughlin—Peaches and Hines seedling apricots.  
J. S. Lynch—Orchard fruits in variety.  
Mr. Oliver Farnsworth—Cream cheese, excellent quality.  
L. D. Combe—Fine and large display of grapes.  
C. H. Worthington, Santa Clara—Fine sack of Nepal barley.  
M. S. Bowdish, Los Gatos—Good display of orchard fruits and grapes.  
Mrs. Bowdish—Excellent exhibit of canned fruits.  
C. E. Stevens, Evergreen—Fruits and nuts in variety, also capers.  
J. H. Cornthwaite—Pears and strawberries in variety; an interesting display.  
R. W. McLellan, Los Gatos—Plums, peaches and grapes.  
O. F. Alley—General display of fruits and vegetables.  
Childs & Mosher—Fine corn and vegetables, branches of strawberry tree from the University, also excellent fruits.  
C. F. Holcomb—Wine grapes in variety.  
Rush McComis, Santa Clara—Strawberry plants and fruit in variety; very interesting.  
Mrs. G. McNeal, Berryessa—Vegetables and heavily laden branch of French prunes.  
S. P. Lunt, Santa Clara—General display of fruits.  
F. B. Kesling—Orchard fruits in variety.  
Mrs. E. F. Duncan, Campbells—Good display of fruit, fresh and preserved.

Wm. Bucknell, Guberville—Grapes and plums.  
Mrs. E. B. Conklin, Campbells—Canned fruit in variety.  
Nellie Sylvester—Cut flowers artistically arranged.  
Wm. Deno, Los Gatos—Prunes and plums and fine corn.  
Mrs. Elizabeth Americh—Branch of carob tree with fruit; very interesting and novel.  
S. Kirk—Fine wheat and barley.  
Mrs. W. W. Reid—Fruit in variety and summer squash.  
H. Fairfield—Several kinds of fruit.  
Mrs. H. A. Leigh—General display of orchard fruits and nuts.  
Daniel Farrell—Apricots and prunes.  
Louis Borksin—Large exhibit of orchard fruits.  
Dr. J. F. Sullivan, Mt. View—Orchard fruits and grapes.  
G. W. Hansen—Peaches and Japanese plums.  
Mrs. W. Cameron, Milpitas—Lemons and peaches.  
A. C. Penniman—Excellent display of dried fruits.  
J. R. Johns, Saratoga—Fruits and grapes in variety; good samples.  
Isaiah Shaw, Berryessa—Lemons, peaches and evergreen corn on the stalk; fine growth.  
Pomeroy & Wagner, Milpitas—Large display of fruits in variety.  
O. J. Albee, Lawrence—Good exhibit of fruits in variety.  
Mrs. C. Loveland—Display of English walnuts.  
G. G. Badger—Peaches and silver prunes.  
G. S. Norcross, Lawrence—Fine yellow globe beets.  
Frank Dentra—Grapes in variety.  
C. A. Pitkin—Good display of fruits, well arranged.  
Mrs. Pitkin—Interesting specimen of cactus in fruit.  
Lottie and Carrie Pitkin—Art work in flowers and fine display of canned fruit.  
George Pardee—French and German prunes.  
Wm. Rice, Saratoga—Prunes and plums in variety.  
Mrs. F. H. Baker, Los Gatos—Early Crawford peaches.  
W. B. Harrub, Los Gatos—Fine display of vegetables.  
W. A. More, Los Gatos—Barley and wheat; good samples.  
Capt. W. Warren, Saratoga—Plums in variety.  
Harvey Wilcox, Los Gatos—Fine yellow egg-plums.  
J. S. Conner, Santa Clara—Apricots and peaches.  
Robert Dodge, Saratoga—Early Crawford peaches.  
John Auzeais—Grapes in variety and wine of several vintages.  
Frank Cottle—Immense rhubarb and good raspberries.  
N. J. Haines—Grapes, nuts and fruits in variety.  
Mrs. Georgia McBride—General display of fruits.  
O. F. Alley—Large exhibit of fruit, including most best varieties.  
R. V. Deidrich—Display of fruits in variety.  
Capt. Frank Dunn, Santa Clara—General display of fruit, Allegretti cherries, and Cabernet grapes grown on a graft put in March, 1886; a very interesting display.  
F. M. Tenny—Fine general exhibit of fruits and vegetables.  
J. H. Flickinger—Splendid general exhibit of fruit in glass and tin, also display of fresh fruit.  
D. C. Feeley, Patchin—Excellent display of plums and wine grapes.  
A. Loomis, Wrights—Apples, pears and peaches, including Loomis' seedling apple, a very promising new fruit.  
Volney Averill, Wrights—Plums and apples.  
Lewis Hebard, Alma—General exhibit of fruit of good quality.  
Geo. A. Fleming & Co.—Fine display of dried fruit in variety.  
A. J. Fowler, Evergreen—Large display of orchard fruits, including citrus fruit.  
T. W. Mitchell—Comprehensive exhibit of fruit in variety, also dried fruit and nuts.  
Carrie E. Worthington, San Tomas—Large assortment of fruit in glass.  
Mrs. Rolla Butcher, Lawrence—Dried and preserved fruit in variety; very fine.  
G. W. Briggs—General display of orchard fruits.  
Chas. Worthington—Large growth of wild oats; Nepal barley.  
George Peirano—Sample of beans.  
J. W. Johnson, San Clara—Display of sweet-wine grapes.  
Jas. Glendenning, Santa Clara—Washington plums.  
Glendenning Brothers—Fruits in variety.  
J. B. Hanson—Orchard fruit in variety.  
Woolsey Shaw, Berryessa—Fruits and yellow corn.  
P. H. Blanchard—Display of fruits.  
M. L. Grewell, Santa Clara—Display of grapes in variety.  
J. P. Bubb, Guberville—Improved wine grapes and orchard fruits.  
J. Shiner, Saratoga—French and Hungarian prunes; fine specimens.  
K. S. Klinkinbeard—Plums and pears in variety.  
G. M. Brown, Jefferson—Apples and fine yellow Danver onions.  
Mrs. Hutton, Santa Clara—General display of fruits and nuts.  
J. J. Fenton, Agnews—Orchard fruits and berries.  
Norris Plummer—Excellent sun-dried apricots, orchard fruits in variety, and watermelons.  
Mrs. J. W. Hines—General display of orchard fruits and berries.  
Bradley Smith—Fresh and dried apricots.  
A. Block, Santa Clara—Excellent display of pears, including a Bartlett 15½ x 12 inches in circumference (borne on an old tree), also fine samples of the new pears, Block's "Acme" and "Superb," also plums and prunes in variety; an excellent display of well-grown, clean fruit.  
R. D. Fox—Excellent display of the famous "B. S. Fox Seedling Pears," an interesting exhibit of varieties which are fast demonstrating their value.

Such items we gain from our hurried notes of individual displays. It is more than likely that in the profusion of material some good things, even of the agricultural class, to which we restricted ourselves, may have been passed over. We may find room for other matter relating to the fair upon a subsequent page.

Among the many valuable uses to which paper can be put, none equals that of advertising. If properly utilized in this respect it will increase its value beyond calculation.

## San Diego County.

Interesting Lecture by Wendell Easton, Esq., on the Soil and Products of that County.

The meeting was held on the evening of Aug. 11th, at the office of Easton & Eldridge, 618 Market street, under the auspices of the Pacific Coast Land Bureau, being the continuation of a series of lectures on the different counties of California which was inaugurated about eight years ago. The subject-matter of the evening was San Diego county and its advantages for settlement. The meeting was called to order by Mr. George W. Frink, vice-president and general manager of the Pacific Coast Land Bureau, who made a few introductory remarks concerning Southern California, with particular reference to San Diego county, and then introduced Mr. Wendell Easton, president of the Land Bureau, who held the attention of the audience for over an hour, expressing his opinions with regard to this section of the State in the following words:

### San Diego County.

San Diego county comprises the most southern portion of the State of California and extends along the border separating it from the peninsula of Lower California on the south, the Pacific ocean on the west and the Colorado on the east, a distance of 150 miles, and with a length of the county from north to south of 150 miles, will make a total area of nearly 15,000 square miles or very nearly 9,000,000 acres, with certainly a fair portion of one-third of the area of level plains and valleys along the Coast Range and in the mountains, suitable for farming in its different phases and grazing.

Two branches of the Coast Range, passing through the county from north to south, separate it into three divisions, which differ as much in soil, climate and topographical features as if they were in different portions of the globe. The division bordering along the coast line forms a part very nearly 25 miles wide, a considerable portion of which consists of level land and gentle sloping valleys, watered by the San Bernardino, San Diego, San Luis Rey, Margarita, Sweetwater and other rivers, the greater portion of this division being suitable for agriculture and grazing. The central, or, as we term it, the mountain division, is very irregular in outline, averaging nearly 40 miles in width, the higher hills being covered with forests of oak, cedar, pine and fir, and contains gold, silver, copper and other minerals. Valuable gold mines are now being worked in the county and to considerable profit to the owners. Between the ranges one meets with continual surprises, for here and there in these secluded spots one will find the most fertile sections of the State of California, with a delightful climate and soil unsurpassed for fertility, which will produce the various cereals and citrus fruits in great abundance and perfection. The eastern division of the county is composed of a treeless, barren desert, part of which is below the level of the sea, which is very dry and hot. About its only recommendations are the many natural curiosities which there abound, among which is a lake of boiling mud about a half-mile in length and about 500 yards wide.

### Soil.

The greater portion of the soil of San Diego county is of decomposed granite, and not alone the best fruit land, but for general agriculture and for richness, combined with easy working, irrigation, drying and retention of moisture, cannot be excelled anywhere. The superior grade of the soil has generally a reddish tinge, and where of coarser nature, it will favor the color of granite with every shade of color between the two. The soil of this section of the State, like other portions of California, cannot be judged by the eye, and in portions of the county, at a careless glance, what appears to be almost pure sand is fine flakes of loam surprisingly rich; the reason being that there is scarcely any decay of vegetation to mix with the other elements, and to give it the appearance of the rich land in the East. Vegetation dries up and disappears in pulverized soil, so that in a handful of soil it can scarcely be noticed without a magnifying glass. Irrigate this same soil, and any seed planted in it will show a growth which is surprising. The sand in the river beds is very rich, but outside of the river beds and bottoms there is little that has any sandy character, having more of an alluvial pulverized appearance, and is extremely fertile. The stranger cannot judge of even the roughest portion of San Diego county from its appearance or distance. Many of those places that seem almost inaccessible, running tier upon tier for several hundred feet, are delightful places for a siege. The boulders are much further apart than they appear from a distance, with plenty of rich soil between them, and bearing flowers, ferns and shrubs innumerable. Long bunch grass rises above the alfalfa or burr clover, often covering the ground and bleaching at the top in summer and starting out again in soft green at the bottom with the first rains. These little parks are scattered with live oaks which stand around the edges filling up the openings in the barricade of boulders, or shading the head or entrance of the little pockets that run here and there into the chaparral, like inlets from a lake. In traveling over the country one meets with continual surprises, and upon rising a hill there may lie before the view a large open space comprising a few acres up to the many thousands. Above an elevation of, say 4000 feet, timber is abundant. Along the river bottoms and low grounds the scymore is found in all its stately grandeur; the cotton-wood is very common; the willow, the ash, the native walnut and a very sweet nut like the butternut, the alder and two varieties of oak, are common; and the alder forms a fine tree on the higher water-courses. Those with the Torrey's pine, are all below the high mountains that can be called timber.

### Climate.

There are but two seasons, neither of which can be exactly defined, but which are nearly described as spring and summer. Spring is generally called winter, and with the exception of a few frosty nights, which can only be when the sky is clear and the air quite dry (in which case the

succeeding day is sure to be warm and bright), there is nothing of the greater part of the season which can correctly be called winter. It is called by many the rainy season, but this is only by way of distinction from the long, dry summer. It is not a rainy season as we term it in the Western States or New England, from the first to the last rain, a period lasting in seasons, usually wet, say six months. The number of rainy days is never equal to that of a wet spring or winter in the Eastern States, and too often does not equal the rainy season in six months seen there. This season commences with a fair rain in November after a light shower or two in October. The summer season, as we term it, commences about the 1st of May, lasting to about the 1st of November, and is a continuous series of dry weather. The peculiarity of the seasons in this county is the fact that no two seasons are alike. One summer might have a light sprinkle or two of rain or a little more intense heat than another, but there are the same regular portion of bright days month after month. In winter the fair and clear days always predominate, even in years of excessive rainfall.

The mid-day temperature of the clearer days in summer is generally from 60° to 70° on the coast, and from 65° to 80° in the interior. The mid-day temperature of the rainy days is about from 55° to 60°. The lowest mid-day temperature recorded at the United States Signal Station at San Diego during eight years is 51°, and this occurred but once. In those eight years there were but 21 days when the mid-day temperature was not above 55°. In fact, there have been but six days when the mercury fell below 36° at any time in the night, and but two when the mercury fell to 32°, the lowest point ever reached. A comfortable summer in a latitude so low and with such warm winters is the last thing which strangers expect, yet it is the greatest surprise to those who venture to remain. Should any one reflect for a moment it can be easily seen that a land so dry must be free from malaria; how a dry air must make cool nights, and be thus less perceived by keeping the skin dry; how a breeze from the sea must follow the rising of the sun. By the sea the difference between the mid-day temperature of winter and summer is hardly above 10°, and in the interior little, if any, above 15°. In the El Cajon valley, but 12 miles east of San Diego, where any given day will be warmer at mid-day than on the coast, it is always cooler at night, and blankets are always acceptable the year round. This noted valley fairly represents the temperature of the interior, there being, of course, places where it is greater and others where it is less.

### The Productions.

Southern California seems to produce, with proper care, nearly every kind of tree, shrub, grass, grain or herb that is at all common to the temperate zone, together with a greater number of those of the tropics. Most of the products of the temperate zone reach here their perfection, while many of those of the tropics do the same. Special soils, of course, as well as elevations, are adapted to special products; the best oranges cannot be grown on the strongest wheat land; the best apples, cherries, gooseberries and potatoes can rarely be grown under an elevation of 2000 feet or more, while the best land for grapes may not produce the best wine-grapes, and vice versa. The cultivation of fruit trees has met with most gratifying success, the product being superior in all that makes fruit feel luscious to the taste or beautiful to the eye. Peaches, pears, plums, prunes, apricots, cherries, apples, nectarines, oranges, almonds, lemons, bananas, figs and many others have demonstrated the productiveness, and in many instances have already proven a source of considerable financial profit. The shipment of fruits to the Eastern States promises to be one of the most profitable of California's business opportunities, and San Diego orchardists are furnishing their quota to-day of the extensive demand. The dry atmosphere is extremely favorable to the ripening of fruits, as well as to their curing, and sun-dried fruits are already among the productions of the county. It is no egotism to say that the raisins cured by solar heat are not surpassed by those of any other section of the State of California. All that has been said of the fruits already mentioned can be said of the grape, and even more, for it is to viticulture that most attention must be paid and hence larger and more satisfactory results will be obtained. Rich alluvial soil, abundantly watered, easy of cultivation and warmed by a genial sun, are the facilities here offered for the culture of the grape. More than these are not found in the most noted vine districts of Europe. To mention the general elements of the success of viticulture in San Diego county would require much more time than is allotted to this article, while an enumeration of individual successes would read more like reminiscences of Utopia than the actual experience of men toiling on San Diego lands. It has been my personal privilege to visit the several important vineyards in the State of California, and having had excellent opportunities to be familiar with the details of the workings of this industry in all its bearings, I am free to say that when I visited the well-known vineyard of George A. Cowles in the El Cajon valley, San Diego county, I was struck with wonderment and surprise to see the extraordinary growth made in his vineyard and the important results which he had obtained by the curing of his crops by solar heat, and putting forward into the commercial mart a grade of raisins that will rank the world. This statement I make is indorsed by the statements of the well-known house of Wm. T. Coleman & Co., of San Francisco, and the raisins of Geo. Cowles are now placed in this market, ranking with the well-known Malaga raisins of Spain, these grapes being grown without irrigation.

### San Diego.

The county seat of San Diego county is the city of San Diego, lying on the well-known bay of the same name. The city is constructed, commencing from the water's edge, rising up the sides of a gentle sloping hill, and is one of the oldest cities and missions in the State of California. The population at the present time is about 8000 people. There are three daily newspapers published here, of which the San Diego Union takes rank by seniority, being the oldest newspaper published in the county of San Diego; the San Diego Sun is in its ninth year, and also the San Diegoan, the youngest publication of the three. The city is well supplied with financial institutions, comprising the Consolidated National Bank and also the First National Bank. These

banks are stock companies, and owned by prominent financiers of San Diego city. The city is well supplied with hotels, and manufacturing is becoming quite a feature of San Diego, as is indicated by almost every branch of trade represented here. The shipping facilities are of the best. The elegant steamers of the Pacific Coast Steamship Company ply between San Francisco and San Diego, touching at intermediate ports. The steamer leaves San Diego every three days. This, together with her excellent railroad facilities, connecting with all through trains, fastens for San Diego her importance as a shipping point for the whole of Southern California. The harbor of San Diego is world-renowned, being one of the finest harbors in the world, and, next to the bay of San Francisco, is the finest on this coast.

#### Coronado Beach.

San Diego, in the future, will supply a great demand as a pleasure resort for Southern California. During the long dry summer the husbandman and the vineyardist, desiring a little relaxation from the continuous warm weather, turn to the seaside, and, with a few days on the ocean, go back with renewed vigor to their labor. This demand is met in the harbor of San Diego, with the well-known peninsula which is now termed Coronado Beach, which is bound to be the Coney Island not only of Southern California but of the Pacific Coast. A level tongue of land makes out from the southern portion of the bay north and to the west, lying across the channel, about four minutes from the mainland at the foot of the main streets leading from the city of San Diego. This magnificent property has been purchased by a syndicate of capitalists of San Diego county who have unlimited capital at their back, and who are now making extensive improvements and developing this important piece of property for its true purpose. A large portion of the peninsula has been set aside and subdivided into proper villa parcels, a hotel site has been set aside, on which will be constructed a second Del Monte; ferry facilities are now completed and a magnificent boat has just been completed in San Francisco, and accepted during the last month, for the purpose of transferring passengers from the San Diego side to the peninsula, where the passengers are met by a railroad, with a steam motor, to convey them to the beach facing the ocean. Ten minutes from San Diego will transfer people across the channel and across the land on to the Coronado Beach, one of the finest beaches in the world, where miles of drives can be constructed, and where the sea-bathing is certainly par excellence. This property is being developed, as I have said, by people of large resources, and with broad and liberal ideas, and will certainly be attractive to strangers from all portions of the world, in addition to the residents of Southern California, who are seeking just such a place for recreation and rest, and here is met their requirements in this direction by this prominent city, so well termed the "Naples of the Pacific."

#### The Back Country.

The city of San Diego, from a commercial standpoint, will certainly acquire great prominence through this section of the State, from the fact that it is the natural shipping point for Southern California, in addition to the wonderful back country, so prolific in resources. As an immediate suburb to the city of San Diego is the

#### El Cajon Valley.

This well-known valley is an original grant comprising 11 leagues or 48,000 acres of land, and is, without question, one of the most extensive fertile spots in the State of California. In going out from San Diego on the main road to El Cajon valley, we gradually rise over the first line of foothills, and upon reaching the brow look down into this valley which is so well known throughout the entire State. The valley is only 13 miles to the east of the city of San Diego, and at the present time has a small population, but is filling up rapidly, owing greatly to the efforts of settlers, whose success in raising grain and the raisin grapes have brought it prominently into notice. There is a town-site laid out in the center of the valley, which is the central point for the transaction of business, where now there is a hotel, store and postoffice, fine schoolhouse and church organizations, and at this point a number of important roads, leading from the city of San Diego through the important back country, cross and recross. This valley is one of the best in the county, comprising a long sweep of broad, level land, which needs no clearing and is readily broken by the plow. Of the entire 48,000 acres, very nearly one-half is valley land or low mesas, all arable, rich, smooth and clear of brush or rocks, and contains less waste land than any other plain of equal size in this county or the adjoining ones. From this main valley run out numerous branches, some of them being quite extensive. The elevation above the sea is about 300 feet, and the whole is sunk in a girdle of hills from 800 to 2000 feet above the valley. The soil throughout the main valley is a continuous sweep of the celebrated red land of this section of the State—a soil very rich in character, easily worked and retaining moisture better, therefore needing less irrigation than deep or sandy soil, and unanimously pronounced by the experts of California to be the very best of all soils for many kinds of fruit trees, and above all, the natural home of the grape. Here is found the home of the orange, the home of the raisin and the acidulous fruits of all varieties. In this beautiful valley is a nursery where every tree almost that one can name has been set out as an experiment, together with a multitude of roses comprising the entire family, and all seem to be at home, thriving and prosperous. In this valley, at the present time, everything is grown without irrigation, and success is demonstrated. The San Diego river skirts the valley its full length on one side, and the San Diego Flume Company is now constructing its important flume on the other and carrying across through this valley a volume of water equivalent to 6000 cubic inches. The soil of the valley is varied in character. On the western and southern slope of the valley it is of a stronger and stiffer character, and as we enter the valley the soil becomes lighter in color and character and more easily handled, and altogether the valley, as a whole, in my judgment, comprises one of the most remarkably productive sections of the State of California. As one rises out of the main valley on to the side foothills, surprises are continually meeting one by the little valleys and mesas that show up from time to time between the low hills. Continuing out through the Cajon, leading up the important streams, we are continually reaching these small

valleys until we get into the very highest mountains. In speaking of this section of country, it is a repetition of other valleys in the State which are of importance, and with these exceedingly fertile spots lying adjacent to the city of San Diego, it is safe to say her future is assured. With her natural commercial advantages and with the extraordinary fertile country lying to the back of the city, this "Naples of the Pacific Coast" must certainly be one of the most important cities of the State, and it is a fair presumption, that with to-day but 8,000 people, to say that within 10 years she will have 50,000 people, and maintain her growth based upon her natural resources.

#### Irrigation.

It is commonly understood that in Southern California irrigation is a very important factor to produce the best results. In fruit-growing and viticulture and in certain sections it is imperative that irrigation should be made available, as in the greater part of Southern California without it nothing can be grown; but in San Diego and in such fertile sections as I have indicated, as the El Cajon valley, irrigation is not known, although thorough cultivation is there an important factor. Major L. Chase, a prominent attorney in Southern California, whose suburban home is in the El Cajon valley, told me that he had demonstrated that thorough cultivation was more desirable in his orange grove in the El Cajon valley than irrigation, and that his trees (which I can vouch for as being the cleanest I have ever seen in California) have been grown entirely without irrigation, and he is an advocate of deep plowing, which concurs with my judgment and experience in the matter. There is quite a territory of land lying adjacent to the city of San Diego and well back to the first foothills of what is called the Mission lands—high mesa lands on which nothing will grow without water, and to meet this requirement one of the most important enterprises of the State of California has been undertaken for the purpose of furnishing water along the line of supply and to terminate in the city of San Diego. The San Diego Flume Company, a local corporation, has secured the proper rights and located water at the San Diego falls, where an unlimited supply of water can be diverted and carried from this point in a flume on a grade of four feet to the mile, down the river to the El Cajon valley. The length of the flume from the dam to San Diego is 49½ miles and the line is already surveyed to a point on the west side and going out of the El Cajon valley. From this point the water is to be taken in smaller flumes across the mesa lands east of San Diego City on a grade of 20 to 25 feet to the mile. The flume as now located runs down the San Diego river to the El Cajon valley, then skirts the edge of this valley to the point of its departure for San Diego. The storage reservoirs contemplate taking in the water of over 150 miles of watershed, and as this country has an elevation of from 4000 to 6000 feet above the level of the sea, and as the rainfall is over 40 inches in that section of the country, there can be no doubt of the fact that the reservoirs can be filled even in the dry seasons. As a result of this important enterprise a magnificent water-supply will be guaranteed to the city of San Diego as well as ample facilities for the irrigation of nearly 200,000 acres of land. With such an area of arable land, San Diego can build homes for nearly 20,000 people. I am informed that a contract is now under consideration for the construction of the dam, and one of the reservoirs will be filled this season, and it is presumed that the water will be taken through El Cajon valley next season. The organizers and the proprietors of this company have been outlining a liberal policy in offering inducements to consumers of water, and the enterprise has every appearance of good faith and stability. As an adjunct to this company, a new company has been organized, known as the Mountain Water Company (one of the leaders of the movement being Dr. Joseph Jarvis, of Riverside, a gentleman well known in Southern California, and together with L. M. Holt, the publisher of the important paper at Riverside), is taking a leading hand in purchasing a large supply of water from this San Diego Flume Company. This new company has purchased some important tracts adjacent to the city of San Diego, and are proposing to pipe them for irrigation and outlining as a portion of the program, to sell the land at so much an acre, including the water-right, and furnish the water for irrigating at the low price of \$2 per acre per annum. This second company will exert a powerful impetus to the prosecution of the Flume Company's enterprise, and in the end give the city a supply of cheap water.

#### In Conclusion.

Of a truth it may be said that the county has great natural capabilities. Touching agricultural crops or horticultural productions, they mature here a perfection which will always make them desirable in the market and guarantee to the producer a liberal return for his time and labor. San Diego has just awakened to her era of substantial prosperity, yet I would not represent it as a land of luxury and ease—a country where a touch or a glance, or even limited labor, can expect a desirable income. There never was but one Garden of Eden. To make a success of anything in San Diego county, labor and time are both necessary, while capital, though not a *sine qua non*, will prove as agreeable here as elsewhere. Our hope is in "small farms well tilled," and we have abundance of room for thousands of active and intelligent families, all of whom may here erect happy and profitable homes, combining health, pleasure and profit. The future is promising and the present is a source of great satisfaction.

#### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INOALLS—Arizona.  
E. L. RICHARDS—San Diego Co.

## PUMPS FOR RECLAMATION, IRRIGATION, AND DREDGING.

WILL BE ON EXHIBITION AT MECHANICS' INSTITUTE FAIR.

This Pump has thrown, on a Test, 234,000 Gallons per hour, On a Lift of 10 feet.

PIT. VERTICAL, BULKHEAD, TURBINE, CENTRIFUGAL AND LOW-LIFT PUMPS.

WE MANUFACTURE ALL KINDS OF

Machine Tools, Including Engine Lathes, Drilling Machines, etc.

Horizontal, Single Acting, Compound Condensing, and Automatic Steam Engines.

Cast Iron Sectional Boilers, Horizontal and Vertical Tubular Boilers, Water Valves, Water and Steam Fittings, Hydraulic Jacks, etc.

Mill Rolls Ground and Corrugated. SEND FOR CIRCULAR.

**SAN FRANCISCO TOOL CO.**

Works, First and Stevenson Sts., San Francisco, Cal.

## DOW STEAM PUMP WORKS, San Francisco, Cal.

## DOW'S IMPROVED STEAM PUMPS And Pumping Machinery

FOR EVERY POSSIBLE DUTY.

## COMPOUND PUMPING ENGINES,

Condensing and Non-Condensing,

.....FOR.....

**Water-works, Mining Purposes, Irrigation, Etc.**

GRAND SILVER MEDAL Awarded at Mechanics' Institute Industrial Exhibition for Best Direct and Double-acting Pump.

Works: 114 & 116 Beale St. Correspondence solicited. Call or send for Catalogue.

**C. SANBORN, ARCHITECT,**  
Builder and Superint'd.  
Preliminary Drawings and Estimates furnished gratuitously. Plans and Specifications prepared with accuracy. No. 6 Eddy Street, S. F.

THE ONLY BAGGER IN THE WORLD.

**\$50 REWARD**  
will be paid for any Grain Fan of same size that can clean and bag as much Grain or Seed in one day as our Patent MONARCH Grain and Seed Separator and Bagger or our Improved Warehouse Mill which we offer cheap. Price List mailed free.  
**NEWARK MACHINE CO.**  
Columbus, Ohio.

The Scientific Kit of Tools for Farmers, Planters, Stockmen and Machinists.

G. G. WICKSON & CO., 238 California Street San Francisco.

## American Exchange Hotel, SANSOME STREET.

Opposite Wells, Fargo & Co.'s Express, one door from Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion of the city. The traveling public will find this to be the most convenient as well as the most comfortable and respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50 PER DAY, ACCORDING TO ROOM.

Hot and Cold Baths Free. None but most obliging white labor employed. Free Coach to and from the Hotel.

MONTGOMERY BROS., Proprietors.

## A MAGIC CURE

—FOR—  
Rheumatism, Neuralgia, Pneumonia, Paralysis, Asthma, Sciatica, Gout, Lumbago, and Deafness.

Everybody should have it. G. G. BURNETT, Ag't 327 Montgomery St., S. F.

Price, \$1.00. Sold by all Drug gists. Call and see

DR. CHAS. ROWELL, Office—426 Kearny St. San Francisco.

## A NEW COLONY

On the new extension of Southern Pacific Railroad, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

**H.H.H. HORSE LINIMENT.**  
THE H. H. H. Horse Liniment puts new life into the Antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windgalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every Bottle before purchasing. For sale everywhere for 50 cents and \$1.00 per Bottle.

The Legislature.

Fourteenth Day—Tuesday, August 10th.

SENATE.

Nothing accomplished as to irrigation.

ASSEMBLY.

Moffitt's bill to repeal Section 1422 of the Civil Code was ordered to be engrossed and read for the third time, by a vote of 53 to 17. Goucher's Assembly Bill No. 8 was amended, read a second time and ordered engrossed and to a third reading.

The bill as amended reads as follows:

Section 1. The water of every natural stream within the State of California is the property of the public and is dedicated to the use of the people of the State. Such water may be appropriated, diverted, and used for irrigation, or other beneficial purposes. The right to divert unappropriated waters of any natural stream to such beneficial uses shall be regulated by law. Prior appropriations of water to any such use, whether heretofore or hereafter made, so long as applied to such use or other beneficial purpose, shall give the better right to the extent of the amount of water actually diverted and applied, and the right of appropriation, diversion and use shall be exercised under legislative regulations; provided, the navigation in navigable streams under the control of the United States shall not be impaired. The English common law of riparian rights, so far as it conflicts with this act, shall not be recognized as a rule of decision in any of the courts of this State.

Sec. 2. All acts and parts of acts in conflict with this act are hereby repealed.

Sec. 3. This act shall take effect immediately.

The balance of the afternoon was devoted to the consideration on second reading of Edwards' constitutional amendment No. 7, as amended by the committee. It was slightly amended and passed to third reading by a vote of 63 to 7. The last clause, as amended, now reads:

But nothing in this section shall prevent the Legislature from passing laws having local application regulating the diversion, distribution and use of water for irrigation purposes, and for the construction and regulation of canals, ditches and other works therefor, as the same may be required in any county or counties or in any district created by law for that purpose. Provided, however, that such laws having a local application shall not grant to any private corporation or individual any special or exclusive right, privilege or immunity.

Fifteenth Day—Wednesday, Aug. 11.

SENATE.

Assembly bill repealing Section 1422 of the Civil Code to the Judiciary Committee, after some discussion, was ordered sent to the file.

A similar discussion ensued in regard to Assembly Constitutional Amendment No. 7, which was finally sent to the committee.

ASSEMBLY.

Moffitt's bill providing for the repeal of Section 1422 of the Civil Code was finally passed by a vote of 53 to 16.

Goucher's bill, No. 8, passed by a vote of 44 to 23.

Sixteenth and Seventeenth Days—Thursday, Aug. 12, and Monday, Aug. 16.

Nothing was accomplished as to irrigation in either house.

Eighteenth Day—Tuesday, Aug. 17.

SENATE.

Time occupied with discussing amendments to Del Valle's bill, No. 16.

ASSEMBLY.

Assembly Constitutional Amendment No. 2, which as amended now reads as follows:

Article XIV, Sec. 3. The waters of all natural streams within the State are the property of the public, and are dedicated to the use of the people of the State. Such waters may be diverted and used for irrigation, mining or other beneficial purposes, under regulations prescribed by law; provided, that navigation in navigable streams subject to the control of the United States shall not be impaired. The English common law of riparian rights shall not be recognized as a rule of decision in any of the courts of this State.

Was ordered to be engrossed, and will come up for final passage as a resolution on the 18th.

TWO GREAT FIRES.—Week before last the most disastrous ranch fire of the season swept its path of desolation for nearly 10 miles in San Benito county, destroying \$50,000 worth of hay and grain, besides fencing, barns, and farm implements. And now word comes that the business portion of Tulare has gone up in flame and smoke. Every hotel and restaurant was consumed; 10 or more horses perished. The total loss is roughly estimated at a quarter of a million of dollars.

THE STARR MILLS, at South Vallejo, employ 90 men regularly. The mills run night and day and convert 250 tons of wheat into flour every 24 hours.

MAJOR J. S. HAYS, of the St. Helena Times, Napa county, gave the welcome speech to the G. A. R. in that place August 12th.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in DEWEY & Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING AUGUST 10, 1886.

347,022.—TWO-WHEELED VEHICLE.—T. S. Bayley, Alturas, Cal.

347,041.—THROTTLE VALVE.—Hopkins & Johnson, Austin, Nev.

347,244.—TOY AIR-GUN.—P. D. Horton, S. F.

347,007.—SLIDING GRATE FOR STOVE OVENS.—M. L. Miller, Oregon City, Oregon.

347,251.—OILER.—Elijah Moat, Los Angeles, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

Other Exhibits at San Jose Fair.

In addition to the displays mentioned on a preceding page we find the following worthy of notice:

L. D. Combe showed a promising seedling from the Howell pear.

Some French petite prunes shown by, Mr. Bowditch, of Los Gatos, were 4½ inches around, the short circumference.

The Farmers' Union showed a glass case of finest honey.

Capt. J. C. Merrithew, of Prospect vineyard, Cupertino, exhibited grape brandy and California old port, Muscatel wines and "A Bonanza," composed of brandy and wine.

The Paul O. Burns Co., of the Yerba Buena vineyard, exhibited wines and brandies of its manufacture, neatly and attractively arranged.

The Burgundy vineyard, J. B. J. Portal, proprietor, made a large and attractive display of wine and table grapes. He showed the growth of a graft of Cabernet Sauvignon imported from the famous Chateau Lafite last January and grafted in February. There were 8 or 9 canes from the graft which had grown 7 to 8 feet this season. Near Mr. Portal were meritorious exhibits of grapes by Ellis Bros., Saratoga; J. Bohnett, San Jose; and W. Pfeiffer.

One large table was devoted to a fine exhibit by Col. Younger, Miss Alice Younger and the Misses Fowler, of Evergreen. One of the attractions was a basket of blackberries of the Washington variety. Miss Alice Younger is the artist. The Misses Fowler exhibited a large sprig of Japanese persimmons, and oranges and lemons seeded and budded. The rest of the display consisted of fruits of all kinds and floral decorations.

L. A. Brooksin showed fine pears and prunes.

E. W. Harrison—Fruits, nuts, and a bunch of English walnuts that was much admired.

George Porter, Santa Clara—German prunes.

J. B. Herbert—Corn.

Dr. Mintie, ranch of Berryessa, made a fine exhibit of fruits.

Perry Curtis and W. Holborn—Fresh peaches, etc.

Wesley Shaw—French prunes, showing the growth of the wood.

J. F. Taylor, Agnews—Strawberries, raspberries and blackberries.

A. M. Van Pelt, of Saratoga, displayed fruit, fresh and dried.

A. Tilton showed some large English walnuts.

E. A. Willett—Squashes.

M. C. Park—Squashes.

Dr. Norcross—Immense beets grown without irrigation.

O. F. Alley showed his farm in miniature. There was the house, in front of it a garden, and back of it an orchard, with trees and vines, and fruits. The idea was happily conceived and admirably carried out.

The carob or St. Johns bread tree was shown by two growers, R. A. Thomas and Mrs. Arnerich. This promising tree has been imported by various parties and has been widely distributed from the University experiment station. Its growth and early fruiting lead to an expectation that much value will be found in it in California.

Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

ROOFING.—There is no better roofing than that made of iron, and we know of no more reliable makers than the Cincinnati Corrugating Company. They will cheerfully give you any information, and prices, and you may depend on their prompt and thorough execution of any orders.

COMPOUND lenses, of every possible combination, mounted in two hours' notice. C. Muller, optician, 135 Montgomery street.

IRRIGATION.

The Law of Water for Irrigation in Colorado.

By S. W. CARPENTER.

This book is intended to present in a clear and concise way the Colorado law of this very important subject at the present time, with all the latest decisions. It also contains many suggestions of the greatest value to those interested in securing and preserving water rights in Colorado.

The information will be found of great value to those who are interested in irrigation laws for California.

We append, by permission, a notice of the book from Hon. H. P. H. Bromwell, of Denver, a member of the State Constitutional Convention, and of the General Assembly at the time much of the legislation on the subject of irrigation was framed, and later referee in the establishment of priorities in Water District No. 3, Cache la Poudre river, and a well recognized authority in such matters.

DENVER, COLO., June 2, 1886.

S. W. CARPENTER, Esq.—Dear Sir: I have examined the digest and compilation entitled "The Law of Water for Irrigation in Colorado," which you have prepared, and beg leave to say that in my opinion it will prove to be of much use and value to the community. The work so much needed has been done by you remarkably well, considering the brevity necessary in preparing a book for the use of all parties interested in irrigation, as well as of members of the bar. Respectfully and truly,

H. P. H. BROMWELL.

Price, \$1.25, Post-paid.

CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.

TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for

COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the products having come forward with this products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions: To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.

JESSE D. CARR, President.

EDWIN F. SMITH, Sacramento.

AGENTS WANTED

to sell the

MISSOURI

STEAM

WASHER

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

MARY J. TAPPAN, REVERSON, N.H.: They excel all other washers I ever saw. JOHN E. HUBBIE, JR., NEWARK, N.J.: The best machine ever invented by man. H. H. H. RANT, CORRAVILLE, S. C.: Everybody likes them and everybody wants them.

S. H. ADAMS, SENIOR, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another.

MRS. JOSEPH SWIFT, SEATTLE, WASH.: I have the most useful article that I could find. ANN HARRIS, BUTTE, MONT.: I have thoroughly tested it on articles from five dollars to ten dollars, and it has done every thing.

ST. CLAIR KINKER, JR., GAITHERSBURG, M.D.: I have tested it on all kinds of goods, and it has done every thing. I have given it several years' use and it has done every thing.

J. H. WHEELER, KANSAS CITY, MO.: They have proved themselves to be the best family washers I ever used. A. P. SHAWLEY, TOLEDO, N.Y.: Give entire satisfaction. Rather than the Washer than anything I have seen.

E. W. WASSLEY, LAMAR, TENN.: Has proved a better Washer than I ever bought or used. JOHN P. EVANS, SHREVEPORT, LA.: If you will get up any instrument that will take so much labor out of me as this Washer takes out of the woman, and I can use it at every house.

MRS. M. C. DOBBS, GAITHERSBURG, N. J.: Give perfect satisfaction. I do not wash any more than I used to with hand help. MISS M. MOORE, NEAUM, VA.: Will do more than a day's washing for me.

MRS. E. O. SUNDEN, SUGARCREEK, N. Y.: Would not take \$50 for mine if I could not get another. Washes quicker and better than it can be done by hand. MRS. FRED H. HARRIS, BUTTE, MONT.: It is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, NORTON, IOWA: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, PAOKA, ILL.: Saved me \$15.00 per year for 15 months. I have had it.

MRS. C. W. TAYLOR, NORTON, IOWA: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, SEARSON, MICH.: I had rather give up my dinner than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand percent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo., or Box 1968, San Francisco, Cal.

## CHICAGO

## VETERINARY COLLEGE,

INCORPORATED 1883.

Regular session begins Friday, October 1, 1886, and runs six months. For annual announcement, giving all particulars, address the Secretary,

JOSEPH HUGHES, M. R. O. V. S.,

120 Twenty-Fifth St., - - Chicago, Ill.

INCUBATORS.

THE PACIFIC INCUBATOR!

Awarded the Gold Medal at the State Fair, Sacramento, and at the Mechanics' Institute Fair of 1885 as the best machine made. It will hatch any kind of Eggs better than a Hen. Send Stamp for Illustrated Circular to GEORGE B. BAYLEY, Manufacturer, 1317 Castro St., Oakland, Cal. N. B.—A large line of Poultry Appliances, such as Wire Netting, Bone Mills, Chopping Machines, etc., for sale at the lowest rates. The Pacific Coast Poultryers' Hand Book and Guide; price 40c.

The Halsted Incubator Co. 1011 Broadway, Oakland, Cal. Price from \$20 up. Model Brooder from \$5 up. Thoroughbred Poultry and Eggs. Send for new Circulars containing much valuable information.

SHEEP AND SHEEPWASH.

THOROUGHbred SPANISH MERINO SHEEP.

Have taken the First Premiums at the State Fair for the last three years.

CHOICE BUCKS AND EWES FOR SALE.

ORDERS PROMPTLY FILLED. Address FRANK BULLARD, Woodland, Cal.

LITTLE'S CHEMICAL FLUID SHEEP DIP.

Price Reduced to \$1.25 PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scas in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO., San Francisco, Cal.

FOR SALE.

40 head SPANISH MERINO BUCKS

Bred by Mr. J. H. Strobinger. Sired by his Imported Vermont Registered Buck, and out of his premium flock of breeding ewes.

TERMS REASONABLE.

ADDRESS

MILO KNOX, Haywards, Alameda Co., Cal.

Recommended by Professors Hilgard, Cooke, etc. Powdered Potash & Caustic Soda KILLS GOPHERS, INSECTS, Etc.

Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to T. W. JACKSON & CO., 304 California St., S. F.

Calvert's Carbolic SHEEP WASH \$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast.

THISSELL'S CODLIN MOTH TRAP

Will destroy every Codlin Moth Larva that crawls up or down the tree. The best, cheapest and simplest trap now invented. No orchardist can afford to do without this trap. It is a sure cure for the codlin moth. For further information, address G. W. THISSELL, Winters, Yolo Co., Cal.

Are you using Wellington's Improved Egg Food for Poultry? If not, why not? Every Grocer, Druggist and Merchant Sells this Egg Food.

HIRES' IMPROVED ROOT BEER.

Packages, 25 cents. Makes 5 gallons of a delicious, sparkling and wholesome beverage. Sold by all druggists, or sent by mail on receipt of 25 cents. C. E. HIRSH, 48 N. Delaware Avenue Philadelphia, Pa.

CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially; is the best adapted to REMOVE STUMPS and TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too ugly, and ordinary Blasting Powder not strong enough.

For particulars how to use the same, apply to

BANDMANN, NIELSEN & CO., General Agents GIANT POWDER COMPANY, SAN FRANCISCO, CAL.

GRANGERS' BUSINESS ASSOCIATION, SHIPPING AND COMMISSION HOUSE.

## S. F. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, as date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, August 18, 1886.

Wheat is stronger and an advance of about 5c per cbl. all around has been gained since our last report. Shippers have more courage and the market is in much better shape. The inspiration comes directly from improved foreign cables, but the facts in the general supply situation (which we have endeavored to point out to our readers in previous articles) are no doubt exercising due influence in all the world's markets. The latest by cable is as follows:

LIVERPOOL, Aug. 18.—WHEAT—California spot lots, 6s 7d to 6s 10d; off coast, 3s 9d; just shipped, 3s 5d; nearly due, 3s 4d; cargoes off coast, firm and bidding fair; on passage, demand fair, with prices a shade higher; Mark Lane Wheat and Maize, turn easier; English and French country markets, rising; Wheat and Flour in Paris, a turn dealer; Wheat on passage to Continent, 670,000 qrs.; Wheat and Flour to U. K., 2,050,000 qrs.; weather in England, fair.

## Foreign Review.

LONDON, Aug. 16.—The *Mark Lane Express* in its review of the British grain trade for the past week says: The unsettled weather has retarded harvesting, which will now be very late. Wheat has rusted and mildewed to an extent greatly affecting the quality, and everything points to a deficient Wheat crop. English Wheat is firmer and prices are against buyers. Sales of English Wheat during the past week were 44,120 quarters at 32s 6d, against 37,610 quarters at 33s 6d, during the corresponding period of last year. The foreign Wheat trade is inanimate. Purchases are only of a retail nature. Corn on the spot is against buyers. Fourteen cargoes of Wheat arrived; three cargoes were sold, including one of California at 32s 3d; one was withdrawn and seven remained. Trade in forward is quiet. There is a desultory inquiry for California, which is momentarily against buyers. To-day's market was very firm, but quiet. English Wheat was 3d dearer, and foreign 6d dearer. Flour was 3d to 6d dearer, and Corn was 6d dearer. Beans and Peas were uneasy.

## English Wheat Markets.

LONDON, Aug. 17.—Wheat market to-day is firm. The feeling of the trade, however, is that there will be plenty of wheat to meet all requirements, even should the English crop not prove an abundant one. With this feeling we cannot look for any wide fluctuations in prices between now and the end of the year, and it looks as if operators would have to be content with two or three shillings per quarter, which may occur in the reaction which necessarily follows any undue depression. The wheat shipments from India last week were 25,000 tons.

LIVERPOOL, Aug. 17.—Wheat market is strong, but depends so much upon the action of New York and San Francisco that it is hard to predict its future. If there should be full sales both from the East and Pacific, prices will not be maintained. The present improvement in the market is likely to stimulate shipments from both Russia and India.

LONDON, Aug. 17.—Market closed strong, but buyers continue to pursue a cautious policy.

LIVERPOOL, Aug. 17.—Market steady, but to make sales a decided reduction would have to be made.

## California Products at the East.

Beans—Quiet; California limas, \$1.50 to \$1.75. California yellow mustard seed quiet at 60¢ to 12¢.

Fruits—California plums are selling for \$1.50 per box; pears, \$4.50; grapes, half cases, \$3.00; peaches, \$2.50.

Dried fruits—California raisins, London layers, \$1.90 to \$2.10; California plums, 5¢ to 6¢. Prunes sell slowly.

Canned goods—Gallon tomatoes, forward delivery, are showing an easier tendency, supplies being now offered at \$2.20 to \$2.25. Packers are commencing upon peaches of the better quality. Up to this time only early goods have been offered upon this market. California canned peaches, \$2.50 to \$2.75; pears, \$2.25 to \$2.50; plums, \$2.00; grapes, \$2.10; apricots, \$2.00 to \$2.25.

Honey—Extracted, 5¢ to 5½¢. New York, Aug. 15.

## New York Wheat Market.

NEW YORK, Aug. 15.—Wheat closed steady, down ½¢ to ¾¢; August, 86½¢; September, 87½¢; October, 88½¢; November, 90½¢; December, 92½¢; January, 93½¢; February, 95½¢; March, 95½¢.

## Eastern Wool Markets.

NEW YORK, Aug. 15.—The local movement in domestic is somewhat curtailed by the fact that dealers have ceased trading between themselves. Advances from the country continue very strong. In foreign wools business has again been quite free. Sales include 25,000 pounds Montana and Idaho, at 25¢ to 30¢; 3000 pounds spring California, at 21¢; 6000 pounds same, at 22½¢; 35,000 pounds scoured same, at 57¢ to 60¢. The Philadelphia market shows no weakness. Sales include 10,000 pounds scoured California, at 51¢; 17,000 pounds Territory fine, at 22¢; 5000 pounds California, at 20¢. The Boston market is rather quiet. California is dull and there is lots of pressure to sell Eastern Oregon. Sales include 133,000 pounds Territory, at 19¢ to 25¢; 125,000 pounds California spring and Oregon, at 19¢ to 20¢.

BOSTON, Aug. 14.—There has been a quiet wool market the past week, although the sales foot up the good average of 2,993,400 pounds. Tight money has been the means of forcing some of the holders to make concessions, but as a rule the supplies are held quite as firm as formerly. The only shading in values has been in fine wools. Medium and three-eighths wools are held firm, and if anything, higher. We see nothing in the situation at home or abroad to warrant any weakness on the part of holders, except where they are obliged to move wool in order to

obtain money. The money market is always firm at this time, when our large crops are beginning to move. This difficulty will, no doubt, be surmounted before long. The signs are as propitious as ever for a strong market. California wool has been rather quiet and sales of only 245,000 pounds have been made. The stocks, both here and at San Francisco, are much reduced. We notice sales of 50,000 pounds spring at 23¢ to 25¢; 100,000 pounds spring at 19¢ to 25¢; and the rest on private terms. There were sales of 510,000 Oregon at 22¢ to 25¢. The receipts of domestic for the week have been 14,369 bales, against 15,630 bales same time in 1885.

NEW YORK, Aug. 17.—The wool market is quiet and firm. Domestic fleeces are quotable at from 30¢ to 38¢; pulled, 14¢ to 35¢; Texas, 9¢ to 25¢.

## New York Hop Market.

NEW YORK, Aug. 15.—In hops, trading is quiet, as buyers seem indifferent. The picking of the State crop is in progress. Some sections show very poor samples, and the recent discouraging advices respecting the State crop are all borne out. Strictly good hops are held firmly, but medium to fair are not so firm, as German hops come in direct competition with them, selling down to 20¢ and 22¢. The imports are considerable, while the receipts of California are increasing. Cablegrams from London estimate the English crop at about the same as last year. A German importer, well posted, says: "The German crop may lose one-third of a full crop." State, prime to choice, 28¢ to 30¢; medium, 23¢ to 26¢; lower grades, 18¢ to 22¢; Pacific Coast, common to choice, 20¢ to 27¢.

COOPERSTOWN (N. Y.), Aug. 15.—The prospect of securing a crop of 8000 to 11,000 bales of hops in the county of Otsego was better a fortnight ago than now. Many yards that then gave promise of one-third of an average crop have since succumbed to the prevailing blight and now promise few, if any, hops. Other yards, of which the owners hopefully expected a late crop out of midsummer shoots, have disappointed this expectation, hence a crop of 5000 or 6000 bales will meet the views of the most sanguine. A very careful estimate by towns, made by competent persons, places the probable crop in Otsego county at about 5000 bales.

## California Fruit at the East.

CHICAGO, Aug. 14.—No special fruit trains have arrived from California since last report. There has been no particular change in prices noted, except in grapes, which are rather lower, with a declining tendency. Pears are somewhat firmer, but this firmness is almost entirely on account of the fact that no fruit has arrived here from California since the first part of the week. With the larger receipts which are expected next week, prices will undoubtedly decline again. It is learned in addition that dried fruits are very firm because of the limited production of apricots and peaches. Prices for dried fruits are opening decidedly higher this year than they were at the closing of last season. Some few samples of evaporated apricots have been shown here, for which offers of 20 to 22 cents per pound have been made, and it is expected that they, as well as peaches, will rule considerably higher than at present.

## (Telegram to the Fruit Union.)

CHICAGO, Aug. 17.—Weather very hot and muggy, making it hard on fruit. Bartletts arrive in good condition and sell at from \$3.50 to \$3.75 per box of 40 lbs. Muscat grapes sell at \$1.25 to \$1.50 and \$1.50 to \$1.75 per crate of 20 lbs, according to condition. Black grapes, from 75¢ to \$1.00 and \$1.25 to \$1.50. Peaches, \$1.75 to \$2.00 and \$2.00 to \$2.25. Plums, \$1.00 to \$1.25 and \$1.25 to \$1.50. PORTER BROS. CO.

## Local Markets.

BARLEY—Barley is still in good shape, and new brewing is higher than at our last report. Call sales to-day were: Buyer 1886—100 tons, 95¢. Seller season—100 tons, 88½¢. Seller 1886—200 tons, 89½¢ to cbl. Buyer season—100 tons, \$1. Buyer 1886—100 tons, 96½¢. Seller 1886—200 tons, 89½¢; 100, 89½¢; 900, 90¢; 100, 90½¢ to cbl.

BEANS—Prices have shaded off this week, and supplies are large. Limas are unchanged.

CORN—Corn is higher, and California corn scarce.

FEED—Hay is in large supply and the range is lower: Barley, \$4.07; Oat, \$—; Wheat, \$8.01 to 11¢ ton.

WHEAT—Full notes are given elsewhere. Call sales to-day were: Buyer season—700 tons, \$1.39; 3300, \$1.39½. Buyer 1886—400 tons, \$1.36. Seller 1886—100 tons, \$1.30½; 100, \$1.30½; 2900, \$1.31; 2300, \$1.31½; 1200, \$1.31½ to cbl. Buyer season—1200 tons, \$1.39½. Buyer 1886—400 tons, \$1.36½; 200, \$1.36½. Seller 1886—300 tons, \$1.31½; 800, \$1.31½; 800, \$1.31½; 500, \$1.31½; 1100, \$1.31½ to cbl.

## (COMMUNICATED.)

## Market Information.

## Bags.

The demand for bags is fair at steady prices. Considerable have been placed the past week in lots, at 6¢ to 7¢ for new importations. Offerings at auction have been made each day in 50,000 bag lots, selling at from 6¢ to 6½¢ cash.

## Cereals.

Since last Thursday the wheat market has been excited, with daily advances noted. As usual, the daily press has been lower in its quotations than actual sales made. The advance is due to our crop being much below former estimates, the Oregon crop one-third less, but particularly due to bad weather in England retarding harvest, causing damp wheat and lessening the yield. Sales by sample were made on Thursday as high as \$1.28½ for No. 1 shipping, on Friday at \$1.30, Saturday, \$1.31½, and Monday and Tuesday, \$1.32½. Sales, under strong buying competition, were run up at the Willows, Colusa county, to \$1.34, delivered at Port Costa.

Two or three firms in this city have different sections districted out—that is, they have an understanding that their buyers shall purchase in separate places and not bid against each other, but if an outside buyer comes in, then run the price up and get the wheat, but pay low prices when left alone. As they are generally left to themselves, they make money by getting wheat cheaper than if sold in this city.

The decline of freight on barley overland to Chicago of 5 cts per cental will materially increase shipments of brewing. In July last the shipments East by rail aggregated 5974 tons and by water to New York 3532 tons, while by sea to foreign ports in the Pacific, 539 tons, making a total shipment last month of 10,045 tons. This is the heaviest single month's shipment ever made from this State.

Liverpool cables received to-day quote California wheat for prompt shipment at 35s per quarter. This is an advance since Wednesday last of 1s 6d per quarter—equal to 7½ cts per cental. While the English market advanced 7½ cts ours has only gone up 5 cts for sample lots.

The barley market for sample parcels has ruled fairly steady. Under receipt of 1200 tons in one day, buyers got 2½ cts reduction in feed, but the next day it recovered. The consumptive and speculative demand is quite active.

It is now claimed by well-informed parties that the barley crop of the State will go between 400,000 and 450,000 tons.

Oats fluctuated quite lively, but generally at high prices, on Thursday, Friday and Saturday last, owing to light receipts and a good demand; but on Monday they weakened off, with freer receipts and larger supplies near at hand.

Oregon advices report the oat crop in Oregon and on Puget Sound up to last year's; but the barley crop, east of the Cascades, below last year's.

## Dairy Produce.

Cheese maintains a firm tone, with receipts light and demand fair. The advance in overland freights is against importing of Western cheese.

Eggs have a stronger tone, with an advance obtainable. Strictly choice fresh laid eggs, marketed by well-known shippers, continue in request, at higher prices. Higher overland freights, together with the poor quality of the eggs, are against Eastern eggs. Oregon eggs are coming to hand and sell at the same price that good California eggs do.

Receipts of northern country butter are increasing, and as the quality is generally first-class, the market for gilt-edged is weaker. The retail trade has opened considerable pickled, which is taken by consumers in preference to fresh rolls at the prices asked.

## Fruits.

Peaches have ruled steady and firm throughout the week, with the market cleaned up each day.

Poor pears are in overstock and very hard to sell; sales have been made as low as 40 cents per box for cooking. Choice pears are scarce and wanted with sales of Bartletts up to \$2 on Monday last, on the wharf.

Choice high-colored apples are very scarce and wanted, and when received fetch good prices, but poor to good are in oversupply and hard to place.

Plums and prunes for canners' use ruled high under light receipts up to to-day, when they were weaker but no lower. Off quality plums have been slow and hard to sell even at low figures.

Figs have been coming in quite freely, causing a shading in prices, with the market weak at the close.

Watermelons ruled weak and slow up to Tuesday, when a better demand sprung up and a slight advance obtained.

Cantaloupes advanced slightly on Thursday last, then fell back under heavy receipts with a weak, demoralized market to-day.

It is reported by good parties that \$25 per ton is bid at the Mission of San Jose for Zinfandel grapes. No sales, so far as can be ascertained, have been made.

Table grapes have gradually weakened off until it was very hard to get over 65 cts per box for choice varieties. Tokay grapes are not coming in, but if ripe and high colored would sell well, or at least it is so claimed by dealers.

Receipts of table grapes the past week have averaged about 1800 boxes per day.

Under a scarcity on Friday and Saturday, raspberries advanced to \$10 per chest for very choice; strawberries to \$5.50, and blackberries to \$3.50; poorer qualities sold lower. Yesterday they weakened off, and to-day were slow and heavy at lower prices.

## Hops.

The market is very strong with buyers not willingly allowing a grower to go out of their office without selling, provided the grower's views are not out of all proportion to the prices bid. The New York crop is virtually a failure, while the drought West has not helped the yards in that section of the country. On this coast the yield is large and of excellent quality. Continued unsettled weather in England has increased the mildew and greatly lessened the prospective yield, and without fine weather soon the unfavorable condition will be still more marked. The German crop is claimed to be about one-third less than last year's crop.

## Live-stock.

Beef cattle continue to offer in excess of the demand, causing slaughterers to be masters of the situation. Various reasons are assigned, but the principal one appears to be the disposition of several cattlemen to market their stock now at the best prices obtainable rather than to stall-feed for winter killing or else carry them over the winter for another season's killing. Mutton sheep, like beef cattle, are pressing the market, causing much difficulty in maintaining present values. Lambs are firm. For hogs there is an inactive demand except for future delivery. Packers are bidding an advance on quotations for grain or dairy fed for delivery in packing time; this they do more freely, owing to the higher market for hog product and also an advance in overland freights on Eastern product. In the horse market there is nothing of any moment doing; the demand and values are the same as reported last week.

The following are to-day's meat prices: Beef—Stall-fed, 7¢ to 7½¢ lb; grass-fed, extra, 6¢ to 6½¢ lb; first quality, 5¢ to 5½¢; second, 5¢ to 5½¢; third, 4¢ to 4½¢. Calves, small, 9¢ to 10¢; larger, 7¢ to 8¢ lb. Mutton—Ewes, 4¢ to 4½¢; wethers, 5¢. Lamb—Spring, 6½¢ to 7¢ lb. Pork—Live hogs on foot, 3¢ to 4¢ for grain and dairy fed; 2½¢ to 2¾¢ for soft; dressed, 6¢ for hard, and 5¢ for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Vegetables.

Under continued free receipts of tomatoes the market continued to weaken until it is difficult to get over 40 cents a box for choice kinds, while sales of

carry-overs have been made as low as 15 cents. Canners are not large purchasers yet, but it is claimed they will be soon, for the crop West, owing to the drought, is almost a failure, causing Eastern canners to advance the price of canned for future delivery.

Green corn has ruled weak throughout the week at from 40 cents to \$1.25 a crate; the latter for very choice sweet.

Green okra, green pepper, cucumbers and summer squash have ruled in buyers' favor throughout the week, while carry-overs sold at almost any price.

Cabbages and carrots are in liberal supply, with prices favoring buyers.

Under heavy receipts Early Rose potatoes have fallen off each day until 90 cents was the top in sacks on the wharf yesterday. The lower prices ruling for Early Rose brought Peerless and Garnet Chilis down to 1 cent for choice in sacks on the wharf. The trade is well stocked, and if heavy receipts are maintained lower prices it is claimed will rule, but if light then better values will obtain.

Red onions are not worth attention, and silver-skins ruled weak up to Monday, when a better feeling manifested itself, resulting in an advance yesterday. Light receipts, light start, and a fair demand caused the advance.

## Wool.

The market for fall wool is not fully opened, although receipts are freer. Sales made the past week mark an advance for choice. Some choice, clean, light, but slightly burry, sold as high as 18 cts per lb. Owing to assortment not being large, a correct reflex of the market is hard to give. Some poor wools with clover burrs in sold at 12½ cts a lb., which is fully 4 cts more than the same grade and conditioned fetched last year.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	299,333	233,311
In port, disengaged.....	58,201	102,774
In port, engaged.....	68,652	14,572

Totals..... 416,186 350,657

The above gives a carrying capacity as follows: 1886, 665,787 short tons; 1885, 561,003 short tons; increase over last year, 104,784.

The exports by sea from this port from July 1, 1886, to date, compared with the like time in 1885, are as follows, in cents:

	1886.	1885.
Wheat.....	1,052,912	509,411
Barley.....	88,768	7,182
Oats.....	1,441	3,154
Corn.....	3,858	975

Extra choice hay is firm, but indifferent to good is in oversupply and hard to sell.

Beans are lower and weak at the decline.

Dried fruits are coming in slowly—not enough received to establish prices.

Poultry has been gaining in strength throughout the week, with young roasters and young hens scarce and wanted. The market to-day was very stiff, with buyers exceeding scarce and bidding quite lively for good stock.

Hams and bacon are very strong, with the stock light and demand good.

San Francisco, Aug. 18, 1886.

## San Joaquin Valley Fair.

We have stated before that there were special efforts being made this year to develop the agricultural features of the Stockton fair. Secretary H. M. La Rue has just issued the following circular relating to county exhibits from the several counties embraced in the San Joaquin district:

Agricultural District No. 2, State of California, is composed of the counties of San Joaquin, Calaveras, Tuolumne, Stanislaus, Mariposa, Merced, Fresno, Tulare, Kern. The soil and climate of the various counties in the district, with careful cultivation, admit of the successful production of almost all the cereals, fruits, etc., that can be raised in any other portion of the State. With the end in view of encourag-

ing a more diversified cultivation than has heretofore been had, the board this year propose premiums for exhibits to be made by the counties above named as in competition with each other.

Premiums are offered for the most varied and perfect exhibits of the agricultural products of the separate counties, to be shown as a county exhibit, as follows: For the best exhibit as above, \$100; for the second best exhibit as above, \$50. Other county exhibits will receive such proportionate encouragement as their relative merits demand. The entire exhibit of one county to compete against the entire exhibit of each of the others. Premiums awarded will be paid to the committee in charge of the successful exhibit. The co-operation of Subordinate Granges, P. of H., is invited, and the board believes that with it this feature of the fair of 1886 can be made a grand success. Entries close September 22, 1886, at 12 M.

## CHAMBERLIN AUTOMATIC

MACHINE-MADE  
"Standard" Shot-Gun Cartridges.

Their long experience as journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS, No. 252 Market St., San Francisco, Elevator, 12 Front St.

## \$10.00 will buy the DAISY

New Style Corn Sheller. The Fan cleans the Corn as it comes out. The Question is Asked why we sell our Shellers so cheap. Answer: We build them in winter after our Clover Huller trade is over. All are warranted to do good work or no sale.

NEWARK MACHINE CO., COLUMBUS, OHIO.

WE WISH TO CALL SPECIAL ATTENTION TO OUR IMPROVED

## FEED MILLS, HAY CUTTERS and HORSE POWERS

For we have Improvements to offer which place our machines far in advance of all others in the market.

## THE "SCIENTIFIC" FEED MILLS, FOR GRINDING ALL KINDS OF GRAIN and EAR CORN,

Is the only Mill having the following provisions:

The Grinding Plates are a Special Metal, hard as Steel, guaranteed to Grind 5000 to 8000 Bushels before wearing out, and then easily and cheaply replaced.

ALL THE BEARINGS are in one casting, consequently are always in line and cannot get out of true. THE JOURNALS are rabbitted with the best metal and can be adjusted to take up wear. THE MAIN AND ONLY SHAFT is of the finest cold rolled steel of large size and perfectly true. THE FLY WHEEL AND PULLEY are turned and, with the Running Plate, are balanced accurately, so run perfectly true, without any shaking. THE HIGH DISCHARGE is most convenient for delivering the feed, and as it draws a current of air through, it prevents heating, as is frequently the case with Iron Mills. THE PIN BREAKER provides against damage to mill should iron, steel or any hard substance accidentally go between the plates. THE FEEDER provides a successful means of regulating the feed when grinding small grain. THE SCIENTIFIC IS THE SIMPLEST. Can be taken apart and put together in a short time without the aid of a mechanic.

## THE "ROSS" HAY and STRAW CUTTERS, with Wonderful Cutting Capacity, have been awarded all the honors wherever exhibited.

The largest Feed Cutters in use in this State to-day are the Ross, and our customers include many of the largest stock-raisers on the Coast; in fact, there are Single Ross Machines now in use here which will cut more feed in a given time than several of the largest of any other made.

THE STRONGEST. All parts are heavy and well braced and especially adapted to the work. AND THE LIGHTEST RUNNING. Having but one shaft, running in bearings, which are always in line, with Fly Wheel, Pulley and Plates accurately balanced, it follows it MUST RUN WITH LEAST POSSIBLE FRICTION. ALSO THE MOST DURABLE. Can be run in either direction by simply changing the spout and crossing the belt. This gives double wearing capacity to the plates, as they sharpen themselves each time they are reversed. AND THE BEST MILL ON EARTH, of the best material throughout, and every part made especially for its place. EACH MILL FULLY GUARANTEED TO DO ALL WE CLAIM FOR IT, and being made in a variety of sizes requiring from one to twenty-horse power, they are adapted for any sized ranch or feed mill. Send for Price List.

Remember that the Capacity of our Cutters is not controlled by the length of the knives, as is the case with all other makes, but we can cut from two to four times the quantity any other machine can handle, and with the same or less driving power. Send to us for our reasons why the Ross is so superior, and get our prices before you invest in any inferior machine.

ROSS HAY CUTTER.

ST. ALBANS TREAD POWER.

SCIENTIFIC FEED MILL.

THE ST. ALBANS TREAD POWERS develop more driving power with the same animal weight and exertion, than any other pattern, and simply because they are built on more scientific principles. They are also the best made and most substantial, finest finished and best governed tread powers on the market, still we sell them as low as the lowest. We have one, two, and three-horse powers, and also have a most complete line of Circular Wood Saws for using in connection with these powers. Write for particulars and prices.

MORE THOROUGH WORK, BETTER MANAGEMENT AND LESS ACRES will help many of our farmers. More work should be performed with the help regularly employed, and outside expenses reduced and annoying delays at critical times prevented. This can be accomplished to a very large extent through the medium of one of our "Individual Ranch Economy Outfits," which consist of a St. Albans Threshing and Cleaning Machine, driven with a Horse Power of the same make, Scientific Feed Mill, Ross Hay Cutter and Complete Set of Blacksmith's Tools, all of which we sell together at a remarkably low figure, or singly in proportion.

It will pay every reader to consider this proposition, send for full particulars and prices and make sure to see our Grand Exhibit at the State Fair at Sacramento.

G. G. WICKSON & CO., 38 California and 106 Davis Sts., San Francisco.

## Commission Merchants.

## THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 61,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

## NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by 6 inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms offer the best inducements to those seeking homes on any part of the Pacific Coast.

The field work of the subdivision of the famous

## PASO ROBLES RANCH

Has been completed. The maps and catalogues are now being prepared, and will be sent free on application. This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

## TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,

West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map

## San Diego County! El Cajon Rancho!

16,500 acres, known as the Jarvis Tract, situated 13 miles from San Diego, surrounded by high hills, protected from winds and fogs—the most equable climate in the world—rich soil and lovely surroundings. Will be offered as a whole or in subdivisions, from 10 acres upward, at prices according to desirability, from \$10 to \$75 per acre, part cash, balance on time. The wonderful Raisins and Olives grown in this valley command the admiration of every one. Water from 6 to 12 feet. No irrigation, and Fruit and Raisins cured by solar heat. All the Semi-Tropical Fruits raised to perfection.

Also 1000 acres, the Smith Tract, adjoining, now in grain.

G. W. FRINK, General Manager Pacific Coast Land Bureau,

618 Market St., opp. Palace Hotel, and 15 &amp; 17 Post St., San Francisco.

DR. JOSEPH JARVIS,  
Riverside, California.

R. J. PENNELL,  
San Diego, California.

## Nevada Warehouse and Dock Comp'y

WAREHOUSES AND DOCKS, PORT COSTA, CAL.

Storage Capacity, 100,000 Tons. Regular Warehouse for S. F.  
Produce Exchange Call Board.

These Warehouses are the largest on the Pacific Coast, and are furnished with the latest improvements for the rapid handling and storing of Grain. A mill attached, supplied with the best and newest machinery for cleaning fowl and smutty wheat.

Money advanced at lowest rates of interest on Grain stored in Warehouses, Insurance effected at lowest rates in first-class companies, or Grain sold, if desired, at current rates.

**STORAGE, 25 cents per ton per month. Total Storage for Season ending June 1, 1887, \$1 per ton.**

**Grading Wheat, 50 cents per ton. Cleaning Wheat, 75 cents per ton. Cleaning and Smutting, \$1.50 per ton.**

Information regarding Storage or other business can be obtained at the office of the Company,

HAPPY CHILDREN  
IN MUSICAL HOMES.

A sweet voice and a good repertoire of songs are valuable aids where juvenile humanity must be entertained. How convenient and useful, then, are such collections as the following:

## MERRY-MAKING MELODIES.

BY WADSWORTH WHIPPLE.

Price in Boards, 80 cts., in Paper, 65 cts.

By a child-lover, who, in his choice of subjects and his genial treatment of them, displays a happy talent for making home cheerful. "Chubby Little Chatterbox," "Grandpa," "Three Little Loafers," "Jollity Jack," "Teeter-Tauter," "Pink-a-Pank," are songs full of kindest humor, and there are others of higher grade. Sheet Music size; Piano or Organ accompaniment; 20 Songs; 9 Pictures.

## RHYMES AND TUNES.

BY MARGARET PEARMAIN OSGOOD.

Price, \$1.50 in Cloth; \$1.00 in Boards.

A larger book than the other, and has, in many cases, German and English words. A true HOME BOOK, with such songs as "Snick Snack," "Tooreltoot," for nonsense; "London Bridge," "Perri Meri Dixi," "Lavender's Blue," etc., for Mother Goose wisdom; "Sandman," "Sleep, Darling," and other nursery songs, romantic songs, Star, May, Flower, Morning, Bird and all other varieties of song that children love. Full Piano and Organ accompaniments.

Mailed for retail price.

**DANIEL BEST'S  
HAND SEPARATOR.**

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to

DANIEL BEST,  
513 Fifth Street, Oakland, Cal.

HENLEY'S

**Monarch Fence Machine,****\$40.00.**

With one of these Machines a farmer can build his own fence cheaper and better than he can buy it, or make it by hand. TRY ONE. Send for Catalogue.

Hardware, and Machinery.

**PRICE \$5.**—The PERFECT ELECTRIC BELT, for male or female, with all the latest improvements, will be sold until further notice at the remarkably low price of \$5. Call or address J. H. WIDBER, Druggist, 701 Market St., corner Third, San Francisco.

**PRICE'S EXCELSIOR SEED SOWER**

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

If You Want to Save Money and avoid a life of trouble, buy Trees Free from Scale.

## LA DOW'S JOINTED PULVERIZING HARROWS.

Superior to all others, because it is Simple, Durable and Flexible. Thousands in use giving entire satisfaction.

**POINTS OF SUPERIORITY.**—It will do better work. It is much easier for the team. It is easier to manage. It has a lever to change the angle. It is not heavy on the horses' necks. It has no side-draft. It leaves no ridge at the center. It has a wrought iron frame. Its chilled bearings cause it to wear longer and work easier. It is easy to ride. It conforms to uneven surfaces perfectly. It can be made rigid, if desired. Its journals are protected from dirt. It has self-feeding oil cups.

### SIZES:

- No. 12—Cuts 6 feet, for 2 or 3 horses, 16-inch discs, with weight boxes.
- No. 16—Cuts 10 feet, for 3 or 4 horses, 16-inch discs, with weight boxes.
- No. 17—Cuts 15 feet, for 4, 6 or 8 horses, 16-inch discs, without weight boxes.

We have the finest Carriage Repository on the Pacific Coast. Agents for David Bradley Manufacturing Company's Plows, Harrows and Cultivators; also a full line of extras always on hand. Agents for McCormick Mowers, Reapers and Twine Binders, Randolph Headers and John Dodds' Rakes. Send for 1886 Catalogue, sent free to any address.

TRUMAN, ISHAM & HOOKER, 421-427 Market St., San Francisco.

## BRADLEY'S NEW SQUARE CORNERED SULKY AND GANG.

REASONS WHY THEY EXCEL ALL OTHERS:

1. They embrace a new principle in construction.
2. They combine lightness and strength.
3. They are extremely compact.
4. They are very light draft.
5. They work equally as well without a pole as with.
6. They turn a corner without strain on the wheels or plow.
7. They are easily operated.
8. They plow level furrows across corn rows.

DON'T BUY UNTIL YOU HAVE SEEN THEM.

## ECONOMY

—OR—

## HARRIS HAND HOP PRESS.

Price, \$80.00.

Each Press is lined with 1/2-inch stuff running from bottom to top, so that the hops are pressed with the grain of the wood.

We also furnish the CLIMAX HOP PRESS:

No. 1.—Price, \$100.00.

These are also made at our factory, and are strong and satisfactory machines, having progressive leverage, tight box and good facilities for sacking.

14 " " " " 6 " " 40 " " " 1400 " "	175 00

The most complete and successful combination of Seeder and Cultivator in use, and the only machine known that sows perfectly all kinds of Grain, Flaxseed, Clover, Grass and other Small Seeds from the box. The increasing demand for these Seeders proves beyond the shadow of a doubt that they are the Best and Most Reliable ever offered to the public. No other machine presents such an array of devices, and taken together they constitute the Gorham Seeder, a machine distinct and separate from all others of its class. It has stood the most severe tests of time and use, and is now the Standard Seeder of the United States. Its numerous points of excellence, unequalled regularity of sowing the different grains, and its manifest superiority over all others, have won for it this high reputation.

This Harrow meets the wants of our farmers in an implement that weather cannot affect, that sun and rain cannot injure, that does its work of pulverization of every inch of the soil in the best possible manner, and at the same time is of light draft for the team.

## BENICIA PATENT ANGLE HARROW.

## IMPROVED OVER THE BUCKEYE AND ALL OTHERS. THE BEST FORCE FEED GRAIN DRILL IN THE WORLD.

Drills from one peck to any quantity per acre. Does not crack the Grain.

### A New York Experiment Farm.

We are glad to give our readers an idea of what is being done in other States in the line of experimental work in agriculture. As we have previously stated, there are a number of experiment stations in the States east of the Rocky mountains, and they are doing good work in bringing the scientific method of investigation and observation to bear upon the methods and materials of the farm. Most of these institutions are supported by appropriations by the States, but some are the result of private enterprise. The most prominent and best equipped of the latter is Houghton Farm Experiment Station, at Mount-ainville, Orange county, N. Y., of which Mr. Lawson Valentine is proprietor and Major Henry E. Alvord general manager. The beautiful engraving on this page presents a scene on this farm. The most prominent feature is the splendid animal in the foreground, but we will look first at the other features of the picture.

The bull is represented in the engraving as standing near a roadway leading from the farm buildings to the railway station of Houghton farm, on the Newburgh branch of the Erie Railway. The building in the center of the picture is the large barn, known as No. 1, the basement of which accommodates the Jersey herd and has room for 20 horses, while above there is storage capacity of 250 tons of hay. In the distance, with a conical roof, is the milk-house, standing over a fine spring, with an unvarying temperature of 49 degrees. The building to the right, partly hidden by trees, contains the offices, library and work-rooms of the experiment department of the farm, together with ample storage.

The water seen to the right is a portion of a pond formed by a stream known as the Awes-sima, which traverses the entire length of the farm. On this pond are kept a flock of wild geese which have become so thoroughly domesticated that they have bred regularly on the farm for several years. Their winter quarters are in a log hut upon what is known as "Crusoe Island," in the midst of the pond, and approached by the rustic bridge shown on the right in the picture. At the left is the winter dairy, covered with vines, above which is the cottage occupied by Major Alvord, the manager of the farm.

We come now to the central figure in the engraving, the Jersey bull Ramapo, No. 4679, who for some years has been at the head of the herd of Houghton farm. This bull is noted for the high average quality of his calves as well as for the remarkable record of his dam, the cow Eurotas, No. 2454, A. J. C. C. This famous cow, owned by Mr. A. B. Darling, of New York, made, immediately after the birth of this calf, Ramapo, in October, 1879, the remarkable record of 778 pounds and 1 ounce of butter during 11 months and 6 days. She calved again in November, 1880.

This performance is more remarkable and really stands unsurpassed, because this was before the days of the abnormal feeding and forced tests. During this period Eurotas was not highly fed at any time, but simply given the treatment which every good dairy cow should have. Naturally, after this wonderful feat of butter production, the calves of Eurotas have been much sought by Jersey breeders who have been able to buy them. She has had but one heifer calf, and that died young. She has, however, six living sons, five of which have passed from the possession of Mr. Darling to become the heads of some of the most celebrated Jersey herds in the country. These

fair in Contra Costa, signed by President E. B. Smith and Secretary A. E. Dunkel. The fair will be held on the grounds near Concord, beginning September 6th and extending through the week. The managers make an appeal to the public to rally to their support and make the exhibition fitly represent the industries of the county. They have wisely decided that there shall be no gambling nor liquor-selling on the grounds during the fair. To increase the educational features of the fair there will be an address on each day, as follows: On Tuesday, an opening address by Hon. Charles Wood; on Wednesday, an address on horticulture by E. J. Wickson; on Thursday there will be ad-

### Our Sunstrokes.

The occurrence of three cases of sunstroke on a single day in July in California, where such unfortunate phenomena are exceedingly rare, has given rise to much discussion among meteorologists and physicians. The ingenious in matters of theory have done their best to explain this singular outcropping. According to the monthly circular of Dr. Tyrrell, Secretary of the State Board of Health, there was one death from "thermic fever" in Sacramento, in the person of a man who, in the army, had had a sunstroke years before. The second case occurred in Oroville, in the practice of Dr. J. H.

M. Karsner, who reports that the man, aged 36 years, had walked a mile in the sun, and on returning home lay down in the cellar, complained of great heat and thirst, became unconscious, and died in two hours after seizure.

The third case is reported by Dr. A. P. Tartar, of Tehama, in the person of a man aged 72 years, of temperate habits. He was a bridge-tender, and obliged every morning to inspect the bridge as the trains passed over. As he was making this inspection he was stricken down on the bridge, and when found conveyed to his home, where he soon became unconscious and died in about two hours. Dr. Tartar is of the opinion that the unusual moisture in the ground from the abundant and late rains of winter had produced that degree of humidity in the atmosphere which makes sunstroke possible. He remarks that sloughs and ponds usually dry at this

VIEW ON HOUGHTON FARM—THE JERSEY BULL RAMAPO, 4679.

bulls have sold, when quite young, at prices ranging from \$5000 to \$12,500.

Ramapo, the subject of this sketch, is noted for great constitution and vigor and transmits these qualities to all his calves. At the New York State Fair of 1885, he won first prize in the class of aged bulls against 12 grand competitors; then with four of his daughters he won the special large gold medal of the society offered for the best Jersey bull with specimens of his get. The noted cow, Myra 2d, No. 6289, also owned by Houghton farm, was then placed with Ramapo and three of his daughters, and these animals won the gold medal for the best Jersey herd. Mercedella, No. 19022, a three-year-old daughter of Ramapo, won the sweepstakes for Jersey cows of all ages, there being 41 entries, including many celebrated animals. A son of Ramapo also won first prize in the calf class, and others of the same family took first premiums at this fair, as well as that of the year preceding.

Ramapo is shown in the engraving as a three-year-old, although he is now seven. To match the high quality of his butter breeding, the herd of Houghton farm contains cows that represent the blood of a large number of the most noted Jerseys of America.

CONTRA COSTA COUNTY FAIR.—We have received a circular concerning the coming county

dresses on the value and advantages of the Grange by several speakers; on Friday, Chas. A. Wetmore is expected to speak on viticulture. We trust the people of the county will take earnest hold and make the fair a grand success.

THE OLEOMARGARINE STAMPS.—The telegraph announces that the Washington revenue authorities are getting ready for the oleomargarine business, which they will have to transact as soon as the new law comes into effect. It is stated that the design for the new revenue stamp for oleomargarine will be simple—it is that of a cow trampling a serpent under her foot in the center, while around the margin are the words "Oleomargarine" and "Internal revenue," the denomination of the stamp being indicated in the corner. There will be three varieties of stamps needed in order to operate under the oleomargarine law—one for retailers, another for wholesale dealers and a third for the manufacturers. These will be made of several denominations, and coupons will be attached in order to make any intermediate number required. The design of a cow trampling under foot a snake reflects the spirit of the affair more thoroughly than we expected diplomatic government officials would commit themselves to. It will serve to remind the bogus butter-makers and dealers continually of the character of work they are engaged in.

season are still holding water, and their evaporation must add something to the cause.

This idea seems reasonable enough, for the most obvious difference between our conditions and those at the East is that we have dry-heated air and they humid. It would seem, however, that if the air be so changed by heavy rainfall in winter, or large supply in sloughs, etc., it could also be thus affected by evaporation from extensive irrigated areas. Such does not, however, appear to be the case, for there are regions where the ground has become so overcharged with water that tules grow in low places, and water can be had in wells at a depth of four feet or so, and yet no case of sunstroke has been reported. In short, though there is the strongest testimony that drainage must be had to take off the surplus water or else much of the country would be swamped, there is still no dangerous humidity in the air. It seems to us that the matter must be further investigated.

SOUTHERN CALIFORNIA WINE-GROWERS.—The wine-growers of Southern California are in session at Los Angeles this week, and have formed a mutual protective association. C. A. Wetmore addressed the convention Tuesday. A full statement of their grievances was adopted and addressed to the revenue authorities of the Government.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Tulare Valley by Daylight.

EDITORS PRESS:—The traveler by the S. P. R. R., going from San Francisco southward on the through train, must necessarily pass over a large portion of the extensive plains and fields of the San Joaquin valley in the night, when the scenery, whatever it is, must be invisible.

It happens that the through trains on the up trip pass over a portion of the same country also in the night. In our frequent botanical exploring trips to Southern California and Arizona, we have passed a dozen times along this route and always totally oblivious of the nature of a certain wide stretch of country of which Tulare is the center.

Recently, by the invitation of Gen. Walter Turnbull, and accompanied by Rev. O. C. Wheeler and family, Mrs. Lemmon and I took the local train for Tulare, going out from the Oakland pier at about 9 o'clock in the morning, traversing the grain-filled plains of Turlock, Merced, Modesto, Fresno and their kindred towns by daylight, arriving through the large oak groves and the rich grain fields and orchards to Tulare long before day closed.

The revelations along the last part of the journey were something astounding. No one could have convinced us without personal knowledge of the great agricultural facilities and the natural wealth of this little-known region. Broad fields of the heaviest grain, fine orchards of thrifty trees, not one missing or diseased in a thousand, long stretches of growing vines, frequent and beautiful farmhouses, multitudes of grain stacks, or regular piles of sacks, etc., all told of the richness of the soil and its appreciation by a numerous population.

While riding next day over the fields for 50 miles in a carriage our amazement was increased by a closer examination of details than hasty glances from car windows will admit. The reason, the cause of this munificence was early revealed—*artesian water*. Boiling up from eight-inch tubes sunk to the depth of about 500 feet were streams of pure, often tepid, water, thence flowing over vast areas of the rich lands.

Even a slight examination of the Tulare valley reveals the causes for the existence of our immense artesian basin here, and hence the possibilities for an almost unparalleled fertile region. It will be seen that several quite considerable creeks and two large rivers—Tule and White—empty here their full-banked streams from the snowy Sierra. Those streams gradually sink under the surface after reaching well into the Tulare basin, except in winter, when they flow on into the large Tulare lake, which then connects by a slough to the San Joaquin river.

Since it happens that so many and so large streams sink in the declined slopes of this valley, this fact accounts for the presence of groves of field oaks over the large expanse of country, and this fact tells the story of water reservoirs held near the surface, which even shallow borings tap and bring the fluid to the surface.

Once a vast cattle range kept zealously from occupation by other than its shrewd owners, it was only four or five years ago that innovations were first made upon this rich territory by persons who had discovered its perfect adaptability to farming purposes. In a few months hundreds of farms were laid out, many of them by colonies from the East; and certainly the appearance of the Tulare farms, orchards and vineyards to-day is hardly second to those of San Jose, and but little inferior to the far-famed reclaimed regions of Riverside and Arlington.

Whatever of richness of soil, of favoring temperature, of salubrious climate, is so requisite in California to attract population and insure satisfaction, this Tulare region seems to possess, with the added feature of cheap irrigation by artesian wells.

And all this was unknown to us who have so often passed through the region—as most every one else on through trains—in the night.

We could hardly credit our senses, so conspicuous, so startling, was the revelation of Tulare by daylight. J. G. LEMMON.

Oakland, Aug. 15, 1886.

## Wagon Axles.

EDITORS PRESS:—Having read Mr. R. G. Sneath's letter to the *Carriage Journal*, copied in your issue of Aug. 7th, all of which I indorse, I would like to suggest some points which I think Mr. S. has overlooked.

First: That too many axles are put on the market made of the commonest iron, and this is usually much injured, if not ruined, by wedging when too cold. Any one who is acquainted with the working of iron knows that this treatment granulates it, destroying its strength, so that frequently it is not as good as cast iron. Let makers put in iron that is both tough and stiff, and forbid the smith to "spit his blood on it," in other words, pound it at a low heat, by which, I am sorry to say, many a forging is ruined. Let them charge what is necessary for good work; what are a few cents a pound on first cost to having a reliable article? My im-

pression is that the spindle could be formed in dies under sufficient pressure.

Second: Ninety-nine axles out of 100 break at the shoulder, the lathe tool is allowed to cut square up to the collar, or, more properly speaking, to where the iron is square, and there is where your axle gives out. The reason for this is plain to every mechanic, and yet they keep on manufacturing them all the same. I have often thought it was done to increase sales. In axles say 2 1/2 x 2 1/2 x 12, the iron next the collar for a short length should be 3" square, and the spindle in the lathe turned with a quick taper from 2 1/2" to the above sizes. There should be no square corners; the box could easily be bored to suit. With this improvement and good iron faithfully worked, an axle could be put on our market that would last twice as long as we now have. What say the Judson Co.? Will they make a start in this direction? Sales may be slow at first, but as soon as wagon-users understand the merits of this axle they will call for it, nor will so many crippled wagons be seen waiting for a new axle from the city. E. G. S.

Iowa Hill, Cal.

## Pomona Notes.

EDITORS PRESS:—I have been a subscriber and a careful reader of your grand and worthy paper for upward of two years, and it has become a necessity in the house. All this time I have seen in its pages very little about Pomona. The place is worthy of the name, and though but an infant yet, has great promise. I do not say this in the interest of any company or person having land for sale, but in order that some one desirous of a pleasant location, with a fair share of Eastern advantages of good society, with the climate left out, may come here with moderate means and enjoy this beautiful climate and such privileges as a new settlement with the best of land and water will afford.

About 30 miles almost due east of Los Angeles, in a broad valley or gently-sloping plain 8 or 10 miles wide and 12 or 15 miles long, with the grand Cucamonga mountains to the north and east and a range of undulating hills to the west and south, on the line of the S. P. R. R., nearly midway between Los Angeles and San Bernardino, is this Pomona, which will in the near future be a large and flourishing inland town. We have now a population variously estimated at from 1800 to 2500 souls. There are four large and costly schoolhouses in the settlement, eight church buildings and nine church societies, a Young Men's Christian Association, public reading-rooms and the Women's Christian Temperance Union, all doing what they can; temperance and various secret societies, well organized. The town is supplied with the best of water, piped from artesian wells lying north of town. The flow of water from the various wells is a wonder to all that behold it.

Our irrigating water is piped from the mountains and is abundant. Citrus fruits must have water, and the acreage planted this year is very great. It has been thought by many impossible to raise deciduous fruits here without plenty of water, but it now proves in very many orchards that apricots do better with good cultivation and no water but the natural rain. So, too, with peaches, prunes, nectarines, plums and pears.

Many owners of orchards of the above fruit trees, two and three years old, are becoming anxious for some means to work the fruit up at a cannery in our own village, rather than ship to a distance, as heretofore. We expect, another season, to have hundreds of acres of apricots and peaches in bearing, three years old and some much older. The crop of these fruits is light this year in this vicinity. Grain and hay have been very good—of the latter, a heavy crop and good quality. Building and improvement is going on in the village and its surroundings everywhere—no boom, but a fair, steady growth of good buildings and beautiful homes.

If you find these few notes worthy of a place in the PRESS, I shall be glad if perchance they meet the eye of some one who wants a place to live—almost a paradise. J. H. DUNN.

Pomona, Cal.

## The Great Percheron Show.

EDITORS PRESS:—The American Percheron Horse-breeders' Association is making extensive preparations for a great show to be held in Chicago, September 6th-11th, in connection with the Illinois State Fair. Large numbers of the Percheron breeders will have stock on exhibition. Suitable buildings, with beautiful decorations, will be erected, and a fac-simile of the gate at the old castle at Nogent le Rotrou, the birthplace of the breed, and the present headquarters of the Percheron Society in France, will be built at the entrance, and will make a very attractive portal.

The Minister of Agriculture of France has appointed the Inspector-General of the National Haras, Marquis de la Motte Rogne, to act as one of the Jury of Awards. Commissioner Colman has appointed Hon. Geo. B. Loring, ex-Commissioner of Agriculture, as the second member of the jury, and the third will be appointed by the Minister of Agriculture of Canada. In every way the exhibition will be one of the highest character ever attempted in this country. M. W. DUNHAM,

Ch'n Ex. Committee.

Wayne, Du Page Co., Ill.

## THE APIARY.

## Ventura Bee-keepers' Meeting.

The Bee-keepers' Association met in Union hall, San Buenaventura, August 7th. Mr. Wilkin was elected president and C. M. Drake secretary.

Mr. Richardson made a report of a warehouse for holding the honey of the county, 40x100x9 feet, with concrete floor and iron covering, with a capacity of 500 tons of honey, saying such a building would cost about \$850. Mr. Mercer said a brick one would cost double that amount.

Mr. Corey gave several good reasons why honey is low.

Mr. Blanchard thought we should organize and work together; store it and borrow upon it instead of forcing sales early in the season.

The following address was read by S. C. Gridley, of Nordhoff:

Gentlemen and Fellow apiarists:—I offer these thoughts with the hope that they may lead to financial good to ourselves. I offer them as suggestions for the bee-men to think over—to alter or amend for the good of the cause—and if anything in this paper proves to be of any benefit, I shall feel that I have been of some help.

We must combine in some form to protect ourselves against the middle-man—the speculator—and the many hands our honey passes through before it reaches the consumer. We must divert some of these profits to ourselves, or our business is ruined. The fruit-men have shown us the way and the benefits derived from union of interests. In union there is strength. Why cannot we follow in their footsteps? Surely we can, and we must do so at once.

Now, I propose the following as suggestions: First, incorporate; then build a fire-proof warehouse large enough to hold the crop of the county, with an office and a large room besides, for purposes which I will mention further on. It is not necessary to build this warehouse where land is expensive. Find out where the railroad line will run and build close to it on cheap land. The railroad will build a switch to it. Let the incorporation be called the Ventura County Honey-packing Association, or any other name that will be appropriate. Let the sole business be in honey and wax in its various forms. Let the bee-men store their honey and wax in this warehouse, and arrange so that money can be drawn from the association on the honey deposited in said warehouse. That will give every man a chance to help himself at once without waiting, and will release the honey market, form a selling pressure and tend to equalize the price of honey. Further, I would propose to have a good, reliable man—one who is used to selling goods—go over the country with samples of this honey and sell it. Go to the best markets with it. Merchants buying from such an association would be assured of getting just what was represented, and from a reliable source.

Now, use the large room I spoke of before to repack the honey as fast as the orders come in. When the salesman sells to a retailer, he wants it in a nice, attractive package—one that will strike the eye. Well, put it up so. Put up a dozen in a case, with handsome labels, the association's trade-mark, and with recipes for using honey in place of sugar for making cakes and preserving fruit, and in this way create other uses for honey, and so stimulate the demand. Also, put a handsome show card, full size of case, in each and every case, to hang up in some conspicuous place in his store. Make it handsome enough so that he will think it an ornament and preserve it, instead of throwing it away. Let it be as handsome as the art of lithographing can make it. In this way Ventura honey will make a name for itself, and will be in demand, and in the course of time orders will come of themselves—will need no salesman. Comb honey should have the stamp of the association on each and every section. Take the wax as it comes in and render it out and make it clean. Have appliances to bleach it, and thereby get a larger return for it. When our salesman strikes a brewer or tobaccoist, he will want it in bulk. Well, put it up to suit him too, and put the association's brand on it. He will be suited with the lower grades of honey.

The cost of cans and cases, as we all know, is a very large item of total loss to the apiarist. Let each and every bee-man provide himself with enough barrels lined with tin or some other material to hold his crop. The first cost would be considerable, but then they would last for years. Let him put his honey in them and store them in the warehouse, and let all the grading and packing be done at the warehouse. It might be advisable for the association to own the barrels, and rent them to the bee-men at so much the season or ton. The association could pack the honey much cheaper than the individual, for they could buy in larger quantities, at a less cost; or they might have machinery for making cans, and manufacture for themselves, and save all the profit. I bought cans and cases in San Francisco this season at 65 cents each. Here they are 85 cents—a wide difference.

Now, a very important question comes up: What will all this cost? How much money will it take? It will require considerable capital

to handle the honey crop of the county this way; but I think a finance committee appointed by this meeting might induce some capitalist to embark in the enterprise. I think we ought to be able to make a good showing for a fair rate of interest on the money—but not one per cent per month. We should be able to get the money at from 6 to 8 per cent per annum, and I think it could be done. The association would have to raise the money for building the warehouse and accessories among its members; but after that there will be no trouble in raising money on warehouse receipts. There are 600 tons of honey in this county. An assessment of one-quarter of one cent per pound would bring \$3000; one-half of one cent, \$6000, which would be ample to build the warehouse. The bee-men could pay their assessments on honey at the market price, let it be sold, and the proceeds devoted to building the warehouse, etc. Then let stock be issued to each one to the amount of his assessment.

The advantages of such an arrangement, to my mind, would be numerous. One of the greatest would be that every bee-man, big or little, when he gathered his crop could raise money on it at once, and that alone would be a great boon to most of us. Another, we would get rid of middle-men and speculators; we would save all their profits to ourselves. That would largely increase the price of honey to us at once.

Now, as to the division of the proceeds of the business. Let a certain percentage be set aside for interest and the various expenses, and for a sinking fund. Let the sinking fund be liberal, so that the corporation can soon clear itself from debt, and in the course of a few years the surplus would be large enough to enable the association to furnish all the money for every purpose. After the season's business is finished, let a dividend be declared to every one depositing honey in the warehouse in proportion to the amount and kind of honey deposited. If this can be carried out I believe the honey-producers will receive a larger return for their crops than they have ever done.

I offer these thoughts as suggestions. My only wish is to help the good cause, and get 10 cents a pound for our honey, if we can.

A committee of five, consisting of Wilkin, Barrows, Richardson, Blanchard and Grimes, was appointed to report at a future meeting, concerning a warehouse, storing and selling honey, organizing, incorporating, etc.

Adjourned to meet at Santa Paula at 1 o'clock P. M., August 21st.

C. M. DRAKE, Sec.

## THE DAIRY.

## After the Battle.

The National Agricultural and Dairy Association, under whose auspices the national oleomargarine law was secured, issues the following address, which is sent to us for publication:

Farmers and Dairymen of America:—The American Agricultural and Dairy Association, by its Board of Directors, extends its greetings to you and to the consumers of dairy products, and congratulates both upon the result of their efforts in behalf of honest industry and pure food.

After the hardest legislative battle ever fought, your contest against the monumental fraud of the 19th century has been won. Congress has passed the bill regulating and taxing bogus butter and President Cleveland has approved it, accompanied by a strong and able message in its favor. It is the greatest and most important victory ever achieved for agriculture and honest dealing, while the consumer is furnished protection from gross imposition in an important article of food.

Every method known to the unscrupulous doer of wrong was employed to defeat your cause, but success rested on your arms at the close of every engagement. Prejudice and venality were employed to inspire the constitution with attributes it did not possess and to interpret it against the interests of a majority of the people to save the fraud from destruction, but they were battered down. The great overshadowing power of the farmer has been asserted for the first time with the most useful results, and must be exerted still further in the future.

Prosperity should now return to the nation's most valuable and beneficent industry, which has seriously suffered so long from dishonest competition. The tillers of the soil in all sections of the country may take heart, since the rights and necessities of the dairymen have obtained practical recognition from the Government through legislation in their behalf.

## The Price of Victory.

Your victory has only been won, however, by herculean effort, and can only be made permanent by fortifying your position through further organization and continued watchfulness. The enemy is backed by unlimited capital and actuated by the strongest personal motives. They have done and will do all in their power to prevent the loss of their unholy and iniquitous gains. They have had the support of a large portion of the public press, and possessed sufficient power in Congress to reduce the rate of tax from 10 cents to 5 in the House, and from 5 to 2 in the Senate. Already these enemies of the public have announced their in-

tention to defeat those members of Congress who voted for your bill when they come up for renomination and re-election, as in the case of Congressman Allen, of Mass. It is all-important to counteract their efforts in this direction wherever made. They work secretly and as a unit without regard to party or expense, and unless we sustain our friends who stood by us in Congress they will strike them down.

We now have a strong majority with us, comprising the ablest and purest members of both houses of Congress, and we must retain and increase it by returning our friends and increasing our representation.

Both producer and consumer should lay aside party politics, so far as it concerns members of Congress, and give earnest, effective help to those who faithfully supported this righteous bill. Also see that members of State Legislatures are elected who will in turn elect United States Senators known to be for your interests. To this end, meet in your townships and school districts and organize. If there is a Grange in your neighborhood, join it! They are most useful and effective organizations, and should be supported everywhere. They have rendered us most valuable aid in our work.

#### The Enemy Organize.

The manufacturers of the fraudulent article have just held a meeting in Chicago, at which they discussed plans to contest the law in the courts, and they propose holding another soon to organize against us. No such effrontery was ever exhibited by evil-doers. These men are determined to follow their nefarious calling if they can, and we must resist their vile attempts at fraud and imposition.

We must be prepared in the next Congress to hold our own, and insist upon our rights. The only way to do this is to extend our organization everywhere and bring out our full strength. We must be prepared for either defensive or offensive operations, not only in this matter but in everything that concerns the agricultural and dairy interests. Proposals are now making to combine all the agricultural, dairy, live-stock and wool-growers' associations in this organization by representation for the most effective work, and we shall yet see it the most powerful institution for good the country has ever had.

#### A National Convention

Of all interested in agriculture and favorable to its protection and advancement and in sympathy with the objects of this association will be held at the Continental hotel, in the city of Philadelphia, Wednesday and Thursday, September 15 and 16, 1886, for the purpose of considering measures to forward the interests of the farmers and dairymen of America. The annual fair of the Pennsylvania State Agricultural Society will be held in Philadelphia at the same time, beginning September 6th and ending September 18th, and this with the convention will add to the interest of the occasion. Please reply stating whether or not you will attend the convention and who will be present from your section. If you cannot come yourself, see that your locality is represented by some good man. State Agricultural and Dairy Societies, State and local Granges, County Agricultural and Dairy Societies and all other organizations of farmers and dairymen, are invited and requested to send delegates. For further information and cards of admission to the convention, address the undersigned, 169 Chambers street, New York.

JOSEPH H. REALL, President.

FORREST K. MORELAND, Secretary.

## THE VINEYARD.

### Vintage Work and Instruction in the Viticultural Laboratory, 1886.

University Experiment Station Bulletin  
No. 57.

The vintage work in the Viticultural Laboratory of the University will be resumed during the first week of September next, substantially on the plan pursued during previous years, but with facilities greatly enlarged and improved. The general features of this work are outlined in the legislative act of 1880, which is here given for the information of persons interested:

#### The Provisions of the Act of 1880.

An Act for the Promotion of the Viticultural Interests of the State. (Approved April 15, 1880. Stats. of Cal., 1880, p. 53.)

Section 8. And for the further promotion of viticultural interests, it shall be the duty of the Board of Regents of the University of California to provide for special instruction to be given by the Agricultural Department of the University, in the arts and sciences pertaining to viticulture, the theory and practice of fermentation, distillation and rectification, and the management of cellars, to be illustrated by practical experiments with appropriate apparatus; also, to direct the Professor of Agriculture, or his assistant, to make personal examinations and reports upon the different sections of the State adapted to viticulture; to examine and report upon the woods of the State procurable for cooperage, and the best methods of treating the same; and to make analysis of soils, wines, brandies and grapes, at the proper request of citizens of the State; also, to prepare comprehensive analyses of the various wines and spirits produced from grapes, showing their alcoholic strength and other properties, and especially any deleterious adulterations that may be discovered. The Regents shall also cause to be prepared, printed

and distributed to the public; quarterly reports of the professor in charge of this work, relating to experiments undertaken, scientific discoveries, the progress and treatment of the phylloxera and other diseases of the vine, and such other useful information as may be given for the better instruction of viticulturists.

Under the provisions of this act, work has been carried on at the University since its passage, so far as the funds available for the purpose permitted. Heretofore, the laboratory and other working appliances and accommodations have been so limited that the vintage work has been severely cramped and under great disadvantages, especially as to the very small scale upon which everything had to be done. By the aid of the legislative appropriation made in 1885, which only became available during the present year, not only has the laboratory been so enlarged as to afford room for a number of special students, but the cellar room required for practical work has been tripled by the addition of two basement rooms and a sub-cellar, 25 by 46 feet, substantially built of brick laid in cement, with concrete floor, well drained; giving full control of temperature in the fermentation and after-treatment of wines. The larger scale and ampler means with which the experimental and illustrative work can now be carried on will render the methods and results more directly applicable to the work of wineries.

#### Plan of the Work.

Although the methods of work pursued in the viticultural laboratory, and the practical objects sought to be attained, have been set forth in previous publications, it is appropriate that a summary statement of the same, made in former bulletins, should here be repeated in substance.

The plan of work in the viticultural laboratory is based upon the obvious fact that "among the first necessities of the present situation of California wines in the world's market is the establishment of more definite qualities and brands, resulting from a definite knowledge of the qualities of each of the prominent grape varieties, and of their influence upon the kind and quality of the wine, in blending before, or as the case may be, after fermentation; of the treatment required by each in the cellar, during the time of maturing, and finally, of the differences caused by difference of location, climate, etc., as well as by different treatment of the wines themselves during the first and after-fermentation."

"In the wine-producing countries of Europe this knowledge has been acquired by long experience; and chemical investigation has subsequently in a great measure ascertained the natural conditions upon which the attainment of certain results in wine-making depends. The principles thus evolved can be applied to new conditions, such as those existing in California, and thus save to a great extent the laborious and costly experimenting which has been gone through heretofore, by formulating into generally intelligible rules the knowledge which otherwise usually remains the trade secret of a few experts."

"It should be fully understood and remembered that while peculiarities and defects shown by analysis are perfectly definite indications as to the conditions that must be fulfilled in a successful blend, yet analysis cannot as yet take cognizance of the delicate and almost intangible flavors or 'bouquets,' which must likewise be made to harmonize, in order to satisfy a cultivated palate. To that extent the determination of the proper blends must always remain with the expert wine-taster, but the work of the latter is immensely facilitated by being informed, through the analysis, of the prominent chemical peculiarities, which in any case must be taken into consideration, and which ordinarily are left to laborious and more or less blind guessing or experimenting."

In conformity with these views, in past years a number of the more prominent grape varieties already cultivated in the State have been made into both red and white wines each,\* and each thereafter subjected to the test both of chemical analysis and taste. The chemical composition of the fresh juice or must is, of course, ascertained by analysis in all cases. The results of the work done in former years have been given to the public in reports and bulletins heretofore published,† and the importance of this method of determining in advance the probable outcome of heavy pecuniary investments has seemed so obvious as to induce every season numerous applications for the examination of grapes and wines from different localities. The working and examination of 40 varieties of newly-imported grapes for the Natoma Water and Mining Company, in 1884, has been fruitful of results, in respect to the intelligent selection of varieties for new planting or grafting; yet, in consequence of the inadequate means and appliances then at command, these results have not been as full as they otherwise would have been. It is expected that during the present season at least a portion of this work will be repeated under more favorable conditions; moreover, grapes of about 40 varieties from the experimental vineyard at Cupertino, grafted in 1884, and now in good bearing, will come under treatment. Comparative experiments with different methods of fermentation under conditions rigorously controlled, as they now can be, will give students an excellent opportunity for practical observation and for the study of the causes that lead to certain definite results.

There prevails not uncommonly among vintners a prejudice to the effect that small scale experiments in wine-making can but remotely lead to a correct estimate of the results to be expected on the large scale, and that they fre-

\*In the case of white grapes, of course, "red" implies simply the mode of treatment, viz.: fermenting on the skins as in the making of red wines properly so called.

†The "Report of Viticultural Work for the years 1883-1884, with Notes on the Vintage of 1885," 210 pages, published December, 1885, can be had on application to the College of Agriculture, at Berkeley.

quently mislead to such an extent as to cause grave financial losses. Were this necessarily true, of course there would be little use for laboratory experiments on any scale practicable outside of a winery.

What is true, however, is that small scale experiments do not lead to correct results when made in large cellars alongside of the large quantities there treated. This cannot be otherwise, from precisely the same causes which have led to the almost universal abandonment of the immense tanks used in the older wineries of the State, in favor of those not exceeding much the capacity of 2000 gallons. If the 8000-gallon tank yielded poor results when placed in the same conditions as the 2000-gallon ones, it is obvious that there must be a similar difference, at least, between the 2000 gallon tank on the one hand and the 5 or 10 gallon experimental keg on the other.

These differences are due mainly to the different temperature-conditions under which the fermentation takes place. When the fermenting masses are large the temperature will rise proportionally higher—sometimes so high as to actually check fermentation, making it difficult to revive it, and leading to the ultimate setting-in of abnormal fermentation, resulting in "milk-sour" wines. When the masses are very small, on the contrary, the regular course of the fermentation is liable to be interfered with by such small variations of temperature in the fermenting-rooms as will leave masses of proper amount, say 1000 to 2000 gallons, almost unaffected. Hence a 10-gallon keg in a cellar and temperature adapted to the proper fermentation of large packages can only accidentally furnish results correctly representing large-scale operations.

It is quite otherwise in a cellar of which the temperature can be regulated at will, and with special adaptation to small packages; when the latter will furnish wines closely corresponding to those that will be produced under correct practice on a large scale. It need hardly be said that the temperature must be kept higher than would be admissible in a cellar containing 2000 gallon packages.

One advantage of considerable practical importance is, however, secured by the use of small packages, viz., that the wines mature much more quickly than in larger ones, and thus results approximating those usually attained in two years may be seen and judged at the end of one year.

#### Course of Instruction in Viticulture and Vinification.

Students taking this course, which may be extended until Christmas recess, will, during the vintage season, occupy the greater part of their time in actual work in the viticultural laboratory, under the direct instruction of Assistants Jaffa and Colby. In addition, from two to four lectures on the principles and practice of vinification and wine analysis will be given them by Professor Hilgard.

It is very desirable that students taking this course should have some general knowledge, at least, of chemistry and physics; and some preliminary experience in winery practice will be very advantageous.

Applications for this course should be addressed as soon as possible to Prof. Hilgard, at Berkeley, in order that the proper laboratory arrangements may be made before the brunt of the vintage comes. The lecture course will begin at the opening of the University session, September 17th, but, according to the season, the laboratory work may begin sooner, and students applying will be promptly notified of the fact. Instruction is gratuitous, but a charge, varying, according to actual breakage of apparatus and use of chemicals, from a minimum of one dollar per month upward, is made to laboratory students.

#### Suggestions to Senders of Grapes, Wines, etc.

Grape-growers and wine-makers are invited to send sample lots of grapes for analysis and experimental wine-making. As a rule, each grape variety will be made into wine separately; the analysis of the must is made on the day of crushing, and will, if so desired, be at once communicated to the sender. That of the wine must, of course, be delayed until the latter has acquired a reasonable degree of maturity, after several rackings. But reports on special points that may be ascertained sooner will be sent if desired.

Experimental blends will also be made either in accordance with the request of growers, or such as examination or previous experience may seem to render desirable.

Ready-made wines or brandies of which the analysis or other examination is desired will receive attention in the order of their receipt at Berkeley.

All work is, of course, done gratuitously, transportation charges being ordinarily paid by the sender. It is hardly necessary to say that, other things being equal, the larger the quantity of grapes worked, the more certainly and nearly will the result correspond to that which may be expected on the large scale. In the case of rare grapes, a few pounds, carefully treated, may be made to give fair results; but it is very desirable that the amount sent for experimental working should in no case be less than that which will yield five gallons of finished wine—say (considering the losses consequent from transportation, amounts required for analysis, frequent racking, etc.) 100 pounds; but twice that amount is preferable, and of some of the more important varieties, 20-gallon lots will be made this season.

Wine grapes, being usually very juicy and of delicate texture, should be packed with especial care in small shallow boxes holding not exceeding 20 pounds each, and preferably in layers with grape leaves between. In no case should packing paper be used, as it causes a rapid production of mold, spoiling both the grapes and the experiment. Persons not having proper boxes may have them sent to them by express from the laboratory by giving timely notice. Send promptly advice of shipment, whether by express or freight. Address University of California, care of Prof. Hilgard; if by express, to Berkeley; if by freight, to West Berkeley depot.

E. W. HILGARD.

Berkeley, Aug. 20, 1886.

## FRUIT MARKETING.

### California Fruit in Chicago.

EDITORS PRESS:—We notice in the RURAL PRESS of August 7th a dispatch from Chicago headed "California Fruit in Chicago," dated July 28th, which goes on to state that Porter Bros. Company received a shipment of ten carloads of fruit, and that they were selling pears as low as \$1.90, while other firms are trying to get from \$2 to \$2.50; and it further states that so large a shipment is more than any one house can well and judiciously handle. Now, we would like very much to have you correct this dispatch, as you have sent it out broadcast in your paper and it is not warranted in fact, but is positively untrue, and evidently is gotten up by some parties who wish to injure the firm of Porter Bros. Company. We wish to cite you the real facts in this whole matter. There is a certain crowd of people in California who are banded together for the sole purpose of breaking up the California Fruit Union, and, at the same time, do as much injury to the Union's agents, Porter Bros. Company, as possible. They went on and established their agencies here in Chicago, and established men who in their own particular line are fair business men, but their line always has been, or nearly so, butter, eggs, cheese and produce. Now, if an experience is not wanted in the handling of California fruits, as in any other class of business, then we are very much mistaken. The facts are that these men, either through ignorance or maliciousness (we do not care to say; we leave that for the people to judge when they receive their account of sales), have gone on and sold this fruit at prices that would make any respectable fruit firm ashamed, and after they had done so they get up the cry that Porter Bros. Company are breaking the market and they are unable to obtain any more money for the goods on that account, when the facts are that they have no trade and no outlet, and simply sit here on the arrival of the goods and either commission them out or sell them for whatever the buyer in this market will give.

In support of what we say, we stand ready any day and at any moment to show our books and compare prices with these gentlemen who have made such a violent howl as to who has obtained the better prices. We do not write this to you out of any malicious feeling, but wish to be put right upon the record. We do not believe that it is the intention of you or your paper to put us in a false position before the fruit-growers of California, as we have been well known to every grower of any prominence in the State for the last 15 years, and the charge that has usually been made against us is that we get too high rather than too low a price; at least that has been the charge made in former years.

WASHINGTON PORTER,

Pres. Porter Bros. Company.

Chicago, Aug. 14th.

[The article to which Mr. Porter refers was a dispatch from Chicago which we printed as a matter of current news without assuming any responsibility for the accuracy of its statements. We give Mr. Porter's statement the same publicity as the dispatch which he corrects.—EDS. PRESS.]

### A Glum Word from New York.

NEW YORK, Aug. 20.—The *Commercial Bulletin*, in a long editorial on California fruit, says: The quantity of California fruit received here this year has been somewhat less than last, though the receipts at Chicago have been somewhat greater. It is frequently the case, when an extra fine carload of fruit is received at Chicago, for the commission merchant or owner there to forward the same to this market, as he is desirous of retaining his connections here, also of keeping the fruit before the public. Competition here is not likely to show any great increase. There are to-day in this city four firms engaged in the trade. These are compelled to make heavy advances upon consignments made to them, and should the fruit, upon arrival, prove poor in quality, they are often obliged to pocket the loss, being unable to obtain a return from the shippers. The rate of commission is 10 per cent, and the incidental expenses of the run are about two per cent. The question is asked: Why is not canning done upon a more extensive scale? We, in reply, would state this ultimately will be done, and is properly the only method that can be adopted to insure a profitable return for the labor expended in raising fruit.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transient and subordinate Granges are respectfully solicited for this department.

## A Tribute to George Ohleyer.

Many will be glad to see, by reports from Yuba City, that Bro. George Ohleyer was received with an ovation on his return from Washington. He deserves honors for his work on the debris question during the last few years. The Marysville Appeal gives the following interesting account of the manner in which the tribute was paid:

An ovation such as never was extended to one of this community was that given to Hon. George Ohleyer upon his arrival, accompanied by his wife, from Washington, where his labors have been solely and sincerely in the interests of the people of the valley. It was all the more extraordinary on account of being impromptu, and shows that a public sentiment exist, which can and will crush all insinuations of irresponsible parties.

Before train time yesterday the lower part of D street was filled with conveyances on which flags were flying. The Yuba City band came over, and after playing several selections headed the line of carriages, which contained the following invited guests, to the depot: Hon. F. H. Greely, Hon. I. S. Belcher, Hon. E. A. Davis, Hon. N. D. Coombs, Hon. Wm. M. Cutter, Hon. W. G. Murphy, Hon. N. D. Rideout, Hon. A. C. Bingham, Hon. Peter Decker, Hon. Edwards Woodruff, Hon. L. H. Babb, Alderman G. W. Elder, Alderman A. W. Lewis, Alderman F. D. Hudson, Alderman D. J. Kertchem, O. Sawtelle, C. E. Sexey, M. Marcuse, J. C. White, J. R. Garrett, J. Stevenson, W. T. Ellis, H. Bruce, T. Dougall, E. G. Clark, P. C. Slattery, D. E. Knight, Justus Greely.

When the train rolled in and while the music was playing, Mr. Ohleyer and wife were brought out and subjected to a severe hand-shaking, after which they stepped into the four-in-hand carriage, and seated with Mayor Greely and Col. Edwards Woodruff, drove into the middle of the street, where the former uttered the

## Words of Welcome.

He said: That on behalf of the citizens—the citizens who have the good of this valley, and especially Yuba and Sutter counties, at heart—he welcomed the champion of their cause from the battle-fields to which he had been sent and from which he had returned crowned with victory. In his speech he reviewed the history of the anti-debris cause, and during the 10 years in which the people had battled through their leaders he could find none whose work had been so devoted and conscientious as that of Mr. Ohleyer. In conclusion, he said that as long as the Yuba, the Feather and the Sacramento rivers flow oceanward, so long would the name of Ohleyer be endeared to the people and remembered by them.

## Response of Mr. Ohleyer.

Mr. Ohleyer rose amid cheering and said: Mr. Mayor and fellow citizens:—This reception takes me entirely by storm. Never at any time a good talker in public, I am now wholly unable to express my thanks for the friendly demonstration of the people of the two counties. I am overwhelmed, Mr. Mayor, with feelings of pleasure and of thankfulness to yourself and those for whom you have spoken. I will not attempt at this moment to repeat the various struggles we have gone through to the present time, as you have yourself very fully adverted to the past. You have, however, given me far too much credit for what has been accomplished. I have been but a humble instrument. I was selected because I was interested. My home and all I had in the world were at stake. My family, the members of which had grown up as Californians, had a claim upon my service, and I felt it incumbent on me to faithfully do my duty as a man, a citizen and a father, to protect my home. In doing so I have had the assistance of yourselves and that of all of the best citizens of the valley, and especially of these two counties. What has been done has been accomplished gradually. But those that have aided have never failed nor faltered. We had, as you have truly said, sir, a reverse at one time. You said, however, that decision was against our right, but it was not. It was simply a dodge to keep from passing upon the merits. I was convinced then, and ever since have been, that it required a united effort to sustain the law. The law existed then as now, but the public sentiment did not. My idea was to create that sentiment in every way possible. That was finally accomplished, and the court held that our course was just and right. It also held that it was a national as well as local question, in deciding that this nuisance was a public as well as a private one. It then occurred to me that if it was a public nuisance we should go to headquarters to have it fully and forever abated. I said so on the streets; I said so in the journal for which I wrote; and finally went to headquarters with this message: "We have done thus and so. We have spent our money, thousands upon thousands—I might say hundreds of thousands—and to do what? To save our homes and to save these rivers for you and for posterity. Your own court has decided that this is your concern as

well as ours; that it involves the saving of property that belongs to you and over what you claim control. Now, what are you going to say about it?" That question, I am pleased to say, has been answered. [Applause.]

I thank you again most cordially and heartily; I really know not how to express myself in return for this demonstration. But I am glad beyond measure that I am able to come representing a victory; for at one time there was imminent danger that I would be obliged to return representing a defeat. I thank you all for your indulgence of these few broken remarks, and for this friendly reception. [Applause.]

At the conclusion of his remarks Mr. Ohleyer was greeted with three rousing cheers and a tiger.

The procession then formed and moved to the courthouse in Yuba City, being cheered along the line. It was over two blocks long, having been augmented by numerous private carriages.

When at Yuba City and the crowd was in the courthouse yard, Mr. Phipps mounted a chair and spoke at some length, from which we quote the following:

Ladies and gentlemen, fellow-citizens of Yuba and Sutter counties:—Less than eight years ago many of the fairest homes of this God-favored country seemed absolutely involved in ruin. Many a careworn father with a family more or less dependent upon him looked forward to the near future when he should be compelled to seek a subsistence elsewhere, his productive land being ruined and its value gone and his family left with only a few half-starved beasts of burthen to bear them away. These were not exaggerated anticipations on the part of every citizen of this county at a period so recent. And all this because of that gigantic evil, hydraulic mining, which literally moves mountains down into these rivers, causing the debris therefrom to be swept over the lands of this valley. But recently a change has been brought about. Our citizens have become more hopeful of the future, real estate has doubled the market value it had six years ago, and to-day the pulse of prosperity can be felt beating in the very least of our institutions. Why this change? Is it because any material number of hydraulic miners have voluntarily ceased their operations? You know the answer. You know that in every instance the hydraulic miner is beaten to the wall ere he will yield a single point. No! It is because of the determination of the citizens of this community expressed through their leaders, who, at an enormous expense, have pushed the vexatious question to so nearly a happy solution. And we are here this evening to show our appreciation of the untiring efforts of one who has stood head and shoulders above any one else in this warfare for home, Hon. George Ohleyer. At each session of Congress more or less Federal money is appropriated for the purpose of preserving the navigable waters throughout the United States through what is known as the River and Harbor bill. We had felt the need of Federal interference in our behalf for the protection of these rivers from this debris curse; the burden of this fight being too great for any one community to bear, and the proceedings in equity too tedious. At the beginning of the recent session of Congress we had not a champion for our cause in either house, and of course, could look for nothing good. Therefore the managers of this fight wisely selected Hon. George Ohleyer as the person who could successfully educate our representatives to a proper understanding of this matter.

## Ohleyer's Response.

Mr. Ohleyer, after being greeted with three hearty cheers, responded as follows:

Fellow-citizens:—I am utterly unable to express my appreciation of this demonstration, this kindness shown toward me. It is a day and an occasion that will live with me as long as memory shall last. [Applause.] It is a surprise, something I did not for a moment anticipate and what I can hardly understand. I have, it is true, done all that I could, but I could not have done anything without the very able assistance of yourselves, your leading citizens and the gentlemen at Washington. It may seem from what has been said—and I believe the speakers who have welcomed me have been sincere—that much has been accomplished through my particular efforts, which I wish to correct somewhat. It seems to me that the pin was set to be knocked down; that public sentiment, the State and the United States, were ready to put their foot down on this destroyer, and that it was only necessary to prick the bubble or knock over the pin to accomplish what was accomplished recently. The defeat that stared us in the face a month or six weeks ago was not because of the sentiment of Congress. The sentiment of the Senate and of the Senate Committee was, as had been positively agreed upon, that hydraulic mining should go, that it should cease. They were willing to vote, and said so, that hydraulic mining was an enemy to mankind and must cease; but that other mining, harmless mining, should not be covered by a sweeping law. That was agreed to, and not, as you may have been led to believe, that it was the opinion of the Senate that nothing of the kind should exist, but by a trick it was stricken out of the bill. This repulse was awful; it was to me an indescribable stroke. It was so to our members of Congress and to all our friends. But they had not resided among us and didn't feel the blow as severely as I did. They said: "Very well; we cannot help it, but next winter we will get the bill." I then telegraphed for in-

structions about coming home, but by the time I received an answer I concluded, with our delegation, that we would see what was left. We were like a defeated army; not annihilated, but put out on the run. Ours was a Bull Run, but the enemy did not get to Washington. We pricked up our spirits and made up our minds to try it again; and then I did not come home right away. [Cheers.] The result was telegraphed you some time ago. I knew it would be, for I left such instructions, and you received it before I did. I left when I found I could be of no further use, and that the matter was likely to be inserted in the bill—the fact is, would go into it, for I had that assurance, the only question being whether the bill would pass, and, if it passed, whether the President would sign it. Contrary to almost all our expectations, especially those of the California members, they did agree upon the bill and they passed it, and the President signed it.

I have not seen the bill as it passed, and cannot tell you its tenor exactly. I would therefore prefer that the reporter I see present would not publish my ideas of what is in the bill, because they may be erroneous. But it will read like this with reference to California: "That the money heretofore appropriated shall not be used until the Secretary of War shall be satisfied that hydraulic mining has ceased, and if he be not so satisfied he shall use so much of said money as may be required to satisfy him." I think that will be about the language of the bill. There is nothing said about any other kind of mining. It is better and shorter than it was in the start, in my judgment. But I will not detain you. I am again compelled to thank you, and do so most heartily, for this demonstration. But I am glad we have met to-day to celebrate a victory. One thing more, which I had nearly forgotten—you should sustain those who have been pushed to the front in this battle. This demonstration is more in favor of your determination to secure and protect your homes than it is to honor the one that stands before you. The world should know that we have our homes more at heart than any public question, and I take it that this demonstration is to show that you mean to stand by those whom you have placed in advance, as well as those you mean to conquer in spite of every obstacle. In that sense I prefer to take this reception. [Great applause.]

## Attend the State Grange.

It is the privilege of every fourth degree member of the P. of H. in good standing to attend every meeting of the State Grange. Each, on being vouched for, and paying a small fee, is welcomed to receive the fifth degree, Pomona, and partake of the annual feast of Pomona. Attendance is a rare privilege, and one highly enjoyed by all intelligent minds who have the highest interests of the Grange and their fellow-beings at heart. Let none miss it who can attend. All who have enjoyed one or more of the previous sessions will feel it an irreparable loss to fail to attend another.

Each succeeding year the attendance of Past Masters and Matrons and fourth degree members has increased. The sessions have also been growing in interest. More literary and social entertainment and harmony have prevailed, until each annual gathering is looked forward to with more eager anticipations from year to year.

Worthy Lecturer Hayes, of Oregon, is expected to return the fraternal visit of Brother and Sister Flint, and many inspiring words concerning the work and fraternal spirit of the Patrons of our neighboring State—soon to be more closely bound to us by speedy overland connections—are surely anticipated.

There is need of council one with another from all parts of our large State. There are stirring times about us on every hand. Questions of vital importance are looming up before our nation and State. The voice of the husbandmen and matrons of the land should be more frequently and emphatically heard in their own behalf, and henceforth they will be. Let no one stay away because the meeting at Marysville is not so centrally located as it has been at other times. The brothers and sisters of the north have never faltered in attending sessions southward. They have suffered innocently and severely from the devastating floods of mining debris. But all will certainly rejoice that justice seems sure to crown with success their persevering efforts for their hard-fought rights. Members from the south and all other quarters should certainly not fail to attend for any small-sized reasons.

A generous welcome must surely await all who attend. The citizens of Marysville and Yuba and Sutter counties have evinced a generous interest with the P. of H. in their midst, from the time Marysville was selected for the annual session, to make the visit of the State Grange there an agreeable success.

Let the subject of the State Grange session be discussed in every Subordinate Grange until the 5th of October. Have as thoroughly prepared for action as possible, matters to be brought before the great gathering. See that some preparation is made by every Grange, or some members of it, to aid in making the coming annual gathering more instructive, delightful and beneficial than any of its excellent predecessors.

VALLEY GRANGE feasts at Pacheco to-day with a large class for instruction in the fourth degree.

ELECT ALTERNATES.—Only a month remains in which to elect alternate representatives to the State Grange. Although it may be confidently expected that the Master and his wife will be present throughout the session, it cannot be certain that they will. Besides, those who do attend may not be able, or wish to confine themselves to be present and act at every meeting of the session. Experience has proved that it is wise, for the welfare of each Grange and the State Grange, that alternates, two from each Grange, be elected, and a month before the session is not too early to make the selection. The delegates should be provided with certificates of election, signed by the W. M. and secretary, under seal of their Grange.

DEATH OF MRS. J. W. MACKIE.—We deeply regret to hear of the death of this estimable lady at Tulare, last week. She was a resident of Oakland and accompanied her husband to a new residence in Tulare last fall. Mr. Mackie wrote for the RURAL under the name "Novice." He is an officer of Tulare Grange and was formerly of Temescal Grange. He will have the fullest sympathy in his great bereavement. Mrs. Mackie leaves three children to mourn their loss. Her native place was West Woodstock, Conn.

TURLOCK AND CERES TO FEAST TOGETHER.—V. E. Bangs, Master of Ceres Grange, and District Lecturer, will install officers of Turlock Grange and confer the third and fourth degrees on two candidates, on Saturday, the 28th inst., at 12 o'clock M. The occasion will be taken advantage of to give a harvest feast, and a most earnest invitation is extended to Ceres Grange to be present and participate. As Turlock people are noted for their generous hospitality, all who attend may be assured of a grand social time.—Modesto News.

SOME of the Wheatland ladies, members of the Grange, recently visited Yuba City to talk over in a sisterly, informal way, matters concerning the State Grange, which meets at the latter place in October.

JUDGE BLACKWOOD, of Eden Grange, visited Temescal Grange last Saturday. A fair attendance of members were present, and interesting discussions prevailed.

## San Francisco Girls' Union.

## A Card to the Public.

The growth of this society demands new lines of work and funds for an additional building. Arrangements have been made with Mr. E. W. Steele (brother of Senator Steele), a most interested and warm supporter of the work, whereby the Union can erect and own a suitable building, in addition to the one occupied on his grounds.

This society, with very little noise and very little assistance from the public since its incorporation, has gone steadily forward and been virtually equivalent to a fraternal order for the respectable, bread-winning girls of city and State, furnishing a pleasant home (for the period desired) for over 250 strangers and homeless residents; has placed in business positions 356 within the past 18 months, and given, through its auxiliaries and correspondence, assistance to many more. Its influence has been to divert from the precarious shop-life and uncertain, purely mental and mechanical work, to the ranks of housekeepers (where skill and efficiency always find room), the many who have found neither success nor permanence in any calling hitherto—particularly the young, who can make of housekeeping in all its departments a science no less than book-keeping, securing comfort and competence and giving respectability by virtue of skill and intelligence to every industry the world needs. To this end we propose to establish

## A Training School.

Which shall include all branches of domestic work, taught in the most approved way; these classes to be open to every beneficiary member of the S. F. Girls' Union, or its branches, throughout the State, between the ages of 10 and 20 years.

From the self-supporting trained classes will be sent, with the society's indorsement, the help required by our sustaining members. To this membership we most earnestly invite all who value skill, in household and all manual work, who would see the self-dependent classes of our California girls made strong in themselves—mistress of circumstances and the environments of womanhood.

Most earnestly, too, we invite the co-operation and material aid of all labor organizations, of whatever name, who recognize in this society's work the advancement and protection of our sex; the justice and respect due efficient labor of every kind, and which it is sure in the long run to command; the helpful solution of the Chinese question, by substituting competent white help, as fast as qualified, in every house and business suited to woman; in short, the restoration of harmonious relations between capital and labor, so vital to the future prosperity and happiness of this commonwealth.

We acknowledge most gratefully the assistance of citizens who saw the necessity of this work on this coast and gave us such personal aid in the start as assured its success. Again we ask their co-operation and that of all friends of the enterprise in the wider work that opens to us, and such donations in cash, building material, scholarships and memberships, as each can contribute.

Mrs. Crocker's donation has been supplemented by scholarships from ladies and business men in this city, Petaluma and Santa Cruz. There are few who cannot at least spare a membership of \$3 in this work of philanthropy. We hope for such response as will insure the necessary \$3500 for this new departure by October 1st.

The public are invited to visit or communicate with the society at their rooms, 714 Bush St., S. F. MRS. C. E. KINNEY, Superintendent.

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Alameda.

**VINE-TRAINING.**—Livermore *Herald*, Aug. 12: Vines trained on the Chaintre and Guizot systems, in this valley, are carrying their fruit almost perfectly, this season. When the vine is laid down, its laterals all grow upward, thus forming an umbrella-like protection to the bunches of grapes, which extend along the stalk, instead of being massed in the crotch of the vine, as in the ordinary stump pruning. The vines should be supported from the ground on pegs, or a light framework of laths. The same result may be obtained by extending the canes on low wires, supported at regular intervals by stout posts. A. Duvall has several acres so trained, on his Bellevue vineyard, in this valley. The following from the St. Helena *Star*, speaking of the Reislings in the Krug vineyard, shows what this system will accomplish in a year where the best St. Helena vineyards are producing but two tons of Zinfandel to the acre: "In this vineyard can be seen Reislings that will produce from 10 to 12 tons per acre. In place of the ordinary stake for these vines two wires have been stretched horizontally from post to post and the vines allowed to run along the wires, having only a space of seven feet one way between the vines and forming a solid wall of foliage and fruit along the wire. As a result the grape is protected from the sun's rays, and the yield is marvelous, the bunches are large, and in many cases, on the horizontal limbs, extended the entire length of wood, forming a solid and continuous chain of grapes. No person without ocular proof can realize the tremendous advantages of this system, and only a visit to Krug's can in any way convince one that such a yield as 10 or 12 tons is possible." Quite a number of our vine-growers are experimenting on the Chaintre and Guizot systems, among them, Chas. A. Wetmore, Clarence Wetmore, Julius P. Smith, Fowler Bros., Jos. F. Black, Howard Black, Bernard & Wente, and J. H. Wheeler. The two systems vary in this way: in the Chaintre, the rows are planted 14 feet apart, and the long pruned canes, which are raised on stakes, to allow of cultivation, are allowed to cover the entire ground during the fruiting season if they will, being supported from actual contact with the earth by forked sticks. In the Guizot system, there are two canes—one of this year's wood, trained to a stake; and another, of last season's, laid down. The following season, the old cane is pruned away, the new one laid down for bearing, and another raised to the stake, and so on. In this system, the rows may be seven feet apart, as there is never the length of cane seen in the Chaintre. The Guizot will probably be the more popular of the two, as it may be applied to all long-pruned varieties in our present vineyards, and does not require special staking. Many others contemplate putting down vines, next season. It should be borne in mind, however, that to be of value to the fruit, the canes must be laid down early—before the laterals have made much of a start. Otherwise, they will not turn upward, and form the canopy which so tends to furnish shade and an even temperature for the fruit.

**STRAW.**—Haywards *Journal*, Aug. 21: We can remember, not many years ago, when straw was looked upon as useless to the farmer, and was either burned up or given away. But this idea has been exploded long since, and straw baling is now a recognized industry in this valley and adjoining townships. It not only gives more work for the balers, but when you come to look into it, there is quite a little speculation and opportunity to double your money. The number of bales of straw in this valley this year, more especially around Mt. Eden, would no doubt go as high as 40,000 or 50,000. There seems to be a steady demand for it, the principal buyers being speculators and warehouse men. It costs to bale it about 17 cents. Where a large amount is purchased on speculation, say from 1000 to 5000 bales, the price is about 25 or 27 cents, but the retail price is between 30 and 40 cents, generally 40. There is a large local demand, and farmers have little trouble in disposing of all they can spare. A speculator can store a number of thousand bales, and along in the winter the price generally goes as high as 50 and 75 cents in retail lots. There is quite a little profit in straw storing, after all.

### Butte.

**NUT-BEARING TREES.**—Oroville *Register*, Aug. 19: It has been demonstrated that the Black and English walnut will grow in all parts of the county except the high, mountainous region. The pecan and the butternut will readily grow all through the foothills. The different variety of almonds, such as the soft and hard-shell, the silk, paper-shell and the Languedoc, can be grown in almost every section of the county. The Italian, Spanish and American chestnut are found about a score of homes, so that the planting of nut-bearing trees would be no experiment, so far as the climate is concerned. Nut-bearing trees are found at Enterprise, and also at the Foreman place, above Bidwell Bar. They thrive well at Bangor and Wyandotte. At the Central house five or six varieties of nut-bearing trees are found in a flourishing condition. Biggs and Gridley show that the same trees will do well

there. About Oroville the almond, chestnut and walnut have been bearing for years. The same is true of Chico, where all varieties of the almond, walnut, chestnut and pecan reach perfection.

### El Dorado.

**RASPBERRY-GROWING.**—Placerville *Democrat*: There is, at Dr. Smith's residence on Coloma street, a patch of raspberry bushes which is worthy of note as a sample of what can be done by man in the way of controlling nature and eccentricities of growth that develop themselves. The raspberry patch is now bearing its second crop of berries for this season, and will soon produce the third. Hearing of this fact, we this week went down to take a look at the bushes, and to see what method the doctor adopted in procuring the result obtained—a vine almost ever-bearing. This result was obtained simply by the pruning out of old canes as soon as done bearing. In the fall a single cane is left on the plant. As spring comes, this cane branches out, buds and produces fruit, forming the first crop. Beginning at the tip, the fruit sets and ripens, being then succeeded by another fruit cluster lower down the stalk, this process being repeated until reaching well toward the base, when productiveness ceases. During this period of bearing, new canes have arisen from the root of the plant, and grown to considerable size. As the old cane ceases bearing, they are cut out as low down as possible, and the young shoot left to mature, which it does rapidly, going through a process similar to that through which the first cane passed. When through bearing this is also cut out, to allow the development of a third shoot, already well grown. This produced the third crop of berries of the season, and is then cut out from the roots. The young shoot then remaining is allowed to grow until checked by cold weather, and forms the cane from which the first crop of the next season is produced. By this method of handling the vines are ever kept bearing from early in the spring until late in the fall, and from appearances at no serious inconvenience or detriment to the plant, which gives every evidence by strength of growth and quantity and quality of fruit, of being as healthy and vigorous as ever. The plants, which have been undergoing the present treatment for over two years, have received no extra manuring, but have been continuously and thoroughly irrigated. What the name of the variety of plant so treated is, has not yet been determined, but that all varieties will not produce similar results under similar treatment has been demonstrated in several instances where Dr. Smith has similarly treated different varieties of vines, and has nearly killed them out in an effort to make them ever-bearing.

### Fresno.

**RESCUED FROM A PIT.**—*Republican*: Frank Ross spilt a well, into which a valuable colt had fallen, by digging the surrounding country into it. Result: the quadruped walked out without assistance.

**DIFFERENCE IN THRASHING.**—Some thrashers will give \$1 a quart for all the grain the farmer can catch in the straw, and others have made the remark that they don't mind a little waste, as they expect to get the cream of the thrashing. Farmers are learning to discriminate between wasteful and proper thrashing. Next year they will demand decidedly better heading.

**SHEEP SHORN.**—*Republican*, Aug. 20: Miller & Lux have just completed shearing 80,000 head of sheep at Firebaugh's, in this county. The sheep averaged about three and a half pounds of wool each, of a good quality. Wool is worth about 12½ cents per pound now, so that the amount taken from the 80,000 head is worth about \$35,000.

**DOES IT PAY?**—*Republican*, Aug. 13: We have frequently heard this question asked in regard to raising wheat upon the plains of the San Joaquin valley. It has been answered as many times, but not always in a thoroughly reliable manner. Prof. Hamilton Wallace is the owner of a 20-acre lot in the West Park tract, about five miles southwest of this city. Last spring he decided to have the place seeded to wheat, it being too late to set it to fruit. He hired every bit of the labor done—plowing, seeding, heading, thrashing and hauling to warehouse, and as a result he received \$201.43 net from his crop upon the 20 acres. As no special pains were taken to secure extraordinary results, this may be taken as an average yield during a fair season, with prices of labor high and grain extremely low.

### Los Angeles.

**WATER DEVELOPMENT.**—Ontario Cor. Los Angeles *Times*, Aug. 20: The surface flow of water was officially measured at the canyon the other day, and found to be 1200 inches. This, be it remembered, is the surface flow. The tunnel has already developed several hundred inches in addition, and will undoubtedly develop a thousand or so more. San Antonio canyon contains oceans of water, and that the purest and best obtainable on the continent. Hundreds of inches are constantly running to waste, notwithstanding this is the dryest season of the year.

**GRAPES THRIVING.**—The Malaga grapes here are doing wonderfully well, surpassing every one's expectations. Vines only two years from the cuttings are loaded with large, heavy clusters. It is worthy of remark that those which are doing the best have never been irrigated. The Sultanas are also bearing well the second

year, something quite unusual. The Muscats are likewise making a good showing, but they are, of course, expected to bear the second year.

**GLANDERS.**—The Santa Ana *Standard* says that there is considerable excitement in Orange about glanders.

### Lassen.

**HAY, GRAIN AND FRUIT.**—Susanville Cor. Reno *Gazette*, Aug. 18: Haying in this valley is about over for this season, and the yield is said to be much larger than in a number of years past. The harvesting of grain has commenced, which, from inquiries from all sections of the county, promises to be a light crop—from one-half to two-thirds of an average yield. The fruit crop is also light, although there evidently will be much more than enough for home consumption.

**SHEEP LICENSE TAX.**—A second suit brought under the amended license ordinance by the county of Lassen, Cal., against J. S. Cone to collect the license for raising, grazing and pasturing sheep in that county, was recently decided in favor of the plaintiff. The judgment will be for \$500 license and \$100 penalty.

### Sacramento.

**THE HOP-PICKERS.**—*Bee*, August 23: Yesterday the hop-growers and the Chinese contractors put their heads together, but they could not agree. Some of the growers have come to the conclusion that they will have to pay 90 cents if they want their hops picked. Contracts would have been entered into yesterday were it not that the contractors wanted the hop-growers to pay the foreman who is employed by each hop-grower to see that the picking is well done. The hop men refused to do this and the Chinamen said they would not go to work. It is expected that Monday will be the day that picking will commence, which will last about five weeks. A Chinese contractor says he can get a thousand Chinamen here in a few hours, if they are needed. Some of the contractors are afraid to contract for less than 90 cents, the hop-pickers' price, as they have been threatened by highbinders that if they do their lives will be made to pay for it. For every picker hired the contractor receives 25 cents, and by furnishing the pickers with their provisions at double prices, they make more money out of it than the pickers. Notwithstanding, however, the fear of some of the contractors to attempt to furnish men at a less price than 90 cents, Quong Lin Hing says he will get plenty of them at 80 cents. Last Friday A. Menke issued orders to his son, G. H. Menke, to employ all the white labor he can get to pick hops, they to board themselves, as he is not prepared to board a large number at present.

### San Benito.

**THE GREAT FIELD FIRE.**—*Merced Express*: Gen. Bost, who has been for some days in the vicinity of Hollister surveying the great burnt district in the San Juan valley, returned on Thursday. The fire which caused such destruction there on the 5th inst. was the most disastrous that has ever taken place in this State. The area of territory burnt over amounts to some 13 square miles, or over 8000 acres of land, all of which, Gen. Bost informs us, was covered with as fine a crop of wheat as ever grew. The total loss will foot up \$75,000, covered with only about \$17,000 insurance.

### San Diego.

**LOTS OF LUCERNE.**—One of the finest sights to be enjoyed about San Jacinto is the great alfalfa meadow in the woods on the north side of Central avenue, two miles from town. There are several hundred acres of alfalfa, put in during the past spring and partially irrigated by the waters of the San Jacinto river. It extends through a part of the forest which follows the northern boundary of the valley for so many miles.

**ARTESIAN WATER.**—San Jacinto *Register*, Aug. 19: E. C. Proctor on Monday finished boring another well, making the 75th artesian well sunk in the valley. The well was put down 111 feet, and the water is flowing one and one-eighth inches over the top of the six-inch pipe. The temperature of the water is about 61 degrees. The well is on A. A. Proctor's place, and the flow is more than sufficient for all purposes. Of all the flowing artesian wells which have been sunk in this valley since the pioneer well was sunk on December 3, 1883, the Proctor Bros. have been the contractors for all but 18.

**CATTLE DISTEMPER.**—San Diego *Union*, Aug. 19: Cattle in El Cajon have suffered from a disease affecting their eyes, the victims being principally milch cows. It first appeared some six weeks ago, and was at that time believed to be pink-eye, but experts in such matters pronounced against this view of the case. The disease has spent its force and almost entirely disappeared. There were no deaths, but some of the cattle became temporarily blind.

### San Luis Obispo.

**A HANDSOME STRANGER.**—Mrs. R. W. Summerville writes the *Tribune*: A flower of royal beauty has just been sent me by Mrs. Brumley, of this city, for identification. It appeared as a volunteer in this lady's flower garden, and is well worthy of a visit by all who are lovers of flowers. The blossom is a brilliant cup, three inches across, with three very large yellow sepals, and three much smaller panduri form petals of the same rich hue. The entire cup is thickly beset with spots of bright red, and the sepals are recurved, thus forming on its outer edge three large pendant scallops. The

colors of this beautiful flower recall our familiar tiger lilies; but all true lilies have six stamens set in the bottom of the cup, while this erects a tall, yellow column from its center, bearing aloft three curved stamens, and within these, three slender, bifid styles. The leaves are fluted like Corinthian columns; that is, they are long and narrow, somewhat cylindrical, and deeply veined and plaited. Botanists call this wonderful creation of nature the *tigridia pavonia*, and its native country is Mexico. It is of the same family as the crocus, the gladiolus, the pardanthus or ixia, and the iris; and through this last is royal in connections as well as in aspect, the lilies of France being *fleur de lis*, or *irises*, and therefore cousins to our superb plant from Mexico. This appearance of the *tigridia* among us adds one more to the large list of half-tropical plants that flourish out of doors, in our incomparable climate of San Luis Obispo.

### San Joaquin.

**NEW MUSKMELON.**—Lodi *Sentinel*, Aug. 21: Mr. J. Dickey, of Lodi, has introduced into this section a rare and excellent specimen of the muskmelon tribe. It grows very large and is almost round in shape. It has a peculiar yellowish color. The meat is white and in flavor surpasses any other muskmelon we ever tasted. We have seen a number of these melons raised by Mr. Dickey, which measure fully 36 inches in circumference. It seems that there would be a good profit in raising this fruit.

### Santa Barbara.

**HOLSTEIN-FRIESIANS.**—*Press*, Aug. 21: No little admiration and comment were occasioned upon the streets to-day by the appearance of a drove of the celebrated Holstein-Friesian cattle from the Ontare ranch. Mr. W. W. Burton, of Ontare, informs us that this stock is to be shipped on the *Orizaba* to-night for the State Fair, which opens at Sacramento on the 6th of September. The drove consists of 3 bulls, 18 cows and 34 calves. The former are Strathmore, a four-year-old weighing 2300 pounds (a magnificent animal); Aggie Idaline Fourth's Roland, three years old; and Ontare Chief, a yearling. On the *Santa Rosa*, next Sunday, a band of thoroughbred and imported horses, including six stallions, 10 mares and 10 colts, will be sent to the fair. This display at the State Fair from the Ontare ranch is certain to create a favorable notice for Santa Barbara.

### Shasta.

**SUCCESS IN GRAPE-GROWING.**—*Democrat*, Aug. 18: Geo. R. Walden yesterday presented this office with a box of very fine grapes of the Black Malvoisie variety, grown by Walden & Dozier near town. They are large and showy and very palatable. These are called the best black table grapes grown in California. We desire to congratulate the proprietors on their success. They are also making good raisins out of their Muscats. Both these varieties are grown on stiff clay land south of town, without irrigation, and the vines are only three years old.

**HAPPY VALLEY FRUIT.**—Anderson *Enterprise*, Aug. 21: A. W. Hubbard placed before our admiring gaze a box of peaches and grapes on Monday morning last, grown in that fine fruit belt known as Happy valley. The peaches are the largest and best we have seen during the season. The grapes are of the Zinfandel variety, of a dark blue color, large and round, and are, no doubt, an excellent wine grape. Land that can now be bought in that section for \$25 per acre will bring \$100 within five years.

### Sutter.

**BEGINNINGS OF BUCKWHEAT.**—The Sutter County *Farmer* says that Mr. H. Bolton, now their County Coroner and Public Administrator, is the man who sent the first buckwheat to the State of Oregon. The shipment was made in 1852, from Fort Wayne, Ind., and consisted, by actual count, of 64 kernels. It was sent to Jacob Kandall, who had searched the State for buckwheat seed but could not procure it. He wrote to Mr. Bolton, then a resident of Indiana, and procured through him the first seed ever introduced in that State. From these 64 kernels, Mr. Kandall raised the first year three pints; the following year he gathered eight bushels, and now the State of Oregon produces an enormous yield of this valuable staple.

### Sonoma.

**COOKED ON THE VINES.**—Index-Tribune, Aug. 21: The hot weather continues and the green grapes on farms in the upper part of Sonoma valley continue to be burned and blighted. Samples shown us seem to be scalded, causing the juice to run out over the bunches below, when those most exposed to the sun's rays become dry and parched, rendering them utterly worthless. The percentage of damage that will result cannot be estimated.

### NEVADA.

**COULDN'T SHOW THE HIDE.**—J. F. Triplett, a detective of the Nevada Cattle Association, swore out a warrant at Eureka last week for the arrest of Henry Fenstermaker, of Fish Creek, charging him with having violated Section 3 of a law passed by the last Legislature in behalf of the stock interests of the State, which reads as follows: "It shall be unlawful for any person peddling the meat of any bovine animal, who is not the keeper of any shop or meat market, to sell such meat without having, and upon request, exhibited the hide of such animal, containing the brand and other marks thereon." The jury failed to agree and the case is to be retried.

### That Mosquito.

Familiar hum, that wakes the shades of night  
While darkness hides its cause from mortal sight,  
I fear I'll have to rise and light my lamp,  
And drive the darned imp back into its swamp.

The insect treads my cheek; I raise my paw  
And strike with vengeful force. I nearly broke my jaw,  
But missed the wretch, which, dodging in the dark,  
May try again. Then at the sucking mark,  
While he is busy, I'll take surer aim  
And put a stop to that mosquito's game.

A hole was in my curtain, and the pin  
Had fallen out; else how could he get in?  
For I was careful when I came to bed,  
And drew the net with caution o'er my head.  
I'm sure he could not through the meshes crawl,  
As each aperture is so very small;  
Although he might screw up his legs, and twist  
And use his trunk as I might use my fist,  
Or writhe and wriggle till he burst his skin;  
But even then he never could get in.

He's here again, and nearer still he comes,  
Up to my face maliciously he hums,  
Yet seems afraid and hovers near my nose  
Till, with a sudden buzz, away he goes.

I cannot see which way the critter went;  
But he must see, or is it his keen scent  
That guides him onward? For the spot he'll find  
With aim unerring where he sets his mind.  
Ah! he returns; I'll let him stick awhile,  
He'll get but little, be it blood or bile;  
My itching temple feels him probe the skin,  
And send his dart a little way within;  
I take the chance and give a sudden blow—  
'Twas death; I killed him ere that he could know  
Or feel the stroke by which his blood was shed;  
Perchance 'twas mine—the little that he bled.

—RUSTICUS, in Santa Barbara Independent.

### The Laboring World.

[Written for the RURAL PRESS by I. C. HATCH.]

Let us have social, civil, political and ecclesiastical institutions formed on these principles of recognized dependence, equality, justice, benevolence and sympathy, and we shall have no complaining, nor any just cause for complaint, either on the part of employers or employees. Let the principles of Christianity prevail, and we should never see, as we do now, especially in the Old World, the millionaire look down with contempt on him who for the scantiest subsistence must grind at the mill till the body is crushed and his soul corroded. It has been computed that if all the human beings on the globe would labor but four hours per day, the whole race might live in competence and comfort. Would God that the pulpit could utter some word that should help on that truly Christian consummation. Would that every rich man might be willing to work with his own hands, if need be, four hours each day, could he thereby release his brethren, toil-worn, from these crushing tasks and pour joy, as he often might, into the poor man's cup. As it is, the present condition of things is lamentable. Our social condition is indeed a problem. Of all ages, this is the age of progress, improvement and discovery. Never in the history of the world have there been such improvements and discoveries as those which have marked the last 50 years. And yet, after all these wonderful improvements, these amazing discoveries, these astonishing results, the poor, especially in our large cities, are still poor, and poorer still than ever. In desperate recklessness multitudes of operatives, especially those whose wages are low—whose trade is subject to frequent depressions—who have had to contend with the grasping spirit of competition, or with the appliances of machinery, are glad to seize any solution of the sad problem, and to look upon Christianity and its professors as the chief obstructions to social progress. Such is the condition of things to-day.

The Bible, say the laboring classes, is in league with the rich and the great, with the merchant who has amassed his gold, the manufacturer who has succeeded in his enterprise, and who has done so, in the estimation of many workingmen, whether right or wrong, at their expense; and thus in many instances acrid suspicion and fierce contempt are engendered in the bosoms of many of the employed toward their employers, who may be members or office-bearers in Christian churches, and through them the same feelings are directed against Christianity itself. That in many cases there is just ground for this charge is doubtless true; but there are many honorable exceptions, and true Christianity practiced will increase the number of these.

What is Christianity?

Let us discriminate between what is Christianity and what is not Christianity. Turn to the Bible, and how readest thou?

The greatest of its heroes were taken from

the humble walks of life. David was a shepherd boy upon the mountains of Judea; Moses kept the flock of Jethro in the far-stretching solitudes of Arabia; Elisha was following his oxen at the plow when Elijah, the Tishbite, who also seems to have been reared in the obscure retreats of humble life, threw his inspired mantle around him.

The prophets were not dandled upon the lap of ease, but theirs was a life of rugged poverty, struggle and toil. Jesus himself was the greatest poor man that ever lived. Born in a stable, He was brought up beside a work-shop, familiar with the ways of hard-working men. His hands must have been rough and horny with labor. The food He ate, the clothes He wore, the chair He sat upon, the bed on which He lay, must have had the stamp of humble life upon them. Nor did He seek when he became a public man to quit this poor society. His chosen companions were chiefly working fishermen. His life was the life of an itinerant preacher, and He was more poorly furnished with comforts than many of His class. His journeys over the bare wilderness of Judea and the tropical plain of the Jordan were performed on foot.

Demands would come on Him for taxes when His purse was empty. He would sit down to rest on the stone-work of a well, and be indebted to a stranger for the vessel He drank from. At His death His only property was the clothes He wore, and the only provision He could make for His nearest and dearest relative was to ask a disciple to give her a corner of his house. Did not Jesus identify Himself with the poor and the lowly?

No advocates for the rights of labor ever pleaded so earnestly as the inspired writers have done.

The Mosaic dispensation abounded in guarantees for the interests of the workingmen; it taught mercy and forbearance in the exaction of toil, and denounced oppression and parsimony as odious in the sight of God. "I will be a swift witness against those that oppress the hireling in his wages, the widow and the fatherless, and that turn aside the stranger from his right." (Malachi iii: 5.) Again: "Defend the poor and fatherless; do justice to the afflicted and needy; deliver the poor and needy, rid them out of the hand of the wicked." (Psalms, lxxii: 3, 4.) While the heaven-protected laborer of Israel enjoyed this immunity from injustice, having his rights defended and his wrongs avenged, in every other land an unmitigated despotism erased all degrees between power and slavery.

### The Working People.

These constitute a very large proportion of the community: a class which has, of late years, been making rapid progress in education, income and political power. They are bold to assert, and strong to vindicate, their due position as a great constituent of the commonwealth. Legislators, even in our national halls, could not now ignore them if they would, and should not if they could. The artisans have discovered that the nation cannot do without them, and therefore they have endeavored, in the present generation, to make better terms for themselves than their predecessors enjoyed; and in this they are not mistaken, for society owes unpayable obligations to labor. Our Creator gave us the globe as He did the ore in the mine; neither the one nor the other is of any use without a working population.

Whatever the friends of Christianity may think of the changes that have taken place during the present generation, let me assure them that this is a tide that cannot be turned back. Let them rather rejoice in the might of its volume, and set themselves to purify and rightly direct the stream. The world now believes that the religion announced by the Author and Finisher of our faith embraces humanity as well as divinity in its range. We must meet the great questions now raised in behalf of humanity, and not be overtaken by them.

Human weal and human woe cannot, as subjects, be postponed. Whatever of evil and danger may be found to lie in the present condition of things should be fairly looked in the face, in order to shake off the lethargy and send them out in a mission upon society—to cure its evils by the grace of God, and employ its vast resources on the side of mercy and truth.

Though a very large proportion of working people are estranged from the Christian church, positive unbelief has not, by any means, spread so widely among them as many would suppose. A sprinkling of intellectual infidelity may be found among them as among others, but infidelity is not, by any means, the rule in their ranks. In very large numbers the belief remains more or less dormant, indeed, but ready to be revived when the truth in love can be brought in contact with their homes and their hearts.

That we may successfully bring religion to bear upon them, there are some things it is well for us to recognize:

That it is a perfectly natural and perfectly proper thing for labor to organize for the protection and promotion of its own interests. Moral reformers, literary men and professional men, all have their clubs, associations and societies. Moreover, capital organizes. Every great commercial corporation in the land represents organized capital. These organizations are sometimes still further combined, corporation joining with corporation—offensive and defensive—until not only the aggregate of wealth which they represent, but the amount of economic power they control, is startling and even

dangerous. It is not only natural that labor should organize, but it is proper and right. Rich men are not all robbers, and corporations are not all soulless; but capital is sometimes oppressive, especially in its organized or corporate capacity. No one, however prejudiced against organized labor, but must admit that such an organization as that of the Brotherhood of Locomotive Engineers has been a good thing.

A capitalist recently said that this organization was one of the best things that had ever been done for railroads. It had not initiated a single strike, but had been able in every occurrence of difference between corporations and employees to settle matters amicably and satisfactorily.

"We must recognize the distinction between the working class and anarchists, nihilists and communists."

With them or their methods the great body of workmen have no sympathy. The anarchist is the foe of all law, all order, all morality, all religion. His law of life is the indulgence of his personal brutality. He acknowledges no right, save his own to do as he pleases.

Many of these men have emigrated to this country because they were constantly liable to arrest in Europe, while others of them have been imported by contractors in the interest of cheap labor. On the plea of freedom of speech, they have been allowed to preach, unmolested and unrebuked, their incendiary and murderous doctrines; and, for the sake of their votes, they have, in such cities as Chicago, been given police protection as they have marched through the streets, carrying aloft red and black flags and banners threatening universal destruction of property and death to all property-holders.

We must not overlook the fact that, in the long run, the laboring-man comes off second best in nearly every strike—saying nothing of the individual and national loss entailed while the strike lasts. Careful calculations made by Bradstreet show that the aggregate losses due directly to the recent strikes amount to the enormous sum of \$30,000,000. In three weeks 250,000 strikers sacrificed the sum of \$3,000,000 in wages.

While, therefore, the legal right of workmen to strike is acknowledged, the striker should ever bear in mind that when he quits work he vacates his place absolutely, and his former employer is under no obligation—legal or moral—to employ him again; nor have strikers any right—moral or legal—to require employers to discharge any good men engaged during the strike in order to make room for returning strikers; nor have they any right, because they stop work, to compel others—by force or intimidation—to stop work.

It is admitted that every workman is his own master—a free man to decide for himself, possessing the right to work or not work, according to his own free will and choice; and no man with any respect for his manhood or regard to his personal right, as a free man, could belong to an association that required him, on joining, to abdicate all freedom of action forever, or to take an oath that henceforth they should be his masters and dictate to him when and where he should work, for whom and for what he should work; that shall suddenly say to him, when he is filling a position in which he is satisfied with the work and wages, "You must leave your employment and remain idle for three or six months, even at the risk of starving your family."

The man who would do this would be no free man, but a slave.

Santa Cruz.

ANTI-PROFANITY.—The Commercial Travelers' Protective Association of the United States have issued a neat placard to be placed in the hotels, banks, depots, etc., throughout the country. It is called the anti-profanity placard. At the top are the words: "Gentlemen are Requested Not to Use Profane Language." In the center is a cut representing commercial travelers just arriving at a depot. On each side of the picture are mottoes, and below, the words: "Commercial Travelers, Attention. The Travelers' Protective Association of the United States indorses the following: Believing that the use of profane language is an unnecessary and ungentlemanly habit, not only disgusting but tending to lower our self-respect and degrade us in the minds of gentlemen belonging to other professions, and that, if the attention of traveling men who are naturally gentlemen is called to the subject, they will refrain from the use of profanity and set an example that will exert a powerful influence in favor of decency and good manners, therefore we request the hotel-keepers and others to place the above card in some conspicuous place in their establishments, and to call the attention of all that are addicted to the use of profanity to the same."

AN IRISH CUSTOM WORTH IMPORTING.—The traveler, on arriving at Dublin, finds the hackmen at the station quite indifferent about business. In London, and almost any other city in civilization—out of Ireland—you no sooner step from a railway car than you are beset by a noisy crowd of hackmen, all soliciting your patronage at the same instant. In Dublin the hackmen, or rather cabmen there, don't come near you. They are sitting or standing one side or by their cabs, talking or bandying jokes with each other, heedless of expectant customers. They evidently think that if you want their service you will step forward a few feet

and ask for it; but they never go out of their way to annoy you by vociferous or even quiet solicitation. The custom is in marked contrast with the nuisance met with at every city in this country, and might well be imported hither.

### California Names.

Many of the names of cities, towns, rivers, etc., of California are derived from Spanish and Indian words. The first Spanish settlers were Catholic missionaries; hence, the many sacred names. The male saints have "San," the females "Santa," preceding their Christian names. The missions were all named from saints or sacred dogmas. There are San Miguel, San Gabriel and San Rafael (from the three archangels, Michael, Gabriel and Raphael); San Juan Bautista and San Juan Capistrano (St. John the Baptist and St. John of Capistrano); San Luis Rey and San Luis Obispo (St. Louis the King and St. Louis the Bishop); San Fernando Rey (St. Ferdinand the King); Santa Cruz (the Holy Cross). Other Spanish sacred names, not derived from saints, are Trinidad (Trinity); Sacramento (Sacrament); Jesus Maria (Jesus, the son of Mary), etc.

The errors which Americans most frequently commit in pronouncing Spanish words are in giving to a the English sounds of a in fat and fate; giving to s the sound of z; to j and g, before e and i, the same sound in English; to qu the sounds of the English w, and on putting the accent on the first syllable—English fashion. The following, from Hittell, may serve as a guide to the proper pronunciation of some of the names. It is not a perfect guide to pronunciation, but only an approximation:

Diego—dee ay go.	Napa—nah pah.
Suisun—soo ee soon.	Jose—ho say.
Alameda—ah lah may da.	Jesus Maria—hay soos mah ree ah.
Sierra—see er ra.	Putra—poo tah.
Nevada—nay vah dah.	Lejon—tay hone.
Mateo—mah tay o.	Farallones—fah rahl yo.
Monterey—mon ta ray ee.	Luis Obispo—loo ess o nes.
Los Angeles—lohs ahn hel rahf ah ale.	Gabriel—gah bree ale.
Vallejo—val yay ho.	Miguel—mee gule.
Vallecito—val yay thee to.	Pajaro—pah har ro.
Joaquin—ho ah keen.	Pacheco—pah chay co.
Juan Bautista—whahn Cahuilla—rah oo eel ya.	Hueneme—way nay may.
Tamapais—tah mal pice.	Dos Pueblos—dohs pway blos.
Nietos—nee ay tos.	

In the pronunciation of the names of Spanish and Indian origin, the letters usually have the Spanish sounds. The following from Hittell's Resources of California is a good guide. A is like a in far; e like a in fare; i like ee in meet; o like o in go; w like oo in fool. H is silent; j and g before e and i have a sound similar to that of the English h; s never has the sound of z, but is always like as in hiss; qu before e and i is like k. Ll is like ll in William; the Spanish, or with the circumflex over it, is like ni in union. There are no diphthongs in Spanish. Every vowel is sounded separately. Words ending in a vowel in the singular have the accent on the syllable next the last; those ending in a consonant on the last.

The following list of California names with their meanings will be of interest to visitors to the State, and by what has been said above, the pronunciations can readily be made. This is compiled from various sources:

Alameda—An avenue of elms or cottonwoods.  
Alcatraz—Pelican.  
Almaden—Arabic. The mine.  
Alvarado—The white road—a proper road.  
Alviso—The view.  
Amador—The lover.  
Alta California—Upper California.  
Agua Fria—Cold water.  
Agua Caliente—Hot water or warm spring.  
Alamo—Elm.  
Baja California—Lower California.  
Calaveras—Skulls.  
Calistoga—Cup and gown.  
Chico—Small.  
Colusa—An Indian name.  
Contra Costa—Opposite coast.  
Corral—Yard or pen.  
Coyote—A kind of wolf.  
Campo Seco—Dry field.  
Corte Madera—Place where wood is cut.  
Del Norte—Of the north.  
El Dorado—The golden land.  
Esperanza—Hope.  
Farallones—Rock islands in the sea.  
Fresno—Ash.  
Hornitos—Little oven.  
Lobos—Wolves.  
Loma Prieta—Dark mountain.  
Los Angeles—The angels.  
Laguna Seco—Dry lagoon.  
Los Gatos—The cats.  
Marin—Chief of the Tomalo Indians, of the sea.  
Mariposa—The butterfly.  
Merced—Mercy.  
Modoc—Strange or hostile Indians.  
Mount Diablo—Devil mountain.  
Monterey—The king's mountain.  
Monte—The mountain or forest.  
Montecito—Little mountain.  
Nevada—Snowy.  
Pah Utes—Utahs that live near the water (Indians).  
Pajaro—The bird.  
Pescadero—The fish.  
Placer—Gold diggings.  
Plumas—The feather.  
Potrero—Pasture grounds.  
Presidio—Garrison, fortress.  
Prieta—Black.  
Rincon—Place where two corners meet.  
Rio Vista—River view.  
Sacramento—Sacred mind.

Salinas—Place of salt.  
 San Andreas—St. Andrew.  
 San Buenaventura—St. Good Ventura.  
 San Diego—St. James.  
 San Felipe—St. Philip.  
 San Francisco—St. Francis.  
 San Joaquin—St. Joachim.  
 San Jose—St. Joseph.  
 San Lorenzo—St. Lawrence.  
 San Luis Obispo—St. Louis the Bishop.  
 San Mateo—St. Matthew.  
 San Pablo—St. Paul.  
 San Pedro—St. Peter.  
 San Rafael—St. Raphael.  
 Santa Clara—St. Clara.  
 Santa Cruz—Holy Cross.  
 Saratoga—Healing waters in a rock.  
 Suelcito—Little willow.  
 Shasta—Stone house or cave.  
 Sierra—Saw, or mountain chain.  
 Solano—The potato.  
 Sonoma—Valley of the moon.  
 Sonora—Harmonious sound.  
 Tahoe—Big or deep water. Some say it means grasshopper.  
 Tamalpais—Country of the Tamal Indians.  
 Tejon—Badger.  
 Temescal—Indian sweat-house.  
 The Dalles—Stone spout for water.  
 Tomales—A tribe of Indians. A kind of food.  
 Tulare—The tule or rush.  
 Tule—Rush of a plant.  
 Utah—Mountain dwellers.  
 Vacaville—Cow town.  
 Vara—A measure about 33¾ inches.  
 Vallejo—Big valley.  
 Walla Walla—Away down.  
 Yolo—Region of rushes and tules.  
 Yosemite—Large grizzly bear.  
 Yreka—Corruption of We-e-kah-white.

The Central Light.

It cannot be denied that the Bible stands alone among all the books of the world—grand, peculiar and unique. It seems to be surely indestructible. Works of history become legendary, books of poetry turn into wild mythologies, and in time vanish as mist before the sun. Books, like their authors, grow old, wither with age and die. Many fall still-born in their author's study or in the publisher's hands. Other books look sickly, discouraged, as if they meditated suicide. Our great libraries may very aptly be called the cemeteries of dead books. But not so with the Bible. It started on its beneficent pilgrimage in the world's morning; grew under theocracy, monarchy, anarchy, democracy; it has passed through storms of fire, centuries of hate, and still lives, the marvel of time. When men began their opposition to it, all the copies of it in the world might have been carried on the shoulders of one man. To-day there is said to be 200,000,000 copies in circulation, and great Bible houses are producing tons of the Holy Scripture every day. It speaks all languages. It has gone into the graceful Greek, the stately Latin, the flowing Italian, the passionate French, the metaphysical German, and the pushing, enterprising, commercial Anglo-Saxon. It is a strangely aggressive book, and along its path blessings bud and blossom. It crossed the British Channel, lighted Wickliffe's lamp and made England the freest and thriftiest nation of the age. It crossed the Atlantic, struck Plymouth Rock, which, like another Horeb, gushed into streams of blessedness. Churches, asylums, schools of learning, spring up along its path, ringing their bells and stretching forth their hands in praise. Said Dr. Talmage in a sermon recently: "It is the lamp that kindles all other lights. It is the home of all majesties and splendors. It is the marriage ring that unites the celestial and terrestrial, while all the clustering, white-robed denizens of the sky hovering around rejoice at the nuptials. This book—it is the wreath into which are twisted all garlands; it is the song into which are struck all harmonies; it is the river into which are poured all the great tides of hallelujah; it is the firmament in which suns and moons, and stars and constellations, and universe and eternities, wheel and blaze and triumph." No book has given so much comfort to the living, so much consolation to the dying. After one of the battles before Richmond, a dead soldier was found with his hand lying on the open Bible. The summer insects had eaten the flesh from the hand, but the skeleton finger lay on these words: "Yea, though I walk through the valley of the shadow of death, I will fear no evil, for Thou art with me; Thy rod and Thy staff they comfort me." Whatever we may say of the many theories of inspiration, we must all conclude at least with Matthew Arnold, that there is no book in the world that contains so much that "makes for righteousness."—*Masonic Record.*

POLITICS.—The time may come when politics will mean all that is noble and good; when a small boy will break an apple in two and give his little sister the bigger half; when a tramp will work and a stray dog won't bite; but the day will never dawn when the fly can tickle a droway man's nose without getting itself disliked.

YOUNG FOLKS' COLUMN.

Young Folks' Club.

[Written for the RURAL PRESS by MRS. J. HILTON.]

DEAR YOUNG FOLKS:—We are all delighted with the answers sent, and all will be tried. The club would like Harry Hopkins, of Santa Rita, Santa B. Co., to tell us if his dog's foot has got well, and what cured it. You see we all feel an interest in the club birds and animals.

Polly says she will try pigeons again, and treat them as B. tells her. She had a pair once and they disappeared all at once. She thought they had flown away, but she found their dead bodies behind a log two or three months after, and she thought there was no use trying to keep them. But times are changed, so maybe she can succeed this time. She advises Mattie to feed her mocking birds hard-boiled egg and cracker soaked in milk every day, and once a week give a little cayenne pepper.

The president of the club says he has three recipes for fleas on chickens: diluted carbolic acid plentifully sprinkled about, and tansy leaves put in the nests and strewn about the hen-house, and Pyrethrum powder. Where squirrels are allowed around a place you can never get rid of fleas, for the ground around a squirrel hole is alive with them, and whatever animal passes over them is pretty sure to take some along with it. So kill off the squirrels if they are near you, and then go for the fleas.

I will ask a question this time. Please give me the name of a bird that eats up all my blackberries. It has a striped head, is of a dun color and has yellow feathers on each side of the breast, and has a bill like a canary, but much larger, although the bird is only about half as large again as a common canary. Scarecrows are of no avail; only death will stop their depredations. Lewis cooked one, but it was so bitter he could not eat it.

Billy Wise read a piece of his own composition at the last club meeting, and they want it printed if the editors think it good enough:

A Poem by Billy Wise.

While taking a walk through my yard one day,  
 I thought that I heard a queer voice say:  
 Good morning, Miss Brahma, good morning, my dear;  
 Why, what is the matter? You're looking quite queer,  
 Oh, dear, said Miss Brahma, I'm really concerned  
 About what men say—I've only just learned  
 That Mr. A. says that Miss Brown Leghorn can do  
 More egg-laying than I; but, take the year through,  
 I do not believe it—now, really, do you?  
 Well, I'm sure I can't say; but some men, you know,  
 In the letters they write, make the figures to show  
 That you are the rival (I'm sure it's quite funny),  
 And all that you do brings much more of the money  
 That people do give for our eggs and young chicks.  
 Oh, dear, said Miss Brahma, just think what a fix  
 We poor chickens are in! We never quite know  
 When we are full grown whether for dinner or show.  
 Our poor bodies are taken—  
 A thin little voice broke in with a pipe:  
 I really declare I can't, for my life,  
 See what they do with us; I know I'm so small  
 That when I am dead there can nothing at all  
 Of good from my bones be taken.  
 Oh, we know why you're kept, said poor Brahma  
 chicken;  
 You are only for show, but it makes my blood  
 thicken  
 To have those men look and comment on my size—  
 How yellow my legs and how bright are my eyes.  
 Now, dear friends, I've been thinking a petition  
 we'll write,  
 And before all those people will hold it to sight,  
 Asking mercy for all.  
 Yes, do, said the Bantam, for although we are small,  
 Even if *sufficit in quantum*  
 Our bodies would make a good stew *I can't grant*  
*em*—  
 With pride to myself, but enough eggs I will lay  
 them  
 To make it all right.  
 Now this petition, who'll write it? I will, said a  
 voice,  
 And Mr. Plymouth Rock bowed. Yes, you are my  
 choice,  
 Said Miss Langshan, then tittered and put on such  
 airs  
 That Miss Houdan quite pouted and said that at  
 fairs  
 She had gained much attention, but here it seemed  
 It was only on those who were forward there gleamed  
 A shadow of a chance to say what they wanted.  
 Well, now, said the Fighting Cock (and he looked  
 fairly enchanted),  
 Keep still, and give us a chance this petition to  
 draw,  
 I shall have to depart or show you my claw.  
 Then the Cochon so stately said, My dear friends all,  
 Let us say what each wants and give to Sir Paul  
 Our petition right now, for I see he is blinking  
 And rubbing his eyes—I am sure he is thinking  
 How fat we have grown, and that he must go—  
 Right off to the town and put a big blow  
 In the papers about us, and our friendship'll be  
 broken—  
 And we will be scattered. Now, Sir Rock, you must  
 say  
 To that man by the fence that we are all clay  
 And not fit to be eaten, but that our eggs are first-  
 rate,  
 And we will lay early and late  
 For him if he'll grant us our babies and wives—  
 Forever, ahem!—then sign with our names.  
 My name I'll indite, then yours you must write.  
 Then up stepped Plymouth Rock and in his best  
 style,  
 He wrote it all out, and then in a pile  
 The others all tumbled, so eager they were,  
 And after their names added "fighter beware!"

GOOD HEALTH.

Cold in the Head.

A cold in the head is believed by many to be "catching." In such case it must be caused by a germ which is introduced from hot, unventilated rooms, when we are weak or tired or exhausted. To break up a cold in the head it should be attended to in its earliest stages. If allowed to run two or three days it generally runs its course, in spite of all treatment. The most effectual means in the very first stages is a vigorous effort of the will. The effect of this is to establish more securely the equal circulation of the blood, which is most important. Another method is to inhale steam from boiling water, as hot as can be borne, through the nasal passages for about half an hour twice daily. This remedy is valuable in every stage of the disease. The method of applying it is as follows: Sit in an easy chair before the fire; throw a shawl loosely over the head, so that it may be folded over the head and held with one hand, leaving plenty of room for the steam. Now, with a spirit lamp boil a pint of water in an inhaling cup, with a rubber tube attached to the nozzle to convey the steam to the region about the mouth and nose. The only caution necessary is to be careful not to let the vapor escape to near the nasal passages, when there is danger of scalding them. A tinsmith will make the apparatus, or it can be bought of the instrument-makers. Still another method is to drink hot water. The Turkish bath in the first and last stages of a cold is a most excellent remedy; in the middle stage it does not do so much good. There are many drugs used to break up a cold, among them quinine, laudanum, etc., but we prefer the simple remedies before named. Most important of all is to guard against colds. This is best effected by daily cold bathing and friction, by abundant exercise, the proper ventilation of rooms and suitable clothing. To all delicate persons colds are but the beginning of lung troubles, which are dangerous in the extreme.—*Herald of Health.*

THE MULLEIN PLANT.—A good deal has been written lately about the mullein plant and its efficiency as a cure for consumption. Extracts and decoctions of this plant (*Verbascum thapsus*) were recently exhibited at the Cork Exhibition, but the judges would not pass any verdict, as the chemical and physiological properties have not yet been investigated. It is under the synonym of cow's lungwort, popularly looked upon as of value in diseases of the respiratory organs. In reference to the use of the above, Dr. Quinlan, of Dublin, writes to the *British Medical Journal* that three ounces of the green leaves should be boiled for 10 minutes in a pint of new milk. The liquid is then strained, sweetened to taste, and drank while warm. This dose can be repeated twice or three times a day. This high authority has no doubt of its efficacy as a curative in the earlier, and a palliative in the later, stages of pulmonary consumption. Care should be taken to use the leaves of the great mullein, known by its thick mucilaginous and woolly leaves.

EATING BEFORE RETIRING.—The ancient prejudice against eating just before retiring is strongly and justly condemned by modern science, experience having shown it to be unfounded. There are exceptions to the rule, but few people are injured and many positively benefited by a slight repast before retiring. A glass of milk and a biscuit or cracker is better than any hypnotic drug to put one to sleep, and in most cases may be taken without fear of "nightmare" or any other form of distress. Going to bed "on an empty stomach" is a good way to invite sleeplessness and ultimate derangement of the digestive organs and general health.

WHITE TEETH.—There are no such things as white teeth, as can be proved by contrasting those called white with snow, raw cotton or marble. Roughly, teeth can be divided, as regards color, into blue, gray and yellow, with hundreds of different shades. The apparent whiteness is due to the complexion and hue of the lips; and the "glistening ivories" of the negro are, as a rule, so exceedingly yellow that they would disfigure a white person. It is the black skin, hair and eyes that make them look white.

DYING FROM EXHAUSTION.—A leading physician says that a patient who is lying dying of exhaustion is generally dying of starvation. We give him beef tea, calf's foot jelly, seltzer and milk—that is, a small quantity of the sugar of milk and some fat; but the jelly is the poorest sort of food, and the beef tea is a mere stimulant. The popular belief that beef tea contains "the very strength of the meat" is a terrible error; it has no food value.

SCARLET FEVER.—A girl from Bath, Me., had scarlet fever while at boarding-school. She recovered and went home, and a trunk containing clothing worn while she was ill was put away in the garret. Six months afterward two little children playing in the garret opened the trunk and took out some of the clothing. In a week both were taken very sick with scarlet fever, and one died. No other persons in the neighborhood were ill.

DOMESTIC ECONOMY.

QUEEN OF PUDDINGS.—One and a half cups of sugar, one quart of milk, two cups of very dry, fine crumbs, one tablespoonful of butter, one quart of red raspberries. Rub butter and one cup of sugar to a cream; beat in the yolks. The crumbs should all this time be soaking in the milk. Beat them into eggs and buttered sugar, and when light pour the mixture into a buttered bake dish. Bake until the middle is well set; draw to the oven door; cover with berries, strew sugar thickly over and among them, and spread deftly over all a meringue of the frothed white of the eggs, stiffened with two tablespoonfuls of powdered sugar. Shut the door and brown the meringue lightly. Set away where it will cool quickly, then leave on ice till wanted. Eat with cream. This is not a new recipe, but among the many variations of the far-famed "Queen," Marion Harland regards the above as the simplest and best.

ROAST FOWL A LA GUYOT.—One tender, full-grown chicken; a sweetbread, boiled, blanched and minced; a dozen mushrooms, chopped; a tablespoonful of minced fat salt pork; pepper, salt and a pinch of mace; half a cupful of fine crumbs, slices of fat salt pork. Draw and truss the fowl as usual, and stuff with a forcemeat made of the minced sweetbread, mushrooms, pork, breadcrumbs and seasoning. Bind thin slices of pork over the breast, lay in a dripping pan, dash a cupful of boiling water over it, and roast one hour, basting often. Ten minutes before taking it up, remove the pork, baste abundantly and brown. In serving, lay the pork about the fowl. To make the gravy, mince the boiled giblets and stir them into the gravy left in the pan, with a little boiling water and a tablespoonful of browned flour wet up with cold water. Boil sharply and serve in a boat.

POTTED BEEF.—To cook beef so that any piece may be made tender: Put a piece of lard the size of an egg into an iron or a granite kettle; when it is hot enough to smoke, drop the meat in it; as soon as brown on one side turn it over, and keep turning it until well browned over the whole surface; add also salt, pepper, a pinch of ground cloves, one bay leaf, one sliced onion, a bit of garlic, and a little thyme if the last two are not liked. Simmer for four or five hours, or until the meat slips readily from the bones. It is good hot, and when cold may be sliced and used for sandwiches like beef tongue. Trimmings of beefsteaks, giblets of fowls, etc., may be cooked with this meat, and will help to make the gravy rich and of good flavor. Even choice pieces are liked by some when thus cooked better than when baked.

RASPBERRY VINEGAR.—To four pounds of crushed raspberries add half a pint of pure wine vinegar and let them stand for 24 hours. Press them through a cloth and let the juice stand for another 24 hours. At the end of this time pour off the clear juice and put it on the fire with two pounds of sugar. When it boils, remove the scum and let the syrup stand over night. Next morning put it in bottles and seal well.

WHITE LEMON CREAM.—Boil the thin peel of two lemons in one pint of cream, strain, and thicken with the well-beaten yolks of three and the whites of four eggs, into which half a tea-cupful of white sugar has been beaten. Add half a saltspoonful of salt, stir rapidly with the egg-beater until nearly cold, and pour it into glasses or cups. This quantity will fill six custard-cups.

MILK TOAST.—Wet the pan to be used with cold water, which prevents burning. Melt an ounce of floured butter; whisk into it a pint of hot milk; add a little salt; simmer. Prepare four slices of toast, put them in a deep dish one at a time, pour a little of the milk over each, and over the last one pour the remainder of the milk.

FRIED SCALLOPS.—Wipe each roll in beaten egg, then in fine crumbs, and fry in hot lard or dripping to a fine brown. Shake off the fat in a split spoon and lay in rows on a hot dish. Garnish with parsley. Pass hot crackers, mashed potato and cut lemon with them.

BOILED INDIAN PUDDING.—One cup sweet milk, part cream, sour milk or buttermilk; three tablespoonfuls of molasses, one teaspoonful of salt, one teaspoonful of saleratus, one cup of meal, one cup flour. Dried fruit if you like. Steam 1½ hours.

JUMBLES.—One cup of butter, two cups of sugar, three eggs, one teaspoonful of soda, two of cream tartar, two tablespoonfuls of warm water to dissolve the soda. No other wetting is used, but the dough is made very stiff and rolled out thin.

CHEAP TEA CAKE.—One cup of sugar, one cup of milk, three cups of flour and one-half cup of butter, two teaspoonfuls of baking powder, one teaspoonful of caraway seeds and two tablespoonfuls of currants.

CHILI SAUCE.—Six large, ripe tomatoes, four green peppers, one onion, one tablespoonful of sugar, one tablespoonful of salt, 1½ cups of strong vinegar; chop peppers and onions; boil one hour.

## The Week.

Governor Stoneman has sent the legislators home to borrow, from their constituents, some wisdom on the irrigation question. They will reassemble on September 7th, and if they cannot legislate they can attend the State Fair, which will keep them out of mischief while it lasts.

The Bulgarians have given their old sovereign, Alexander, a pressing invitation to go abroad and stay, and will make a new sovereign who will lean toward the Czar and not toward the Sultan. It would seem from this distance that Russia is still pursuing a quiet aggressive policy, stealing territory in such a very diplomatic and gentlemanly manner that the Powers can find no wrong in it. If we were in the Sultan's shoes we should tremble, all the same. Mexico has decided that an American editor is too small game to fight over, after all, and the

liberated prisoner, in whom for a moment seemed to rest the peace of two countries, came over the border, in triumph to the land of the free, in a street car.

In California the leading events are fairs and political conventions. This week, the Republicans are saving the State in Los Angeles; the Democrats will do the same service in this city next week, and then the State will have to be pulled and hauled for a couple of months to choose which way it shall be saved. How fortunate it is that in politics all policies lead to public prosperity; just as in old times, all roads led to Rome. Travel, then, which way you like. This is our first stirring political editorial this campaign.

As for the fairs, the great events this week are the opening of the Mechanics' fair in this city, which is described elsewhere, and the holding of the District fair in Petaluma. Other exhibitions are noticed in our table of "fairs to come" in another column.

## Does it Pay to Ship Fruit?

We publish upon another page a paragraph telegraphed from New York, in which the *Commercial Bulletin* of that city speaks its mind very freely on shipping fresh California fruit to the East. It seems to think we ought to stick to fruit-canning, and not try to fight space and ruin the railroads by shipping the product East in perishable form. We propose to stick to canning, and to drying also; in fact, to put California fruit into every conceivable form that the consumer will accept. A part of this business will be to sell it in its natural state, and how much this trade amounts to may be shown by the fact that 1125 carloads were used last year—exclusive of citrus fruits. This year the shipments will be vastly greater. How desirable the business is, may be gained from the fact that the shippers are doing everything they can to prevent the growers' shipping organization—the Fruit Union—from handling all the fruit, by buying it eagerly and shipping it in large quantities. If it were such a poor business, we imagine these dealers would be very willing to let the growers have it all to themselves.

And then the railroads: It is too bad about the railroads. We would be very sorry to have them ruined by cheap freights on California fruit. But they have not acted as though they were suffering. On the other hand, they, too, seem to be disposed to cling to their traffic in California fruit and to increase it as much as possible. They have given much lower rates for trainloads; they seem to like it, and the more they can get of it the better they like it. The *Commercial Bulletin* thinks that canning is the only thing that will insure a profit on California fruit. It is badly mistaken. We propose to make all the money there is in canning, but we propose to make money in other ways too.

Despite the mellow disposition which the railroad managers have shown at times, they have not lost the ability to look out for themselves. A dispatch which came from Los Angeles on Monday seems to attest this fact. It is as follows:

By arrangements made in Boston between the Atchison, Topeka & Santa Fe R. R. and the Southern Pacific, freight rates on grapes to Chicago by passenger trains have been advanced to \$600 per car. The cold storage cars, by freight trains, are \$300 per car, going through in eight days.

We do not, on the moment, foresee all the effects of this advance in rates. On the face of it, it appears, however, to be a very unfortunate and uncalled-for discrimination against the grape interest. The yield of many orchard fruits has been uneven this year, but a good, large crop of fine table grapes has been expected, and an outlet was looked for at the East which would yield the grower good returns and make way with a large amount of fruit. To advance freights just at this time will work disastrously to the growers and prevent, to some extent, the offering of California grapes to Eastern consumers in large quantities at more reasonable prices than they have heretofore had. It is certainly to be deplored that the growers are met with an advance in rates just as the crop is ready and arrangements have, no doubt, been made at the East upon the basis of the old rates of freight.

Among the other indications that the railways can be trusted to take care of themselves, is the advance in freights between California and

Denver, and other Colorado points. Special rates are made on certain produce, as follows: Green fruit and oranges by the carload will be \$140; canned goods by the carload, \$125; dried fruit, raisins, etc., per carload, \$130; wine, in wood, per carload, \$130; wine, in cases, and brandy, in wood, per carload, \$190; brandy, in cases, per carload, \$210; sugar, \$120.

There is still complaint made of fruit arriving at the East in poor condition. A carload of grapes from Los Angeles county, the first one sent this year, is said to have been poorly boxed, and suffered sadly on the way. Evidently there is still much to be learned about this business, but experience will teach it.

## The Florida Fruit Exchange.

When the organization of our Fruit Union was in progress there was much said of a similar undertaking in Florida, which began its work last fall, with the beginning of the orange crop. We notice that Mr. Greenleaf, one of the directors of the Exchange, made an address recently, reviewing the operation of the Exchange during its first year. Mr. Greenleaf said that the Exchange had handled a little over 57,000 boxes of oranges, or more than 10 per cent of the entire available crop. From the most reliable data obtainable, he thought the sales had averaged over \$2.60 per box, for oranges which, at the same time last year, brought \$2 per box, and it was not too much to say that this increase of value was due to the confidence inspired among Northern buyers by the importance and efficacy of such substantial and reliable manipulation, as well as the uniformly excellent condition in which the fruit was received at the North, when handled by the Exchange.

Another advantage accruing from shipping through the Exchange could be seen from the fact that through its agency small lots could be picked up and gathered together, thereby securing car rates which is a great saving in expense to the small grower and effects a reduction of from 20 to 40 cents for freight on each box. But the greatest benefit to growers, derived from the Exchange's method of the perfect immunity from shrinkage, is secured by transportation in refrigerator cars. All fruit handled by the Exchange is shipped in cars built especially for that purpose, in which a temperature of about 50° Fahrenheit is maintained—a temperature which prevents and renders decay impossible.

Another and rather a peculiar advantage which Mr. Greenleaf found in the Exchange was in preventing the fruit from being stolen en route, and he gave this somewhat startling incident:

A case is on record where a man entered a car which had been shipped by private parties, and changed the marks on 250 boxes of oranges, causing them to be sent to another city than that for which they were intended, and thus, boldly and in open daylight, stole the whole carload, and they have yet to be heard from. If those oranges had been consigned to the Florida Fruit Exchange, the robbery would have been impossible, as a special agent accompanies each separate car.

They must have pretty sharp thieves or a pretty loose way of managing railways in the South and East if a shipper is liable to lose his fruit in that way. To make way with the fruit by simply changing the mark on the boxes leads one to ask if the railways run their cars by the marks on the boxes. If they do, it is no wonder that the growers need protection.

**INTEREST IN SILK CULTURE.**—Mrs. Rienzi, Secretary of the Silk Board, reports that at Santa Cruz some children raised cocoons to the value of \$15, which sum was paid for them by the Board in order to encourage other like efforts. A communication also has been received from Campbelltown, Tasmania, asking for information as to the Pacific method of working silk, in order that a similar school may be started in the antipodes.

**APPLES AT AN ALTITUDE.**—An exchange states that there are several apple trees at Hot Springs, Lake Tahoe, loaded with fruit. This is probably the highest point in the United States where such fruit is grown, being over 6200 feet above the level of the sea. It is nearly 500 feet higher than Truckee.

The blind beggars' holiday occurred in New York recently. According to an annual appropriation of \$20,000 which the city provides, 469 destitute blind of the city received their share, having been examined and pronounced genuinely worthy of the alms.

## The State Fair.

On Monday, September 6th, the State Fair will open in the grand pavilion at Sacramento. The entries for the [pavilion display close at 6 P. M. of that day. For the display at the park, entries remain open until 6 P. M. of Sept. 9th. There is much going on this year in political circles, and the minds of the people are more or less distracted thereby, but in spite of this we understand that the outlook for the fair is very bright. It would be unfortunate to permit the rush for office to lead to neglect of our great industrial event and the opportunity which it offers to make better known the gratifying progress and grand resources of the State. There are still vast numbers of strangers here, who have lingered since the Encampment, and the State Fair will no doubt be a rallying point with them. Probably there never was a better opportunity to show off the State to good advantage than this year.

We are glad to hear that many counties are moving in the direction of the "county exhibits," for which the State Board has liberally provided. Let this work go on vigorously and all effort and self-sacrifice will be compensated for by the gratification and profit of having one's chosen locality presented in a creditable light.

We expect an unusually complete and excellent live-stock show this year. We have heard of a number of herds not usually represented which will appear this year. There is the fine Underhill herd of Holsteins from Santa Barbara already on the ground. We hear also of others which will be on hand at the opening. The speed program, with the entries, which we will print in full in next week's *RURAL*, shows that in its racing features this year's fair will be exceptionally complete.

We plan to print next week a number of the *RURAL PRESS* especially adapted to the State Fair, of which a large extra edition will be distributed. We expect to make it an issue of much interest to the reader, and it will be of especial value to those who desire to advertise desirable goods. There is often much advantage in announcing beforehand what may be seen at the fair, for people desiring certain things will be reminded to hunt them up and examine them. We notice that our English exchanges, before one of their royal shows, have many extra pages filled with advertisements in which exhibitors give notice that their wares may be found in certain parts of the grounds or buildings. These advertisements also serve to draw popular attention to the fair itself, and thus exhibitors help themselves and the exhibition at the same time. The attention of our advertising patrons is respectfully drawn to this matter.

## Joaquin Miller and Arbor Day.

In a letter to Major-General Howard, Joaquin Miller, the poet, has asked that officer to consent to a peaceful invasion of Goat Island for a novel but decidedly praiseworthy service. Mr. Miller proposes that on some day next month yet to be fixed, himself and such friends as he can enlist for the purpose, including those better known to him in the walks of journalistic and general literary life, shall visit the island and plant shrubs which shall develop into stately trees. He proposes that this shall result in the institution of an arbor day in California, and that the example of tree planting, which it is desired shall be set upon this island, shall be copied all over the State, to the end that the birth of new forests shall at least keep pace with the destruction of existing ones.—*The Call*, Aug. 21.

The idea of covering the bare sides of Goat Island with forest trees is an excellent one, and we hope Mr. Miller and his friends may accomplish it. The establishment of an arbor day for California is an institution we have long advocated and hope to see realized, but we must decidedly object to September as a month for planting forest trees in California. Unless our literary friends should be careful to get pot-grown trees, and plant the balled roots without disturbance, and then plan a weekly pilgrimage to the island for the purpose of watering the poor things until the winter rains really set in, we imagine about all the results of the plantation would be the poetry they would write about it. We want Goat Island covered and we want trees in many other places throughout the State, and we want an arbor day with all its horticultural and literary features, but the climate of California does not want it in September if any "stately trees" are to be attained.

## A Week Away.

## Notes on an Editorial Excursion.

It was our good fortune, last month, to pass a week on an excursion arranged by the Pacific Coast Press Association, to visit Lake Tahoe and adjacent parts of Nevada. The company numbered about 50 ladies and gentlemen, well content with each other and delighted with the sights and delights of the excursion. We take it that the internal incidents of the trip would be of little interest to our readers; furthermore, we put a shade over our reportorial eye, for the excursion was for rest and recreation. The only way to get pleasure from a trip is to cherish the consciousness that it doesn't have to be "written up." We saw, however, here and there, a few things which it gives us pleasure to place upon record.

## Development of the Foothills.

It is about 10 years since the writer crossed the Sierras by the Central Pacific line. It was gratifying to see the marks of development and improvement of the foothill region which could be described from the car windows. Of course, we know that one sees very little, indeed, of this growth from the cars, and yet many thrifty orchards and vineyards came within view. There are, however, at all the stations, exponents of the increased business done in produce shipment—especially in fruit. Auburn is, undoubtedly, a busy place. Newcastle shows, by her group of fruit-shipping establishments near the railway, how large the fruit interest of the neighborhood has become. Colfax, also, shows great advancement. The same is true of the many intermediate points, which are now far more important than the ones we have named were a decade ago. Higher up the Sierra there are also signs of industrial growth, chiefly through the arts of the woodman. The summer population of the region is also increasing as the delights of the various resorts become more generally known. The grandeur of the scenery adjacent to the overland has been too widely seen and described to warrant us in expatiating upon it.

## Lake Tahoe.

Leaving the cars at Truckee, a bustling and wide-awake town, we rode by stage along the beautiful waters of the Truckee river to Lake Tahoe. This "gem of the Sierras" is also too well known to periodical literature to need words from our pen. It would require a genius to write something new about Tahoe. We steamed from Tahoe City with its hotel full of guests, past "Idlewild," the delightful summer home of Mrs. E. B. Crocker, and on southward until the southern extremity of the lake was reached, at the Tallac House, a well-kept hostelry near the base of Tallac mountain. On the afternoon of our arrival we sauntered out into the forest south of the hotel, and on the highway were so fortunate as to meet Nathan Gilmore, who will be remembered by many of our readers as prominent in Angora goat circles a few years ago. Mr. Gilmore still has herds of goats upon the mountains south of Tahoe lake. We are indebted to him for guidance to his most romantic and beautiful Glen Alpine. This gorge opens at the southern extremity of Fallen Leaf lake—a small lake lying about two miles south of Tahoe. From the highway Mr. Gilmore has, at great labor and expense, constructed an excellent wagon road along the eastern and southern shores of Fallen Leaf lake to Gilmore Glen Alpine Springs, seven miles distant from Lake Tahoe; and from the Springs a good trail to the summit of Mount Tallac, seven miles further. This road, after leaving Fallen Leaf lake, winds up the glen, now close to the base of cliffs thousands of feet high, and again amid low rocks, broken in all conceivable shapes, with now and then a cascade overlapping them in most picturesque fashion. What one sees about Tahoe is grand, but to find wild beauty one must go to Glen Alpine. High up in the glen, at the end of the wagon road, is a summer residence where Mr. Gilmore's daughters furnish excellent refreshment for the hungry tourist; and here is located Glen Alpine Spring, of which we could not hold enough to satisfy us. It seemed to us the most delicious mineral water we had ever tasted, and we have a weakness for mineral waters, too. It has a character and sprightliness which cannot be described. Above the terminus of the wagon road there are several lakes which Mr. Gilmore has

stocked with trout. The water of these lakes comes from the melted snows of the Sierra range, and from any point the silver-sided trout and speckled black trout can be seen darting hither and thither. The waters are pronounced by tourists to be clearer than even the crystal waters of the Swiss lakes.

## Crossing the Line.

After two days' delightful sojourn at the Tallac House, where we found excellent fare and care, we crossed the State line on Capt. Todman's stanch little steamer and debarked at Glenbrook in Nevada. Here is located an important lumber enterprise which will be mentioned further on. From Glenbrook over the road made famous by the rein-holding of the late Hank Monk, the traveler climbs to the summit of the mountains overlooking Tahoe from the east and then drops speedily into the Carson valley on the other side. On this road one gets a good impression or a bad impression, as the case may be, of the arid hillsides of Nevada. Along the way, too, he sees what a contrast is made by pouring water upon this arid soil. When the valley is reached, there are seen, here and there at the mouth of the canyons, little farms, orchards and garden spots, where the industrious settler has collected a little water and flumed it down upon his land. These places are gems of verdure.

## Carson City.

One approaches the Capital of Nevada from the south, through miles of desert, broken only, as we have said, by the little oases at the base of the hills. The first sight of Carson City is as inspiring as one could wish, with its masses of green trees and the cupola of the capitol rising above them. Entering the streets, one finds them lined with trees and bordered with tasteful cottages set in pretty gardens. The business streets are well built up and lively. The people are cordial and hospitable, and opened everything to the visiting excursionists—even their State's prison. In fact, much of the sojourn in the town was passed there, interviewing the prisoners, the great footprints in the quarry, and other curiosities.

## Fruit Boxes from Nevada.

While at Carson City we saw that an enterprise of that State is making quite an important contribution to the horticultural lumber supply of this State. We refer to the Carson & Tahoe Lumber Co., which has saw-mills at Glenbrook, on the shore of Lake Tahoe, a narrow-gauge railway which hauls the mill products to the summit of the mountains east of Tahoe lake, and then a fine 12-mile flume by which timber, lumber and firewood are all shot down the grade to the spacious lumber-yard, on the outskirts of Carson City. This enterprise has furnished an immense quantity of mine timber to be put underground at Virginia City, and contributes largely to the fuel supply of the State. Recently there has been established a planing-mill and box factory which is filling large orders, chiefly from Southern California. We were shown over the Carson establishment of the Carson & Tahoe Co. by Mr. W. D. Tobey, who is the resident manager, and we believe largely interested in the enterprise. We saw the flume working excellently with Mr. Tobey's arrangement for dumping at any point along the flume that may be desirable. At the box factory there were vast numbers of raisin trays and raisin boxes, in the shock, awaiting shipment to California. The company has some lumber excellently adapted to this use, and has, we understand, orders for all it can supply at present. The vigor in the orange business in the south is calling for many boxes, and growers are looking out ahead for next winter's supply. The water brought down by the flume is used to irrigate quite an area of land south of Carson. It is land from which the sagebrush has been removed and is wonderfully productive when the water is brought upon it.

## A Nevada Editor's Ranch.

We greatly enjoyed a short call at the country residence of Mr. and Mrs. Sam Davis, of the Carson Appeal. Mr. Davis is widely known throughout the journalistic world for the grandeur and peculiarity of his imaginative writing. The pursuit of the imaginative is one of the most exhausting of intellectual labors, and to maintain the freshness of his style Mr. Davis found it necessary to draw near to Nature in some of her varied forms, and so he chose that most charming masterpiece of creative wisdom, a piece of Nevada sagebrush. Where the

northern hills begin to look down upon Carson there was a piece of ground which even Uncle Sam seemed hardly to think worth remembering. Upon this Mr. and Mrs. Davis determined to embark in the villa business. There was not any yellow Tiber near at hand, so they developed some water on an adjacent water-shed, and as usual in Nevada, we are told, the first crop raised by irrigation was a lawsuit. Nothing daunted by this result, Mr. Davis determined to employ vertical rather than horizontal ditches, and the result was a flowing artesian well which was sending forth quite a stream during our visit. Even with the somewhat uncertain water supply had during their early efforts, Mr. and Mrs. Davis have succeeded in changing the whole appearance of the site and have fruit and ornamental trees, pasture and garden, where there was but recently only sagebrush. They have laid out an avenue fringed with shade trees, adown which one, standing upon their doorstep, looks directly upon the State Capitol in Carson. The house is commodious and comfortable, the barn an excellent structure, and the various plantings they have made are in promising condition. Perhaps the most interesting feature of the ranch is the thoroughbred Holstein herd which Mr. Davis bought last year from Smiths, Powell & Lamb, the famous New York Holstein breeders and importers. We have, unfortunately, lost the notes we made of the names and breeding of the animals in Mr. Davis' herd, but we remember the excellent appearance of the cattle. We think Mr. Davis has done wisely in starting in early in breeding so popular a breed as the Holsteins, and doubt not his venture will prove a good thing for his own interests and for the State. There is one thing about the farming operations of Mr. and Mrs. Davis which it will be interesting to recall when they become famous as farmers, and that is when they began upon their choice piece of sagebrush neither of them knew anything about farming. They were as unused to it as the soil they entered upon. They have, of course, had many amusing experiences; but their liking for the effort has sustained them through all mistakes and through the vexations of the water question and the labor question, and will, no doubt, lead them on to a gratifying success.

## Nevada Cherries.

While stopping at the house of Trenmor Coffin, Esq., of Carson City, we had some very fine May Duke cherries, grown by Stephen A. Kinsey, of Genoa. Mr. Kinsey planted an orchard of a number of varieties, and finds the May Duke the only cherry of those he had which bore satisfactorily. It has a crop every year. The Royal Ann and Black Tartarian proved of no account. The Early Richmond only bears occasionally. People who have their palates set for sweet cherries may not count much on the May Duke for a table fruit, but they do very well where other varieties are untrustworthy.

## Shade Trees in Nevada.

One who visits Carson City in the summer is delighted with the abundance of shade trees on the residence streets. The main reliance is the cottonwood, but Lombardy poplars are being largely introduced as a very satisfactory substitute. Some parties are showing much enterprise in testing many kinds of Eastern and Southern trees. We were especially interested in an experimental plantation which Mr. Trenmor Coffin has on the large lot of ground in the center of which his elegant brick law-office is situated. Mr. Coffin is evidently an ardent tree lover and has taken great pains in securing many kinds of trees from distant parts. His plantation is still young and it is too soon to draw conclusions from it, but in a few years the results his records will show will be of great value to the future forest planters of the State. It seems that the hardest condition which the trees have to withstand is a heated term in midwinter which awakens them into activity, and then a return of winter in March catches them in very vulnerable condition. Mr. Coffin contemplates wrapping his young trees with straw and covering the ground to keep them asleep during the false spring in February. It is altogether likely that in this way many handsome trees can be made to succeed for city gardens, but, of course, the most important thing to know is what trees can be trusted to take care of themselves in spite of the peculiar conditions. Possibly for the bene-

fit of the experiment Mr. Coffin may protect some and let others of the same kind go it alone.

It seems to us that the State of Nevada would do well to furnish its new State University with the means for carrying on experiments in forest tree planting and for collecting and publishing the experience of other tree planters. Certainly the State needs a tree wherever a tree can be induced to grow, and trustworthy information as to what would be likely to succeed would stimulate planting.

## Machine Shops at Carson.

Under the guidance of Mr. D. A. Bender we made an interesting trip through the well appointed foundry and machine shops of the Virginia & Truckee Railway at Carson City. These shops are the outgrowth of necessity arising from the need of repairs to ponderous machinery on the Comstock, and are better equipped than car shops generally. They are doing a great deal of important work and keep a large force employed.

## Red Clover in Nevada.

On the railroad from Carson to Virginia City, at the Brunswick mill, there is a ditch carrying water, probably for milling purposes. We noticed along the bank of the ditch, and where the roots are fed by seepage water, some red clover plants growing very vigorously. Whether planted or sown by chance, we do not know. Possibly the plant came in, as was reported from the dry land near Riverside, from the chance dropping of a seed or by its carriage by the water from some distant plantation. At all events, the plant looked as though it might be at home in the Carson valley if it could find water to sustain it.

## Virginia City.

A very delightful day was that occupied with an excursion from Carson City to Virginia City and return. The railroad has a considerable climb to make and tacks hither and thither around the mountain slopes to accomplish it. For the first half of the distance the Carson river, with its numerous ore mills, flumes and chutes, furnishes full entertainment for the eye. The precipitous mountain-sides, with prospect holes and abandoned tunnels and large hoisting works, with Silver City nestling in a canyon far below the road, occupy the visitor's attention until he is rolled into Gold Hill, and thence on to Virginia City, with its large number of hoisting works, many of which are now closed, and with its fine stores, hotels and residences clinging to the steep hillside, and now, they say, gradually sliding, as the surface is affected by the thorough honeycombing of the interior by mining drifts and tunnels. We had read so much about the decaying glory of the Comstock that we confess we expected to see a much more run-down city than we did see. Maybe if we had seen it all in flush times we should have better data for judging, but there seemed to be plenty of people and peculiar things enough to keep the tourist busy for a week.

## Homeward.

Virginia City was the end of the outward course, and the week devoted to the excursion was nearly gone. A quick ride back to Carson, a departure thence, at nightfall, for Reno, and we were drawn through much that we wished to see in Nevada after the darkness had veiled the Washoe valley. For this reason our agricultural notes on the region could be written on the wrong side of a postage stamp. We were much pleased with Reno—so much as we could see of it after dark, and before the six o'clock train started the next morning. The town has grown wonderfully, and has built up in a way bespeaking enterprise and good business methods. We regretted exceedingly that we could not see the town in action.

Coming westward from Reno, one sees much productive ground being turned to good account along the Truckee river. There are improved buildings on the older places, and many marks of new settlement and beginners in agriculture. The ride up the Sierras from the east is very delightful. The lumbermen are making sad work of the forests—viewed from the tourist's standpoint, at least—but the beautiful Truckee river, with its rushing, leaping, crystal waters, is a sight not to be forgotten. Reveling in the beauties of these waters, as the early morning sun played upon them, we re-entered California and took our turn in growling at the snowsheds.

## HORTICULTURE.

## In the Los Gatos and Saratoga Country.

EDITORS PRESS:—On the slopes extending from the Lower Santa Clara valley up and on either sides of the Los Gatos and Saratoga creeks we find the surface diversified with hills and valleys, having an abundant supply of good water and many features which go to make up a country suitable for many first-class family homes. We here have much more rain than at San Jose, and the thermometer is said to range from 10 to 12 degrees higher in winter here than there. The soil is generally a light sandy or gravelly loam.

Most people are engaged in fruit culture, and we find peaches, prunes, plums and almonds among the fruits most successfully cultivated. From what we see and hear, we believe the culture of the apricot is in this region, with most people, not a financial success. It is claimed that pears do well, excepting the Winter Nelis, which should be excepted almost anywhere in California. Cherries should not be made a specialty here. The tree grows and blooms well, but much of the fruit drops off prematurely.

F. M. Farwell, half a mile southeast of Saratoga, says grapes grow here to perfection, have high flavor and make some of the best wines we have. Raisin grapes bear well, but mature crops too late for drying. Fruit grown here is of high flavor. Trees and vines grow thriftily and are by one or two years longer coming into bearing than those grown in the lower places of the Santa Clara valley. Mr. F. is supplied with an abundance of water, running in a small creek through his place, fresh from the Santa Cruz mountains. By constructing a reservoir he could have a fish pond, and also all the water that could be desired for irrigation purposes. Fruits and vines need no irrigation. On trial he has found irrigation to be a detriment to both trees and crops. At this place we have delightful drives among the spreading oaks.

At Mr. J. W. Fuller's place, one mile southeast of Saratoga, we find an orange orchard of 100 trees seven or eight years old, which commenced bearing at three years, and are now bearing regularly, and have never been irrigated. The varieties are Navel, Mediterranean Sweet, and some others not known. The fruit looked large and well colored. He has one lemon and one lime tree, set out three years ago, both in bearing. It would seem that these representatives of the citrus family would indicate success, at least in growing and bearing, in this neighborhood. From what we learn at other places, however, we suspect some peculiar condition of the ground at Mr. Fuller's place which promotes the growth and bearing of the orange without irrigation. The flavor of the fruit is reported by Mr. and Mrs. Fuller as good as any grown in the State.

## Nut-growing.

At many places we see fine trees of the English walnut. We even see some considerable orchards of this fine nut-bearing tree. The tree grows well, and makes a good shade in summer, but financially seems to be bringing poor returns for the expense of cultivation. The fruit mostly falls off in the spring-time. Some years in some localities it may prove a partial success, but, on the whole, is generally pronounced a failure.

At the Yoko place, about two miles southeast of Los Gatos, we find on a stony hillside, where the soil is dry and rather poor, the almond doing well. Chestnuts also do well in this situation as far as tried. The varieties selected as best are the seedling Marron de Lyon and Combe.

Mr. John Casella, of Milpitas, who happened to be present with me at the Yoko place, gave me the following directions, pursued in Italy, for drying the chestnut ready for use: When the nuts commence to color on the tree, knock them down; put in a pit or big pile, cover up with grass or other material to keep from drying. Let them lie two weeks, during which time they heat. Then knock off shell with wooden mallet. Then let them lie in the sun till perfectly dry and ready for use. After they are dry, put into a bin packed in straw, above and below, with sand covering the straw on top. The bin with the packing and sand on top should be sufficient to exclude air in order to keep well. This treatment of the varieties mentioned will free the chestnut of any astringent qualities which are sometimes found in the skin of the kernel. Italian chestnuts are reported by Mr. Casella to bear here in five years, while in Italy the same would bear their first fruit at from 8 to 10 years old.

## Olives and Figs.

From the experiments being made at the Yoko farm, and the success so far attending, it would seem that the olive may prove a great success on these steep hillsides. The trees of the young olive orchard here are growing rapidly and are thus far free from disease. Great hopes are entertained of the future of the olive here. Olives, as well as chestnuts, bear here much younger than in Italy or France. Mr. Yoko informs me that olives in this vicinity generally commence bearing at six years old. In those old countries not before 10.

J. F. Kennedy, near Los Gatos, is experi-

menting with new varieties of fruit trees. Of the olive he has one Sevilleano Gordal from Spain, imported early this spring, and has since duplicated the order. This is the tree producing the queen olive of commerce, a very large olive—largest known—and said to need rich land for its proper development. It is the great pickling olive. He has also the Manzaniella from Spain, much larger than our Mission olive, earlier and more productive. This is said to be the best olive for oil.

Of the fig he has eight varieties from Dalmatia, all Adriatic figs, and described as follows: (1) Large white fig, very thin skin, little more than a film, filled with a kind of nectar or honey that will run right out on cutting open; very sweet. (2) Green Smyrna, very large, of greenish color, said to be productive. (3) Apple fig, shape of an apple, good flavor, and as good as the type generally. He has five other varieties much like the White Adriatic—perhaps only varieties. These five all extremely prolific. Mr. K. has seen all these figs in bearing and tested the fruit of all except that of the Green Smyrna. These, as it is with figs generally, should have water at maturity of fruit. All the above-named fruit trees at Mr. K.'s are very young and will be only yearlings next fall. The fig is readily budded, and so the common fig can be used for budding stock and would bring any foreign or new variety speedily into bearing. It has been said that the fig thus budded would not do well. I asked Mr. K. what experience, if any, he had had in this direction. He said that he had tried it and that such grafting or budding has with him succeeded admirably.

Mr. K. has the "Commercial Almond," which originated in Tulare county as the "Herriott," now known by the name first above given. It is a straggling tree with a very large leaf, a much larger kernel than the Languedoc, of as fine flavor and texture of shell, more evenly distributed over tree, and fruit sets better.

Of apricots, the only trees bearing at Mr. K.'s place this year are the Hems Kirk and Blenheim. Priers' Royal Golden usually succeeds well, bearing when others fail. It is large and of fine flavor, and thought to be best at this place. It compares well with the Early Golden. The tree has the habit of the Royal; but the fruit is large and yellow like the Early Golden. It is worthy of general trial. MCD.

Santa Clara Co.

## Stockton Notes.

[Written for RURAL PRESS BY MRS. W. D. ASHLEY.]

The chief business here now is receiving the new crop for sale and storage. Sales have been made at \$1.29 and \$1.30, good milling. Considerable grain is yet to be thrashed around Linden and Farmington.

The trial of harvesters before the State Agricultural committee for a prize of \$250, on the 12th, is said to have not been a success, because some of the best running machines had been put away and a good piece of heavy standing grain could not be got for test. The Houser stands pre-eminent still for good work in lodged and all kinds of grain. One that has run five years lost only four hours in 46 days' cutting, and cut 30 acres a day in standing grain. They are made at the "Stockton Combined Harvester and Agricultural Works." The Myers machine has run finely unless grain was badly lodged. One cut \$700 worth, besides the owner's crop. A man hired one and cut enough out to pay for his own cutting and thrashing.

Matteson's "Stockton Chief," a pull machine, cuts 12 feet, turns corners, has no belts, uses 12 or 16 horses, and costs only \$1300 or \$1500. It has been tested lately, and is very popular for strength and lightness. He has conditional orders for 30 if crops are good next season. It is said that a man at Acampo cut enough with one this year to pay for it at \$1600. The firm is putting up another building on their agricultural block for setting up machines, 136 feet by 65. This is called the windmill city, and may truly be called the combined harvester city, although the combined machine was invented near Lebanon, Oregon, in 1855, it is claimed.

Business men have straightened and gone on again since the disastrous fires, but it is hard on the many poor people who saw the earnings of years licked up by the flames, that left some to regain with stiffened limbs and in harder times what they had thought would be the comfort of age. A young lady, a teacher, lost \$1000 worth of books. The last fire is said to have destroyed \$190,000.

The River and Harbor Bill gives San Joaquin river and Stockton and Mormon channel \$18,750 to clean and improve channels.

Striped and spotted beetles (diabrotica) have spoiled the roses all summer, and taken late gardens, especially squashes and beans. Buchach is useless; dusting with ashes and lime useless. They eat holes in the musk-melons and the peaches. There is also the larva of the peach moth; the worm hatches at the stem of the whole peach and goes to bed in the pit. Linnets gather all of the Egyptian corn, then twit for us to look at the plum and peach pits they left swinging while they went to test the mellow apple, but never alighted on the pan of poisoned wheat. Cabbage and turnips flourish, but alas for the "Hubbard" and the prospective winter pumpkin pie, with the blazing heat and striped beetles. Grapes are fine, promising \$25 per ton.

## A Welcome to California.

Upon the occasion of the visit of the G. A. R. to the Horticultural pavilion, a warm welcome was tendered the veterans. One of the features of the reception was an eloquent address by Mr. A. C. Bane, of San Jose, which we print as follows:

Mr. President, Friends, Neighbors, Country men:—Look around you! You stand mid the foliage and breathe the aroma of a growing, blooming, budding, fruiting garden. Thought, language and images fail us as we pause to describe it. It is a scene too high for conception; too grand for description; too sacred for comparison. The grandeur of nature and the glory of art, the dreams of fancy and the creations of poetry, all fade before this vision. Admiration no longer hovers over the Elysian fields of Virgil; Homer's sparkling rills of nectar, streaming from the gods, woo our thirst no more. The bright Bandusian fountain and the magnificent vale of far-famed Cashmere lose their splendor. Even the paradise of Milton, with its trees and its rivers, its fruits and its flowers, its hymns and its harps—a living landscape with its vernal diadem and voiced with melody—dwindles into sterility. Here is a sheaf from our golden grain fields, a garland from our decorated door yards, a cluster from our burdened orchards. A Santa Clara county home in miniature. With one glance you behold the products of every zone, of every season. A spectral view of the beauties and wonders that enrobe our vernal valley. Nature has canopied the scene with her emerald drapery, while the arched vault that bends above us is bestudded with blazing sparks from nature's sun.

This is not a Work of Fancy.

Nor a production of art; neither is it an "ethereal creation of intellectual frostwork," but it is a real, living and truthful display of the perennial products that rise and shine as perpetual monuments to the industry of our citizens, the wealth of our soil and the beneficence of God. We challenge the fame of Italy or the splendor of France; we challenge the valley of the Nile or the ancient Euphrates; we challenge Australia or her sister islands of the sea; we challenge the hills of New England or the lakelands of the North; we challenge the plains of the West or the sands of the South; we challenge every State whose star decks our flag; we challenge every sister county that goes to make our State. Yes, we can stand upon this pedestal of pride, before this pageant of wealth, wonder and beauty, surrounded by these proud and sympathetic hearts, and with Herculean strength hurl our challenge to the world! shouting upon the winged zephyrs of heaven across every sea, to every land and every people: "Our soil and our climate present to us tonight a wealth and a variety of products that yours will never yield!" Look thoughtfully upon this picture, ye sons and daughters of Santa Clara valley; see this resplendent scene of ineffable glory unfolded before you; and go away with a loftier pride in your homes; go, fostering an unbounded ambition, to expend your toil, your brain and your money, till every spot in the county becomes a conservatory of fruit and flowers.

## There was a Time

In the history of our county when the antelope and elk wandered over our lands, unhindered by fences or bars. Our farms were public hunting grounds; our flower gardens supported the tall mustard in whose branches sang the blackbird; our orchards were marshes where the tule grew and the frog croaked the evening stars to sleep. The first invader to break the monotony of nature was the farmer. With his wide plow he furrowed the valley's bosom and sowed grain thereon. Broad acres for the first time were turned under and new soil took a first view of the heavens. The springtime brought many spots of green that turned to gold in July's sun and yielded a harvest to the sower. The winds of heaven, fanned by the hand of industry, blew the seed broadcast over the land until every cultivated acre annually was bringing in the sheaves of wheat and barley. The agriculturist was monarch of the valley. Yet the lowlands were unplowed; the hillsides were uncleared. Acres that received the rays of sun and rains of heaven cast no trophy at their Creator's feet. Next the horticulturist came; a lover of nature and a friend of art; and horticulture, the true poetry of agriculture, was written and read throughout the valley. The forests were cleared, the marshes were drained, the hillsides were dug up, and the vine and fruit tree were planted everywhere, until now the leading interest of our county is her fruit; the most beautiful spots are her orchards; the richest land is her fruit land; the happiest and most thrifty citizens are her horticulturists. Horticulture

## Is a Divine Institution;

God planted the first garden in Eden; and our first parents were horticulturists. In its most comprehensive sense it is the fine art of common life; it is eminently a republican fine art. It distributes its products with equal hand to the rich and poor. Its implements may be wielded by every arm, and its results appreciated by every eye; it decorates the dwelling of the humblest laborer, who returns with the departing sun from his place of honored toil to the house which is his own, and where the blossoming vine and fragrant fruit bespeak the content and happiness of the loved ones at home.

The fruit and grain producers of this county, to stimulate the culture of the tree and vine, to display collated samples of our choicest products, and to tell the wondrous story of this wondrous valley to the world, have built this beautiful and spacious hall, and frescoed it with nature's living colors. They have built it that your eyes might herein enjoy annual feasts; they have built it that you might know the worth, the wealth and the wonders of our valley and hillsides; they have built it because hundreds of acres in our county are yet uncultivated or are unproductive; they have built it because many of you have no homes you can call your own.

## The Hillsides Call to You

Through the silent yet impressive voice of these blushing grapes; the canyons call to you through this luscious fruit; the marshes call to you through the berry and grain to come, enter, occupy and cultivate, and they will yield you a harvest, and will appoint you as king to sit in royal splendor upon the royal throne of earth's most powerful dominion, a home. All honor to the public-spirited men and women who planned and executed this beautiful hall. It is an ornament to the city and a monument that will ever reflect honor upon and perpetuate the memory of the builders. It is dedicated tonight to the fruit interests of Santa Clara county; it is dedicated to the annual display of the varied products of our soil; it is dedicated to the future generations that shall cultivate the fruit and the vine; it is dedicated to the lowlands and hillsides that are now barren, but that in the near future shall whiten with the blossom and yield their harvest; it is dedicated to the prosperity of our citizens and the adornment of our homes. In behalf of the Directors of the Hall Association, we welcome you one and all to this Horticultural Fair; we welcome you into the midst of this scene, which it prototyped by the fabled golden orchard of the Hesperides, by the hanging gardens of palatial Babylon, by the famous elevated park of old Genoa, and by the garden groves of lovely Naples.

## We Welcome the Men and Women

Of old "Forty-nine," who came when there was nothing inviting, and who made this wilderness blossom as the rose. We welcome those who came later, whose capital was added to the labor of the pioneers. We welcome the sons and daughters of Santa Clara county—those who were born in the valley and those to whom all eyes turn and in whom all interest centers as the hope of the future; those who are to accept the mantle of their parents and carry the banner of our prosperity to greater conquests and grander victories. We welcome all, citizens, friends and neighbors; enter and enjoy. But we desire to extend an especially hearty welcome at this, the opening night of our fair, to those representatives of the Grand Army, of the flag's defenders, who have come and to those who will come to our Garden City. You have come from the pine-clad hills of Maine, from the snow and ice-fields of the North, from the savannas of the South, and from the plains of the West; we welcome you to the modern Athens, the garden spot of the universe. You have undergone hardships, you have suffered, you have labored in weariness, you have hungered, you have been stripped of money, of friends, of home and of limbs for your country; in the name of a people who love our common country we welcome you to the laborers' fabled "Atlantis," to this land of peace and of plenty; this place

## Of Rest and of Delight;

To this conservatory of the beautiful, the wonderful and the luscious; to this magnificent scene of the native products of the land that Washington won, that Taylor reclaimed and that Lincoln redeemed. Soldiers, stack your muskets, sheathe your swords, and with the olive branch for your wand, enter, enjoy and rest in peace 'mid the fruits that grow by the clear waters of Eden. To the residents of Santa Clara county this horticultural fair teaches an important lesson—a lesson which we hope will be well learned and its precepts practiced, to the improvement of our county and the greater prosperity of our citizens. You have here learned what our soil will produce, have seen the rich rewards that came from industry well applied. You have learned that these marshy barrens and these brush-covered hills are but Edens in disguise. If you will but tickle them with the rake, they will smile with a harvest. Let this lesson teach the poor man to get out of the city on to God's pastures and hillsides, and cultivate and beautify them, and soon instead of a vassal you will be a lord. There is no grander nor easier nor surer way to gain independence than to be the owner of an acre of mother earth. Let us hope as the crowning result of this fair that many of our guests from the East may be attracted to our county with a purpose to make this their home, and that many of our own citizens may be induced

## To Cultivate the Fruit

And the flower. Then, ere the modest violet of early spring ope again their beauteous eyes, Santa Clara will be what she might be, and what she ought to be—a place of untold delights, a terrestrial paradise, fanned by the balmy zephyrs of an eternal spring; clothed in the gorgeous sheen of ever-blooming flowers, as delicately hued as the rose-tinted clouds of our summer sunsets, and vocal with the silver melody of nature's choicest songsters.

In conclusion, Mr. Bane read some verses by an enthusiastic poet, reciting the glories of California.

## QUERIES AND REPLIES.

### Early Fruiting Peach Trees.

EDITORS PRESS:—I send by express a box of Orange Cling peaches to show that we can raise peaches in this part of the State. These peaches grew on trees three years old, with corn planted between the rows, and no irrigation. I have about 180 acres planted to peaches, apricots, pears and prunes. I have three-year-old prune trees that I think will have over 200 pounds on a tree. When they are ripe I will pick and weigh a few trees and report. I think we have the cheapest and as good fruit land as there is in the State. The peaches I send were all from one tree, and there were at least 150 pounds left on the tree.—J. W. BRIGGS, Visalia.

The fruit arrived in good order and was much enjoyed. The specimens we measured averaged 10½ inches in circumference, and were, in fact, quite uniform in size. They would command the top price in the market. The early fruiting of orchard trees in this State is one of the most interesting points in our horticulture. At San Jose, last week, we heard that Mr. F. M. Tenney was gathering a remarkable crop of peaches from trees set out two years ago last April. He gave the land unusually good preparation, subsided to great depth, etc. The result has been a wonderful growth and early bearing. We much desired to visit the orchard, but could not find time.

### Fleas in Hens' Nests.

EDITORS PRESS:—I would like to say to "a subscriber" that the best remedy I have found for fleas in hens' nests is cremation. When I find there are fleas in the chicken-house I take out the nests, which are coal-oil cans with one side cut out, pour a little kerosene in each one, touch a match to the straw, and burn out thoroughly; then fill with fresh straw and put back. I also occasionally sprinkle the chicken-house with diluted carbolic acid, and use the same for brushing the under sides of the roosts to kill the mites which collect there in the daytime. It will not do to put it in the nests, as it will give the eggs a very disagreeable flavor.—Mrs. JOSIE P. HILL, Petaluma.

### Strawberry Plants or Fruit at Will.

EDITORS PRESS:—One of our leading strawberry growers here, in conversation with me, said he understood the Chinese growers employ a peculiar method in fertilizing their plants, by which they are able at will to direct their energies to the production of foliage or fruit. He states that it is his information that they apply a solution of soda, or of soda and ammonia, to produce foliage, and one of potash to bring them into fruiting; that, within a very few days after the application of the potash, they cease to grow and begin at once to form flowers and fruit. Will you or some of your readers kindly state whether there is any foundation in fact for this report? Have the Chinese any peculiar method worthy of our adoption?—STEPHEN POWERS, Lawley, Fla.

EDITORS PRESS:—The note of Mr. Stephen Powers, one of your Florida readers, is received. In my opinion he has been wrongly informed regarding the practice of the Chinese in the growing of strawberry plants and fruit at will, either in their native country or anywhere else. I have no knowledge of their growing the plants by the use of soda, or soda and ammonia; or of their growing the fruit at will by the use of potash. Many of the Chinese in California were experienced gardeners at home, and would undoubtedly have brought their experience into practice here in this regard if such had been their experience. I answer, further, that I know of "no peculiar method" of theirs in raising this fruit.—I. A. WILCOX, Santa Clara.

THE RIPE FRUIT-CARRIER.—Many of our fruit-growers are familiar with the excellent fruit package bearing this name, either from having seen it at the meetings of the Horticultural Society, or elsewhere, or from mention which has already been made of it in the RURAL. Extensive experimental use is being made of it now by growers of fruits for Eastern shipment. An advertisement upon another page gives interesting information regarding it. A number of prominent California capitalists have purchased the patent-right for the Pacific Coast and Territories, and have incorporated under the name of the Western Ripe Fruit-carriers' Company, with Hon. Evan J. Coleman as President, Senator George Hearst, Representative Felton, Robert F. Morrow and Frank Z. Maguire as Directors.

NEVADA COUNTY.—We have received from G. E. Brand, of the Nevada County Land and Improvement Association of Nevada City, an interesting pamphlet entitled "Nevada County: the famous Bartlett pear belt of California; its horticultural resources, healthfulness of climate, temperature, rainfall, topography, facilities for irrigation, large and profitable yield of fruits, and other useful information for home-seekers, edited and compiled by E. M. Preston." The title well describes the publication, which we doubt not will do good service in making the resources of the county better known.

GOING TO CHICAGO.—Mr. J. M. Hixson informs us that he has sold out his interest in the firm of Hixson, Justi & Co., and will remove to Chicago, where we trust prosperity will attend him.

GALVANIZED IRON.—Do not keep drinking water in a galvanized iron pail. The zinc coating acts readily upon the water and forms a poisonous oxide.

### Well Done, Good and Faithful Servant.

[Written by request, for the PACIFIC RURAL PRESS, on the death of MRS. EDWARD FRISBIE.]

It would seem that, at rare intervals, nature, in the physical, mental and moral world, puts forth an extraordinary effort, and there result some marked individuals with characteristics of such unusual strength and beauty that their fellows can but do them reverence.

Such an exceptional character has recently been called from our midst, in the person of MRS. PHOEBE A. M. FRISBIE, wife of Mr. Edward Frisbie, of Anderson, Shasta county, Cal. Endowed at birth with a constitution of amazing vigor and elasticity and a mind of unusual quickness and power, the old, much-sought ideal of "a sound mind in a sound body" seems, in her organization, to have had its literal fulfillment. Even as a child she was remarkable for her executive ability. In the work of rearing to maturity her 11 children, there was ample scope for the development and expansion of all those faculties of eye and hand, heart and brain, and nobly were those powers used. As a sister wrote some three years since—"Where will you find another such a mother, another such a woman?" Loyalty to principle was a conspicuous trait—indeed, formed the basis of her strong, earnest character. In any direction where mere self-sacrifice was required no one was easier to persuade, but let the attempt be made to sway her from principle and it was soon found that her house was indeed "founded on a rock."

Coming here to this Pacific Coast when the state of society was crude and of a different stamp from that in which she had been reared, she was told: "You will be obliged to let your children follow in such and such ways; it is the custom of society and cannot be helped." Promptly came the reply, "I think not. If their associations in society must needs be undesirable, I shall keep them out of it." Yet, with all her profound convictions of truth and right, she was no sour-faced Puritan. A more genial, cheerful, wholesome nature it would be hard to find. Her ringing laugh, her bright, vivacious words, her contagious joyousness, made her, usually, a center of attraction for both old and young when, notwithstanding her numerous home duties, she was found mingling with her friends and neighbors.

In those early days, when schools were remote and in their infancy, and her growing family needed a teacher and there was none to be had, the problem would have seemed, to most minds, unsolvable—how to guide the household and keep all comfortable, yet instruct the children. But nothing daunted, books were procured and the mother of six children, the youngest an infant in her arms, proceeded to systematize the time and the work (which was done much of the time without assistance, other than that of her little girls), and hear daily recitations from the elder ones. Just here, let it be observed, that no one of her 11 children was taught to read by an outsider. It was her theory that children should know how to read intelligently before being sent to school. Meantime, all the garments were to be made, the cradle rocked, the meals prepared, the dairy attended to, and all the ocean of work of a large farm-house daily gone through with. And let it not be supposed that any of that household were ill-fed or cared for.

When the Sabbath dawned, would not an ordinary energy have said—now, I must rest—I am too tired to attend church. But no! With unusual celerity the house was set in order, and with happy heart the household summoned for the morning home service, and then to dress for church. Once there, the time was all too short for the cheerful songs and earnest words of the devoted Sunday-school teacher.

O my mother! How many by your loving words have been led to choose the better part, only eternity will reveal. Her religion was to her a very elixir of life, for it was not only, or chiefly, the active brain, the magnificent physical resources, the sparkling social ability, but, more than all, the loving heart and the Christ-like spirit of self-sacrifice that made our departed one so pre-eminently "a mother in Israel."

There are many whose mental endowments, seconded by generous culture, have gained for them a local reputation as brilliant conversationalists; but it was not in such walks that she sought to be known. Her mission was to speak, in the ear of the discouraged and faint-hearted, words of hope and cheer. And not words alone, but helpful deeds, bore witness to her love for humanity. Was she ever too tired to help any who asked assistance? Did any of her 11 sons and daughters ever find mother's ear dull to their recitals, whether of joy or sorrow? Ah! the keenness of our grief is this—we cannot tell it to mother.

A more loyal wife, a more tender mother, a heart more filled with unwearied, quenchless, devoted love—I do not think the world has ever seen. I am not exaggerating. "Many daughters have done virtuously, but thou excellest them all."

It was not in her own household alone that her comforting presence was made a blessing. From far and near, when sickness and death invaded the homes of others, came the cry—we want you, we need you; can you come? And seldom indeed was her weariness so great, or her cares so numerous, that she did not contrive to respond to the call of distress. Said a friend to me, once—"Your mother seems such a tower of strength when she comes into a sick-room." There are many still surviving, and others who have passed on, who could testify to the aptitude of the figure.

Her humility was one of her most touching traits. Though to some degree aware of her own extraordinary gifts, no sense of superiority ever betrayed itself in manner or bearing. All mankind were her sisters and brothers, and she was ever inclined to acknowledge and reverence intellect in others.

Of flowers she was an enthusiastic lover, and they grew under her fostering care with a profusion that seemed to prove her kinship to all forms of life and beauty. The dear hands fashioned many a floral gift for the burial service of those who otherwise would have been laid to rest without those "emblems of our own great resurrection."

Nearly two years ago, her summons came. No one knew the call or dreamed that the accidental fall meant a year and nine months of suffering which grew to mortal agony the last few weeks. Yet, so it was—and on the 17th of July with the words "More light forever!" the spirit that had ever aspired to the light closed its earthly utterances and shortly after "returned to God who gave it." The

first break in our family circle, that has seemed so long charmed against the Destroyer, has come where least expected, and where human wisdom would have said—"Anywhere but there can one be better spared." Our dearest, our best, our greatest, God has taken. But remembering her teachings, we say: "It is the Lord—let Him do what seemeth Him good."

"Oh, be sure of this,  
All things are mercies while we count them so;  
And this believing, not keen poverty,  
Nor wasting years of pain, nor slow disease,  
Nor Death—  
Shall ever drift our bark of Faith ashore.  
Whose steadfast anchor is securely cast  
Within the veil, the veil of things unseen,  
Which now we know not, but shall know hereafter."

ANNA FRISBIE BAILEY.

Battle Mountain, Nev., Aug., 1886.

PICTURESQUE CALIFORNIA HOMES.—We have received a copy of the "Second Volume of California Homes," by S. & J. C. Newsom, 504 Kearny St., S. F. It is a companion volume to the "Picturesque California Homes" published last year. It contains 40 plates with designs for city, suburban and village homes, and contains many which seem to us very satisfactory. Estimates are given of cost of construction and hints of interior finish and other matters of importance to builders.

### Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes. \*\*

## Educational.

### MILLS SEMINARY.

The next term of this well-known Institution will commence on

Wednesday.....August 4, 1886.

For Circulars giving particulars, address

MRS. C. T. MILLS,

Mills Seminary P. O., Alameda Co., Cal.

### California Military Academy, Oakland, Cal.

Special Feature—Commercial Department. Next Term begins July 19, 1886. Send for circular.  
COL. W. H. O'BRIEN, Principal.

### VAN NESS SEMINARY

San Francisco, Cal.

### A BOARDING AND DAY SCHOOL

—FOR—

### Young Ladies and Children,

1222 Pine St., San Francisco.

Thorough training in practical studies and accomplishments, and pleasant surroundings, are the principal advantages offered.

Fall Term Opens July 26, 1886.

For Catalogues and particulars, apply to MRS. S. B. GAMBLE, or MRS. E. H. WOOD.

REFERENCES—Rt. Rev. W. I. Kip, Bishop of California; Rev. C. O. Tillotson, Santa Cruz; Hon. C. H. Hartson, Napa; John D. Yost, San Francisco; F. A. Hihn, Santa Cruz; E. J. Wilson, Vallejo; Capt. A. D. Wood, San Francisco; Eugene Sherwood, San Francisco.

### STOCKTON

Business Telegraph Institute and NORMAL SCHOOL.

Open day and evening for both sexes. Expenses less than one-half the usual rates. Excellent board in private families from \$8 to \$10 per month. Address, for College Journal and Circulars, J. C. BAINBRIDGE, Principal, Stockton, Cal.

### PERRY SEMINARY,

Boarding and Day School,

1825 Telegraph Ave., Oakland, Cal.

MRS. HERMON PERRY, Miss KATH M. FULLER, PRINCIPALS.

Next Term will begin Monday, Aug. 2, '86

HEALD'S BUSINESS COLLEGE,  
24 Post St. S. F.  
Send for Circular.

## HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

## CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.  
TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for

### COUNTY EXHIBITS.

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions: To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit. The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.

JESSE D. CARR, President.

EDWIN F. SMITH, Sacramento.

## \$50 REWARD

will be paid for any Grain Fan of same size that can clean and bag as much Grain or Seed in one day as our Patent MONARCH Grain and Seed Separator and Hopper or our Improved Warehouse Mill which we offer cheap. Price List mailed free.

No. 15b, Seven.....	90 00	10-inch.....	95 00

### GEM SEED SOWERS —WITH— Armstrong's Patent Force Feed.

No. 1—WEIGHT, 130 POUNDS, \$20.00. This machine is run with a Chain and Bevel Gear. It is the one we have sold for years, and has given the best satisfaction of all broadcast seeders yet invented.

No. 2—WEIGHT, 164 POUNDS, \$22.50. Runs with Chain and Belt Gear. The advantages gained by the bevel gear are smoothness of movement, noiselessness while running, durability of the rapidly running parts, and the evenness with which it sows the grain.

No. 3—WEIGHT, 164 POUNDS, \$25.00. Runs entirely by gear. This machine is preferred by many to the others which run by chain.

### STOCKTON OR REVERSIBLE MOLD-BEARD GANG PLOWS.

GANG OF 8-INCH BOTTOMS.

3 Plows.....	\$33 00	5 Plows.....	\$44 00	7 Plows.....	\$57 00
4 Plows.....	38 00	6 Plows.....	50 00	8 Plows.....	65 00

GANG OF 10-INCH BOTTOMS.

3 Plows.....	\$40 00	4 Plows.....	\$45 00	5 Plows.....	\$50 00
--------------	---------	--------------	---------	--------------	---------

These gangs and extras are made in a superior manner, and all parts are interchangeable.

#### Seed Sowers Attached to Above Gangs.

In Front, Extra, according to size.....	\$4 50 to \$ 9 00
In Rear, Extra, according to size.....	9 00 to 11 00
Rear Harrow Attachment, Extra.....	12 50
Lifting Device, Extra.....	15 00

N. B.—We are manufacturing for this season's trade a new Steel Beam Gang Plow, with 3 or 4 plows, each plow cutting 8 or 10 inches. They are much lighter than the wood frame gangs, cutting the same furrow, stronger and more durable. Each Gang has two wide-tire carrying wheels, with adjustable boxes and regulating levers to each wheel. They also have a long gauge lever, by which the gang can be regulated to take more or less land.

### THE ROYAL SINGER!

NEW SINGING CLASS BOOK BY L. O. EMERSON  
THE BEST OF ALL!

Teachers of Singing Schools who examine this, the last of Mr. Emerson's series of successful class-books, will generally concede that it is, in some degree, superior to any of its predecessors. The elementary exercises, the graded easy tunes for practice, the part songs or glees, and the church tunes, anthems and chants, all excel in their selection or arrangement. With its happily chosen title, good and interesting music and generally attractive character, there is good ground for hope that it will be the "favorite of the season." READY SEPTEMBER 1st.  
Price, 60 cents; \$8 per dozen.

### PARLOR ORGAN GALAXY.

A good and large collection of Reed Organ music, selected and arranged by W. F. BURNS; 40 good Marches, Galops, Waltzes, Rondos, Schottisches, etc., and 17 popular songs, covering 96 sheet music size pages, yet sold for the very low price of 50 cents.

Remember our superior new Sunday School Song Book, Songs of Promise, 35 cents, and our High School Song Book, Song Greeting, 60 cents.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., 867 Broadway, New York.

600 ACRES. 13 GREENHOUSES.

### TREES AND PLANTS

We offer for the Fall trade a large and unexcelled every description of FRUIT and Ornamental TREES, Shrubs, Roses, Vines, SMALL FRUIT TREES, Hedge Plants, Fruit Tree seedlings and Forest Tree seedlings. Priced Catalogue, 1000, mailed free on application. Address BLOOMINGTON PHOENIX NURSERY, BLOOMINGTON, ILL.

## PUMPS!

WINDMILL PUMPS, HAND-FORCE PUMPS, LIFT PUMPS, WINE PUMPS, HYDRAULIC RAMS.

And Pumps for every kind of work.

IRON PIPES and PLUMBERS' GOODS.

W. R. ALLEN,

414 Market St., San Francisco.

### A MAGIC CURE

—FOR—

Rheumatism, Neuralgia, Pneumonia, Paralysis, Asthma, Sciatica, Gout, Lumbago, and Deafness.

Everybody should have it.  
G. G. BURNETT, Agt  
327 Montgomery St., S. F.  
Price, \$1.00. Sold by all Drug  
gists. Call and see  
DR. CHAS. ROWELL  
Office—426 Kearny St.  
San Francisco.

### RUPTURE!

A New Invention! The "Perfection" Belt Truss, with Universal Joint Movement and Self-adjusting Spring. Worn with perfect comfort, it cures all cases of ruptured vessels, hernia, etc. Price, \$13 to \$18. Call or send for descriptive circular. Address, J. H. WIDDER, (Druggist) 701 Market Street, cor. Third, San Francisco.

### American Exchange Hotel,

SANSOME STREET.

Opposite Wells, Fargo & Co.'s Express, one door from Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion of the city. The traveling public will find this to be the most convenient as well as the most comfortable and respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50 PER DAY, ACCORDING TO ROOM.

Hot and Cold Baths Free. None but most obliging white labor employed. Free Coach to and from the Hotel.

MONTGOMERY BROS., Proprietors.

Are you using Welling-ton's Improved Egg Food for Poultry? If not, why not? Every Grocer, Druggist and Merchant Sells this Egg Food.

### FOR SALE.

300,000 SEEDLING ORANGE TREES,

Average one inch in diameter.

Price, ten (10) cents each. Address

T. H. & J. G. HERNDON,  
Leesburg, Fla.

### COMMERCIAL HOTEL.

A. & J. HAHN, Prop'rs,

Nos. 275, 276, 277 and 2 Main Street, STOCKTON, CAL.

Rates, \$1.25 to \$2 Per Day.

Stage offices for Colleville and Oakdale, Roberts and Union Islands, and Lase's Mineral Springs stages. The most desirable location in the city. Refurnished and refitted in the best style for the accommodation of the public.

### THE GOAT-BREEDERS' ANNUAL MEETING

Will take place on Thursday, September 16, 1886, at Pioneer Hall, SACRAMENTO, at 8 o'clock P. M. of said day.

All Goat-breeders invited to attend at that meeting, and also requested to exhibit specimens of their flocks at the State Fair.  
C. W. SCHLEIFFER,  
July 23, 1886. Chairman.

### A NEW COLONY

On the new extension of Southern Pacific Railroad, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

The Sonoma County Fair.

It was thought to be assuming quite a risk for one county to undertake such a fair as came off last week at Santa Rosa—a fair on so extended a scale, with large premiums on all classes of exhibits, agricultural, mechanical and artistic—but it proved a great success, both financially and otherwise. President De Turk, Secretary Winants and John M. Laughlin were most attentive and efficient, the excellence of their management being spoken of generally, the police regulations were admirable, the weather was delightful, and the attendance went on increasing daily to the close, the farm folk coming and camping in the pavilion, and making a kind of family picnic. From the ample columns of the *Democrat*, and notes of our representative on the spot, we make up a partial report.

Approaching the inclosure, one was struck with the beauty of the surroundings as seen from the avenue, and the soft lowing of kine came pleasantly to the ear. In the foreground the long line of stalls, with their coat of white, was almost blinding to the eye. Beyond, one caught glimpses of the track, dotted here and there with the flyers destined to afford the visitors pleasure in the days to follow, while the pavilion and grand stand loomed high above the neighboring tents and booths.

At the gate a busy scene burst upon the view, and the question was which way to turn first, but it seemed natural to join for awhile the spectators grouped near the grand stand to watch the exercising trotters whirl past. The horses seemed to feel the magical influence of the perfect morning, and their nostrils dilated as they quaffed deep draughts of the pure air.

Entering the pavilion, the eye was caught with a lovely floral bank, composed of pot plants from M. H. Dunn's nursery. Turning to the left, one came first upon Baker & Ross' buggies—their own make.

Next was the display of the Santa Rosa Soap Works—a fine exhibit tastefully arranged.

The new Santa Rosa steam fire engine was next in line. Its beauty and lightness, combined with strength and utility, sufficed to keep a large number of spectators around it all the time.

After this came a beautiful display of Sonoma county wines, from De Turk's winery, arranged in pyramidal form. This included samples of the vintage of eight consecutive years, beginning with 1878.

Fisher & Kinslow's specimens of marble work deserved and elicited flattering comments.

Ludwig & Kroncke showed tanks and fancy woodwork; and Ludwig & Son, fine buggies.

Geo. S. Brown (formerly of Oakland) had on exhibition vineyard plows and cultivators of six different patterns, each claiming superiority for some special purpose.

In the center of the floor, and stretching its entire length, was the Pomona Grange's exhibit of fruit, vegetables and fruit contained in cans, which visitors seemed never tired of inspecting. Here were displayed the choicest products of orchard, garden and housewife's sanctum. Owing to the earliness of the season, some of the fruits were unripe, but foretold perfection in their promising beauty and symmetry. Those already ripe—plums, peaches, pears and apples—were in a perfect state of preservation and promised long to retain their beauty. Among the canned fruits, one can in particular of Crawford peaches put up with the skins on attracted much attention. The beautiful velvety softness and richness of tint retained on these luscious peaches, as seen through the glass in clear liquor, was unrivaled. There were many others worthy of mention, but this can was singled out for its novelty.

Three or four branches from a chestnut tree, lined with the prickly burrs, attracted a deal of notice and drew from hoary-headed men nutting stories of the long-ago.

Doggett & Goodfellow made a fine display of the products of their feed-mill.

Colgan & Hervey showed fine carriages.

L. Keser's exhibit of articles included in the equine wardrobe was both complete and tasteful.

The W. C. T. U. bazaar was emblematical of the good work of their organization. These ladies would revolutionize the world with the simple weapons, pure water and good example. Their booth was very artistic. The center figure was a ship of somber hull and rakish rig, bearing upon its black sides in silver letters the word, "Prohibition." On either side were the inscriptions: "Wine is a Mocker" and "Prohibition Our Watchword." The latter invited the visitor to a refreshing draught of ice-water.

Ascending the stairs at the southwest corner, the first display was Spencer & Armstrong's brilliant assortment of cut-glass and fancy groceries.

Then came Mrs. Laughlin's jellies, L. Burbank's "garden truck" and E. H. Smyth's pears.

Doubleday Bros.' booth struck the visitor as beautifully and tastefully gotten up. In the German bazaar of F. W. Spence & Co., of S. F., were found pianos of the makes of Conover & Bro., S. G. Chickering, Guild and Christie & Son. In the Commercial College department fine specimens of pen-work and phonographic studies were exhibited.

The art gallery contained paintings, pencil sketches, pen-drawings, specimens of embroidery, kindergarten-work, etc., beautiful and in-

teresting enough, but not to be detailed in our brief survey.

The mineralogical and entomological display from the cabinets of the Agassiz Society, No. 664, A., was remarkably fine. The young people took a pardonable pride in their collection, and exerted themselves to the utmost in entertaining their visitors.

The central portion of the downstairs exhibit, as viewed from above, resembled a mound of fruit. It was said by those who should know, that the pavilion never looked nicer.

At the stock-sheds everything was neat and well ordered. Among the horses were Clydesdales, Normans, and Cleveland bays. There were a large number of brood mares with their little families. J. H. White, of Lakeville, showed six head of Holsteins, from his importation of 1884. His three-year-old bull, Usurper, weighing 1600 pounds, is a magnificent animal and as gentle as a kitten. Edward Steiger, of Sonoma, exhibited a calf, from the same herd, which competent judges pronounced one of the finest ever seen in California.

Guerne & Murphy, of Guerneville, showed a yearling Holstein bull calf of Peter Saxe & Son's importation.

The Jersey family, exhibited by E. W. Woolsey, presented a picture admired by all dairymen. There were two bulls and two cows in this lot. There were also other fine lots worthy of mention; but the above were singled out as being of standard blood.

The poultry exhibit was remarkably small, considering that (as the *Democrat* avers) "the income from the poultry industry in this county exceeds that of any other, not excepting lumber, the grape and its auxiliaries."

The sheep and swine sheds were but scantily tenanted, yet the exhibits made were especially good.

The Mechanics' Institute Fair.

The annual exposition of the Mechanics' Institute is now in progress in the grand pavilion in this city, and will continue to be the center of attraction in the city for a month. The space is well occupied with a great variety of industrial and art materials, natural productions of every kind, etc. It is too late to prepare any sketch of the fair for this week's *PRESS*. Let our readers note the fact that it is now in readiness for their visits. For those who cannot come we shall record our notes of the exhibition hereafter.

The opening exercises at the Grand Opera-house began at 2 o'clock Tuesday afternoon, Aug. 24th, with a grand opening overture by the orchestra under Charles Schultz. Rev. Joseph P. Macaulay made a short prayer, after which there was more music by the orchestra.

P. B. Cornwall, President of the Mechanics' Institute, in a brief address introduced Ramon E. Wilson, who delivered an excellent address, which we will publish next week.

The address of Mr. Wilson was followed by a laughing song, "Manon Lescant," by Miss Ellen Coursen and the Young Ladies' Choral, after which Fred Emerson Brooks read an original poem. The exercises closed with a cornet solo by Mr. Mahood, a chorus from *Lucia di Lammermoor* by the Choral, and music by the orchestra.

The American Exhibition in London.

The following communication has been received by Jesse D. Carr, President of the State Board of Agriculture, from Burnet Laudreth, Director in the United States for the American Exhibition in London, which opens on the 2d of next May, and closes October 31:

"May I take the liberty of calling your attention to the subject of the American Exhibition, to be held in London next summer, and suggest that if it be considered desirable by you that the agricultural products of your State be shown in London with a view of developing the foreign demand for the same, and with a view of attracting the attention of intending emigrants to your State, that it is now the proper time to take steps, during the continuance of the county agricultural fairs, to make collective exhibits of cereals and fibers. No doubt a handsome display could be gathered together in this way, and one which would serve a most admirable purpose, as indicated. Of course the State display—should one be made—would properly include products of the mine and forest, as well as those of the farm. If this subject meets your approval I will be glad to correspond with you further."

The State Agricultural Society proposes to make up, from the county exhibits of the State Fair, an exhibit for the London exhibition, and to this end, as well as for the purposes of the State exhibition, it is hoped that the counties will make a very creditable display.—*Record-Union*.

WORTHY OF FAVOR.—We give space freely to the card of the S. F. Girls' Union, in this issue, because we believe the institution one of the most worthy among the benevolent undertakings of the times and one particularly needed in our metropolis for the benefit of the city and whole coast. We are confident that many other journals, if fully informed of the really philanthropic and important benefits being derived from the Union by homeless girls and women, would be prompt to give the ladies a "God speed" in their work. The card should be read and well considered by all.

The Legislative Recess.

The Legislature adjourned at the close of last week and will reassemble Sept. 7th. The following is the Governor's message, stating his reasons for adjourning the Legislature:

STATE OF CALIFORNIA, EXECUTIVE DEPT.,  
SACRAMENTO, Aug. 20, 1886.

To the Senate and Assembly of the State of California: At my call you met in special session on the 20th of July for the purpose of considering and taking action upon measures which relate to the immediate and future welfare of the State. A memorial, signed by 89 members of the Legislature, was presented me as Chief Executive of the State, petitioning me to call this extra session. To that memorial were appended certain measures for legislative action in regard to the division and use of the flowing waters of the State for irrigation, and I was therein informed by the signers that those measures would receive their support. I am bound to believe that they, the elected representatives of the people, were sincere in making such representations to me. In view of the vast importance of this question of water rights to the material welfare of the State, and in view of the light which has now been thrown upon it, I cannot but believe that the Legislature will pass such laws and amendments to the Constitution as may be necessary to set aside the English common-law doctrine of riparian rights—a doctrine which, if sustained and enforced, will, in my judgment, destroy millions of property and ruin the agricultural interests of a large part of the State. The consideration already given to the pending measures has resulted in securing a nearly unanimous support of certain constitutional amendments and bills in one branch of the Legislature. Although over four weeks have elapsed since the Legislature convened, no agreement between the houses has yet been reached. The complex nature of the subject and the wide diversity of opinions as to the specific measures go to show that the matter could not receive due and sufficient consideration at a regular session which is limited in time, and during which many other affairs demand attention.

The settlement of this great question in this special session, called for the purpose, will repay the State a thousand-fold for the expenses of the session. It now appears to be necessary to defer the daily sessions for a brief period. A general election is approaching. The two great political parties, through whose organized instrumentality under our American system the Government of the State is at regular times renewed, are about to meet in conventions to nominate candidates. Many members of the Legislature desire to attend these conventions, and they may justly consider it their public duty to do so; accordingly a resolution to adjourn until the 7th day of September has been passed by the Assembly, but the same has been disagreed to by the Senate. It seems to me proper that an adjournment should be had. No additional expense would be entailed, since under the Constitution the period of the members ceases when there is an adjournment for more than three days. In the mean time, by communicating with their constituents and a consequent interchange of opinion, members may be better prepared upon their return to come to a proper agreement, resulting in wise and fruitful legislation. Now, therefore, I, George Stoneman, Governor of the State of California, by virtue of the power vested in me by Section 11 of Article V of the Constitution, do hereby adjourn the Legislature until Tuesday, the 7th day of September, A. D. 1886, at 2 P. M. of that day.

GEORGE STONEMAN, Governor.

Los Angeles County Quarantined.

We have received a copy of the following circular from the Southern Pacific Company:

To Agents and Fruit-shippers:—We have been notified that Los Angeles has been placed in quarantine against the importation of infested trees and fruits. All fruit and fruit trees imported into that county will be subject to an inspection by the Local Inspector, and if found to be infected, delivery will not be allowed. Please be particular and notify all shippers of the above facts, informing them that they must assume all responsibility in case of this company's inability to deliver on account of action by inspector.—RICHARD GRAY, General Freight Agent.

SILK AT THE FAIRS.—The State Board of Silk Culture has decided to establish booths in the Mechanics' and State Fairs. The manner of reeling silk from the cocoons will be shown daily, and small samples of silk, accompanied by descriptive pamphlets, will be distributed to all who take an interest in the matter. They will have a large exhibit at the Sacramento Fair, and new machinery, costing \$200, and weighing 1250 pounds, is on its way from Marseilles, and is expected to arrive early next week.

FROZEN beef carcasses are now being shipped from Texas to London and other European points.

Three District Fairs.

The Third District Agricultural Association, embracing Butte, Tehama and Colusa counties, held its fair at Chico last week and the town was crowded with people from the region round about.

In former years, says the *Bee*, the first named county carried the greater part of the work, but this year the others helped along splendidly, sending in fine specimens from orchard, garden and farm. Premiums to the amount of about \$6000 were divided among the exhibitors of stock, fruits, grains, vegetables, mercantile displays, art work, mechanical work, needle work and the flyers.

In the new Armory hall every foot of space was taken. The berries, peaches, pears, plums, apples, grapes, etc.—once more spoke volumes in favor of Northern California as a fruit-growing region, while the exhibit of cereals demonstrated its rank among the grain-producers.

There was nothing, however, from the Rancho Chico orchards and gardens, which in former years carried off all the first premium ribbons. The owner of the ranch, General John Bidwell, has such an aversion to horse-racing that he declared two years ago he would never make another display as long as that custom was kept up in connection with the annual fairs. He favors a fair devoted entirely to a stock show and the exhibitions of products of the soil. It is said that the General does not particularly object to trials of speed of horses, but he does object to pool-selling at the race-course. His influence and his exhibits are greatly missed.

The Fourth District Fair at Petaluma is in progress as we go to press. The exhibit of horses and horned stock is said to be large and fine, surpassing that of any previous year. The display indoors was never better, and the attendance has been up to the average.

At Nevada City, also, the attendance at the park this week has been large, while the pavilion is overflowing with horticultural and agricultural produce. The show of pears, grapes, apples and peaches is pronounced one of the best ever made upon the coast.

Costly Conflagration in San Francisco.

One of the most wide-spread and destructive fires that has taken place in this city for years broke out in Small's foundry on Brannan St. last Saturday evening, made rapid headway among the planing mills, box factories and other combustible material of the neighborhood, and, in spite of the strenuous efforts of the whole fire department, swept along two blocks on Fifth St., between Bryant and Townsend Sts., before it could be mastered.

The greatest destruction of property was that of M. C. Hawley & Co., but fortunately they were well insured. Harvey W. Rice met with a most deplorable loss, as his insurance was very small in proportion to his losses. Another establishment which readers of the *RURAL* know is that of L. Walker & Son, wool warehouse, etc., but they were well insured. Baker & Hamilton fortunately escaped with little injury. We regret exceedingly the losses and inconvenience which the conflagration has brought upon some of our best known and most enterprising men. The total loss by the fire is estimated at \$1,000,000.

THE IMPROVED DEMAND FOR WHEAT.—The news from the great wheat markets of the Atlantic seaboard is that wheat exporters are hurrying the trade and getting as much wheat as possible under engagement for delivery during the next three months. The reason for their activity can be found in the now admitted fact, which we have claimed for some time past, that the partial failure of the wheat crop nearly everywhere will make supplies quite short before another year's eating is complete. A dispatch from New York on Friday last said:

The transactions in wheat for September, October and December deliveries amounted to upward of 11,000,000 bushels. The increasing demand for Europe is chiefly based upon cablegrams from London and Paris about the bad weather. One authority is quoted as stating that the French wheat crop is largely short. The announcement that a quarter million of bushels of cash wheat has been taken at Baltimore for export this morning served to stimulate the market.

It is a very good sign when the exporters are doing more business than the grain gamblers,

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### POULTRY.

CALIFORNIA POULTRY FARM, Stockton, Cal. Send 2-cent stamp for Illustrated Catalogue.

W. C. DAMON, Napa, Wyandottes, W. and B. Leghorns, P. Rocks, L. Brahmas, Pekin Ducks.

## INCUBATORS.

## THE PACIFIC INCUBATOR!

Awarded the Gold Medal at the State Fair, Sacramento, and at the Mechanical Institute Fair of 1885 as the best machine made. It will hatch any kind of Eggs better than a Hen.

Send Stamp for Illustrated Circular to GEORGE B. BAYLEY, Manufacturer, 1317 Castro St., Oakland, Cal.

N. B.—A large line of Poultry Appliances, such as Wire Netting, Bone Mills, Chopping Machines, etc., for sale at the lowest rates. The Pacific Coast Poultryers' Hand Book and Guide; price 40c.

The Halsted Incubator Co. 1011 Broadway, Oakland, - - Cal. Price from \$20 up. Model Brooder from \$5 up. Thoroughbred Poultry and Eggs. Send for new Circulars containing much valuable information.

## SHEEP AND SHEEPWASH.

## FOR SALE.

## Pure-Bred Southdowns,

From the Celebrated Sheep of Long John Wentworth, Chicago, Ill. Address

R. H. CRANE, Petaluma, Cal.

## THOROUGHbred SPANISH MERINO SHEEP.

Have taken the First Premiums at the State Fair for the last three years.

## CHOICE

BUCKS and EWES FOR SALE.

ORDERS PROMPTLY FILLED. Address FRANK BULLARD, Woodland, Cal.

## LITTLE'S CHEMICAL SHEEP DIP.

Price Reduced to \$1.25 PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Soap in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

FALKNER, BELL & CO., San Francisco, Cal.

## FOR SALE.

## 40 head SPANISH MERINO BUCKS

Bred by Mr. J. H. St. Bridger. Sired by his Imported Vermont Registered Buck, and out of his premium flock of breeding ewes.

## TERMS REASONABLE.

## ADDRESS

MILO KNOX, Haywards, Alameda Co., Cal.

## Recommended by Professors Hilgard, Cooke, etc. Powdered Potash &amp; Caustic Soda KILLS GOEPHERS, INSECTS, Etc.

Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to T. W. JACKSON & CO., 804 California St., S. F.

Calvert's Carbolic SHEEP WASH \$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast.

E. VAN EVERY, Manager.

A. M. BELT, Assistant Manager.

## ARE YOU USING

## Wellington's Improved Egg Food For Poultry?

## IF NOT, WHY NOT?

NOTE.—Eggs have now doubled in price and will continue to advance to 50 or 60 cents per dozen, and from this time on every one should feed this Egg Food in order to have plenty of Eggs to sell at those profitable prices.

## Excelsior Improved Hot Water Incubator.

NOTE.—This is the only Incubator in the world which is run literally without any expense whatever, saving the full price of the machine every year used—in oil alone. We use no LAMP, no oil, no heating apparatus with the machine, and guarantee it to run strictly to any degree.

EGG TESTER. The long-needed Tester just patented. Testing six eggs at a time, as quick as one at a time by the usual process, and six times as effectually.

SEEDS. Alfalfa, Grass, Clover, Vegetable, table, Flower, Fruit, and Seeds of every variety.

B. F. WELLINGTON,

Proprietor, Inventor, and Importer and Dealer in Seeds, 425 Washington St., San Francisco, Cal.

## AGENTS WANTED to sell the MISSOURI STEAM WASHER

(Extracts from Reports of Purchasers.)  
"MARY J. TAPPAN, REYNOLDS, Neb.: They excel all other washers I ever saw. JOHN H. DODGE, JR., NORMAL, Ill.: The best machine ever invented by man. H. E. DURAN, CORRAZUELA, S. C.: Everybody likes them and everybody wants them.  
"S. B. ADAMS, ANTON, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another.  
"MRS. JOSEPH SWIFT, SPATE CENTER, Iowa: The most useful article about the kitchen. ANNA RAMSEY, MILFORD, Tex.: Have thoroughly tested it on articles from lace collars to bed quilts; gives entire satisfaction.  
"ST. CLAIR INKSTER, JR., EGYPT, WASHINGTON Terr.: Sells itself and can not be spoken of too highly. JOHN DETTON, BIRCHAM CITY, Utah: Have given it several severe tests and it came out triumphant every time.  
"JNO. B. WHEELER, KANSAS CITY, Mo.: They have proved treasures to the families who secured them. A. P. SHIVELEY, TONAW, Nev.: Gives entire satisfaction. (Lather handles the Washer than anything I have seen.)  
"E. M. MASSEY, LOCKPORT, Tenn.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, STOUTLAND, Mo.: If you will get up any instrument that will take so much labor off of men as this Washer takes off the women, and cost no more, I could sell one at every house.  
"MRS. M. C. DOBBINS, CALDWELL, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to with hired help. MRS. M. MOORE, NEWFANE, Vt.: Will do more than it says, especially washing flannels.  
"MRS. F. G. SINDEN, SHERMAN, N. Y.: Would not take \$50 for mine if I could not get another. Washes quicker and better than it can be done by hand. MRS. FRED. H. HARRIS, BEATTYMAN, Vt.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, NORTHERFIELD, Conn.: Have used it nearly four months. Am perfectly satisfied. I fully recommend it to all housekeepers. MRS. MARY E. YALE, PATERA, Ill.: Saved me \$5.00 per year for 18 months I've had it.  
"MRS. C. W. TALCOTT, NORTHERFIELD, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, STANTON, Mich.: I had rather give up my Jersey cow than part with my Washer.  
"I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

## S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday the date which the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, August 25, 1886.

The markets have been full of activity and interest this week, and much has been accomplished, of which full notes are given below. The latest by cable, to-day, shows that the better feeling abroad is well maintained:

LIVERPOOL, August 25.—WHEAT—Firmly held. California spot lots, 65 to 75; off coast, 35s; just shipped, 35s 6d; nearly due, 35s; cargoes off coast, quiet but steady; on passage, steady; Mark Lane Wheat, firm but not active; English and French country markets, firm; Wheat and Flour in Paris, steady; Wheat on passage to Continent, 600,000 qrs.; Wheat and Flour to U. K., 2,075,000 qrs.; weather in England, more like summer.

## Foreign Review.

LONDON, Aug. 23.—The *Mark Lane Express* in its review of the British grain trade during the past week says the harvest thus far has been very disappointing. A spell of dry weather, with hot sunshine, may yet redeem what appears to be a bad harvest. Returns from 423 wheat districts show that 39 are above the average, 96 equal to it, and 288 below. The yield in 237 out of 427 barley districts is below the average; oats in 265 out of 433 districts; beans in 162 out of 275 districts, and peas in 115 out of 245 districts is below the average. Trade is sluggish, but English wheat is generally dearer. The sales of English wheat during the week were 48,050 quarters, at 32s 7d against 28,480 quarters at 33s 5d during the corresponding period of last year. Flour is 6d 1s dearer; foreign wheats from 6d 1s dearer; sellers expected a greater advance. The supply of corn is short, and prices are against buyers. Mixed American sells at 22s ex ship. Oats are in abundant supply and lower. Four cargoes of wheat have arrived; 5 were sold, all being Chilean, 7 were withdrawn, and 4 remained. The trade in forward is more active. To-day the political situation commanded some attention, and wheat was 6d dearer, while holders asked 1s advance. English flour was 1s dearer and foreign 6d 9d and 1s dearer. American corn was irregularly dearer; round corn, owing to scarcity, was 3d 6d dearer. Peas 6d dearer.

## English Wheat Markets.

LONDON, Aug. 23.—The wheat market is firmer. Holders are asking higher prices. Market is affected by fear of political trouble.

LIVERPOOL, Aug. 23.—Market is firm. Weather more settled. Resellers were offering more freely at the close of the day.

## New York Wheat Market.

NEW YORK, Aug. 22.—Wheat has been active and prices are materially improved. There has been an urgent demand for export to the continent, for which nearly two million bushels have been taken the past week.

The market closed steady, September, 89½ cents. October, 90½; November, 92½; December, 93½; January, 94½; May, \$1.00½; June, \$1.00½.

## Eastern Wool Markets.

NEW YORK, Aug. 22.—The movement in domestic wools does not assume the proportions hoped for by the more sanguine dealers, and in some cases there has been a nipping off from extreme rates, especially where cash terms could be obtained. The shading is principally upon overstrained valuations for Territory wools and Texas growths. Among sales were 20,000 pounds Oregon at 24 cents, 10,000 pounds Montana at 30 cents, 25,000 pounds spring California at 21 cents, 70,000 pounds spring California at 22½ cents. The Philadelphia market remains quiet, with no change in prices, but buyers look for lower prices soon. Among sales were 30,000 pounds scoured defective California at 46 to 51 cents, 1000 pounds Territory bucks at 14 cents, 15,000 pounds Territory fine medium at 23 cents, 20,000 pounds California at 19½ cents. The Boston market, though somewhat disturbed by recent defalcations, remains firm. The sales of the week were heavy, mostly in Territory wools, at prices a shade under the asking figures. Among sales were 236,000 pounds California spring and Oregon at 20 to 23 cts.

BOSTON, Aug. 21.—The demand for wool the past week has been quite good, and prices were steady. The sales of the week foot up 4,189,200 pounds, foreign and domestic, including considerable Cordova and other foreign carpet wools. There is no material change in the tone of the market. Some holders have been forced to realize by the stringency of the money market. Manufacturers have obtained a slight advantage in this way. Aside from this fact there is little if any weakness in the market. Foreign advices still report a firm and advancing market. There have been a number of our largest manufacturers in the market during the week looking round, and the sales show they bought considerable wool. There is some anxiety caused by the failures and defalcations of the past week, and uneasiness is felt by many who believe more embarrassments will follow. There has been a fair demand for California wool. Stocks are much reduced. The sales include 167,000 pounds California spring and Oregon at 19 to 25c; 194,000 pounds spring at 20 to 24c; and 325,000 pounds Oregon sold at 22 to 24½c. The receipts of the week have been 11,087 bales domestic, and 1693 bales foreign.

NEW YORK, Aug. 24.—Wool is quiet and firm. Domestic fleeces, 27 to 36c; pulled, 14 to 35c; Texas, 9 to 22c.

PHILADELPHIA, Aug. 24.—Wool is dull and nominal.

BOSTON, Aug. 24.—Wool is steady. Ohio and Pennsylvania fleeces, extra, 32c; XX 34c; XX and above, 35c; Michigan extra, 31c; other grades unchanged.

## New York Hop Market.

NEW YORK, Aug. 22.—For hops the market is rather quiet, and there is nothing doing excepting the changing of a few lots among dealers. Prices have a downward rather than an upward tendency. Good 1885 hops bring 27 to 29c, but do not command a

ready sale, buyers deeming them too high. The competition of German hops is felt more and more seriously, and as they are freely offered at 23 to 25c, American hops of similar quality can hardly bring much more. Of choice hops none are offering. The vines in the districts visited by the vermin are said to be, in most instances, totally destroyed, so that the yield of this State is insignificant. The excitement in the country has about died out, as has the expectation of very high prices. California 86's quoted about 35c; 85's 20 to 24c; 84's 12 to 14c.

## California Fruit at the East.

(Telegram to the Fruit Union.)

CHICAGO, Aug. 22.—Muscats are arriving, some poor and others in good condition, and sell from \$2.00 to \$2.50 per crate. Tokays, because of the hot weather, are coming in fairly well, selling at \$2.00, \$2.25 and \$2.50. Bartletts arrive in good order and sell at \$3.50 to \$3.75. Beurre Clairgeau, selling for \$3.50 to \$3.75. Peaches carrying only medium and arrive in fair condition, sell for \$1.50 to \$1.75.

PORTER BROS. CO.

CHICAGO, Aug. 22.—Earl Brothers, Butts & Fry, and Thacker Brothers, received a special fruit train from California Thursday, as also did Porter Brothers. The condition of the fruit on its arrival here was mostly good, and selling at low prices. Pears bring from \$2.00 to \$2.75 per box; muscatel grapes sell for \$2.00, and Tokays at \$2.00 to \$2.50 for 40-pound cases, with some lots not in very good condition, going at lower prices. Gross prices are selling lower, mostly at the jobbing rate of \$1.00 per box. Peaches are almost unsalable, as the receipts are so large from Michigan. Pears will probably decline considerably next week and that following, as increased receipts are expected. It is thought that fair pears will sell soon at \$1.50 per box, as York State pears will probably be on the market soon and in large quantities.

NEW YORK, Aug. 22.—Green fruit is arriving in very bad condition, some unsalable, and prices are steadily declining. The market is very dull. California pears, \$3.00 to \$5.00 per box; plums, \$1.00 to \$2.00; grapes, \$3.00. Raisins are quiet but steady. Loose Muscatel, \$1.95; London layers, \$2.20 to \$2.45. California London, none in the market. Citron is selling at 18½ to 18¾c; currants, weaker under liberal offerings. Sales of 1500 barrels at 5½c. Prunes, quiet, 3½ to 3¾c for Turkish.

## California Products at the East.

NEW YORK, Aug. 22.—California canned peaches, \$2.25 to \$2.50; pears, \$2.50; plums, \$2.00 to \$2.25; grapes, \$2.00 to \$2.10; apricots, \$2.10 to \$2.25; salmon, \$3.55 to \$3.60.

Honey—Extra clarified, 5½ to 6c. Seeds—Moderately active for all leading descriptions. California yellow mustard, 6 to 6½c.

## Local Markets.

BAGS—5000 Calcutta, importation of 1886, are reported sold by auction at 6.05c; balance of offering withdrawn.

BARLEY—Barley is quotable about 5c per ctl. higher than last week. Call sales to-day were: Seller 1886—100 tons, 92c; 100, 90½c; 200, 90½c; 100, 90½c; 2400, 90½c; 100, 91c per ctl. Seller 1886—400 tons, 90½c per cental.

BEANS—There is very little change; Pea and Small White are a shade easier and Pink Beans slightly improved.

CORN—Nebraska corn is lower this week. The market generally is unchanged.

DAIRY PRODUCE—The recent advance turned consumption largely upon pickled roll, and fresh butter has accumulated, and is lower this week. Strictly choice fresh roll will probably not remain long down. Cheese is in moderate supply and firm. EGGS—Eggs have taken another step up. The strictly choice, which alone bring the outside figure, are scarce.

FEED—Bran has advanced 5 cents per ton since our last report. Hay has declined the same amount. The following is the range. Barley, \$4 to 7; oat, \$6 to 9; wheat, \$8 to 11 per ton.

FRUIT—Full notes are given below.

OATS—Supplies are increasing and prices declining. Considerable quantities are arriving from Oregon and Washington.

WHEAT—Wheat and flour have made a considerable advance since our last report. In the case of wheat much discrimination in quality is made. Call trading has been active. To-day's sales were: Buyer season—100 tons, \$1.44½; 100, \$1.44½; 1200, \$1.45; 200, \$1.44½; 200, \$1.45½; 300, \$1.45½. Buyer 1886—300 tons, \$1.40½; 100, \$1.40½; 100, \$1.40½; 300, \$1.41; 200, \$1.41½. Seller 1886—2400 tons, \$1.34½; 200, \$1.34. Buyer season—300 tons, \$1.45½; 500, \$1.45½; 700, \$1.43½. Buyer 1886—600 tons, \$1.41½; 300, \$1.41½; 400, \$1.41½. Seller 1886—700 tons, \$1.34; 3300, \$1.33½; 600, \$1.33½ per ctl.

[COMMUNICATED.]

## Market Information.

## Bags.

The market is dull and weak, with no large sales reported. Advices from the interior report many farmers bringing back sacks, as their crops did not turn out as well as thought; these sacks were offered or being offered for sale at lower prices than they cost originally.

## Cereals.

Notwithstanding fine weather has prevailed in England the past week, wheat in that country has ruled strong with advances in prices reported. The higher market ought to indicate that the crop outlook is bad. An English cable to the press on this coast reports the English wheat crop at 60,000,000 bushels short. As harvesting has hardly commenced the estimate is premature; besides, it is wrong, but evidently is intended to give the shortage as compared with last year. Last year the yield to the acre was 28 bushels (4 bushels above an average), and this year it is estimated at 20 bushels, and even less if bad weather is experienced to any extent next fortnight. The French crop is undoubtedly considerably short of last year and heavy imports will be in order to meet the consumptive requirements.

Late revised estimates of the wheat crop of this State do not give encouragement to expect over 800,000 short tons (flour reduced to wheat), for export. Last season the exports (flour reduced to wheat), in-

cluding that received from Oregon, aggregated 800,000 tons, and then the tonnage to take it away was less than this season. This year, owing to a lessened yield, Oregon will not send us wheat, and very little flour.

One firm in this city has received instructions to buy 1200 tons for a firm in Texas. Other purchases, it is said, will follow for shipment to that State of good to choice wheat.

The local market has ruled exceedingly strong, at higher prices. At the advance there are more sellers than buyers. Sales have been made of No. 1 shipping at from \$1.36½ to \$1.38½, Port Costa delivery, and \$1.40 to \$1.42½ for good to choice milling, delivered here.

On Thursday last, heavy transactions in wheat were recorded on call, with options advanced from 4 to 6 cents over Wednesday's sales, but they fell back about 2 cts, since when there have been several slight ups and downs.

The barley crop—it is now well established—like wheat, is not so large as has been estimated; and as the demand is quite large, the heavy receipts that came in were absorbed with higher prices ruling for both bright feed and brewing grades. Shipments of the latter to the East continue on a liberal scale.

Oats ruled steady and firm up to Monday, when heavier receipts came to hand, causing a weaker feeling; but on Tuesday the market was firm again at Saturday's prices. The oats received are, as a rule, poor and inferior to what are wanted.

No transactions are reported in rye or buckwheat. English cables report wheat very strong to-day, but Chicago and New York were lower, owing to higher freights from New York to Europe. Our market closed very strong for sample parcels, with few sellers in the market.

## Dairy Produce.

Cheese has ruled steady and firm throughout the week. Stocks do not appear to be accumulating, as the trade call is fair. Eastern mail advices report a better market, with a slight advance obtainable.

The market for fresh butter in rolls is demoralized, as receipts from the north have increased, and the warm weather is against its keeping, thus forcing it on the market at the best obtainable prices. It is hard to get over 25 cts for gilt-edged.

Eggs have ruled strong throughout the week, with an advance obtained for all qualities, but particularly choice to gilt-edged. The consumption is in excess of receipts, causing stocks to be materially lowered.

## Feedstuff.

Hay continues to come in freely, but very little received is fine and, in all respects, first-class. The latter is wanted, and high prices paid—running up to \$13.00 afloat. Good to choice, but not extra choice, and also inferior grades, are in liberal supply, with a strong selling pressure reported.

Ground barley and rolled barley, in sympathy with barley, are strong and higher, with a good trade call ruling.

Bran, middlings and oil cake meal are strong, with a good consumptive demand ruling.

## Fruits.

Under heavy receipts on Thursday and Friday and still heavier on Saturday, Grapes were decidedly demoralized on the last named day. Canners bought Muscats as low as 30 cts a box and all other varieties proportionally as low. Our Monday receipts being lighter allowed merchants to clean up, which gave a firmer market on Tuesday, and a strong market to-day. The first Isabella grapes of the season were received to-day and sold at \$1.50 per box. There is more inquiry for wine grapes, with sales of Zinfandel at from \$20 to \$30 per ton, according to the locality grown; Muscatel grapes have sold at the same price.

Peaches under lighter receipts and a good demand have held to strong prices, with an advance obtained for choice varieties of clingstones.

Plums and Prunes under heavy receipts have ruled exceedingly low, with only choice varieties receiving attention.

In nectarines very little has been done, as receipts were light.

Pears, if choice, were quickly taken, with some extra choice Bartletts selling at over \$2 per box on the wharf. Cooking pears were hard to place.

The bulk of the apples received so far has been more or less wormy and otherwise inferior, causing them to be hard to sell. Choice varieties in good condition sold at from \$1 to \$1.50 per box; the latter was an outside figure.

Figs have been slow throughout the week, with prices favoring buyers.

A consignment of pomegranates came in to-day and sold at \$1 per box from the store.

Cantaloupes have been steadily advancing under lighter receipts and a good demand.

Watermelons are selling for more money as receipts fall off, and the hot weather increased the demand.

All kinds of berries ruled steady up to Monday, when, owing to only 71 chests being received, blackberries sold up to \$4 per chest; strawberries, \$6; and raspberries, \$11, with freer receipts since prices have shaded off.

## Hops.

The market is quiet, but strong for old and also for new for future delivery. The stock of old not in brewers' hands does not aggregate over 150 bales, with the quality poor. The New York crop is now placed at 20,000 bales against 150,000 bales last year. It is claimed that the bulk of this coast's 1886 crop has been bought up, chiefly for shipping East.

## Live-Stock.

Beef cattle are offering in excess of the demand, causing low prices to obtain. Retail butchers report a very dull trade, with lighter sales than at this time last year; why it is they are unable to say, but advance as many theories as there are butchers. Mutton sheep are also dull and weak, with prices in buyers' favor; the quality is unexceptional and therefore the dullness cannot be said to be due to poor stock. Calves and lambs are steady, with young wanted. Spot hogs are hard to sell, as the demand for the block is light, and from packers there is no call reported. For delivery in October and November some contracts for grain-fed hogs have been made at prices reserved, but it is claimed at an advance on spot quotations. In horses the market is without change; free steppers, of fine appearance and gentle, are in demand and fetch good figures, as do general utility animals. Small draft horses are not wanted, but larger sized find a fair market.

The following are to-day's meat prices: Beef—

Stall-fed, 7 to 7½c; 1 lb; grass-fed, extra, 6 to 6½c; first quality, 5½c to 6c; second, 5c to 5½c; third, 4½c. Calves, small, 9 to 10c; larger, 7 to 8c; 1 lb. Mutton—Ewes, 4½c; wethers, 5c. Lamb—Spring, 6½ to 7c; 1 lb. Pork—Live hogs on foot, 3½ to 4c for grain and dairy fed; 2½ to 2¾c for soft; dressed, 6c for hard, and 5c for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Vegetables.

Choice potatoes continue scarce and command high prices. Choice Peerless sold readily at \$1.10, while the general run of those received only fetched from 75 cts to \$1. The same remarks apply to Garnet Chilis; but Early Rose are poor and very inferior, as receipts constitute the last of the first crop.

Under heavier receipts sweet potatoes have ruled barely steady up to Monday, when they were weaker, with some difficulty had in getting over \$1.25 on the wharf, even for choice. The market is overstocked with ordinary to good.

In onions no changes have occurred the past week—the demand and receipts being about equal. Pickling onions have been drooping, with a weak closing.

Tomatoes have ruled weak and low throughout the week, as canners did not buy except at very low prices.

Summer squash, cucumbers, green okra and green peppers have been slow, with prices in buyers' favor. Pickling cucumbers have been taken in considerable quantities at 1½ cts per lb.

Receipts of cabbages and carrots have been freer, causing more of a selling pressure, necessitating some shading in prices to effect sales.

Green corn has fluctuated, with choice sweet young and fresh not selling at any time below \$1.25 for large crates. The large bulk received was fair to good and sold low, ranging from 60 cts to \$1 for large crates. On Saturday considerable carry-overs were sold to peddlers at 15 cts a crate.

Potatoes closed very strong to-day. Sales were made on the wharf of extra choice Peerless from San Leandro at \$1.20; Garnet Chilis, \$1.10, and Early Rose at 90 cents.

## Wool.

The market is quiet but firm for choice, desirable grades. Buyers are trying to obtain concessions, but so far as can be ascertained, without success. Receipts of fall wools are increasing, yet the stock on hand is light—hardly large enough to allow fair selections by buyers. Sales made this week were on last week's basis, as reported in the PRESS.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way .....	308,471	233,281
In port, disengaged .....	56,182	102,774
In port, engaged .....	72,643	14,572
Totals .....	437,296	350,627

The above gives a carrying capacity as follows: 1886, 699,673 short tons; 1885, 561,003 short tons; increase over last year, 138,670.

The exports by sea from this port from July 1, 1886, to date, compared with the like time in 1885, are as follows, in cents:

	1886.	1885.
Wheat .....	1,154,730	575,233
Barley .....	217,788	9,769
Oats .....	2,001	3,813
Corn .....	4,094	969

Poultry has ruled steady and strong throughout the week, with choice conditioned sold at an advance on daily press quotations.

Beans are quiet and weak.

Honey is dull and lifeless, yet holders are not pressing the market, believing that better prices will prevail later on in the season.

San Francisco, August 25, 1886.

## List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey &amp; Co., Pioneer Patent Solicitors for Pacific States.

From the official report of U. S. Patents in Dewey &amp; Co.'s Patent Office Library, 252 Market St., S. F.

FOR WEEK ENDING AUGUST 17, 1886.

- 347,563.—CAR AXLE—J. Bourne, Jr., Portland, Oregon.
- 347,479.—MOTOR—B. Elmore, Redding, Cal.
- 347,705.—MOTOR—I. S. Goldman, Pasadena, Cal.
- 347,592.—ELECTRIC BELT—Ira Gray, S. F.
- 347,484.—CANDLESTICK ATTACHMENT—George Grisel, S. F.
- 347,615.—SMOKE-CONSUMER—John Keane, S. F.
- 347,721.—GANG PLOW—E. E. Krause, Rio Vista, Cal.
- 347,722.—CULTIVATOR—E. E. Krause, Rio Vista, Cal.
- 347,430.—BATH APPARATUS—W. F. Lambert, S. F.
- 347,431.—VERTICAL SHAFT BEARING—I. P. Lambing, Ione, Cal.
- 347,433.—ELEVATOR—A. J. McAdam, S. F.
- 347,435.—KING-BOLT—T. A. McGovern, Bolinas, Cal.
- 347,438.—ROCK DRILL—E. Moreau, S. F.
- 347,368.—HOSE AND PIPE COUPLING—P. J. O'Connor, S. F.
- 347,644.—STEAM ENGINE OR PUMP—W. C. Salmon, Portland, Oregon.
- 347,524.—SHOE FASTENING—J. T. Senteney, Blocksburg, Cal.
- 347,455.—CARTRIDGE-LOADER—C. Wonacott, Murphys, Cal.
- 347,353.—CAR AXLE—J. J. Kelly, S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & CO., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and, as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription rate, \$3 a year. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber please show the paper to others.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Idaho and Montana.  
Geo. McDOWELL—San Luis Obispo and Santa Clara Co's.  
FRANK W. SMITH—Montana, Utah and Colorado.  
M. S. PRIME—Alameda Co.

## Santa Rosa Nurseries.

Our RURAL reporter during fair week, in company with Mr. Luther Burbank, the well-known nurseryman, took in the "City of Roses," one of the most lovely and thriving inland cities of California. On every side, extending to the very top of the mountains on the east, dividing the counties of Sonoma and Napa, extensive orchards and vineyards have been planted. Mr. Burbank has been for years prominently identified as the chief nurseryman in this section. At the present time he has three nurseries within the city limits of Santa Rosa and one at Sebastopol, seven miles west. He has kept abreast of the times in securing all the choicest varieties of fruit, ornamental trees and rare flowers. Anticipating a demand for olive trees, he has now 60,000 of the Picholine and Mission varieties. His Santa Rosa nurseries are under-drained with terra-cotta pipes, and to this he attributes his success in the thriftiness and growth of his trees. As a sample, he has olive trees two years old, six feet in height, well branched, without irrigation, and other varieties of trees in like proportions. Such a thing as "scale" of any kind, he says, has never been known in his nurseries.

## The Fresno Nursery.

D. W. Lewis, of the Fresno nursery, opens the season in our columns with an attractive illustrated advertisement, showing the Texas umbrella tree, the most popular shade tree about Fresno, and excellently adapted to the warm valleys, though it also does very well in other situations. Mr. Lewis has a good stock of these trees and has grown them perhaps in larger quantity than any other grower. He has also a full general nursery stock, including all the most popular varieties. A specialty has been made of pear trees, of which about 30,000 yearling trees will be ready for this year's planting.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

THERE is a vast difference between charlatans and scientific opticians, judging by the numerous misfits calling at Muller's optical depot, 135 Montgomery St.

## CHAMBERLIN AUTOMATIC

MACHINE-MADE  
"Standard" Shot-Gun  
Cartridges.

Sold by all Dealers in Ammunition

THE Sign of the Arkansaw Cough Syrup is looking you all square in the face.  
Do you want a sure, safe and reliable Cough Syrup? Are you troubled with a Cough, Cold, Bronchitis or Lung Complaint? Do your Babies keep you awake all night with Hacking Coughs, Colds in the Head, etc. Do you want something reliable in the house to meet these emergencies? We answer to all: "Go to your Druggist and get a Bottle of the Arkansaw Cough Syrup, and be troubled no more." Price, 50 cents per Bottle!

For Sale by all Druggists.

## California Inventors

Should consult DEWEY & CO. AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. Their long experience as journalists and large practice as Patent attorneys enables them to offer Pacific Coast Inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS, No. 252 Market St., San Francisco, Elevator, 12 Front St.

## THE WHITMAN PERPETUAL HAY PRESS

Write for Circular. I am Agent for this Press.  
**BYRON JACKSON.**  
Manufacturer of  
HAY STACKERS, RAKES, THRESHERS, WINDMILLS, PLOWS, HARROWS, ETC.  
625 Sixth Street, San Francisco.

## JACKSON'S WINDMILLS ARE THE BEST!

Send for Circular and Prices of the various styles of Mills I make.

## IRRIGATING PUMPS.

WRITE FOR PRICES, ETC.

I MANUFACTURE

Steam Engines, Threshing Machines, Windmills, Harrows, Pumps, Etc.

Complete Catalogues Free. Address

**BYRON JACKSON, 625 Sixth Street, San Francisco.**

SEE MY IRRIGATING PLANT ON EXHIBITION AT MECHANICS' FAIR.

## The Fresno Nursery

IS HEADQUARTERS FOR THE CELEBRATED TEXAS UMBRELLA TREE.  
We have the only stock of genuine in the State; also a full line of Fruit Trees of all varieties, and rooted Grapes, French and American Elms. We make a specialty of Pear Trees, and have all sorts, including the latest Early Pear, The Lawson; 20,000 branched yearling Bartlett. Our Stock is Clean. New Catalogue ready Oct. 1st; free to any address.  
D. W. LEWIS (Successor to Lewis & Bard), Fresno, Cal.

## STEARNS MANUFACTURING COMPANY, SAN FRANCISCO, CAL.

Sawmill, Woodworking and Shingle Machinery.  
DETROIT BLOWER CO.'S DRY KILNS.  
Circular, Band, Scroll and Crosscut Saws.  
SAW TOOLS, KNIFE and TOOL GRINDERS.  
Emery Wheels, Files, and Belting.  
LUBRICATING OILS and MILL SUPPLIES.

ALL SIZES OF THE

## Ewart Detachable Chain

CARRIED IN STOCK.

## HOOPER'S SOUTH END GRAIN WAREHOUSE.

First-class Fire-proof Brick Building.

TOWNSEND STREET, BET. FIRST AND SECOND, SAN FRANCISCO, CAL.

GEORGE H. LEMMAN, Proprietor.

Goods taken from the Dock and from the Cars of the C. P. R. R. and S. P. R. R. Free of Charge. Storage at Current Rates. Advances and Insurance at Lowest Rates. TELEPHONE No. 327. 4

## SPRAY PUMPS.

Fruit Growers, Farmers, and all desiring to purchase a Spray Pump that is far ahead of all others in the market, as it is the ONLY Pump made with all metal valves, should buy the "CLIMAX SPRAY PUMP," all complete with tube, spray nozzle, six feet of best Rubber Hose; capacity, 8 gallons; also plain nozzle, galvanized iron can, all ready to use. Price, \$15.00. Good Agents wanted at once. Send for Circulars. No. 211 CALIFORNIA ST., SAN FRANCISCO, CAL.

## NATIONAL ASSURANCE CO., OF IRELAND.

ATLAS ASSURANCE COMP'Y, OF LONDON.

BOYLSTON INSURANCE COMPANY, OF BOSTON, MASS.

H. M. NEWHALL & CO.,

GENERAL AGENTS,  
309 & 311 Sansome St., San Francisco, Cal.

## A Good Opportunity for a Machinist.

A variety of good Tools, Patterns, etc., with business for sale cheap by a party retiring from business. A splendid opportunity for an enterprising mechanic.

Address A. B. C., care of this paper.

## Engraving.

Superior Wood and Metal Engraving, Electrotyping and Stereotyping done at the office of this paper.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially, is the best adapted to REMOVE STUMPS AND TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.

For particulars how to use the same, apply to

**BANDMANN, NIELSEN & CO., General Agents**  
GIANT POWDER COMPANY,  
SAN FRANCISCO, CAL.

## THE PACIFIC ASYLUM,

STOCKTON, SAN JOAQUIN COUNTY, CAL.

### PRIVATE ASYLUM for the Care and Treatment of Mental and Nervous Diseases.

The Proprietary Institution called THE PACIFIC ASYLUM, where the Insane of the State of Nevada have been kept for several years, was opened as a PRIVATE ASYLUM for the care and treatment of Mental and Nervous Diseases, on the 10th of August, 1882, the Nevada patients having been removed to the new State Asylum at Reno. The buildings are capacious and comfortable, having been constructed for the accommodation of over 200 patients, and they are pleasantly situated in the suburbs of Stockton, and are surrounded by attractive grounds of 40 acres in extent, with cultivated gardens and pleasant walks. Its advantages over public institutions in facility of admission and procuring extra accommodations, if required, are obvious. For terms and other particulars apply to the proprietor and Superintendent, DR. ASA CLARK, PACIFIC ASYLUM, STOCKTON, CAL.

ASA CLARK, M. D.

REFERENCE—Dr. L. C. Lane, San Francisco.

### DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to

**DANIEL BEST,**  
513 Fifth Street, Oakland, Cal.

HENLEY'S

### Monarch Fence Machine, \$40.00.

With one of these Machines a farmer can build his own fence cheaper and better than he can buy it, or make it by hand. TRY ONE. Send for Catalogue.

## WINDMILL.

After many years' experience in the invention and manufacture of Windmills, among which may be named the "Hercules," "Saunders," "Cyclone," "Eureka," the subscriber has perfected a mill that infringes no patent; will face the wind; is direct action; solid wheel; no wood screws, pivots, loose joints, flapping sections or spider legs to get out of order. Is beautiful, strong, not liable to get out of order, and in cheapness below any other. Send for pamphlet of the "Eureka Improved Windmill." Pumps of various kinds at very low rates. Address

**E. B. SAUNDERS, San Jose, Cal.**

ANGELL'S LIVER PILLS cure rheumatism and headache.

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

# THE "NEW DEAL" SERIES OF WHEELED WALKING PLOWS.

Single, Double, Triple and Quadruple Furrow. Manufactured by JOHN DEERE & CO., Moline, Ills.

The Latest and Greatest Improvement of the Age in Plows. The "New Deal" is a Plow of the Times, made to suit the demands of the times.

THE "NEW DEAL." { LIGHT WEIGHT, LIGHT DRAFT,  
LIGHT WORK for man and beast.

## THE NEW DEAL GANG PLOW

GILPIN SULKY PLOW.

The construction of the "GILPIN" Sulky Plow is ingenious and simple. It is of light draft, easy on the operators, strong, durable and economical. It has an iron beam and an iron frame; is free from a complication of lever gearing, jack-screws, pulleys and chains, one lever only being required to operate to any required depth.

### TESTIMONIALS:

DUNNIGAN, CAL.—We have a 3 and 4-Gang New Deal Plow; have used them in gravel, adobe and the ash hill land, and we find the Plow equally adapted to each kind of soil, and consider them the "Boss" Plow for the California farmer.—BOOTH BROS.

VIRALIA, CAL.—Having been extensively engaged in farming for a number of years, I can safely recommend the "New Deal" Plow to be superior to all others, for lightness of draft, quality of work, and adjusting facilities.—JOHN TUOHY.

MERCED, CAL.—I have the four 3-Gang, 10-inch "New Deal" Plows at work, and for completely turning the ground over and lightness of draft, they are the best Plows I ever saw.—V. C. W. HOOPER.

HUBBARD, CAL.—The "New Deal" Plows have given entire satisfaction in our part of the country, and have plowed weeds under which no other Plow could have done. Mr. N. S. Cook, who had a "Stockton" Plow to use on the side-hill, could not do anything with it, and had to use the "New Deal," which worked satisfactorily.—WOLFF & LEHMAN.

YOLO, CAL.—The "New Deal" Plow is the best Plow that ever was made, excepting none. I have got "Brown's," "Caasady's," and "Eureka's," and the "New Deal" will do more work and better than any of them; furthermore, it can be worked in any kind of soil.—GEORGE WOODWARD.

LIVERMORE, CAL.—The 3 Gang, 10-inch "New Deal" Plow bought of you works first class. If I can sell my other gangs, I will use the "New Deal" altogether, as they do the work better and run much easier than any gang plow I have used or seen.—DETLEP LA FRENZ.

We can furnish one hundred more Testimonials, if desired.

For Lightness of Draft, Ease of Management, Strength, Durability and Quality of Work,  
The "NEW DEAL" is without a Parallel.

3-Gang, 8-inch.....\$75 00	4-Gang, 8-inch.....\$80 00
3-Gang, 10-inch.....80 00	4-Gang, 10-inch.....90 00

All with Extra Points.

We take pleasure in calling special attention to our recent improvements in the construction of Plows, which consists of a brace crossing and WELDED SOLIDLY TO THE STANDARD, extending down and bolted to the land side, affording a firm brace to the standard and giving much greater strength than will be found in any other set-up handle plow. It also extends up and bolts to the handle with two T bolts, producing the best braced and finest plow made.

#### A Group of Holsteins in California.

The cow Dulytra (Anna), 1639 F. H. B., and 9412 Holstein-Friesian Herd-book of America, was bred by J. J. Heystra, Beetgum, Friesland, in 1878, imported to this country in September, 1884, by M. S. Bidwell, of Monterey, Mass., and to California by Mr. H. Pierce in 1885. She was selected by an agent of Mr. Steele as being the best cow imported from Holland in 1884. She was shown at the State Fair at Sacramento, at Stockton and Oakland fairs in the fall of 1885, at all of which fairs she took first premiums as best Holstein-Friesian cow. She was bought by E. W. Steele, of San Luis Obispo, and exhibited at the Monterey District Fair last year, where she again took first premium. She has a fine, glossy coat of hair, velvety skin, excellent milk mirror and veins, and a perfect udder; her head and horns are fine. She is straight on the back, square hipped, in short, is nearly perfect in form; she weighs 1450 pounds in moderate flesh. At the time when purchased by Mr. Steele she had been for more than a year on steamers, railroads, in quarantine or attending fairs, notwithstanding all of which she dropped a fine bull calf December 8th, sired by the imported bull, Billy Gibbony, No. 3227, Vol. 8, H. H. B. Since December 20th Mr. Steele has had kept a daily record of the weight of her milk product. The following is the result: From December 20th to January 1st, 641 pounds; for January, 1975½ pounds; February, 1764 pounds; March, 1754½ pounds; April, 1701½; May, 1604½; June, 1438 pounds—being 10,238 pounds in six months. This milk yielded 12 per cent cream, according to a glass with a scale of 100 parts, which showed the relative quantity of milk and cream at the end of 36 hours. There is no doubt at least 13 per cent would have been obtained by the use of the Centrifugal creamer.

According to tests made this year by weighing milk, and the cheese produced from the milk so weighed, this quantity of milk would have made 1290 pounds of cheese. Mr. Steele thinks Dulytra's milk for the season, if made into cheese, would have made 2000 pounds. In February the cow was sick for a few days, and lost 10 pounds per day in the flow of milk, which she did not regain. This, together with the fact of its being her first season in the country,

and consequently having to pass through the acclimatization process and to become accustomed to California feed, makes this a remarkable record. As showing the effect of removal upon cows, Mr. Steele states that he has dairied cows in Marin county, on the coast, that were brought from the interior, and in San Mateo and San Luis Obispo counties, cows brought from the colder climate of Point Reyes, Marin county, and even these slight changes in climate and grasses cause a marked effect on the flow of milk during the first season, decreasing

age weighed 535 lbs. A heifer calf, mother a two-year-old heifer, at seven months of age weighs 575 lbs. These calves are all raised for use, and not for show; they are well raised, but not forced. From nine thoroughbred cows, Mr. Steele has raised, this season, three bull and five heifer calves, which, at like ages, are all, except Dulytra's calf, so nearly alike that one could hardly choose between them at this time.

Mr. Steele has two thoroughbred Holstein bulls—one imported and one bred by N. M. Singarly, of Philadelphia, Penn.; eight im-

#### Our Paper.

We borrow a corner on our first page, this week, to say a word for ourselves. This enlarged edition, being devoted to the State Fair, will, no doubt, bring our journal face to face with some who are desirous of agricultural information, but who are not numbered among our subscribers. To all such we desire to say that their interest and support are respectfully solicited. The PACIFIC RURAL PRESS is conceded to be the leading agricultural and home

journal of the State; that there is no other source from which can be obtained such important and useful information of the condition and practical methods in all branches of California agriculture, and in which discussions of all important interests are mainly conducted by those actually engaged in the work. There was never a time since California farming began that there was such a demand for accurate and practical information as at present. This is owing, first, to the hosts of newcomers who are investing their means and labor in building up rural homes, and who naturally need advice as to the details of the work; and, second, from those older in California industry who desire to consult and plan together to secure the best methods of preparing products and placing them upon the

IMPORTED HOLSTEIN COW DULYTRA, OWNED BY E. W. STEELE, OF SAN LUIS OBISPO.

it from one-third to one-fourth. Such changes of conditions and surroundings often cause a heavy percentage of the cows to drop their calves prematurely; and all this, even though the change is to a better climate and grasses. With good luck and care, this cow may be set down for an increase in quantity of milk of one-third during the next season over that produced in this, her first year in California.

Dulytra's calf was raised by hand on milk and grass; has not been fed grain nor oil-cake, neither blanketed nor curried. At two months of age his weight was 310 pounds; at three, 405 pounds; at four, 556 pounds; at five, 665 pounds; at six, 755 pounds; at seven, 775 pounds. The lessened gain in the seventh month was owing to the hot weather and the weaning process. He will be registered in the American Holstein-Friesian Herd-book, under the name of Duke of Obispo.

The second bull, the calf of a two-year-old heifer, dropped February 3d, at six months of

ported cows and heifers, and one cow bred by Peter Coutts. The two year-old heifers are producing 25 per cent more milk than selected heifers from Mr. Steele's old herd under the same treatment, and the old herd have been bred for milk for 30 years and are equaled by few herds for the dairy.

When we take into account the fact that these two-year-olds have spent six months of their lives in quarantine, have crossed the ocean and the plains, made another sea voyage from San Francisco to San Luis Obispo, and then ranged on new grasses and water, we think these results demonstrate the fact that the Holsteins are a hardy and valuable breed both for the block and the dairy, and that they adapt themselves readily to the soil and climate in California. Mr. Steele is raising his calves well, but not forcing them. He intends that they shall be valuable animals for the use of the farmer and dairyman, and not for show or fancy alone.

world's markets. These demands for information, and the kindly disposition to impart it, fill our columns with life and interest, and warrant us in promising to all new friends who may be interested in our columns that they will secure benefit from subscribing for the RURAL, altogether disproportionate to the slight expenditure which a year's subscription demands from them. Any one who enlists in any branch of California farming, in stock-growing or dairying, in the poultry yard or apiary, in the orchard or vineyard, or he who does even more wisely, perhaps, and enters upon mixed farming to supply the needs of his own family and have a varied product for the market—all will find in the RURAL PRESS a painstaking friend and earnest adviser which will grow in his esteem the longer the acquaintance be. The RURAL always desires to increase its ranks of friends and patrons, and will be pleased to hear from all who may favorably judge us on first appearance.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## San Jose Notes.

EDITORS PRESS:—Can you use a few notes from this smiling, hopeful land of fruits and flowers? One of the prominent citizens of this great nation fiercely asserted, some years ago, that "cotton was king." Others seem to be sure the crown would rest on wheat. Any one taking notes this month in our orchards, along our roads and streets, and through our huge canning and drying factories, must declare at sight, "no matter who or what is king, Pomona is surely queen of our purses, people and hospitality."

Our trees bowing (in many cases far too humbly) with their load of fruit. Our streets are thronged by carefully-driven teams that often have to wait their turn to unload at the factory until the patience (or impatience) of the drivers may be known, heard, if not read of all men.

Then what a sight is presented to one who has the privilege of a peep into that Babel of clatter and noise, sweet vapors and fruity smells, the canning factory, where feminine youth and old age seem striving to see which can make the most rapid movements to empty boxes for so much a box, or to fill and jar down the fruit in cans at so much an hour; while the manager walks about holding each of these busy bees close to the rules and regulations, and wishes very earnestly he could obtain 100 more workers.

Many thoughts occur to one who studies this new industry. Large-framed, fast-growing boys make much finer men if allowed to grow strong before being set to heavy work. No tree should hold a load that will bend its youthful limbs to the ground, destroying its symmetry and impairing its usefulness in after years. Prune severely, cut back each year's growth until you feel ashamed to look at the tree, and you will find it will start up and develop such crotches and strong, upright main limbs, that when you let it have a show, at four years from setting, to keep a part of its fruiting limbs, it will have backbone enough to hold its head and fruit proudly aloft and be a thing of beauty as well as utility.

I believe this service of Queen Pomona will do for a people what neither King Cotton nor Wheat can do. It will develop the love of beauty and be the means of bringing out the "artist" in many families. Beautiful groves, flower-plats and landscapes seem the natural daily sights about an orchardist's home and must affect the children whose lives they seem a part of. Each year our Horticultural hall shows the growth in this direction, but I leave the description of growth shown there to able pens, driven by those who have better opportunities to observe.

I think we need a more definite standard for our first, second and third class fruits. At the canning factories there seems to be a determination that the fruit shall correspond to the label on the can; first-class shall always open and pan out first-class, and this is easier to be sure of than to be sure what first-class means as it is boxed in the orchard. There is a complaint that when fruit first comes in or is short on the market, a certain size or number per pound is quickly taken as first-class, but the same size may be rejected and refused to apply on the contract when fruit is plenty. Can we not have a definite, well-established size and weight for each fruit independent of season? If no peach in a box of first-class could pass through an inch and three-quarter hole bored in the lid of box, we should have some idea of its required size, or if a box of given number of pounds must be filled by not more than a given number of peaches, it would give us a standard of size and weight, and the pickers' eyes would soon be so accustomed to sizes that it would be easy to approximate the right.

We here very much need some enterprises that could and would be closed during the fruit season, that the hands might be taken on by the canners. No class of help can be expected to lie around ten months to be rushed two months. We need a greater variety of occupation for common workers. Please accept this from a country observer brimful of strong faith and hope.

San Jose.

C. A. WYMAN.

## Boring for Oil.

EDITORS PRESS:—About one-fourth of a mile below Miles station, on the Pacific Coast R. R., between Port Harford and San Luis Obispo, Messrs. Nichols, Adams & Walker, of the latter place, are boring a well for coal oil. They are down over 700 feet, have plenty of carbonic gas and sulphur and an artesian flow of water strongly impregnated with sulphur, and running at the rate of 900 barrels per day. The prospect for oil is considered excellent. Should success attend this effort, there are other prospects considered of value in this part of the county which will doubtless be investigated.

San Luis Obispo Co.

MCD.

A MASS OF LEAD in an elevated furnace in Paris was completely dissipated by a stroke of lightning, no trace of the metal being found afterward.

## THE IRRIGATOR.

## The Irrigation Question in Southern California.

EDITORS PRESS:—Your correspondent, S. Bristol, in your issue of August 21st, makes some remarks which, if they were not answered, would imply that we were purposely and willfully withholding the truth for selfish purposes. The contrary is the fact; we are only anxious that the whole truth should be known, believing that any fair-minded land-holder will see that our position is so just and fair to all that he will be willing to concede all that we ask on irrigation matters. My article, in your issue of August 21st, was perhaps not so clear on some points as it might be, and as we can best arrive at a proper understanding of the matter by a full and free discussion of it in all its bearings, hence this further article.

One fact in regard to our rivers in Southern California, which is not generally known, should be stated: There is not a single river in either Los Angeles or San Diego county which runs into the ocean. San Bernardino county not being a coast county, is exempt from these remarks, but the Santa Ana, a short distance from its exit from the San Bernardino mountains, loses itself in the sand, except in an unusually wet season. The Mojave, also on the desert side of the mountains, has the same peculiarity. All of our rivers sink and rise again several times, and this quite independent of irrigation. All of the water used in Riverside comes from Warm creek, which takes its rise in and around San Bernardino. All of the water used in and around Los Angeles rises within seven miles of the city, and, except in heavy rains, has never been known to run into the San Gabriel river, its natural outlet. The waters of the San Gabriel river are all taken out near the Sierra Madre range, in which it rises, and the channel has always been perfectly dry in the summer time on the wagon-road between Los Angeles and San Bernardino. Still, a few miles below, there are two rivers—the old and the new San Gabriel—which are again lost before reaching the ocean. The old San Gabriel has this peculiarity: There are several ditches on it which take all the water they can get, but a short distance below each the water is in considerable volume again.

Mr. Bristol makes one statement in his article as follows: "It may be said, 'The irrigators are not opposed to proper indemnity, etc.' Then why have they avoided all allusions to it in all their speeches, manifestoes, conventions, etc.? They have been asked to define their position on the matter in the public prints, but to this day they are silent, and because they have been thus reticent on this most important matter they have aroused against them the suspicion and opposition of pretty much all the farmers living on the banks of rivers throughout the State." Simply because there is no need to do so. The doctrine of appropriation recognizes the rights of prior appropriation for a useful purpose, no matter whether that use be for domestic or irrigation purposes. There are really

## Three Parties in this Fight,

The riparianists, the monopolists and the appropriators. The riparianists have classed the appropriators with the monopolists, and very unjustly. Mr. Bristol has stated the doctrine of monopoly very fairly, which is to get and keep all it can, legally or otherwise, and "bluff" or wear out in our courts of law the weak and defenseless. Practically, riparianism in its ultimate effect is no better than monopoly, which seizes on anything within reach, and holds it until necessity compels people to agree to its demands. Riparianism, on the other hand, lies in wait until somebody has appropriated water and made it valuable and a necessity of life, and then starts up and says that you must let this water flow in its channel undiminished in volume. This, of course, means ruin to the appropriator. The riparian owner, in all probability, can make no use of the water; but he wants the State to exercise the right of eminent domain and pay him not its value to himself, but the value of the water to the appropriator.

## A Record of Experience.

A short description of things as they were 16 years ago will illustrate the position of the appropriators better than any argument. Nearly 16 years ago the writer was an owner of both land and water on the old San Gabriel river, in Los Angeles county, 10 miles from Los Angeles. This was one of the oldest rights on the river, and indeed in the county, at that time. The water and the land were inseparable—if not according to law according to custom, which our ablest lawyers admit is good law. The original owners of the land in good faith built their ditch and appropriated water, not for speculative purposes or to sell water, but simply for their own use. They could and did take, if necessary, all of the water in the river in summer, so long as they applied it to a good use. They could not run any of it to waste. If they had more in their ditch than they could use, they had to turn it back into the river. Had they taken water from the river and wasted it, those on the river below who suffered damage from want of water had a good cause of action at law for damages. They could have frequently sold water to adjoining lands, but

would not, for two reasons: First, if they once let water on new lands, it gave them the first right to the use of a surplus. Second, they would have been responsible to those who had built ditches lower down to catch surplus and waste water. Each owner of land was interested in proportion to acreage, and had representation in the company accordingly. The water was not sold, but was divided equitably and in such a way that those who got it this time in the daytime got it next time in the night-time. Assessments were made to pay expenses. Owners might work out most of their assessments.

This is appropriation pure and simple, and, as handed down from the Moors through the Spaniards and Mexicans under this system, only lands contiguous to rivers and easy of irrigation were so irrigated. As the country became settled up it was found that the choicest lands lay on the high mesas or table lands, that the bottom lands could raise good farm produce and fair fruits, but the best fruits could only be grown on high, dry mesas. It required capital to do this, and this brought in another system of appropriation. The system, as it now stands, is for the capitalist to buy up the lands in large tracts, water with it if possible; if not, get it by purchase elsewhere, which has frequently to be piped or flumed, owing to the porous nature of the ground run over. The land is laid off into small lots, generally 10 to 20 acres, and the water brought to it, land and water being sold together—so much water for so much land—representation accordingly. Such has been the absolute fairness of this system that the capitalist has even refrained from asking for representation on unsold land and water, trusting to the honor and honesty of purchasers themselves to manage water matters. Capitalists have gone into these enterprises, of course, to make money, but I do not know of any yet in Southern California who have made anything so far. Thus the Riverside Land and Irrigating Co., at the time of selling their ditches and other property two years ago, had spent \$180,000 more than they had received from all sources, and the purchasers, the owners of land in Riverside, are under obligations to spend \$120,000 more, which is likely to be increased as much more before contemplated improvements are completed. Of course we expect to get some of this outlay back again from future land sales.

## Of no Use to Riparian Owners.

Riverside, Los Angeles and some other places are in the position that the water they have appropriated cannot be used elsewhere to so much advantage as in the present position, and should riparian owners be able to turn the waters of the Santa Ana into the channel again, it could be of no possible benefit to any one. Until this recent decision by four out of seven judges of the Supreme Court came up, there never was any question as to the rights of appropriators in Southern California; but, in consequence of that decision, everything is unsettled because there is money in it for a certain class—that class who make their living by the sweat of another man's brow. It would not, of course, at all suit riparian owners to use the water themselves; but if they can compel the water to be turned in to the streams again they know they have us by the throat.

## Effect of the Riparian Doctrine.

It was said a long time ago by a very important personage, "Skin for skin, yea, all that a man hath will he give for his life."

If the courts should sustain the law of riparian rights we will have no option but to practically buy our places over again at their full value, improvements and all. Our titles to our lands are not worth the paper they are written on without water. Many have come here with very limited means and in poor health and went into debt to buy their lands and put improvements on them. It is an expensive business buying and improving land and waiting five or ten years without any returns for your labor or money. If the returns are large, so also are the expenditures.

The position that the appropriators take is that they appropriated these lands and waters for a useful purpose and to the detriment of no one; that after the expenditure of millions of money and years of toil, a class of men who have never done any good to society see a chance to make money, and they are trying for all it is worth. The appropriators of water ignore no man's rights. The courts here have always decided in favor of prior users of water, whether rich or poor. If Mr. Bristol has been injured as he says, had he lived in San Bernardino Co. he could have cut the dam on the river above him and the courts would have upheld him in his action, but he could only claim the water he was actually using at the time of appropriation by the other parties.

## Old Filings.

A good deal has been made of the sentiments made by the San Francisco Chronicle about the number of filings on water in the Southern counties. A filing on water amounts to no more than filing on Government land unless the law is complied with. You can file on water, but unless you go to work in good faith within 60 days it will be null and void. When a ditch is built and water appropriated it can only be applied to a useful purpose. The ditch may belong to the capitalist, but the water that runs in it belongs to the users of the water. There is no strife on that score in Southern California, for those who own the lands own the ditches and water. Such is irrigation and appropri-

tion of water as custom has decreed from time immemorial—a custom under which Southern California has grown and prospered, and which was unquestioned until the recent decision, which, if sustained, can only result in ruin to Southern California or dismemberment of the State.

## Valuation of Riverside.

In copying from the Riverside papers the figures of the assessed valuation of Riverside, I omitted one item which made the aggregate (as given in my article in the RURAL of August 21st) too small. The figures, as taken from the assessment roll, stand as follows:

Real estate.....	\$625,254
Improvements.....	641,855
Personal property.....	255,018
Cash.....	19,059

\$1,541,186

This, of course, does not materially alter the sense of my article. The total was correct, with one item omitted.

JAMES BOYD.

Riverside, Cal.

## THE FIELD.

## Prospects for Higher Wheat Prices.

EDITORS PRESS:—Many writers claim that the English wheat crop plays a less important part in regulating values than formerly. While this, to a certain extent, may be the case, yet the fact cannot be ignored that England's crop prospects still control values. This is made more clearly evident by favorable weather in July, and also in this month, depressing wheat values in that country, and unfavorable weather enhancing values. The advances abroad during the past ten days were brought about by bad crop weather, and while prices are only slightly higher now, with continued changeable weather, the effect will be more telling later on in the season. Going back only two decades, or from the year (1866) the first returns of acreage seeded to wheat in the United Kingdom were made, the results of bad and of fair weather are seen. After a medium warm summer in 1866 the season of 1866-67 gave an average price of 60s 4d per quarter. The summer of 1867 was cold and wet, giving an average yield of only 21 bushels to the acre; the price for the season of 1867-68 averaged 8s higher. The summer of 1868 was very warm and the price of wheat the season of 1868-69 dropped. The summer of 1869, though a medium season, resulted in a large harvest, and prices averaged the season of 1869-70 4s 2d. The summer of 1870 was dry and warm, but not so fine as 1868; the average price the season of 1870-71 was 54s 2d. There was speculation and demand from France on account of the Franco-German war. Damp and cool weather in the summer of 1871 gave a poor crop; prices averaged 56s 7d the season of 1871-72. Like weather in 1872, and again in 1873, gave the average price of wheat the season of 1872-73 at 57s 3d, and for 1873-4 at 61s 3d. In 1874 the summer was nearly as fine as 1868; caused wheat to sell for the season of 1874-75 at 46s 6d. Low prices ruled owing to favorable summer weather in each year up to the season of 1879-80, when the average was 46s per quarter, an advance of 4s 6d over the average of 1878-79. The advance was due to the cold, wet summer of 1879. The next two summers had medium weather, and the wheat averaged the season of 1880-81 44s 1d, and for 1881-82 46s 9d.

The summer of 1882 had medium weather, and the crop was an average; the large imports of wheat sent values down, making an average for the season of 1882-83 of 41s 11d. The average for 1883-84 was 39s 4d. The summer of 1884 was dry and warm and the crop fine, causing wheat to average only 34s 3d the season of 1884-85. The summer last year was warm and dry, and wheat averaged for the season just closing only 32s 1d per quarter.

The summer this year in England has been medium and with damp unsettled now when fine weather is of the utmost importance up to the last of September. If there is changeable unsettled weather from now on it is claimed that England will require a larger importation this season of 1886-87 than the season of 1885-86. It is safe, from all information obtainable, to place the additional requirements at fully 35,000,000 bushels, for, although the English yield may not fall much below the average to the acre, yet the grain will be damp and America's dry wheat wanted for mixing. France's summer so far has been as unfavorable as England's, and with continued unfavorable weather in this and next month, her shortage compared with last year's crop is placed at 81,000,000 bushels. This will give a total shortage for the two countries of fully 116,000,000 bushels. France's estimated shortage this year is based on the short crop which followed the unfavorable summer in that country in 1879. If the wheat crop in England and France should be as deficient as in 1879, and the Hindostan crop as short as claimed, prices in England will rule very high, particularly if the United States is unable to spare more wheat than last season (it now looks as if we will not be able to spare so much). Some well-informed parties place the advance abroad before the end of July, 1887, at fully 50 per cent on present prices.

## THE VETERINARIAN.

## Government Suppression of Cattle Diseases.

Recent acts of Congress make it the duty of the Commissioner of Agriculture to prepare rules and regulations for the suppression and extirpation of the contagious pleuro-pneumonia of cattle, and authorize expenditures for investigation, disinfection, quarantine, and for the purchase of diseased animals for slaughter. The following are the sections bearing upon this subject:

Sec. 3. That it shall be the duty of the Commissioner of Agriculture to prepare such rules and regulations as he may deem necessary for the speedy and effectual suppression and extirpation of said diseases, and to certify such rules and regulations to the executive authority of each State and Territory, and invite said authorities to co-operate in the execution and enforcement of this act. Whenever the plans and methods of the Commissioner of Agriculture shall be accepted by any State or Territory in which pleuro-pneumonia or other contagious, infectious or communicable disease is declared to exist, or such State or Territory shall have adopted plans and methods for the suppression and extirpation of said diseases, and such plans and methods shall be accepted by the Commissioner of Agriculture, and whenever the Governor of a State or other properly constituted authorities signify their readiness to co-operate for the extinction of any contagious, infectious or communicable disease in conformity with the provisions of this act, the Commissioner of Agriculture is hereby authorized to expend so much of the money appropriated by this act as may be necessary in such investigations, and in such disinfection and quarantine measures as may be necessary to prevent the spread of the disease from one State or Territory into another. [Approved May 29, 1884.]

## Bureau of Animal Industry.

For carrying out the provisions of the act of May 29, 1884, establishing the Bureau of Animal Industry, \$100,000; and the Commissioner of Agriculture is hereby authorized to use any part of this sum he may deem necessary or expedient, and in such manner as he may think best, to prevent the spread of pleuro-pneumonia, and for this purpose to employ as many persons as he may deem necessary, and to expend any part of this sum in the purchase and destruction of diseased animals whenever in his judgment it is essential to prevent the spread of pleuro-pneumonia from one State into another. [Approved June 30, 1886.]

In accordance with these laws I hereby certify the following rules and regulations for co-operation between the Department of Agriculture and the authorities of the several States and Territories, which I deem necessary to insure results commensurate with the money expended:

## Inspection.

1. The necessary inspectors will be furnished by the Bureau of Animal Industry of the Department of Agriculture.

2. The properly constituted inspectors of the Bureau of Animal Industry which are assigned to the respective States are to be authorized by proper State authorities to make inspections of cattle under the laws of the State; they are to receive such protection and assistance as would be given to State officers engaged in similar work, and shall be permitted to examine quarantined herds whenever so directed by the Commissioner of Agriculture or the Chief of the Bureau of Animal Industry.

3. All reports of inspections will be made to the Bureau of Animal Industry, and a copy of these will then be made and forwarded to the proper State authorities; when, however, any inspector discovers a herd infected with contagious pleuro-pneumonia, he will at once report the same to the proper State authority as well as to the Bureau of Animal Industry.

4. The inspectors, while always subject to orders from the Department of Agriculture, will cordially co-operate with the State authorities, and will follow instructions received from them.

## Quarantine.

5. When contagious pleuro-pneumonia is discovered in any herd, the owner or person in charge is to be at once notified by the inspector, and the quarantine regulations of the State, in which the herd is located, are to be enforced from that time. The affected animals will be isolated, when possible, from the remainder of the herd until they can be properly appraised and slaughtered.

6. To insure a perfect and satisfactory quarantine, a chain fastened with a numbered lock will be placed around the horns, or with hornless animals around the neck, and a record will be kept, showing the number of the lock placed upon each animal in the herd.

7. The locks and chains will be furnished by the Department of Agriculture, but they will become the property of the State in which they are used, in order that any one tampering with them can be proceeded against legally for injuring or embezzling the property of the State.

8. Quarantine restrictions once imposed are not to be removed by the State authorities without the consent of the proper officers in the Department of Agriculture.

9. The period of quarantine will be at least 90 days, dating from the removal of the last diseased animal from the herd. During this period no animal will be allowed to enter the herd or leave it, and all animals in the herd will be carefully isolated from other cattle.

When possible, all infected herds are to be

held in quarantine and not allowed to leave the infected premises except for slaughter. In this case fresh animals may be added to the herd at the owners' risk, but are to be considered as infected animals and subjected to the same quarantine regulations as the other members of the herd.

## Slaughter and Compensation.

10. All animals affected with contagious pleuro-pneumonia are to be slaughtered as soon after their discovery as the necessary arrangements can be made.

11. When diseased animals are reported to the State authorities, they shall promptly take such steps as they desire to confirm the diagnosis. The animals found diseased are then to be appraised according to the provisions of the State law, and the proper officer of the Bureau of Animal Industry (who will be designated by the Commissioner of Agriculture) notified of the appraisal. If this representative of the Bureau of Animal Industry confirms the diagnosis and approves the appraisal, the Department of Agriculture will purchase the diseased animals of the owner and pay such a proportion of the appraised value as is provided for compensation in such cases by the laws of the State in which the animals are located, when they are condemned and slaughtered by State authority.

## Disinfection.

12. All necessary disinfection will be conducted by the employees of the Bureau of Animal Industry.

## Inoculation.

13. Inoculation is not recommended by the Department of Agriculture, and it is believed its adoption with animals that are to be afterward sold to go into other herds would counteract the good results which would otherwise follow from the slaughter of the diseased animals. It may, however, be practiced by State authorities under the following rules:

14. No herds but those in which pleuro-pneumonia has appeared are to be inoculated.

15. Inoculated herds are to be quarantined with lock and chain on each animal, the quarantine restrictions are to remain in force as long as any inoculated cattle survive, and these animals are to leave the premises only for immediate slaughter.

16. Fresh animals are to be taken into inoculated herds only at the risk of the owner, and shall be subject to the same rules as the other cattle of the inoculated herd.

17. The chief of the Bureau of Animal Industry is to be promptly notified by the State authorities of each herd inoculated, of the final disposition of each member of the herd, of the post-mortem appearances, and of any other facts in the history of the herd which may prove of value.

The co-operation of Governors, of State Live Stock Commissions and of other officers who may be in charge of the branch or service provided for the control of the contagious diseases of animals in the States where pleuro-pneumonia exists, is earnestly requested under these rules and regulations, which have been framed with a view of securing uniform and efficient action throughout the whole infected district. It is hoped that, with a vigorous enforcement of such regulations, the disease may be prevented from extending beyond its present limits, and may be in time entirely eradicated.

NORMAN J. COLMAN,  
Commissioner of Agriculture.

Washington, D. C., August 2, 1886.

## POULTRY YARD.

## A Study of Gapes.

The following, by Mr. O. S. Bliss, of Georgia, Vt., appeared in the N. Y. Tribune: This disease has been known in the United States since the last century, and the method of removing the worms which cause it from the trachea of chicks with the tip barb of a hen's feather or some similar device has been handed down from that time. That fowls are sometimes relieved from immediate suffocation by this means cannot be well questioned, though most of the persons who have scientifically investigated the subject doubt its efficacy. It is certainly quite too delicate an operation for unskilled hands, and is, as a rule, to be resorted to only when danger of suffocation is imminent. But the disease has received far more intelligent attention abroad than in this country, owing to the circumstance that there it not only affects the interest of such of the people as are engaged in chicken-raising, but it interferes very materially with the sports of the aristocracy.

It is estimated that in England alone the loss of the chickens by the disease has averaged half a million a year for the last ten years; while of pheasants, partridges and other game birds the proportional loss has been much greater. In France its ravages have been still more severe. It is said that in the parks of Baron Rothschild, at Rambouillet, the known losses, chiefly of young pheasants, at one time reached a daily average of 1200 birds. In the forest of Fontainebleau it threatened total extermination. In short, all of the large game bird and poultry establishments of the country were in most imminent peril from its ravages. It broke out in the royal pheasantries of Turin, Italy, and, in fact, at one or another time it has

appeared in nearly all the noted establishments on the continent. To what extent the parasite infests wild birds is not known, but it has been found in the green woodpecker, the black stork, the swift and the magpie; hence it may be inferred that the disease cannot be made obedient to any quarantine regulations, but is liable to appear at any time where least expected.

It is, moreover, quite certain that inasmuch as infested birds do not appear to suffer any special inconvenience or injury from the presence of the parasites except when present in numbers sufficient to produce suffocation by obstructing the air passages, they may be active distributors of the disease without showing any of the known symptoms in their own cases. It is believed, and I think with abundant evidence, though scarcely positive, that the worms do not become detached from the trachea of the birds until they are fully matured, nor do any of the very large number of eggs which each contains ever leave the mother worm until after her death. But the red worm, when ejected by the coughing or sneezing action of the bird, is an attractive tidbit, which is instantly seized upon by the first bird which sees it and eagerly devoured. In from three weeks to a month from that time the new crop of worms will have become fully developed, and if enough of them have succeeded in reaching the air passages to produce strangulation, death is the inevitable result.

That they do not affect grown birds in the same manner as young chicks is inferentially believed to be due solely to their inability to force their way from the digestive apparatus into the lungs and air passages in sufficient numbers to obstruct their normal action. Their frequent presence in grown birds cannot be doubted. Whether any portion of the eggs or embryo escape digestive action and are voided with the excreta of the birds with sufficient vitality for further development, is an open question. It is quite probable, however, that such is the case, though only to a very limited extent. That a flock once infested remain so as long as the conditions are favorable is very probable, but it is very doubtful if the reproduction in grown birds is sufficiently active to perpetuate the test beyond the second season in the most extreme cases without the aid of favorable external conditions which may be easily controlled.

Ejected worms die immediately; but the eggs they contain retain their vitality for a longer or shorter period, according to their condition in respect to heat and moisture. In moist earth, at a temperature below 60° Fahrenheit, they retain their vitality nearly or quite a whole year; in dry earth, especially when warm, they lose vitality. In moist earth, when the temperature rises as high as 70° Fahrenheit, the eggs will hatch, though very slowly, the temperature required for their normal hatching and development being that of the internal organs of the chicken. In water of moderate temperature or in moist earth the embryos live with scarcely any further development for a considerable time, and finally die unless their victim, the chick, comes along and gathers them in out of the cold, when they immediately make with all due haste for the trachea, where, in couples permanently attached, they fasten themselves immovably by their mouths. Autopsies of birds who have died of the disease show that it requires from 5 in young birds to 30 or more pairs of the worms in grown birds to so close the trachea as to cause death. But a single couple, without any injury to their host, will produce eggs enough to infect a whole flock of fowls in three generations.

The treatment of gapes should be as far as possible preventive. The fowls should be entirely excluded from all places known or suspected to be infested and the grounds disinfected with sulphuric acid. Fowls known to be infested should be separated from others and confined in partially darkened apartments. In damp weather, confinement in dry houses with an abundance of dry earth, or an equivalent to cover the dry floor several inches deep, is much better than permitting them to run out in search of worms. Give only pure cold water, and change it several times a day, never permitting it to become stale. Give only dry, fine food. Fowls suspected of being infested may have medicated drinking water to advantage. In England an infusion of rue and garlic is made to take the place of water with good results. The theory upon which this is used is that, being chiefly eliminated by way of the air passages, it causes the worms to detach themselves from the trachea. Asafetida is also used in the same way and for the same reason. In France, flavoring the prepared foods very strongly with garlic beaten into a paste mass, not chopped, is claimed to have resulted efficaciously in many cases. It is indeed claimed to be a specific.

An English experimenter, in spite of total disbelief in the efficacy of the remedy, soaked the grains fed to pheasants in urine and became convinced that the ammoniated air respired caused asphyxiation of the parasites and compelled them to let go their hold on the trachea, so as to be easily ejected by the birds. Fennugreek seed is recommended as having much the same effect as the garlic-flavored food and drink. Sulphurous fumigation is believed to have afforded relief in many cases, but to be effective it must be so thorough as to nearly asphyxiate the birds as well as the parasites. Fowler's solution, turpentine and sundry nostrums, administered as medicine to the birds individually, have been recommended, but the results have generally been disappointing. In

fact, so far as I can learn, not one in a hundred cases of individual treatment was ever otherwise. There remains just one treatment about the efficacy of which there is no possible doubt, that is, the total cremation of the crop and entire respiratory apparatus of every dead bird which is in any degree infested by the parasites. Burying these, unless very deep or entirely beyond the runs of the fowls, is not to be depended upon to prevent the spread of the disease.

## Cure for Chicken Diarrhea.

EDITORS PRESS:—Mrs. S. C. Coombs, of Santa Cruz, furnishes the following recipe for curing chickens having diarrhea: Give to each fowl of tincture of camphor, one-third of a teaspoonful. If, in 10 or 12 hours, the patient is found still drooping, repeat dose. Found to be very efficient. If given in time, considered a certain cure. McD.

## FORESTRY.

## Joaquin Miller and Arbor Day.

We alluded in our last issue to Mr. Miller's proposition concerning tree-planting on Goat Island, as mentioned by the *Call*. Since then the Secretary of the Forestry Commission has written to the same journal as follows:

In your editorial columns in the issue of the 26th inst., I find an article entitled "The Movement for an Arbor Day," in which the plan for planting trees upon Yerba Island proposed by Mr. Joaquin Miller is favorably commented upon, and also his suggestion that the ladies of San Francisco and Oakland be requested to join in the work. The State Board of Forestry, which I have the honor to serve, has since its organization, by means of circulars and letters sent out, been endeavoring to instruct the people in the importance of forest culture and preservation, and this increased interest in the movement is at present particularly gratifying. There can be no question of the effects of forests in modifying climate, dispersing fogs and preserving water sources, and the suggestion to plant the headlands and hills to the seaward with forest trees should be speedily acted upon, and is one which the State Board of Forestry will assist with all the resources at its command. There could be no question of experiment in this, and from the beautifying feature of the case I am sure that the genial effects from the planting of a thick growth of trees to the westward would soon be felt, and those citizens living in the fog belt would in time rise up and call him blessed who had started the tree-planting boom.

The State Board of Forestry has at present under consideration a bill providing for the establishment of an arbor day, which will be presented for passage at the next session of the Legislature. The laws of the different States which have already established arbor days have been digested, and at present West Virginia seems to stand at the head in her efforts to interest her people in tree-planting and cultivation. The school-children and teachers are more particularly addressed and encouraged to plant trees about school sites, along country roads, about public property and in private lands. A system of rewards is offered to the class or pupil planting the greatest number of trees, and additional premiums for the rearing and care of the same. The occasion is proclaimed a holiday, and the result thus far has been most gratifying. Although this plan has not been definitely settled upon as the fittest by the Board, yet it is believed that it would commend itself and be decidedly popular. It is sincerely hoped that Mr. Joaquin Miller may meet with unqualified success in his efforts at tree-planting, and that the 30th of October, the day named by him for the inception of his work, may mark the beginning of a series of arbor days, encouraged by the State and the people at large.

SANDS W. FORMAN,

Secretary State Board of Forestry.

[By the notice which we quoted from the *Call* last week it appeared that Mr. Miller proposed to do his planting in September. According to Mr. Forman's statement the day set is October 30th. This is, of course, better than September, and possibly in some exceptional years trees then planted would live; but both dates are altogether too early.]

Our readers know that this proposition for an arbor day for California is an institution which we have advocated for years, and which we thoroughly approve. Our choice of a day has been Washington's birthday (Feb. 22d), because it is already a holiday, and because the general and official planting of trees throughout the State would be a happy and novel way of commemorating it. Besides that, it is a good time to plant trees, and the time mentioned by Mr. Miller is not a good time. We are, however, not particular about a day except that it be when the trees are quite sure to be in good condition to move and the soil in condition suitable to their growth.—EDS. PRESS.]

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## The Coming State Grange.

We had a pleasant call from Bro. Ohleyer, editor of the *Sutter Farmer*, on Tuesday. He assures us that the outlook for the coming session of the State Grange is very bright. Local committees are at work making all needed preparations, and the Patrons who will visit Marysville may be assured of comfort and a warm welcome. The very satisfactory condition in which the debris evil now stands tends to lift a great burden from the minds of the people of the region, and they are ready to have a joyful reunion with their brother farmers from all parts of the State. We quote the following from the *Sutter Farmer* of last week:

Next month the California State Grange will hold its annual convention in our neighboring city of Marysville. There is a widespread desire among the Grangers of the central and southern portions of the State to visit the "ancient city," as they were pleased to term it, of Marysville. In our intercourse with them at previous conventions we found many who had resided here at some time in their lives. And again, it is well known that our fair neighbor is the center of a victorious battle-field, the like of which had not agitated the world for 2000 years. This fact gives her a celebrity unknown to any other California city, and creates a desire to witness and share her glory. The Grange, as is well known, is composed of leading men and women who are engaged in the tilling of the soil, who have contributed so much of muscle and brain to place our State in the very front rank of the greatest agricultural States. We bespeak for the members a most cordial reception by the people of the fortunate city and her neighbors. We understand that committees have been named to cover every feature of the event, to whom all needed assistance should be rendered. It is now estimated that the attendance will be between 300 and 400, and possibly 500, to remain a week. Our northern contemporaries should make a note of this and lend their valuable aid.

## Grange Camp of Northern Virginia.

The project of holding a California State Grange picnic has been agitated, though without any definite result hitherto, and it may interest those who have had the matter in mind to learn something of what is doing in a similar direction by the Patrons of the Old Dominion.

The District Grange of Northern Virginia has obtained a charter from the Legislature, bought a beautiful grove, and purposes holding a great agricultural and industrial exhibition there—at Loring, Fairfax county—from the 8th to the 15th inst. Lively preparations were going on, at last accounts. Beside a hotel and three two-story structures, 28x78 feet, to be used for displays of manufactured articles, agricultural, floricultural and horticultural products and ladies' handiwork, several other buildings are going up and a number of tents will be provided for the accommodation of campers. A grand stand will be erected in a chestnut grove, from which the many distinguished speakers will address the audience.

The presence is assured of the following founders of the Order: William Saunders; John Trimble, Sec'y National Grange; J. R. Thompson, author of the ritual, and Wm. M. Ireland, Past Sec'y National Grange. By special request Bro. John R. Thompson will confer the fifth degree in due form. Hon. Pat. Darden, Master, and Bro. Mortimer Whitehead, L. of the N. G., will also be on hand, with many other prominent Patrons.

Among those expected to be present are Hon. N. J. Colman, U. S. Commissioner of Agriculture; Col. Randolph Harrison, Commissioner of Agriculture; Hon. R. Beverly, President National Agricultural Congress; T. V. Powderly, General Master Workman of the K. of L.; Hon. G. B. Loring, ex-Commissioner of Agriculture; Sen. Morton, of Illinois; Gov. Lee, of Virginia; Lieut. Gov. Massey, and Gen'l W. H. F. Lee, of Fairfax county, and many other notables.

The State Grange of Virginia will hold its annual session on the grounds, and the Frederick County Pomona Grange and the District Grange of Northern Virginia will hold joint sessions during the week.

There will be telegraph, express, freight and postoffices on the grounds, and everything that possibly can be done will be done to promote the comfort, pleasure or convenience of the visitors.

GRANGE SOCIALS were resumed at Martinez August 21st, with an evening party which was largely attended and fully enjoyed. The pleasure of the occasion was enhanced by recitations by Miss Jennie Ipswitch, Miss Grace Brackett and Mrs. W. B. Thomas, and singing by Miss Annie Ryan, all of whom were warmly applauded.

SAN JOSE GRANGE, at its regular meeting August 21st, chose 10 delegates to the Farmers' Convention to be held at Sacramento on the 15th instant.

## Meeting of Sacramento Grange.

EDITORS PRESS:—Our last meeting was largely attended by members of our sister Granges, as it was the day for Pomona Grange, No. 2, to assemble. A few of our members were absent, at the sea-shore, Los Angeles, and hop-gathering.

Sister Jones was present and acted as Secretary *pro tem*. The Grange selected 15 delegates to attend the Farmers' Convention to be held September 15th in Sacramento. A number of members spoke on the advisability of the action, and trusted some good results may grow out of it. The Master had the power to fill all vacancies if any should occur.

## Pomona Grange Meeting.

The Grange met at the close of the Sacramento Grange meeting for the purpose of conferring the fifth degree on a class of seven, three sisters and four brothers. After the ceremony all marched to the Feast of Pomona, which was abundantly supplied with fruits of the farm. There was a large surplus of fruit untouched, and it was moved to donate it to the Orphan Asylum. The next session of Pomona Grange will take place Oct. 30th, at Sacramento, when the annual election of officers will take place.

## Delegates to the Farmers' Convention.

Following are the delegates to the Farmers' Convention:

Myron Smith,	Newton Fay,
Joseph Sims,	William Curtis,
Nelson Wilcox,	Chas. E. Mack, Jr.,
John Reith,	D. R. Hunt,
Chas. A. Hull,	Jas. Reitter,
Moses Sprague,	E. Greer,
S. J. Jackman,	G. T. Rich,
	Geo. Hack.
Sacramento, Cal.	G. R.

## A Runaway Well.

A most peculiar experience with an artesian well is the following, which is telegraphed from Cedar Rapids, Iowa: William Weir & Sons began boring an artesian well at the intersection of Beech and Washington streets, Belle Plaine, on a flat about four blocks south of the Burley house. The contract called for a well with a three-inch casing and flow guaranteed. They bored a two-inch hole and theorized that the flow of water through it would wash it out so that they could sink a three-inch casing. On Thursday they struck water at the depth of 185 feet. At this time they had about 60 feet of three-inch casing down, and the water rose with strong force 12 feet above the surface in a solid three-inch stream, plainly showing the strongest flow yet struck. On Friday morning the flow was under control, but during the forenoon, in an attempt to force a three-inch tube into the two-inch hole, it broke loose and wore away sufficient space outside the tubing to allow water to boil out around it at the surface. At sundown on Friday a stream of water a foot in diameter was pouring out. At 8:30 p. m. the city authorities were appealed to to take control and give relief from the impending danger. Already many lots and houses were more or less flooded.

At 9 p. m. a gang of men was set at work, the Mayor and City Councilmen personally superintending the job until nearly morning. All expedients were tried, but the water could not be controlled. On Saturday morning Eugene Palmer proposed that a 15-inch tubing be driven to the blue clay, believed to be about 50 feet down, and by thus confining the flow to a common center the outside flow could be stopped, and then, once in the tubing, controlled; but the scheme failed. It is impossible to estimate the damages. The south part of the town is flooded and cellars are filled with water. The flow continues unabated, making two rivers through the lower part of the city. In his helplessness, the Mayor to-day applied to the hydraulic engineering science of Chicago for relief.

TEHAMA COUNTY FRUIT.—We had a call on Wednesday from Mr. George H. Flournoy, of Thomas Creek, Tehama county, who brought us some assorted samples of varieties of fruit borne on his young trees. He has trees bearing large amounts of fruit at three years from the bud, two years in the orchard. The samples he brought—the White Heath and Orange cling peaches, the President Brockworth and Winter Nelis pears, and the Hungarian prune—were all exceedingly well grown, perfectly healthy and very beautiful. Such fruit is certainly an excellent testimonial to the adaptations of his locality for fruit-growing. Mr. Flournoy takes much interest in his orchard work, and is making a thorough study of it. He promises, at his convenience, to prepare us something for publication relating to his part of the State, which is certainly not so well known as it deserves to be.

MANY Santa Barbara pampas plum-raisers are now seeking a foreign market, says the *Press*. A large number of "knock-down" boxes for shipping plumes in were received in Santa Barbara from San Francisco on the last steamer. It is estimated that these boxes hold from 3000 to 3500 plumes each, and are being shipped direct from here to London, Hamburg, and other European cities.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

SUGAR BEETS.—*Reporter*, Aug. 28: Speaking of beets, the crop this year is a splendid one—over 20 per cent sugar, we understand, and making 15 tons per acre. The cultivators are paid \$1.35 per ton for the work done from the time the beets appear above ground "in the spring, tra la," and the time they are lifted on the wagon "in the fall, tra la." They sell at the factory for \$4 per ton.

## Butte.

COUNTING UP THE LOSS.—*Butte Record*, Aug. 28: Mr. H. B. Sanders, of Orland, has furnished the *Times* the following information, which may be interesting, and also form a basis of calculation for estimating the loss where the grain has been blown out by the wind. He ascertained that 100 grains of wheat had been counted to the measured square foot, and taking this for a basis, he weighed 100 grains of averaged sized wheat and found that it weighed exactly 62 grains avoirdupois weight; this sum multiplied by nine, the number of square feet in a square yard, would give 558 grains, and this sum multiplied by 304, the number of square yards in a square rod, would give 168,792 grains; this sum multiplied by 160, the number of square rods in a square acre, would give 2,700,720 grains, and this result divided by 7000, the number of avoirdupois grains in a pound, will give 385 pounds, or in other words, three times as much as would be necessary to seed the ground, or about \$4.50 worth at present prices. Thus it will be seen that on every 100 acres the loss would amount to 38,500 pounds, which would be worth \$450.

## Colusa.

SUMMER-SOWN ALFALFA.—*Sum*, Aug. 28: C. C. Hickok, of Grand Island, has been experimenting some in sowing alfalfa. He had a piece of land overflowed by the break at Brown's, and as the water receded he plowed the land and sowed it to alfalfa. The last was sowed in July. All this came up in splendid order and is doing well. He also tried the experiment of sowing the seed upon the water when it was about a foot deep, and this also is doing well. It has been thought that it would not do to sow alfalfa seed during the hot months, but Mr. Hickok has demonstrated that all that is necessary is to have the moisture and the land in good condition to plant it at any time.

## Fresno.

THE GRAIN CROP.—*Expositor*, Aug. 25: It will take fully a month longer to finish thrashing the immense grain crop of this county, and it will take lively work to get the grain housed before the early rains. The price has materially advanced since the harvest began. The S. F. market now shows a selling price of \$1.35 per cental for wheat, with a good demand. This increase in value means a great deal to those who have not yet sold. The grain farmers of Fresno county will realize something over \$2,000,000 for their crops this season.

ARTESIAN PROBABILITIES.—*Tulare Times*, Aug. 26: The lands around Summit Lake, west of Lemoore and just across the line in Fresno county, have attracted many Tulare settlers during the past year, and those who took up lands in that section and around the Poso Chene, and put in crops last fall, have raised good crops, realized a handsome profit from their investments of time and labor, and secured a hold of property that in a short time will bring in much money, should they feel disposed to realize on their claims. The one lack there is water for irrigation, though it is possible, and more than probable, that artesian water may be found there. There has really been no deep boring, the largest well we hear of being only 110 or 120 feet deep, in which a flow was struck that rises within three feet of the surface. The party boring this well was unable or unwilling to continue the boring further, and the reason given for going as far as he did was that the water first struck, at a shallow depth, was possessed of mineral qualities that rendered it unfit for household purposes, and he had to go deeper for what he wanted. But the fact that the water in his well rose within three feet of the surface is an indication that artesian water can easily be obtained. With artesian water that section will support an immense population, as the soil is of the richest quality.

## Humboldt.

MESQUITE GRASS.—*Eureka Standard*, Aug. 28: Mr. Marshall gives us the following from Dow's Prairie: The mesquite grass was cut and harvested during the latter part of July. The seed is kept by the farmers for sowing and the stalks are bought and used for feed at the logging camps. Mesquite hay is not adaptable to modern thrashing methods, the seeds are so light in substance that they would be scattered to the four winds during the process. On the other hand, mesquite is thrashed by the old Egyptian method. Oats, hay and wheat are now being harvested, the former two products constituting the larger part of the crop. Humboldt county, and especially Dow's Prairie, are ill adapted for the proper growth of wheat.

## Los Angeles.

GLANDERS.—*Orange Tribune*, Aug. 28: That terrible horse disease, glanders, has been dis-

covered in this valley, and a short time since a veterinary surgeon, invested with power, under the law, to condemn glandered horses, paid a visit to Santa Ana and Orange and condemned quite a number of horses, most of which have been disposed of. The disease, while fatal—there is no known cure for it—is of a mild type compared with the glanders east of the Rocky Mountains, and this is possibly due to climatic influences, but it is better to stop it at once, and the only way to do that is to kill all horses that have contracted the disease. We have reason to believe that several of the "old plugs" driven by the Chinese vegetable peddlers have the disease, and they should be attended to.

VINES IN TROUBLE.—*Santa Ana Standard*, Aug. 28: The disease which has been discovered in this valley this season in the old Mission vineyards, seems to be still spreading. The trouble originates at the roots, apparently, as vines that have made an average growth this year can be seen in many vineyards withering and dying on moist ground. In many instances roots of vines have been examined by experts with powerful glasses and pronounced sound. The actual cause for the detention of growth has not yet been ascertained so far as we have learned. The Mission grape in this valley has grown in disrepute, however, for some years, and many vineyards have already been grafted to Muscat for raisin purposes. If the diseased root plague continues to spread it will put a damper on the grafting process somewhat.

Anaheim Gazette: An inspection of some of the twigs of the diseased Mission vines shows that a worm has eaten the pith in the twigs. Whether the presence of the worm has any connection with the disease afflicting the vine is a question that has been referred to Mr. Morse, the viticultural expert, for answer. The discovery of the worm was made on the vineyard of Mr. John Taylor.

## Nevada.

HOG CHOLERA.—*Grass Valley Tidings*, Aug. 19: We are informed that a great many hogs are dying in Penn Valley and vicinity. It is asserted that Montgomery Bros. have lost fully 100 lately, Church 50, Watts 100 and many others heavily.

FRUIT AND CORN.—H. H. Hansen, who has a model farm and orchard near the Idaho mine, brings us fine samples from his ground. The Shafter Colossal raspberry, second growth, is delicious. Large, fine blackberries decorated the basket sent us, and Bartlett pears crowned the load. The specialty, however, was green sweet corn, as fine as anybody can grow. Mr. Hansen informs us that the codlin moths are treating his orchards badly this year. The pears and apples are being eaten by them, and the destruction is great. These pests will have to be killed off by combined effort, else the fruit business here cannot be the success desired.

## San Benito.

BARLEY YIELD.—*Free Lance*, Aug. 27: Probably the largest crop of barley ever harvested in this section, and for that matter in any section we have ever heard of, was that secured by S. Daviggio, of Mulberry, this season. The yield was 84 bushels to the acre. This is not a "whopper," either.

GRAIN MOVEMENTS.—On an average 6000 bags of grain are being hauled into the various warehouses in town, and shipments to the metropolis and other points average about 2500 bags daily.

## San Diego.

GETTING READY FOR THE FAIR.—*National City Record*, Aug. 26: J. M. Asher informs us that he has rented the Armory hall of the City Guard as a suitable place in which to hold the Horticultural Fair on the 6th, 7th and 8th of October, and it is hoped there will be ample preparation made and a good representation secured.

HONEY, GRAPES AND GRAIN.—*Escondido Cor. Union*, Aug. 17: The honey season is over for this year in this section. The quantity of honey is far below expectations, and the price is very disappointing. Our grape crop is very promising. Early rains to rot our grapes before they ripen is the only thing to be feared. Last night we had rain for two or three hours. About .15 of an inch of water fell—enough to wet the ground an inch deep. Heavy crops of grain have been secured, which the teams are now hauling to Stewart's or San Diego. A stub railroad to Escondido from the line of the California Southern would get nearly all the produce raised over one of the largest and most fertile sections of the county.

## Santa Barbara.

BANANA-MUSKMELON.—*Santa Maria Times*, Aug. 21: B. F. Peterson left at our sanctum on Thursday a couple of banana-muskmelons that were ahead of anything we have seen in that line. The melons were about 20 inches long and 10 or 12 inches around. In shape they resembled a banana, hence the name. Mr. Peterson imported the seed from Wisconsin.

## Santa Clara.

STILL ANOTHER RANCH FIRE.—*Capertino Cor. San Jose Herald*, Aug. 27: A huge column of smoke ascending from among our foothills Sunday morning attracted the attention of residents for miles around. The fire was caused by the carelessness of some hunters passing through the Anthony Ranch. As usual, a spark quickly generated a flame and the immense growth of tar-weed growing in all the

fields this year gave the blaze a fearful impetus, and a sweep of flame was soon rolling over the country. Unfortunately, most of the neighbors were at church, and the fire had gained some headway before parties arrived to battle with the conflagration. Soon, however, many willing hands began to arrive, quite a force got to work struggling with the flames, and at 4 P. M. nothing remained of the fire but the smoking remains of some old stumps and the charred and smoldering fences. Walter Anthony lost several cords of stove-wood and John Anthony some hay, but outside of the damage done to the fence and the destruction of much fine pasturage the damage will not count. This is not the first time this season that fire has been caused by careless hunters, and it is high time that steps were taken to avert like possibilities in the future. Causing fire on the high seas is a crime punishable by death, and it is no great stretch of comparison to strike a parallel with the individual, be it from carelessness or malice, who causes fire to start up in the stubble field of the farmer, especially while the grain is yet waiting to be thrashed as it is this year. The farmer's debts, his all, are in the crop, and hard enough has been the struggle in the present prevailing hard times to get together that which is to meet the demands of many a creditor. All hunting whatever should be prohibited by law on farming lands from July to October, and until this is effected we will continue to have plenty of just such occurrences every year.

**San Joaquin.**  
**HOW TURKEYS DO THEIR WORK.**—Merced *Argus*, Aug. 28: Some three months ago we began to watch the maneuvering of a band of 25 turkeys. When we first discovered them they had just commenced on a fine plot of evergreen rye grass. Every spear was soon demolished; then they attacked about 25 vines of fine table grapes. Of these they made quick work, leaving the once well-staked vines lying upon the ground. Next, the lower limbs of half a dozen peach trees were attacked, and now they are busily engaged in stripping the ripe figs from three trees. What they will do next is still in the womb of time. We long for Thanksgiving to come.

**Solano.**  
**GIANT PEACH.**—Solano *Republican*, Aug. 27: We were shown a peach on Tuesday last of the Late Crawford variety by G. N. Platt, from the orchard of Geo. E. Brown. The peach in question was a magnificent specimen, weighing 14 ounces, and measuring 11½ inches. Beat that if you can, Winters!—*Judicion*. Probably Winters cannot beat that, but Suisun valley can. Here is the record: The peach we refer to came from the ranch of A. T. Hatch, weighed 16½ ounces, measured 13½ inches in circumference, was of the Orange Cling variety, and had a most delicious flavor.

**Sutter.**  
**THE RIVERS CLEARING.**—Sutter *Farmer*: At last the warfare that has been waged against the barbarous practice of dumping the mountains into the streams is crowned with success. Had the law been obeyed as promulgated by the United States Circuit Court, this result would have been obtained two years ago; that it has not is wholly owing to lawlessness. The people of the valley would gladly have desisted from further litigation and agitation had they been permitted. But we intended to speak of the clearing rivers. The Yuba is nearly clear—more so than for 25 years. The Feather above the Yuba is perfect, and below nearly so; and the Sacramento shows scarcely a sign of color, and has not been so clear at Sacramento for a quarter of a century.

**Stanislaus.**  
**RESOLUTE RAPTOR.**—*News*: An eagle was killed in the chicken-house of W. E. Turner by the gardener, John Reynolds. Considerable noise was heard in the chicken-house, which he investigated. The eagle flew at him, and he protected himself with a stick until the bird receded. He then went to the house, procured a pistol, and succeeded in killing it. The eagle measured 6 feet and 10 inches from tip to tip. It is probably the first one ever killed in Modesto.

**Tulare.**  
**A FERTILE REGION.**—Tulare *Times*, Aug. 26: Thomas Jenkinson, of Mussel Slough, states that he has this year gathered 1100 pounds of fruit from one apricot tree, and 750 pounds of peaches from a five or six-year-old peach tree. This, at the rate these fruits have been retailing in Visalia this year, would be \$33 per tree for apricots and \$15 for peaches—surely an extraordinary production. He also states that 16 months after an apricot pit had been planted, a tree had grown therefrom and ripe apricots been picked from it. There is no doubt as to Mr. Jenkinson's statements, as the Mussel Slough section has proven particularly adapted to the growth of both fruit and vine. We have gathered sacks of walnuts from trees grown there, only four years from the planting of the nut. The nature of the soil allowing the water to percolate vast distances from ditches is supposed to be one of the great advantages given this section in fruit culture. Weeds do not grow so rank, and are easier kept in subjection; the soil is more friable, allowing a deeper rooting than in those sections where the ground has to be flooded. Some one proposes to change the name of this section of the county from Mussel Slough

to "Lucern Vale," or some other sweet-sounding, poetical name. I believe I but echo the sentiment of many of the pioneers of Mussel Slough when I say, let the name alone. In good time it will be suggestive of the finest land on the earth; of the most productive orchards and vineyards; of the most luxuriant pastures, covered the year around with sleek horses and cattle; of comfortable homes, wherein dwell noble men and women. Nothing can be gained by dropping the name Mussel Slough—a name interwoven with the most interesting and exciting history of the county.

**Yolo.**  
**MORE RAISINS.**—*Democrat*, Aug. 26: The Henry Bros., of Capay Valley, have purchased E. G. Bray's grape crop, near Black's station, and intend to manufacture the entire crop into raisins. These gentlemen understand the business thoroughly, and believe the Bray vineyard cannot be beaten in Yolo county for the quality of the grapes. It contains about 60 acres. From this fact alone it would appear that the raisin industry of Black's will soon be of considerable importance.

**NEVADA.**  
**FRUIT.**—Reno *Gazette*, Aug. 24: It is estimated that there are about 7000 apple trees in Washoe valley, 2000 of which are on Mr. Lewers' ranch. Robert Lewers says this is the best season for fruit that has been known in the valley for many years. The apple trees are breaking down under the heavy load. Pears, plums, peaches, quinces and other fruit are abundant.

**TICK-TORMENTED CATTLE.**—*Pioche Record*: The cattle down in the Wash are suffering with what may be called a "woodtick" complaint, and a number have died from its effects. The woodticks gather about and in the ears of the cattle, causing the beasts much suffering, and also causing a film to form over the eyes and blinding the cattle. The remedy for this, we learn from Wm. Culverwell, is first to pour coal oil into the cattle's ears. This kills the ticks in the ears and those outside are then cleaned away. They then make an ointment of burnt alum, lard and some other ingredients with which to rub the cattle's eyes, to cut and clear away the covering formed over them. Dow Barton treated 60 head of his cattle in this way the first of the week. It is thought that owing to the drought, the ticks have become abundant and get on the stock from the sagebrush.

**RABBITS DYING OFF.**—*State Journal*, Aug. 28: John Watterman, whose ranch is in Grass Valley, about 20 miles south of Winnemucca, says the rabbits are dying off, or are being killed by coyotes. Whatever the cause, there are plenty of their dead carcasses in the valley, and there is not one live one now where there were a dozen earlier in the season.

**Sonoma County Fair Awards.**  
The following are the awards for products of agricultural and allied industries at the recent fair at Santa Rosa:

- Horses.**  
CLASS 1.—Thoroughbreds—All premiums to P. Carroll, except one to C. T. Mathison for best 3-year-old, Argo. Graded—J. H. Laughlin, best mare 4-year-old, Flora; C. T. Mathison, mare Lady Bell, 4-year-old, with three colts.  
CLASS 2.—Stallions—T. Skillman, best 4-year-old; C. M. Bosworth, best 2-year-old; J. T. Carmichael, best suckling colt. Mares—D. McArthur, best 4-year old; J. W. Wiley, best 2-year-old; J. P. Rodchaver, best suckling colt. Families—J. T. Carmichael, best mare other than thoroughbred, with three colts; J. P. Rodchaver, best stallion other than thoroughbred, with five colts.  
CLASS 3.—Draft Horses—Stock Breeders' Association, best stallion 4-year-old; I. F. Cook, best 2-year-old stallion; Robert Crane, best 1-year-old stallion; J. M. Laughlin, best suckling horse colt; Robt Crane, best 4-year-old and best 3-year-old mare; R. B. Cannon, best 2-year-old mare; J. H. Laughlin, best suckling mare colt; I. F. Cook, best draft mare, with three colts.  
CLASS 4.—Roadsters' Stallions—M. Rollins, best 4-year-old, Rosewood; B. E. Harris, best 3-year-old, Sir Whipple; W. Wood, best 2-year-old, Mac; H. C. Brooks, one-year-old, Ado; J. Keeler, best suckling colt with mare, Logan; John Munson, best roadster gelding, Munson; Mares—H. C. Brooks, best four-year-old mare, Mag; B. E. Harris, best two-year-old mare, Edna; J. H. Laughlin, best one-year-old, Roxy; C. T. Mathison, best suckling mare colt, Lady Jane. Families—B. E. Harris, best family roadster with five colts.  
CLASS 5.—Carriage and Saddle Horses—Rufus Murphy, single buggy horse, Steve Story; B. E. Harris, best saddle horse, Duke.  
CLASS 6.—Stallions (Standard Trotters)—R. J. Schaffer, 4-year-old, Rustic; H. H. Button, best 2-year-old, Doc Button; I. De Turk, best yearling horse, Anteeo Button; H. W. Peck, best mare, Danville Maid; H. W. Peck, best suckling horse colt, Laurel Dale.  
CLASS 7.—Jacks—J. S. White, Black Night.  
**Sheep.**  
Graded Lambs—All awards to R. B. Cannon. Spanish Merinos—All awards to E. W. Woolsey & Son. Southdowns—All awards to Robt. Crane.  
**Goats.**  
Angora—All awards to C. W. Hardesty.  
**Swine.**  
Berkshire—V. Piezzi, best boar, Dan. Duroc—J. H. White, best boar, 2-year-old and best pen five pigs, 6 months old.  
**Cattle.**  
Durhams.—All awards to V. Piezzi. Jerseys.—All awards to E. W. Woolsey & Son, except one to

- J. Miller for best 1-year-old bull, Wm. Scituate 2d. Devons.—V. Piezzi, best 3-year-old cow, Lovey. Ayrshires.—J. Austin, best 3-year-old bull, John. Holsteins.—All awards to J. H. White, except the following: Ed. Steiger, best 1-year-old bull, Wm. Tell. Guerne & Murphy, best bull calf, Redwood Hickey.  
Graded.—V. Piezzi, best graded bull 4-year-old and over, Prince; \$5. D. McArthur, best bull over 1-year-old, Jack; diploma. Guerne & Murphy, best bull calf, Lockwood; diploma.  
**COWS.**  
V. Piezzi, best 4-year-old and over, Prince; \$5. V. Piezzi, best 3-year-old cow, Bell; \$3. Guerne & Murphy, best heifer calf, Devon; diploma. V. Piezzi, best fat cow, Cotelida; \$3.  
**Fruit, Etc.**  
C. Whitmer, best display and best variety of apples; Mrs. Mary Henderson, 2d.  
E. H. Smyth, best display and variety of pears; M. Litchfield, 2d; C. Wightman, 3d; Glenn Murdock, 4th.  
C. Wightman, best display peaches; M. Litchfield, 2d, and best display and variety of plums; C. Wightman, 2d plums; Glenn Murdock, 3d.  
Mrs. M. Henderson, best display green figs, and best general table fruits.  
Mrs. E. E. Whitaker, best fruit in glass.  
Mrs. A. Laughlin, best red currant jelly, and blackberry jelly.  
Mrs. John S. Taylor, best jams and jellies; Mrs. E. E. Whitaker, 2d.  
C. Wightman, best dried pears, dried peaches, dried plums and dried apricots.  
Mrs. M. Henderson, best soft-shelled almonds. Glenn Murdock, best 6 var. table grapes.  
L. A. Murdock, best 6 var. wine grapes.  
Ed. Steiger, best 3 var. wine grapes.  
Glenn Murdock, best var. wine grapes.  
L. A. Murdock, best general display of grapes.  
I. De Turk, best grape brandy over 1 year old, best white wine, best claret, best sweet wine, best California sherry.  
**Flowers and Foliage Plants.**  
M. H. Dunn, collection of 25 flowering plants, and collection of vine myrtle foliage plants.  
Miss Ella Murdock, cut flowers.  
Mrs. J. Harris, best bouquets.  
**Agricultural Products.**  
Grain, etc.—W. Wood, best samples of White Club wheat; Daggett & Goodfellow, best sample flour made in Sonoma Co.  
Vegetables—P. Mullally, best half bushels of red potatoes, white potatoes and of any other variety; M. L. Durbin, best 12 carrots, best 6 sugar beets, best 6 Hubbard squashes; E. A. Rogers, best 6 long blood beets, best 6 turnip beets, best 6 crook-necked squashes, best dozen ears of sweet green corn; John Roberts, best and largest pumpkins; E. Steiger, best peck tomatoes; E. H. Light, best 3 watermelons, best 3 green-flesh muskmelons.  
**Dairy and Domestic.**  
M. L. Durbin, best butter in rolls and best firkin of butter.  
Mrs. J. E. Claypool, best biscuit.  
Mrs. A. Moore, best soda biscuit.  
Miss D. Anderson, best loaf of bread made by a young lady under 18 years of age in Sonoma county. Miss S. Hall, 2d best loaf.  
Miss H. Atterburg, best corn bread.  
Miss L. Atterburg, best graham bread.  
Mrs. B. M. Button, best domestic wheat bread and best fruit cake.  
Miss D. Ames, best sponge cake.  
Miss Flora Bishop, best pound cake.  
**Machinery, Carriages, etc.**  
Baker & Ross, best mowing machine; best open buggy made in Sonoma county; best road-cart made in Sonoma county; best plow for all purposes. Geo. S. Brown, best one-horse cultivator; best farm feed mill; best gang-plow; best side-hill plow; best one-horse plow; best hilled plow; best well-pump; best haying and harvesting tools; best churn. John Drive, best fanning mill.  
E. M. Pedigo, best washing machine; best clothes-wringer.  
Doubleday Bros., best sewing machine, and best sewing machine (White) for ornamental work.  
T. J. Ludwig & Son, best top buggy; best open buggy.  
Colgan & Hervey, best family carriage; best ladies' phaeton; best two-seated open wagon made in Sonoma county.

List of U. S. Patents for Pacific Coast Inventors.

- From the official report of U. S. Patents in Dewar & Co.'s Patent Office Library, 252 Market St., S. F.  
FOR WEEK ENDING AUGUST 24, 1886.  
347,919.—CAR COUPLING—J. H. Buster, Spenceville, Cal.  
347,993.—CONCENTRATOR—J. D. Channell, Nevada City, Cal.  
347,920.—OPTICAL APPARATUS—A. Duboce, S. F.  
348,161.—SHOVEL—W. C. Gregg, Golconda, Nevada.  
348,128.—ORANGE-GRADER—J. W. Keeney, Riverside, Cal.  
347,809.—ORE-CRUSHER—S. Kendall, Angels Camp, Cal.  
347,892.—RELIEF VALVE—Jas. O. Rusby, Chico, Cal.  
347,834.—CAN-OPENER—Frank Sharp, Oakland, Cal.  
347,972.—ANCHOR—R. R. Spedden, Astoria, Or.  
347,973.—LAMP-BURNER—S. W. Spooner, Astoria, Or.  
347,898.—GATE—Sam'l Stephens, Central House, Cal.  
347,899.—WHIFFLETREE GUARD—Stephenson & Lasher, S. F.  
347,853.—SLEEVE-PRESSING FRAME—Emma J. Whitman, Oakland, Cal.  
347,909.—ORE-CONCENTRATOR—Woods & Garcelon, Santa Cruz, Cal.  
NOTE.—Copies of U. S. and Foreign Patents furnished by DEWAR & CO., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates and in the shortest possible time.

**The Fair at Petaluma.**  
The twentieth annual show of the Fourth District Agricultural Association, held at Petaluma last week, drew throngs of people from various quarters and proved a signal success.  
The live-stock exhibit has rarely been outdone even at our State fairs, and was claimed to be the finest ever made at any district fair in California. Among the cattle, Page Bros., of the Cotate ranch, entered no less than 33 head of Durhams—14 bulls and 19 cows. M. D. Hopkins, of Petaluma, had just imported from Michigan six shorthorns, recorded in the National Herd-book. This strain was selected especially for milking qualities, and Mr. H. intends to continue importing select Durham and Red Polled stock for dairymen. J. H. White, of Lakeville, showed 17 fine Holsteins, part Friesland-born and part of his own breeding; and good specimens of same breed were entered by E. Steiger. Several pure-bred Devons were shown by J. R. Rose, of Lakeville; herds of Ayrshires by George Bement, of San Mateo, and Tyler Beach, of San Jose; and Jerseys by E. W. Woolsey & Son, of Fulton, and W. D. Bliss, of Petaluma.  
The display of horses, too, was superb, embracing every style and grade of the equine family, from a Shetland pony up to Percheron and Clydesdale draft-stallions. One interesting entry here was J. R. Rose's span of three-year-old fillies, of McClellan stock, for which he was offered \$800. As that is but an average of his prices for five years past, it seems needless to query if there be profit in raising such horses. Mr. Whitney, the owner of Dawn, had four of his colts (yearlings and two-year-olds) hitched up in bright-colored webbing, a team which attracted a deal of admiring notice. Theodore Skillman, of course, had Normans on exhibition, and will soon set out for France to purchase a large invoice of coach horses and merinos.  
The sheep shown, though not as numerous as the foregoing, were splendid samples. Woolsey & Sons' and Easton Mills' Spanish Merinos have hardly been excelled in the State. R. H. Crane's were Shropshire and Southdown. Mr. C. has just imported a lot from Kentucky, and in order to meet the growing interest in mutton, will at once bring over another carload, going East himself to make the choice. The Poland-China, Berkshire and Duroc swine were represented sparingly but creditably.  
The poultry exhibit was good and quite extensive, as will appear upon reference to the list of awards, which we intend to print next week. Morris Bros., of Sonoma, entered nearly a score of coops.  
The line of the stock parade on Wednesday reached entirely around the track, and was therefore a full mile in length. Among the thousands of spectators were two Japanese gentlemen, looking out fine sheep and cattle for exportation to the island Empire.  
The display within the pavilion fairly matched that of the classes outside. The fruit and farm products, the specimens of work from factory and home, useful and ornamental, were abundant and admirable, eliciting from visitors an unstinted meed of praise.  
One very interesting exhibit was that from a five-acre orchard owned by F. F. Ennis. It comprised ripe plums, peaches, pears and apples, dried apples, sun-dried peaches, sun-dried plums, etc., and covered one table. In another collection of fruits raised in one orchard, owned by George W. Parks, were plums, quinces, sun-dried apples, sun-dried plums, sun-dried cherries and an assortment of jellies. A few oranges and lemons grown in the Fourth district were on exhibition, and a large showing of grapes was made by the Morris Brothers.  
The floral display of W. A. T. Stratton, in the center of the pavilion, could hardly be surpassed in extent, variety and beauty. He also had large pots of olive and orange trees in fruit.  
The line of vehicles manufactured in Petaluma by Farrell & Robinson would win admiration anywhere in America. Their fruit-wagon is one of the best-modeled and neatest extant. The wine and cider presses made by W. H. Worth are in such demand that he cannot fill the orders received for this season, although he has put on a double working force. L. Cantel showed French cheese, also manufactured in Petaluma. But it is impossible for us to give more than a few sparse notes of special exhibits, whatever merit we may slight in so doing.  
The annual address was delivered on Thursday, by P. J. Shaffer, of Olema. It is said to have been at once instructive, able and poetic. The subject of agriculture was dwelt upon at length, and the comparison between the city dwellers and farmers clearly drawn. The address throughout was listened to with attention and interest by those within hearing, and at its conclusion was loudly applauded.  
The baby show on Friday was one of the most popular things of the week. Twenty-one mothers of the district brought forward in competition as many babies under a year old. The judges found their task no sinecure, but Charles W. Hunt, from Two Rock, aged 11½ months, was finally invested with the ribbon, amid lusty cheers from the multitude. No accidents nor angry discussions occurred to mar the harmony of the entire week, and the management of the affair as a whole was thoroughly admirable. The music of the First Infantry band, from S. F., was a source of great delight to the myriad listeners.

### Better Things.

- Better to smell the violet cool than sip the glowing wine;  
 Better to hark a hidden brook than watch the diamond shine.  
 Better the love of a gentle heart than beauty's favor proud;  
 Better the rose's living seed than roses in a crowd.  
 Better to love in loneliness than to bask in love all day;  
 Better the fountain in the heart than the fountain by the way.  
 Better be fed by a mother's hand than eat alone at will;  
 Better to trust in God than say, "My goods my storehouse fill."  
 Better to be a little wise than in knowledge to abound;  
 Better to teach a child than toil to fill perfection's round.  
 Better to sit at a master's feet than thrill a listening State;  
 Better suspect that thou art proud than be sure that thou art great.  
 Better to walk the real unseen than watch the hour's event;  
 Better the "Well done!" at the last than the air with shouting rent.  
 Better to have a quiet grief than a hurrying delight;  
 Better the twilight of the dawn than the noonday burning bright.  
 Better a death when work is done than earth's most favored birth;  
 Better a child in God's great house than the king of all the earth.

—George MacDonald.

### How the Gilhooleys Went Camping.

#### A California Experience.

Written for the RURAL PRESS by MRS. MATIE E. DUDLEY.

Mrs. Gilhooley was determined to go camping, and when Mrs. Gilhooley made up her mind something had to happen. When his wife broached the subject, Mr. Gilhooley gently remonstrated, for he had often been camping, while Mrs. Gilhooley had not.

A multitude of the Gilhooley acquaintances had become inoculated with the camping craze, and, after divers consultations, some 40 persons decided to go to Hemstead beach, 30 miles distant.

Such a bustle of preparation as the several domiciles presented for the ensuing three days! Baking, boiling, roasting, while the mercury persistently rose to 100° in the shade.

At last the fated day arrived and the procession started. (I am sure Mrs. Gilhooley would use this phrase in a funeral sense were she writing her own experiences.) There being but two in the Gilhooley family, they headed the procession. Next came the Devons. Now, the Devons were more numerous; there were Pa and Ma Devon, the two Misses Devon, the three Devon boys and the baby. How they managed to stow themselves and camping necessities into one vehicle is a mystery unto this day.

Pa and Ma Devon sat majestically on a high box in front; the sunbonnets of the Misses Devon rose demurely among tent-poles, kitchen utensils, inverted chairs, and bed-clothing, and the three boys stowed themselves into various small apertures until nature rebelled and they climbed out and walked. The Devon carriage being a fair sample of the half dozen that followed it, it seems quite unnecessary to enter into details concerning their variegated appearance.

All through that long, hot day, the hottest on record, did these jolly campers move toward Hemstead beach. The dust rose in clouds and enveloped them, the sun broiled them, the gnats bit them, the five babies squaled, the older children quarreled, and their elders scolded. At last, just as the sun dipped his wings into the Pacific, preparatory to his evening plunge, the dismal crowd reached their destination and began to unload, tired, cross, and hungry.

Now the Gilhooleys were invited to lodge with the Devons, and, therefore, had not provided themselves with a tent, as the Devons had assured them there would be an abundance of room. Theoretically a tent 16 feet long does seem ample; but, when the peak is only five feet in altitude, and the canvas is stretched to its fastenings on the ground, one must admit the space for standing room to be limited.

Next to the Gilhooley-Devon tent the Serfingers erected theirs; but a strong western gale having set in, the paternal Serfinger's supper hour was embittered by the untimely collapse

of the newly-erected canvas. As the Serfinger outfit had boasted of having better accommodations than the other campers, this catastrophe caused no little merriment and chaffing on the part of their less unfortunate neighbors. At last the Serfinger tent was made to stand by anchoring it with ropes to several stable objects near by, and its dismal inmates proceeded to collect their scattered articles and stow them in it again. The Brown tent was cozy and stood in a sheltered nook. It seemed quite commodious, as there were but three occupants—Mr. and Mrs. Brown and their only son Jerry, a bright youth of 11 summers and American proclivities. Mrs. Brown drove the pegs and anchored the tent by moonlight, gathered fuel and cooked supper, while poor Brown sighed over a pain in his chest, and paid compliments to the young ladies of the party.

The wind increased as it grew dusk, so the Whitmarshes and Perkinses put up their tents by a stout board fence and vowed they'd remain there if the fence did.

The Gilhooley-Devon tent was pitched on a slope, and Pa Devon, being of a meditative turn, did not take this into consideration when arranging the beds, so that on retiring the disgusted crowd found their heels several degrees higher than their heads. Mrs. Gilhooley, being of a somewhat natural disposition, refused to submit to this outrage. The uproar that so positive a change of heads occasioned was, to say the least, extensive, as half the crowd were in *un-dress* parade. Much and loud was the grumbling at Pa Devon's expense, and Perkins' tow-headed boy yelled out: "This way, gentlemen. Right this way. Here's the Seven Sleepers, each one with his head where his feet ought to be."

Among the conveniences the Perkinses had was a young, frisky colt, which kept up a running fire on the various anchor ropes during the night, and caused the occupants of the several tents to be in constant dread of collapsing canvas. Mrs. Gilhooley, from that first night of disturbed slumber, arose in the morning several hours older than when she went to bed.

From the very first morning the formalities of polite society were carefully omitted by the campers, and grimy faces, blackened fingers, and a generally woe-begonish air pervaded camp. A dense fog had rolled in from the ocean during the night, and everything was dripping. The women stood huddled in groups, ankle deep in the salt grass, with saturated shoes and skirts, trying to escape the smoke which the men whisked in their faces, in their vigorous endeavors to coax the dampened fuel into a blaze; but all things earthly have an end, and finally the breakfasts were over, the sun shone, the five babies crowded, and the men went fishing.

Alas! an unlucky star seemed to shine on this camping party, for, in clambering over some loose rocks, Mr. Gilhooley slipped, caught his foot, and after grasping wildly at nothing for awhile, sat down very firmly on a cold, unfeeling rock, dislocating his ankle. Serfinger, Pa Devon and Perkins' boy extricated the Gilhooley foot and bore poor Gilhooley back to camp, where the injured member was duly set and bandaged.

The second night the campers retired unusually late, and silence had reigned for some time, when all were awakened by a sound of scuffling and of excited voices issuing from the Serfinger tent. All heads were protruded from the surrounding tents, and what a sight met their sleepy eyes! There lay Serfinger half out of his tent, grasping the hind legs of a struggling pig. On inquiry it was found that Serfinger was suffering from nightmare, and, in his frantic efforts to capture an imaginary burglar, had grabbed an inoffensive pig that was prowling around the camp in search of food. On awaking, Serfinger meekly crawled back into bed amid the audible grumbling of his better half, who objected to his unusually moist condition from sliding around so long on the wet salt grass.

The second morning the sun climbed over the distant mountain range, and peeped down on Mrs. Gilhooley disconsolately building her own campfire. While the Hemstead campers were making their morning toilets, excited exclamations from the Whitmarshes' lodge attracted general attention. The following dialogue discloses the conversation held in the Whitmarsh family at that hour:

Whitmarsh—"Sary Jane, what on earth have you done with my pants?"

Mrs. W.—"I ain't had your pants; where'd you put 'em yourself?"

Whitmarsh—"Why, I rolled 'em up for a pillar, but, I snum! they ain't here, and I b'leve you've hid 'em."

This charge was indignantly denied, and, to prove her innocence, Mrs. Whitmarsh began vigorously hunting for the missing garment. A thorough overturning of frying-pans, camp-kettles, bedclothes and grub-boxes disclosed the fact that the pantaloons were a minus quantity. General surmises were indulged in as to where they could have gone, which Whitmarsh savagely interrupted with: "I don't give a copper where they've gone, but I ain't goin' to stay in this blasted tent all day, anyway!"

A general mass meeting was held, but no extra pantaloons could be found in the crowd. Here was a dilemma; but Mrs. Serfinger, who was of goodly stature, came nobly to the rescue with an extra dress-skirt, which Whitmarsh donned sulkily while a messenger was dispatched to the nearest store for the garment due to masculine dignity. Whitmarsh appeared at breakfast in dress-skirt and overcoat,

but complained of feeling chilly. To this day it is a mystery where those pantaloons are. A theory is extant to the effect that a thief, in search of a pocket-book, carried them off. After the excitement had subsided, Mrs. Gilhooley proceeded to prepare breakfast for the Gilhooley-Devon crowd. One small kettle, holding but three pints, was the only vessel which the Gilhooley camp could muster in which to boil potatoes and make coffee for a family of 10 with two-edged appetites. Mrs. Gilhooley repeated several blessings before the company were allowed to partake of the food prepared by her. The first one occurred when the kettle of half-boiled potatoes turned over and nearly put out the fire. The potatoes were hastily righted and the fire renewed amid the smoke which persistently enveloped her; then Mrs. Gilhooley said another blessing and stalked off in solitude, wiping away the briny tear-drops as she stumbled along.

A farmer driving past, and observing Mrs. Gilhooley's distress, offered to thrash Gilhooley, supposing he had ill-treated his wife. Mrs. Gilhooley being too indignant to offer any explanation of her tears, the bewildered farmer drove away.

What artist's brush can portray or poet's pen describe the campers' breakfast hour?

As there were no seats in the tent, the majority of the family sat *à la Turk*. In this trying ordeal Pa Devon bore himself placidly, disposing of the food and his troublesome length of limb with equal felicity.

Ma Devon and Mrs. Gilhooley sat on the boxes in which were kept articles of great use in dining, such as bread, cake, etc.; as these were in constant demand, the poor ladies were much disturbed during each meal. You wonder why they had no table. For two good reasons: first, there was no table to have; second, there was no room in the Gilhooley-Devon tent to put a table.

After the several breakfasts were dispatched, the Perkinses proposed that the entire crowd should pay a visit to the lighthouse at Hemstead beach.

This plan was received affirmatively by all but the Gilhooleys. The Gilhooley ankle was too painful to be moved, and Mrs. Gilhooley was obliged to remain at the camp with her husband. In a spirit of self-sacrifice she offered to take charge of the boys from the several families, as there did not appear to be any room to put them after the grown people and the girls were crowded into the three buggies.

There were Jerry Brown, the three Devon boys, Frank Serfinger, Perkins' boy and Bub Whitmarsh, ranging in years from 7 to 15. The partial mothers assured Mrs. Gilhooley that the boys would not give her one particle of trouble, Mrs. Perkins remarking: "I allus bring up my young 'uns to mind."

The vehicles soon departed amid the injunctions of the parents to the boys to stay at the camp and obey Mrs. Gilhooley.

No sooner were those same confiding parents out of sight than the promises given were ignored, and away started the boys for the village or the wharf. Mrs. Gilhooley called and remonstrated in vain. The three Devons hung their heads and thrust their hands deep into their breeches pockets, apparently undecided how to proceed. Jerry Brown saucily snapped his fingers, Perkins' boy turned a handspring, while Bub Whitmarsh whistled insolently as he walked away. He being the eldest, the other boys followed, of course.

As the hours passed and the boys did not return, Mrs. Gilhooley grew almost distracted, and at last, in sheer desperation, she grasped a shake and started up the street, vowing she would "shingle" or rather "shake" every youngster she could find, and bring some of them back to camp.

During her absence the parents returned, and in the course of half an hour the anxious mothers beheld part of the truant flock meekly coming down the street, with the defiant Mrs. Gilhooley bringing up the rear, brandishing in her hand a broken shake.

Frank Serfinger had lost his hat in the briny deep, while the three Devons were saturated with surf; but Perkins' boy, Jerry Brown and Bub Whitmarsh were nowhere to be found. Their respective fathers started forthwith for the village in search of them. They were some time absent, but finally returned without the boys, wearing decidedly solemn faces. On being eagerly questioned by their wives, they explained that the boys, in throwing stones at a saloon, had been caught by the irate owner and locked up, and would probably have to remain over night.

This affair caused a slight coolness among the campers; Mrs. Devon and Mrs. Serfinger were angry at Mrs. Gilhooley for bringing their offspring home with a shake, while the other mothers were angry that she did not bring theirs at all.

Mesdames Brown, Perkins and Whitmarsh charged Mrs. Gilhooley with being the cause of their trouble and gave her a sound berating. Thereupon Mrs. Gilhooley firmly resolved never to go camping and take charge of other people's children again.

The next day, by paying the saloon-keeper \$10, the boys were liberated, somewhat crestfallen, to be sure, yet ready for another lark as soon as a good opportunity presented itself.

When the sun broke through the fog on the third morning it shone on Mrs. Gilhooley's resolute face set homeward.

She has made a solemn vow never to go camping again.

Santa Paula.

### The Characteristics of Californians.

[Written for the RURAL PRESS by CLARA SPALDING BROWN.]

In summing up the advantages and blessings enjoyed by the dwellers on the Pacific Coast, I think that we may modestly include the almost universal intelligence, breadth and charity of mind among the people. This is not meant for "California brag," but may be substantiated by any careful observer, conversant with life in this State, and in other portions of "Uncle Sam's domain." It is a characteristic of great value in the development of the country, and worthy of deep respect and appreciation.

One may ask, "Are not the settlers from all parts of the universe, since comparatively few residents are native born, at this stage of events? How, then, can they differ from the status maintained in their former homes, or be noticeable as progressive or liberal-minded beyond their companions of old?"

True, we meet now some one from Massachusetts, next a "Wolverine," or a "Sucker," or a "Maine-iac," or a "Lone Star" immigrant, and so on till all the States and Territories of our own "glorious republic" are numbered, and intermixed we find a generous sprinkling of representatives from foreign countries. Each has brought some local peculiarities of speech, mode and dress with him; but there is one common feature—one factor which, multiplied in the mass, produces a distinguishing quality in the Californian by adoption.

In the first place, it is generally the most wide-awake, earnest-thinking and acting people who leave home for a tour of observation or with the purpose of beginning life anew in a strange country. Then, having taken the decisive step, having risen out of the well-worn "rut and channel" of everyday life and struck out boldly on an untried path, travel—one of the greatest educators that the world knows—steadily enlarges the horizon of the mental sphere, even as it reveals the immensity of this earthly globe. And so it follows, that, speaking of the aggregate—there is no rule without exceptions—the men and women who buy land here, or engage in mercantile business or the professions, are imbued with a desire to forge ahead, to look at a matter from all points of view, to weigh and consider strictly according to merits and according to all the light obtainable, without narrow prejudice or obstinate clinging to ways and ideas that may have been the best that could have been entertained in eras past, but are out of place in the present stage of civilization. There is nothing like contact with the various forms of humanity and phases of life that may be studied on a long journey, to convince a person that his ways are not the only good and proper ways and his town or section is not the only spot on the universe where one may dwell with the blissful consciousness that naught else can compare with it. The quiet, easily-contented people who seldom stir from their hearthstones, at least from their native heath, do not realize the narrowness of their views, or their ignorance of what is going on in the world. They are as much concerned in the trivial doings (this applies to rural neighborhoods) of their neighbors as Californians are in the anti-riparian cause, the special session, or the gigantic improvements that are the order of the day. In my native town, duly recorded in the history of one of New England's beautiful States, as "the banner town of the State," it has at last—by special "town meeting"—been decided to build a new town hall, after years of wrangling; and the cause was won only by the "drumming up" of every voter that could be transported to the village, where the battle waged until 11 o'clock at night. A letter recently sent me says: "Mr. N. D.—ain't going to pay any more minister's tax because he (the minister) voted for the hall. He has never paid but three dollars a year. And the blacksmith says he will not do any more work on credit for any man who helped put the matter through." Imagine such a "tempest in a teapot" in California! Yet the town in question has no debt, has wealthy citizens (Mr. N. D.—is one of them, and sends a large family to church with his munificent pastoral support of three dollars), and is using for all public purposes an old-fashioned room in the church, the same as 50 years, and more, ago.

I sojourned for a brief season last year in a town of aristocratic proclivities, a few miles from Boston. Here large and handsome residences were the rule, artistic interiors were a delight to the aesthetic. The people were stylishly dressed and fastidious in small matters. Where would you look for cultivation of the intellect and enlargement of the sympathies, if not in the atmosphere surrounding the noted "Hub"? I expected a "feast of reason and flow of soul" when callers came, anticipated discussions of the latest books, the movements in art and musical circles, theatrical matters, interesting bits about notable characters, comments on public affairs, etc. What did I hear, sitting mute on the edge of the circle? One call of nearly an hour was devoted to the minute consideration of the merits and demerits of various kinds of matches, with a harrowing portrayal of unsatisfactory experiences therewith. This is an absolute fact. The few other topics that were incidentally mentioned were of equally trifling nature. I wondered where the entertainment came in, for either guest or hostess, and how they could be willing to fritter

away their time so. On another occasion the ladies present carried on an animated conversation about their servant girls, to the exclusion of more elevated topics. The desire was not to seriously consider the problem of domestic service, bringing into play the intellectual faculties with a view of paving the way out of difficulties for both maid and mistress; but story after story of Mary's peculiar ways, Bridget's incompetency and Norah's disposition to "smash things," convinced the hearer not only of the necessity for improvement in house-servants, but the desirability also of a more comprehensive treatment by their mistresses. Other calls brought forth individual opinions as to the last style of bonnet, the new shades of dress goods, etc. I do not recall a single instance when the conversation was up to the standard of which an intelligent woman's mind is capable, or when the wanderer from California felt herself in any degree benefited. She knew herself to be considered unfortunate in dwelling "on the ragged edge of civilization," and knew that the real state of the case never entered the heads of those self-satisfied women. Now I mention these things only to draw conclusions, not to criticize unkindly or unfairly. It has been the rule in my experience in California—and haven't you all found it so?—for affairs of general interest and of more or less importance to receive at least passing mention when visitors were being entertained. Not all are posted in or inclined toward art, literary or musical matters; but the condition of the crops, the amount of rainfall, the methods of irrigation, the experience in planting, pruning and grafting, the warfare against pests, the various soils and products of those soils, the city, county and individual improvements, railway affairs, legislative business—these and other progressive subjects are treated, according to capacity and knowledge, in even the remotest sections of the State. Men, women and children evince interest in these things, though they may not be connected personally with any of them.

Our public-school system will bear comparison with that of any State in the Union. Let a subscription paper be started for any good cause, and from the pockets of our citizens will come amounts that tell their own story of liberality. I pay this tribute because I think it richly deserved, and I wish that every stranger to our coast could comprehend the nature of the people who are rapidly bringing the "Golden State" into enviable prominence.

I would not like to be understood as advocating a wholesale uprising and evacuation of other localities; nor would I insinuate that everybody who lives and dies where he was born is stupid or content with narrow aims. I presume there are few persons who love the land of their birth more than I do, who have suffered more from the pangs of homesickness, or who cherish better the memory of friends that perhaps will never be seen on earth again.

There were advantages left behind which California cannot at present offer, and there exist beauties of nature for which the heart longs even under the shadow of our grand Sierras. Still I can see the spirit of reform, of liberality and charity, manifesting itself here as it was not visible to me there—exceptions noted, as in all things. I think that the Central States are ahead of "good old New England" in these respects, inhabited as they are largely by the venturesome from colonial precincts and their descendants. And when it comes to California, why, the circle widens all ways, and it may well be a proud matter for the State that it is so.

Los Angeles, Cal.

## YOUNG FOLKS' COLUMN.

### Ant Lore.

"Stop, Hallie! See what you are doing!"

"He's making a dreadful dust," said Elmore.

"He's destroying a whole city with all its wealth, and maybe killing whole families, babies and all."

Both boys looked at Uncle Frank in a horrified way, and then looked quietly and curiously at the ground.

"It's only an old ant hill, uncle!"

"Only an ant hill? And what is that but a city of many thousand people, a few hundred

"All, perhaps, but the trouble of assorting and storing them."

"Storing? Storing? Do they go to that trouble?"

"Does your papa in his store mix flour and hams and coffee and molasses together? Fancy these ants mixing crumbs of bread, grain, dead flies, bits of sugar or apple, and dried insects all together! They have a place for everything, and put everything in its place."

"But what about the babies?"

"Don't you see those white things they are carrying away!"

"They are grains of rice, I suppose."

"They are nothing of the kind, but baby ants being carried to a place of safety."

"I'd awfully hate to be one of their babies,

## DOMESTIC ECONOMY.

**FRICKADELLEN.**—Soak half a pound of bread crumbs in one pint of cold water. Mince very fine a half a pound of any kind of roast or boiled meat with a little fat. Now, put the bread in a napkin and press it, in order to extract all the water. Fry one table-spoonful of finely-chopped onion in two ounces of butter for two minutes; add the bread, stirring with a wooden spoon until rather dry; mix the bread with the minced meat, seasoning with one teaspoonful of salt, half a teaspoonful of pepper, a little grated nutmeg and grated lemon-peel, stirring constantly until very hot; then add two eggs, one at a time; mix well and pour in a dish to cool. When quite cool, take pieces the size of an egg and roll in oval shape, slightly flattened; dip in egg and bread crumbs and fry in a quarter of a pound of lard or drippings made very hot. Serve on a napkin or on a border of mashed potatoes with sauce or garnish to taste. Remnants of poultry, game, fish and even vegetables may be prepared in this way.

**GREEN PEA SOUP.**—Marion Harland gives this receipt: Two quarts of liquor in which corned beef or mutton has been boiled; two quarts of green peas; bunch of sweet herbs, including a shallot or young onion; one even table-spoonful of prepared flour rubbed up with one of butter; pepper to taste; disk of fried bread; boil, skim and strain the liquor and return to the fire with the pea pods. Cook them 20 minutes, strain them out and put in peas and onion. Cook until the peas are soft and broken; rub all through a colander back into the pot, stir in the floured butter; season, boil two minutes and pour upon the fried bread in the tureen. The advantage of using flour in this recipe is to prevent separation of the pea pulp and the liquor.

**PEACH AND TAPIOCA PUDDING.**—For this pudding there will be required one can of peaches, a generous half pint of tapioca, three-fourths of a cupful of sugar, half a teaspoonful of salt and one quart of water. Soak the tapioca over night in cold water; in the morning turn it with the water into a double boiler and cook for an hour. On removing from the stove add the salt, sugar and juice of the peaches, and stir thoroughly. Pour a layer of the mixture into a well-buttered pudding dish, then lay in the peaches and pour over the fruit the remainder of the tapioca; bake in a moderately hot oven for one hour.

**LEMON TRIFLES.**—Squeeze four lemons into half a pint of water and throw in the rinds, adding one-half a pound of loaf sugar; cover closely, and let it stand one hour; then take out the rinds and let stand all night; then strain through a cloth, add one ounce of isinglass, and put in a saucepan with six well-beaten eggs. Set it on the fire and keep stirring it till it is as thick as cream. When milk warm put in molds. This is a very light and delicate dessert. Molds for receiving creams, blanc mange, etc., should always be wet in cold water. Half a pound of sugar is half a pint.

**RECIPE FOR ROOT BEER.**—Take one ounce each of sassafras, allspice, yellow dock, and wintergreen, half an ounce each of wild cherry bark and coriander, quarter of an ounce hops, and three quarts molasses. Pour sufficient boiling water on the ingredients and let them stand 24 hours, filter the liquor, and add half a pint yeast, and it is ready for use in 24 hours.

HOW FIDO LEARNED TO SPEAK.

times smaller than you, 'tis true, but alive and capable of feeling and planning and working."

"I believe you about the numbers—just see them swarm! But weren't you joking about the 'wealth' of the city? I don't see any banks and stores."

"There were banks and stores, nevertheless, and all this year's crops and goods in them."

The boys looked, rather than asked: "What kind of goods, pray, are in an ant hill?"

"There was stored in that city what was worth as much to its owners as your own father's stock of groceries and bank account to him—wheat seed, crumbs of bread, grain and sugar, shreds of meat, dead bugs, etc., enough to last all winter. Suppose you take all the provisions out of Chicago?"

"Well," said repentant Hal, "I'll bring my pockets full of wheat and things, and that will pay them all back."

and get nothing for breakfast but dried bugs and ragweed seeds."

"Mistaken again. Their babies are fed the sweetest and richest of milk."

"Can these fellows carry away milk, too, or have they milkmen as well as banks and stores?"

"Better than that; they keep their own cows—the aphids, a kind of plant louse, which exudes drops of honey-like fluid just adapted to baby ants. They watch these creatures—sometimes shut them up to keep them from running off—and milk them by pressing the body with their forefeet."

"I'll watch what I kick after this."

"And remember God made the ants as well as you."—*Morning Guide.*

WEE Fanny bit her tongue and came in crying. "What is it?" said her mother. "Oh, mamma!" she said, "my teeth stepped on my tongue."

THE scramble for the Fresno county raisin crop still continues, says the *Expositor*, and new buyers are appearing in the field daily. The fact is, Fresno raisins are a good thing to have.

## The Week.

Disturbance is rife. Our political and legislative sensations are mild compared with the jarring of thrones and elemental disorders in earth crust and cloud which are telegraphed each morning. In our own country, fortunately, there are but natural phenomena; in Europe the trouble predicted is international. Sunday the storm center was the city of Chicago. A storm of thunder and lightning and torrents of rain fell upon the city. A powder magazine was fired by lightning, buildings were demolished, and a number of lives lost. Earthquakes give renewed evidence of their disrespect for State lines and their repugnance to being classed among the resources of California.

On Tuesday night there was a wide-reaching tremor throughout the States east of the Mississippi, which frightened people and did some injury to buildings at many points. The center of the disturbance was Charleston, S. C. Telegraphic communication was shut off, and not until the following day did the country know that the streets of the city were, to a degree, at least, blocked by the ruins of buildings cast down, and that about 60 lives were lost in the catastrophe. No doubt the mails will bring a sad account of the deplorable event.

From abroad there comes new rumors of war. The Bulgarian ruler, cast out from his throne and dominion a week ago by a conspiracy, has been called back and re-seated by his people and his enemies condemned to death. Though the reaction has been speedy the agencies which wrought the mischief are ill-content, and are said to menace the peace of Europe by their plotting. Some predict the greatest war of the century. Certainly affairs are assuming an ugly shape, but for humanity's sake the age of war should be closed.

## Our Industrial Jubilees.

The grain harvests have been gathered and the time has come to celebrate our annual industrial jubilees. They assemble under cheering and happy auspices. Though there have been some disappointments in yield and value of certain crops, the year has generally been an encouraging one to all forms of industry. The horn of plenty is full enough and to spare, labor in demand, and no one need stand idle. These industrial associations are undoubtedly among the best and most useful of the age. No educational establishment, no school or college, is so well calculated to enlighten and advance great masses of mankind in practical knowledge in so short a time. One may not find time to visit every hamlet, town and city in the State, every wheat, barley, cotton, hop or other field; every peach, apple, orange or other orchard; every flock of sheep, herd of cattle or stable of horses; in short, he may not be able to walk over every acre of soil in the valleys or on the hill slopes, every mine in the mountains, yet he can find a very good substitute for such a survey and may learn very much of value by a week studiously spent at one of our annual fairs. The special object for which they are established must secure the approval of all who have patriotism, public spirit or agricultural zeal, and though they are not yet perfect we discern tendencies in their management which promise much for the future.

Next week the Thirty-third Annual Fair of the California State Agricultural Society will be held in the city of Sacramento. Let us briefly inventory what we are likely to see. The indications are that the orchardists, viniculturists, nurserymen, gardeners and florists will give a display in their respective branches of industry, that for beauty, taste, excellence and variety, will be equal, if not superior, to anything of the kind ever seen. We shall see samples of our great staples and vegetables, our wheat, oats, barley, corn, rye, beans, Irish and sweet potatoes, onions, cabbages, beets, turnips, etc., which a few swift years ago were largely imported and now are produced in excess of home consumption. The quality and variety of these productions are rarely equaled in any clime. We shall see a display of the leading varieties of grapes and wine known to commerce. In the line of pickled, canned and preserved fruits we can challenge the best fruit-producing countries of the globe. In this direction we cannot be excelled. And yet how short the time since

millions went out of this State to purchase and import these articles. To-day we are exporting in large quantities, and saving these millions to expend in improving our farms and homesteads. The display of woolen fabrics, the cunning work of our own looms, will be another attraction. They will comprise many fabrics made of wool or silk.

Then there will be brought together the finest and purest-blooded horses in the State. Horses in whose veins courses the fiery blood of the Arabian steeds and the high-bred race-horse of England; horses for heavy draft and the truck; horses for the road, carriage and farm; horses, in short, adapted to every purpose for which that noble animal may be used by man. We shall see the best breeds of cattle in the world; the noble Durham, the beautiful Devon, the milk-giving Ayrshire, the cheese-making Holstein, the butter-producing Alderney and Jersey. In the sheep-pens we shall find some of the finest specimens of French Merinos, Spanish Merinos, Cotswolds, Southdowns, and all the other various breeds that are known. Swine will be shown in profusion, and no doubt the beautiful Angora goats will win the admiration of all.

Now, surely, no one can witness such magnificent exhibitions of staples and stock, as we have been accustomed to see at our State and district fairs, and not be convinced of the importance of the work that has been achieved by these associations. Who can say that the great body of the people who take a lively interest in such displays receive no benefit from them? Had we space we might go through every department of an agricultural exhibition and point out its special advantages. No one can carefully study the various assortments of agricultural implements, the reapers, mowers, headers, thrashers, combined harvesters, plows, harrows, cultivators and stackers; the magnificent displays of flowers, fruits, fabrics and cunning works, the spacious picture-galleries, without lasting benefit in taste and knowledge. After witnessing these scenes of beauty, wonder and utility, no one that has a particle of sentiment or ambition can return home without a glow of emulation and a determination to do better than he had ever done. In no way, then, can we better promote the public good, develop our resources, attract immigrants to our shores and help build up a prosperous and a happy commonwealth than by liberally participating in these annual exhibitions.

## County Exhibits at Mechanics' Fair.

The number of county exhibits at the Mechanics' Fair, now in progress in this city, is rather smaller than was expected. Several counties which entered for the competition have failed to send on the material. The agricultural material shown is, however, of the highest excellence, and there is a good display of it, though the most of the counties have not availed themselves of the invitation of the Institute. Sonoma County Pomona Grange has a grand exhibit.

The efforts of Messrs. Whitaker and Adams and others who aid them seem to increase year by year, and they do not propose to allow their talents in this direction to fall into desuetude. They have for several years carried on work which has given old Sonoma new rank among progressive communities, and, profiting by their experience, they make each year's display far surpass its predecessor. It is to be regretted that Sonoma's competitors last year do not appear on the list this year. An honorable rivalry is a valuable progressive agency. Sonoma is evidently in the contest to stay. We hope to have space next week for a review of the materials which comprise this year's display.

Placer county has a very creditable exhibit at the Mechanics' Fair, showing various valuable industrial products and foothill fruit in all its glory. Of this, too, we expect to speak further at another time. Mr. J. S. Harvey, of Jamul, San Diego county, has a very fine exhibit of citrus fruits—bright, clean and well grown. There are also a number of individual entries of articles of agricultural interest which we shall take time to examine hereafter. The fair is now in its second week. Two full weeks remain after this, so that there will be plenty of time to arrange visits to the city during the exposition.

## What the Miller Does.

As a nation is but an aggregation of individuals, so flour is but the result of treatment of innumerable grains of wheat. A recent writer has remarked that in a flour mill the whole thing comes right down to making flour out of one grain of wheat. It is not like many industries in which there are several raw materials to be chosen, prepared, mixed, acted upon mechanically and chemically, and transferred into products entirely different from any one of the raw materials. The making of wheat flour is simply the repetition, millions of times, of

Grain of Wheat Enlarged and Analyzed.

various operations upon one grain of wheat. We show herewith the appearance of a grain of wheat cut lengthwise, and otherwise laid bare from inside to out. This enlargement will show us what is to be acted upon. The five outer layers, marked 1 to 5 inclusive, are the layers of bran. Next inside comes a layer worth more than any other portion of equal weight, consisting of gluten cells, which give "strength" to the flour and force and health to the consumer. Within this layer 6, of gluten cells, comes the greater mass of the berry, marked 7, and consisting principally of starch cells. No. 8, at the bottom, is the chit or germ, waxy or oily, and very nourishing, but discoloring the flour and preventing it from keeping, especially in a warm, moist climate. At the top will be seen, marked 9, the fuzz or beard, discoloring and innutritious. The cut being a section does not show the crease, which contains more innutritious and discoloring dirt.

From millions of such berries the miller is expected to make flour of various grades of color and strength, the machinery in use for this purpose, considering the small size and delicate nature of the berry, being of the coarsest and most cumbersome character. If any one of you will take a single grain of wheat and with the sharpest knife and the most delicate emery paper and finest brush will endeavor to take off the bran, pick out the germ, rub off the fuzz, and get the gluten layer separated from the starchy interior, the task will be found very difficult. Yet this is what must be done in the mill, by immense machines moving at a high rate of speed, and working upon grains of all sizes and shapes, and various degrees of hardness.

## The University Exhibit at the Mechanics' Fair.

The College of Agriculture of the State University has a very attractive and instructive exhibit at the Mechanics' Fair. It is located opposite the main entrance to the garden, and consists of wall space about 40 feet long, upon which are fastened 16 large glass cases containing specimens of the large grain collection of the University, each kind plainly marked with name and source whence it was obtained. There are probably 300 different varieties of cereals shown, both in this form and in the thrashed grain, which is in bottles below the cases. On the table below the cases there is a collection of fruits from the University standard orchard, all clean and correctly named. There is also quite a collection of typical grape-vines and about a score of trees and plants, which are being distributed for trial in different parts of the State, the success or failure of the plants being described in the reports of the College of Agriculture. Of the fruits shown, cions are furnished to all who may desire to have them for trial. The fruit collection being accurately named, is studied by fruit men with much interest. We understand it is expected that a display from the College will also be made at the State Fair in Sacramento.

## Kansas Agricultural College Barn.

Both with an idea of showing our readers what arrangements Kansas has made for experimental work in live-stock feeding and as suggestive perhaps to our readers who may contemplate barn-building, we give on this page a perspective view and floor plans of the new experimental stock barn of the Kansas Agricultural College at Manhattan, in that State. E. M. Shelton, professor of agriculture, under whose direction such work is done, has already made important contributions to the literature of live-stock feeding, and we congratulate him upon the improved and increased facilities which he has secured for such work. We shall take pleasure in presenting, from time to time, interesting items of the progress of his experiments and the results attained.

The engravings on this page show the college barn, or rather system of barns, designed in part for experimental uses, a considerable part, however, performing the functions of the general-purpose barn. The perspective view shows the front and westerly exposure of a connected structure, built at two different times, as the result of appropriations made for that purpose during the legislative sessions of 1876-77 and 1884-85. That portion of the building having its greatest extension north and south was built in 1877; the annex placed at right angles to this—the experimental barn proper—was finished ready for occupation in December last.

The entire structure is placed in a side-hill, sloping toward the east, and having a variation from the horizontal of about 3 feet in 50. That portion of the building first constructed was planned for a farm carrying out a system of mixed husbandry, in which the growth of grains and grasses with stock-raising have about equal prominence. The newer portion, that having its greatest extension in the direction east and west, was planned with especial reference to the wants of the farm in its experimental operations. However, in the description which follows, "the barn" will in every case have reference to the entire structure, as shown in the cut.

The old part of the barn is 97x48 feet, the new experimental portion 76x48 feet—outside measurement in both cases. The building is of Manhattan limestone, put up in the best style of rubble work; all the arches of the doors and windows, all jambs, and, with the exception of one door in the upper story, all sills, are of cut stone. A basement 9 feet 6 inches in height underlays the entire building. The upper story is 16 feet high, measuring to the top of the walls.

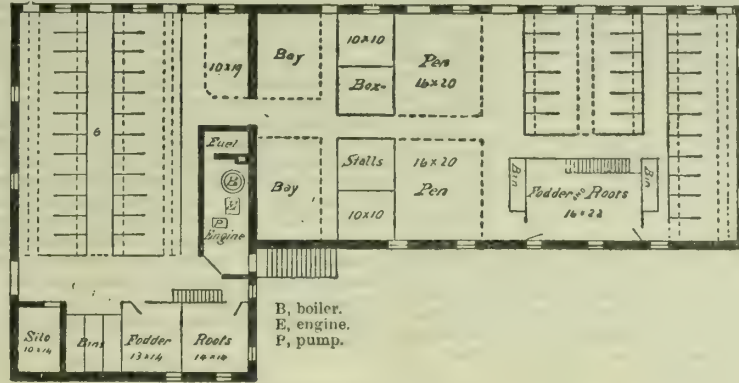

The plan on this page shows in very full detail the arrangement of the basement of the college barn. The very great number of doors and windows—the former indicated by blank spaces in the wall, the latter by the blank spaces divided longitudinally by a line—sufficiently attest the thorough lighting, and, to some extent, show the ventilation of this part. The windows are for the most part half sashes of usual size, hinged at the top so as to permit opening at will. Six ventilators—marked V in the plan of ground floor—establish a direct connection between the basement and outer air through cupolas on the roof. These ventilating shafts are made of inch flooring, with supporting joists at the corners; their sides are provided in suitable places with trap-doors, through which hay or other fodder may be pitched to the basement. Being three and a half feet on a side where they penetrate the ground floor, and three feet square at their upper extremities, these ventilators admit the passage of fodder without ever obstructing.

The barn furnishes stall-room wholly in the basement for 51 head of cattle, which might easily be increased nearly one-half by the construction of stalls in the spaces marked "pen" and "bay."

Each stall is 4x8 feet, including the manger, two feet wide. At the rear of the stall is a manure gutter 6 inches deep and 20 inches wide, and beyond the gutter in the single tier of stalls is a passage-way two feet wide, on a level with the general floor. The mangers in all except box-stalls consist of simply a foot-wide

the floor, and have sloping bottoms, so that the feed slides readily to the front, where it is drawn out through a spout. Each bin communicates with the upper story by a hinged trap-door set into the floor.

The considerable space given for the storage of fodder and roots may be used for other pur-

BASEMENT PLAN.

two-inch plank resting edgewise on the floor. This plank slides in cleats in the partitions, and these may be so adjusted that the space between the front of the manger and gutter may be increased or diminished to suit the length of the animal using the stall. The grain-boxes

poses than those named—as a hospital or as box-stalls or calf-pens, for example—but in experimental work these apartments will be found to be useful as storage-rooms for specially-prepared fodder and roots. The silo has for its walls solid masonry, well pointed, extending

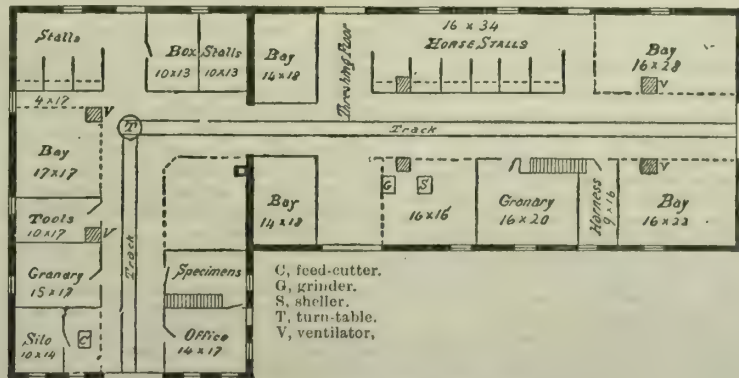

EXPERIMENTAL BARN OF THE KANSAS STATE AGRICULTURAL COLLEGE.

are made by simple partitions in the general manger. The stall partitions next the alleys—the front of the manger—are not vertical, but slope toward the alley, 18 inches out of the perpendicular; by which arrangement waste by animals while eating is largely prevented, the

upward to the main floor. The arrangement of the silo, feed-bins, fodder and root-storage rooms, with reference to convenience in feeding, has proved altogether satisfactory.

The main floor is about two feet above the ground level, and entrance is gained to it at

GROUND FLOOR PLAN.

feed being caught as it falls from the mouths of the cattle and returned down the sloping partition to the manger. The box-stalls are 10x10, as shown in the engravings—a satisfactory size in our experience, although a space of 8 or 9 feet by 10 feet would answer nearly or quite as well. The space marked "Fodder" and "Roots," if too great for the purpose suggested, may be partitioned and used as a box-stall or as a storage-room for calves.

The feed-bins, five in number, are usually 3x12 feet. They are supported two feet from

the south end and west side of the old portion of the barn, and at the west end of the new portion, as shown in the plan. Earth embankments lead directly to the doorways. These doorways are 12 feet in width, and the main floors 13½ feet—a space which ordinarily might be reduced one foot without lessening the usefulness of the barn.

The bays, with all the space over office, stalls, tool-rooms, silo and granaries, give the general storage-room of the barn for hay and other fodder. This great area has been largely

increased by flooring over a good part of the main gangway.

The horse-stalls occupy a space 16x34 feet in the old portion of the barn, while in the newer portion three stalls occupy a space rather more than 13x17 feet. Each stall in the old barn is 5x9 feet, including manger and excluding the alley 7 feet wide at the rear. In the new barn the width of the stalls is 4 feet. At the rear of the stalls is a blind gutter beneath the floor and covered by a plank on a level with it, which carries the liquid excreted to the drain at the rear of the cattle-stalls in the basement.

In the office the records of the farm are kept. It is furnished with secretary and suitable chairs and other like furniture. The specimen-room is designed as a secure place for the storage of specimens of farm and experimental crops. It is provided with suitable shelving and vermin-proof granaries. The blank space at the rear of the specimen-room may, as convenience dictates, be used as a storage-room for implements and machines, or it may be made to do service as a bay for hay or grain in the straw.

The pump in the engine-room is connected by an inch-and-a-half iron pipe with a never-failing well, located about 300 feet to the rear of the barn. It also connects, in like manner, with two cisterns, having a joint capacity of 350 barrels, which are located at either side of the main entrance to the newer portion

of the barn. These cisterns are filled from the roof of the barns. From the pump, one pipe leads to the tank which supplies the boiler, and another to a 40-barrel reservoir, which is supported by the roof trusses at a point near the roof in the central part of the new barn. A steam pipe conveys steam from the boiler to this reservoir, by which means its contents may be raised to any desired temperature. From the reservoir, pipes lead to different parts of the barn, supplying stock with water and water for cleansing purposes as needed.

Upon the track indicated in the cut moves a car, having flanged wheels of the usual form. This track leads to the corn-cribs, located south of the barn, and upon it grain and hay are conveniently shifted.

As a precaution against accidents from fire, the engine and fuel rooms have

walls of masonry, as indicated in the plan. The fuel-room is also partitioned off from the engine-room by a stone wall. The total space given to the engine and its fuel supply-room is 9x25 feet. The boiler and engine in use are of the vertical type, of nominal 10-horse power. These, with the pump and other machines, are more fully referred to in another part of this report.

The floor of the engine-room is laid with dressed flagging stone, as is the main aisle in front of the feed-bins and silo, and the alley extending past the engine-room to the door at the rear. The space marked 10x19 at the rear of the fuel-room is used for steaming and in other ways preparing experimental foods for pigs. A steam pipe from the boiler and a cold-water pipe lead to the steaming tank here located.

Outside of the matters of light and ventilation, the following are the considerations which have most influenced the arrangement of the basement:

To place those parts in close proximity which are likely to be used in connection; as, for example, all space used for the storage of feed and the stalls in which the animals are fed; to place all stalls and tiers of stalls in direct communication with the barnyard, thereby giving ease of access and quick and easy riddance of manure. The hay bays extending to the basement floor have proved most useful; they are filled with the least possible labor from the floor above, and are very easily emptied in the process of feeding.

## THE DAIRY.

### Dairying in California.

[Written for the RURAL PRESS by E. W. STEELE.]

Much is being written and published daily upon the various branches of dairying in California—so much, indeed, that it seems as though the final necessary word must or might have been said by some one or at least all of the able writers upon the subject. But all do not see all that is written and published upon any subject, or remember all they read.

When any one is in need of information upon any given point, and it comes to him, a hit is made, he puts in practice the information so gained, he appropriates it, and ever remembers it afterward. Few can learn and remember well many things abstractedly, hence the necessity for the constant repetition of facts and information upon all practical subjects. There are improvements, too, from day to day in every pursuit; new conditions arise, new facts are developed, and we pass milestones on the road to progress.

#### Location for Dairying.

If I were about to engage in dairying in California, I should first turn my attention to securing a location for the business. In deciding what would constitute a suitable location, I should consider: First, the cost of marketing produce. Can the produce be shipped regularly and arrive in good order? Secondly, are the range and climate suitable? In answering this question, I should ascertain at what time the rains commenced in the fall, if frosts might be expected to cut down the early grass, and at what time the dairying season might be expected to commence profitably on the natural grasses, and at what time do the grasses dry up. The answer to these questions in this State would be: December, January, February and March to commence dairying, and May, June and July to dry up, according to location, making the longest season in the most favored locality in the most favorable years. This gives only eight months, of which only about five months would be good dairying, and not more than two or three months' full flow of milk on the natural grasses alone, and correspondingly less favorable results in less-favored localities. But a good dairy of cows ought to milk eight months, and the best nine months, with proper feed, six months of which ought to be full flow of milk. Hence it is evident that we ought to look for a range where we can have the longest possible season of the best quality of green grasses, and more than this, where we can raise by cultivation the best kind of food to use before and after the natural grass seasons.

These requirements point clearly to a ranch of rich, arable, moist bottom or irrigable land, or both; that has rolling land, not too hilly, that will produce rich, sweet, early feed, say bunch grass, alfalfa, oats and clover, which should also grow in the bottom land luxuriantly for later feed, particularly burr clover. On such a ranch one can raise to feed, before grass grows, and after it is done growing, alfalfa, green corn, planted thick for fodder, the various kinds of grain, pumpkins and roots.

The first crop of alfalfa and the fodder corn that is likely to get too old before it can be fed, and any crop of wild oats or grain that comes to maturity before the weather is suitable to cure it for hay, should be placed in the silo. These crops and the green grass should meet. Add to these some mill feed and ground oats, barley or corn in sufficient quantities, and you will have enough of the right kind of food for your cows every day in the year, which is the first requisite, the "open sesame" in the dairy business.

#### The Water Supply.

Now we have a ranch, let us look next after the water. First—Water for stock: Springs where the cattle tramp in and stand in them, mud-holes and stagnant water, will not do. Under such circumstances at times your cattle will die of "dry murrain," malarial fever, etc. Your milk will not be good. Could you look into it with a microscope, you would see animalcules in it which rapidly increase in number until, if it stands long enough, your milk will be unsound and good cheese at least cannot be made of it. Therefore fence in your springs and conduct the water in pipes into good large troughs. In hot weather draw the water out, or, better still, have the patent troughs that you can get at P. P. Mast & Co.'s, Market St., S. F., that you can turn over, empty out and turn back again to place as easily as a bucket. This should be done at least twice a week, and scrub them occasionally with broom or brush. Medicate the water with some sulphur, copperas, salt and slacked lime. For this purpose take 100 lbs. salt, 10 lbs. copperas, 6 lbs. sulphur, 3 pints slacked lime, and mix it. In hot weather, a green vegetable growth rapidly forms in standing water in troughs, and even in running water along the margin of streams. If you will look into this vegetable growth you can see millions of minute insects, and fatal diseases are being traced more and more, these days, to animalcules.

Next, look after your running water; save it and make it grow you alfalfa or other green feed in the dry season; and if you have not got enough, try an artesian well or two for that purpose. Run the water from swampy and

springy places in ravines and hollows, in blind ditches into your dryer lands lower down (if you have any so situated), and distribute it there (a la Cole). But the dairyman asks,

#### Will it Pay?

What will be the result of all this? I will answer that, now since we have got a farm suitable and are prepared to feed with proper food every day in the year, let us get the best dairy cows possible and secure thoroughbred bulls of the best milking strains of blood. (I prefer the Holsteins, and think they are the coming cow for general dairying and beef; for reasons see Holstein article in this issue of the RURAL.) These things being done, we shall have the material to make the largest possible quantity of the best article of produce per cow, and will have made the best possible arrangements to secure the health and increase of our stock.

These are not theories that I am advancing, but the result of experience. When we used to run a dairy on grass alone and let the cows drink out of any spring or mud-hole, as they could get it, we have lost as many as 17 cows in a single day, and frequently several thousand dollars worth in a season. To-day the dairy-men in our county (and there are many of them who are dairying on this plan) are meeting with similar losses. But since I have adopted my present plan my losses have been very light; no more than an average mortality, such as is incidental to the business. But if we let down a little into old methods the extra mortality soon begins to show itself again.

#### Handling Dairy Stock.

Now we are supposed to have a suitable ranch, have arranged for feeding and watering stock and have a good dairy of cows and thoroughbred bulls of what we believe to be the best breed for our purpose. We come to the management of stock and dairy.

First, let us have the cows come in at the proper time, which will be decided by our plan of dairying. I believe that in California the most thorough dairymen either do or will gradually get into the way of milking the year around. This has been my practice for 28 years. During that time there has not been one day that either butter or cheese has not been manufactured in some of the dairies in which I have been interested.

As cows cannot milk on dry grass long, this plan of dairying requires the cows to have enough of the proper kind of food every day in the year. Even the dry cows, after milking so long, must be kept in condition in order to milk well the next season. A cow cannot milk till she has more than enough food to sustain life. It makes my blood boil to think of turning out the gentle, patient, dairy cow, who has been giving her very life during the greater part of the season for the benefit of the dairyman, on to scanty or bleached pasturage, without protection from storm or sun, where she will be compelled, in order to sustain life, to eat rushes and the pucker and often poisonous weeds that grow in damp places late in the season. Often she has to lick up dirt with the grass seed which is often the only other remaining pasturage, thereby contracting disease, and getting poor and weak. It is not profitable; it is not right; it is even worse than the admitted "man's inhumanity to man."

If we have decided to milk the year around, let us have three-fourths of the cows come in January and February and one-fourth in August. The calves can then all be weaned on green grass, which I consider to be a very important point if the calves are to be raised. Every practical man knows the danger and loss incident to weaning calves on dry grass, and that if they live their growth must inevitably be stopped for a time. Then only three-fourths of the dairy will be milking at one time. In proportion as you increase the number of cows milked in one place at one time, you increase the distance that the cows must travel for feed, and the amount of pasturage tramped out, the confusion on account of having so many new cows and calves coming in daily, and the loss consequent thereon.

#### Advantage of Smaller Bands of Cows.

Every dairyman knows that a large number of cows running together when grazing do not make as much produce in proportion as a smaller number of cows, and are more subject to accident and disease. By dividing the calving season the dairyman can more surely have the cows come in as he wishes, can manage the bulls more successfully, will not have so many cows to milk in short days and in the mud, and consequently will get them more thoroughly milked and the calves better cared for.

Again, produce sells for a better price from July to January than from January to July, and if dairymen expect to get good prices they must scatter their produce more through the year, and the extra feed will be compensated for in quality and quantity and price of produce, in condition of cows and increase, and in the saving of stock from diseases and losses therefrom. There is also an advantage in being able to keep the best and experienced milkers from year to year. Some milkers have staid with us for 15 consecutive years, put their money out at interest as they earned it and quit with respectable fortunes of their own.

#### A Bull Paddock.

Make a bull lot, and keep your bulls in it so that you can use them as you want them. They do not do well kept tied or in a barn. A lot surrounded by plenty of posts and iron-clad with barbed wire will hold them.

#### Milking.

Let the dairyman see that his cows are kindly treated and quickly and thoroughly milked. A cow (or at least many of them) will not give all her milk to a milker who is not kind to her or that she does not like. Weigh the milk that each milker milks occasionally, for a week at a time, particularly in those parts of the season when the cows are either gaining rapidly or shrinking. Keep a table showing the relative increase or decrease in quantity of milk per cow. If you have not an extraordinary lot of milkers you will be astonished at the results. Such tests have shown that some men's strings of cows were losing six pounds of milk per week per cow, while others only lost one-half pound per week per cow—all in same band, on same feed, at same time, and all of the milkers supposed to be good milkers. Such tests have a most excellent effect upon the milkers, beside teaching the dairyman something worth knowing in his business. Too much importance cannot be placed upon the thorough milking of the cows by competent milkers, who will make the cows think as much of them nearly as they would of their calves.

#### Handling of the Milk.

Having plenty of good feed, good cows, good water and good clean milkers, the dairy-men will usually have good sound milk to manipulate, without which a good article of produce cannot be made. Now about the proper handling of the milk.

It would make this article too long to go into it extensively, and it is so much a matter of observation and experience that it would do but little good if I did, especially as the subject has been treated scientifically and exhaustively in such works as "Flint's Dairyman," to which I refer any dairyman wishing recipes and directions. I will only make a few general suggestions.

There is no doubt that the most successful method of handling milk for making butter now known is with the Centrifugal creamer. With it can be separated more completely the butter globules from the milk, and in a shorter time, than by any other method now known. Having good milk the cream must be good, and, being so much less in bulk, can be kept at the proper temperature, and churned at the proper time. I believe in churning, in stopping while the butter is still in small globules, or, in other words, not gathered into a big lump; then thoroughly washing the butter with good, clean cold water until it will not color the water; then salting and working the butter just enough to mix in the salt—only working it once. You will not by this method break the grain of the butter, and it will be more solid and less salty than when worked twice.

#### In Making Cheese

The cheese-maker should know first the condition of his milk with reference to the acidity which it has arrived at when he adds the rennet. The more acid the less heat in the milk and the less rennet to add. I have set milk all the way from 65° to 88°, and made cheese in from one to six hours, according to the condition of the milk and the kinds of cheese I wished to produce. Cheese-making (successful cheese-making) is largely a matter of judgment and experience. The milk should be so cooled down at night that a good article of merchantable cheese would require three to four hours to get into the press. This can be easily and surely done if the cows have had proper food and water. If they have not you are all at sea, and the cheese-maker will have use for his experience and powers of observation if he makes a passable article, and will almost surely come out second best.

When the milk of which you are about to make cheese is in about the usual condition found in cheese dairies, where they make up at once the milk of 24 hours, heat the milk to about 84° to 86°. Add rennet enough to bring curd in from 30 to 40 minutes. Now, the texture of your cheese is determined by the manner in which you manipulate your curd. Put in the rennet, commence to heat the milk at once, and stir it while heating and continue to stir till cooked. Then put to press without salt, and you will have a cheese like a puff-ball. Then salt it from the outside until it comes down flat, and you have a partly-decomposed cheese, full of holes. This is the way Swiss cheese is made.

Take the same milk; put in the rennet at 88°; let the curd come firmly, then cut the curd slowly and carefully, and handle the curd until it is matured without heat; salt and put to press. Turn it daily, run skewers through it, still keeping it in the press for several days, and you will have a square-cornered hard cheese that will not be fit to use for several months, and then will be a sharp, crumbly cheese.

Take the other extreme; cut up your curd as quick as it comes, fine as you can; put on the heat and cook it up to 100°, or a little more, in an hour, and you will have a puffy cheese, which, if you should cut at the end of a month, would look like toasted cheese and soon after that time would commence to taste bitter.

Try still another experiment with same milk. Set at usual heat; use rennet to bring curd as usual; let the curd come firmly; cut it slowly and carefully; work the curd slowly and carefully without heat until it becomes quite mature, say for two hours or more; then apply the heat slowly, taking an hour and a half or more to raise the curd to 98°. Then cool your curd before salting, and you will have a

solid flat cheese, which will not be cheese for some time, but will be a rather dry, firm, but merchantable cheese. I give these examples to show that the texture of the cheese is fixed by the time and manner of applying the heat to the more or less matured curd at the time of the application of the heat. Cook a loaf of bread too soon and it will be heavy; too late, and it will be sour. Making cheese is a chemical operation, and must be so conducted as to have the proper chemical changes take place at the proper time. With a new cheese-maker, or in starting a new dairy, I always make what I know will be a good, solid, merchantable cheese, as herein indicated. Then, if I wish to make a mere porous, soft and buttery cheese, I cut the curd a little sooner, apply the heat a little faster until my cheese begins to round up in the center soon after being placed on shelves to cure. Then I work back to the place, when they will begin to cure and soften up in a few days, but keep their shape. When I have the texture of the cheese to suit, I try to stay there. Of course the subsequent handling of the cheese has much to do with their flavor. Some cure in cellars and some with extra heat. I always keep my cheese moderately warm, and try not to have the process of fermentation stop at all until the cheese is at least partially cured and will do for the market. Then, if it can be kept in boxes or covered with gum shellac, it would shrink less, be more moist and keep better.

[Our dairy readers will, we know, thank Mr. Steele for his very valuable and interesting essay. There are many men of many minds in dairying, and we would like them to take Mr. Steele's article as a text, and write for the RURAL what they think of his suggestions and how they may be approved or improved in their experience. We ought to have much more dairy discussion.—EDS. PRESS.]

#### Modern Furniture.

The great-grandfathers and grandmothers of the present generation would open wide their mouths in mute astonishment were they to visit a furniture wareroom of the present day, or enter a modern furnished house. They would now and then see a few specimens of the plain old familiar furniture—the case of drawers, the tall clock in one corner of the room, because of the present popular craze for antiques. But side by side they would also behold elaborately wrought massive furniture, but more especially would their attention be arrested by the numerous profane contrivances, in which one piece of furniture was made, by a few shifts and turns, to act for something quite distinct from what it appeared to be. A folding-bed, for instance, would be made to assume the appearance of an organ or upright piano, or perchance a massive combination bookcase and writing desk. Sofas, by a magic twist and jerk, would be transformed into elegant bedsteads with mattresses, pillows, sheets and blankets coming forth from the dark recesses of their interior.

Cribs for small children, when not in use for such, would be folded up and made to serve as ornamental supports for statuettes or bric-a-brac. Stationary wash-stands are made to undergo similar transformations. Some of the carved heads and figures upon modern furniture are as much unlike anything real as are the fancies of the Japanese upon their vases and other ornamental work. Buffalo horns and the long-horned cattle of Texas are oftentimes polished up and so interwoven with themselves and curious shapes of wood as to present most unique and weird appearances in the shape of chairs and tete-a-tetes. Bronze and hammered metal picture frames and round tables are also among the latest novelties in this direction. Then, again, in the matter of household decorations and wall-papers, the light, airy colors and figures of half a century ago have been changed to dark and somber colors, hiding and concealing the beauties of the furniture and carrying one back to the dark and gloomy rooms of medieval times. Such are some of the characteristics of modern furniture and ornamented indoor work.

A SIGN-BOARD FOR DOOR-PLATE.—The Yolo Democrat thinks the public would be greatly accommodated if every farmer would erect in a conspicuous place on the farm his name, in order that travelers might be guided thereby; that this would save the husbandmen the task of answering hundreds of questions, and at the same time direct to them persons who had business to transact. The suggestion is a good one, and although itinerant beats and sharpers would try to abuse such conveniences, as they do door-plates in town, yet all annoyance thus caused would, we think, be far outweighed by the grateful use of the well-meaning and honest.

TO MAKE MOCKINGBIRD FOOD, take of hemp seed three parts, toasted wheat bread two parts, maw seed one part, ox heart one part. Boil the ox heart well in water, cut it small, and place it in a pan in an oven, where it must be allowed to become perfectly dry and crisp. All the ingredients must then be thoroughly mixed and ground in a mill to coarse powder.

### The Mechanics' Institute Fair.

The annual exposition of the Mechanics' Institute is now in progress in the grand pavilion in this city, and will continue to be the center of attraction in the city for a month. The space is well occupied with a great variety of industrial and art materials, natural productions of every kind, etc. It is too late to prepare any sketch of the fair for this week's PRESS. Let our readers note the fact that it is now in readiness for their visits. For those who cannot come we shall record our notes of the exhibition hereafter.

The opening exercises at the Grand Opera-house began at 2 o'clock Tuesday afternoon, Aug. 24th, with a grand opening overture by the orchestra under Charles Schultz. Rev. Joseph P. Macaulay made a short prayer, after which there was more music by the orchestra.

#### Ramon E. Wilson's Address.

P. B. Cornwall, President of the Mechanics' Institute, in a brief address introduced Ramon E. Wilson, who spoke as follows:

*Mr. President, Ladies and Gentlemen:*—For the twenty-first time the friends and patrons of the Mechanics' Institute assemble to celebrate the opening of its annual industrial exhibition. This large concourse of people is a most fitting tribute to the ceremony, and it speaks stronger than language can express the feeling and sentiment of the community as to its success.

#### Origin of Industrial Exhibitions.

Industrial exhibitions are now fully recognized as a method of assisting the development of industries and material progress. As exhibitions purely, they are of comparatively recent date. For the purpose of effecting sales of the productions placed on view they have an origin which antedates modern history.

This latter class were called "Fairs," held at stated intervals both in Asia and Europe, in the earliest period of civilization. They are supposed to have derived their origin in religious gatherings, which first gave an opportunity for the exhibition and sale of wares to large numbers of people. The Greeks and Romans have left accounts of many such.

We find in some of the earlier text-books of the law that these institutions had become so important that special courts were established for the consideration and determination of questions of law and equity arising at them.

Fairs were instituted in France and in Southern Europe some 1000 years ago. Among the more celebrated of those early times was that of St. Denis, instituted by Dagobert, A. D. 629, and Aix-la-Chapelle and Troyes in about A. D. 800. In A. D. 826 they were introduced into Great Britain by Alfred the Great. At the end of the tenth century they had become well established and very common throughout Northern Europe.

In Great Britain patents were issued by the king, permitting the establishment of annual fairs. Some of these have become famous. The English fair at Weyhill is noted for its display of sheep; that of St. Faith's is distinguished by the numbers of Scotch cattle bought and sold, and everybody has heard of the Donnybrook fair, so long celebrated for the jollity and pugnacity which distinguished its visitors.

In France the fairs of St. Denis were discontinued. Beaucaire and Gibray have been in existence for centuries.

Fairs are still held in Holland and are enjoyed by the people as important holidays.

Germany is known as the modern home of this peculiar institution, the principal ones being those of Leipzig, Frankfort-on-the-Main and Brunswick.

In Russia the fair is the largest in the world, lasting 25 days, and the sales amount to many millions of dollars.

In Asia the fair held at Mecca, when the annual pilgrimage takes place, is the most extensive. One of equal magnitude is held in India on the Ganges, where a million people assemble annually.

On the Western Continent no such great assemblages, with but rare exceptions, are known. In early times fairs were held at the City of Mexico, frequently attracting many thousands of people.

In later years these fairs have been less required as a means of promoting commerce, owing to the facilities afforded buyers and sellers by the modern means of transportation and travel, which permits trade to be carried on with regularity and convenience throughout the year. The necessity of accumulating products of manufacturing and transporting them in quantities to the fairs, to be wholly sold in a few days, no longer exists. Their production is continual and their sales go on uniformly and promptly at all seasons.

This change in the methods of commerce has led to the institution of the industrial exhibitions, at which the object is not to procure the sale of exhibited articles, but to make visitors familiar with their character and value, and to inform them of the places of manufacture and sale, with the ultimate result of bringing the purchaser to the manufacturer and merchant, and by a course of object-teaching educating the masses in the progress of the age and the growth and development of the country.

The first of these exhibitions is supposed to have been held in France. Similar ones were

held in Great Britain by the Royal Dublin Society nearly a half century ago. The American Institute of New York commenced holding its exhibitions a little later, and still later, just a quarter of a century ago, the first exhibition of the Mechanics' Institute of San Francisco was held. They have continued annually ever since, and it has now become one of the permanent institutions of the country.

#### The Mechanics' Institute.

The Mechanics' Institute was organized in January, 1855.

Its founders declared its objects to be to cultivate a social feeling of friendship, mutual improvement, the dissemination of information and useful knowledge by the establishment of a library of circulation and reference, and the erection of buildings for any scientific, mechanical or literary purpose.

Right worthy objects they are. What a wonder it must be to those schemers now living to see the most perfect realization of their designs. What a contrast between the library of 40,000 volumes now upon the shelves, devoted to and representing every subject to which the human mind has given thought or tongue utterance, and the "library of circulation and reference" in San Francisco in 1855.

Ten years later they must have accumulated a library, for in the year 1865 was inaugurated the first of its industrial exhibitions. It would be a curious and instructive spectacle could we arrange the fair of 1865 side by side with the fair of 1886.

Not unlike many other things, the "glorious climate of California" has had its influence upon this institution, and although it was born amid the fogs and trade winds of San Francisco, and has its local habitation here, it has grown to such magnitude that it exerts a power over the development of all that is strongest and best throughout the whole commonwealth. Its capacities and capabilities will not decrease, for its fountain source is a pure spring unpolluted by selfishness and undisturbed by narrowness.

Its 31 years' growth has been unassisted by a single dollar from the public treasury, not a dime by gift, nor a penny from endowment, and not even a lottery.

It is indifferent to sects, creeds and parties. Its members and coadjutors are now composed of all parties, sects and denominations, without distinction of creed or political sentiment, until now it stands entirely above and secure from all convulsions of political contests, not dependent upon the success of one party or another, but all equally willing and anxious to form the pillars of its support, while it operates in a different sphere and extends its exploring vision far beyond the arena of party measures or political action, penetrates the mysterious work of God in the government of the material world, and draws down permanent accessions to the common stock of human enjoyment.

Its history presents a phase, not unlike that in the lives of some men, who have become great in the many walks of life through their own exertions.

The public, recognizing the permanent and abiding character of its works and the self-sacrificing enthusiasm with which its pioneers press on the enterprise, that its achievements are for the benefit of the country, has gradually become impressed with the sense of its importance and yielded co-operation.

It is now the great vanguard of the pioneers of substantial and practical improvements in all the useful occupations and employments of life.

The men who founded it, as well as those who have succeeded, and who now direct its policy and affairs, have never sought their own glory in its establishment nor their own advancement in its growth.

Who will not delight to cherish the warmest emotions of gratitude for these veteran patriots? They deserve the thanks of the whole country.

#### The Influence of its Fairs.

The primal object of this great institution is to expound and illustrate the laws of nature, as exemplified by the various industries, and to produce therefrom new and useful things for the practical application and use of the human race. This it accomplishes by the aid of volunteers from the ranks of science and art and all the departments of industry. It demolishes the barriers which obstruct the progress of the age, breaking down the inclosures of Nature's storehouse and letting mankind in to the enjoyment of constant accessions of novelties and wonders.

Its great productive forces, as applied to mankind, are emulation and stimulation.

Within its capacious receptacle are the products of the fields, the factories, the shops, the farm, the manufacturer, the mechanic, and the inventor. Hither they all come with the products of their skill, to witness the grand tournament of genius, the great trial of inventive strength, to compete for premiums, and through them for the patronage of the public. Emulation, constantly excited as it is by these exhibitions, and urged on to increased exertion, results in the production of fabrics and works of handicraft which can only be excelled by the continued application of the same stimulating process. The products of skill, labor and ingenuity are brought to the immediate view or critical examination of thousands of observers. It is a better advertisement than daubs of paint on all the fences in the country.

These fairs are the grand exchange of the ingenious and enterprising producers of the country. Here they are brought together,

many of whom would not otherwise ever meet, and interchange ideas.

The farmer comes to see what improvements have been made in agricultural implements. He finds them all in active operation, and has an opportunity to test their merits.

His wife comes with him. The latest devices in incubators, washing machines, churns, and the innumerable things which tend to lessen the work of the farmer's wife, are spread out before her. And perhaps the daughter comes too. Her mind is speedily stored with the beautiful things she sees among the finer arts and works of handicraft, which she utilizes to make the country home more home-like and attractive.

Hither comes the miner. He stops not to look to the right or to the left, but goes straightway to the rear, where all is noise and bustle. Here he finds the newest inventions for crushing ores—concentrators, separators, pumps and labor-saving drills. By their aid he finds that he can unlock the doors which lead to nature's repository, the storehouse of its precious metals. Mines upon which have been expended the fortunes of men without material results are again opened and made to yield up their hidden treasures. Hither comes the artisan, the carpenter, the mechanic, the blacksmith and the various workers in wood and iron, who find new tools and devices with which to lessen the burdens of their daily labor.

Hither come the vineyardist and the orchardist. By walking from one end of the long tables to the other, upon which are placed the various products of the tree and the vine, one can, without expense of time or money, make a visit to almost every county in the State and note with profit to himself what might take years of experience to learn, the various effects of soil and climate upon production.

Hither come the manufacturer and merchant, the one to display his products and the other to learn that he need not go beyond the boundaries of the State to find material to supply his customers.

Hither come the artist, sculptor and skilled handi-craftsman to show to the wealthy and refined good people of our State that they need not go to New York, or Paris, or Rome, to buy good pictures; that mantles with carvings and tiles, rugs, carpets, furniture, portieres, pianos, wall-paper and decorations and all the other many articles which go to beautify the dwelling-place can be bought, and that clever workmen can be had at home.

Hither come the representatives of every class of human work, of man's labor and ingenuity, to use and compete with each other in the struggle for development, prosperity and success.

Hither come the masses of the people, who have no time to inform themselves from books or papers. The days and nights of exhibition are to them a grand holiday. It is a rest from the cares and burdens of life. It provokes energy and ambition. They see what would otherwise never be seen by them, and are taught what they would never otherwise know—the improvement of machinery—the encouragement given to commerce, the perfecting of rural economy—that men are rewarded for their labor—and the advancement, development and growth of the wealth, intelligence and comfort of the people.

And last but not least come the ladies, without the presence of whom no industrial exhibition can or ought to be a success. Homage is their due, for always they are the earliest and firmest friends of whatever tends to elevate, ameliorate and perfect the happiness, the comforts and the prosperity of the human race.

Who can measure the amount of pride and exultation felt by the exhibitors? Who can measure the amount of laudable ambition engendered by the complimentary observations of the multitudes who gather at these exhibitions? Who can measure the renovating power upon public opinion?

#### The Future.

The remark is sometimes heard that each exhibition is the same as the preceding one. Such speeches are thoughtlessly and carelessly made. As evidence of it, the very people who make them buy a season ticket and come to the fair every night so long as it lasts. The public does not think so, for yearly the coffers of the institute are increased, its exhibitions are enlarged and the value of its prizes, premiums, medals and awards enhanced.

The Mechanics' Fair has become one of the solid and permanent institutions of the country and the pride of its citizens.

How could it be otherwise? There is no tract of country on the face of the earth that can compare with our own State and coast as a birthplace for everything that is promoted by agriculture or the outgrowth of inventive genius—the pillars which form the foundation of every industrial exhibition and upon which repose the prosperity of the human race.

There is enough material on hand and in sight to keep this exhibition alive and useful for generations to come; nor will it be exaggeration or arrogance to say that within the lives of those here to-day the entire block of land, now owned by the institute, will be covered by one roof, filled with evidences of the inexhaustible resources of the State.

Some doubt this. It is said that the soil, like the human frame, will wear out and refuse, after a time, longer to yield to cultivation. That all of the available precious and other metals have been taken out; that, in view of the wonders already wrought, the secrets of nature are well-nigh exhausted. They ask

what is there left to do? The elements have been pressed into service and made to perform labor. Oceans have been contracted and their opposite shores brought within a few days of each other; the wind and the wave have been trained to the car of industry; steam has been imprisoned, and its angry efforts to escape have been applied to the generation of power; vision has been protracted through the aid of glass until it has penetrated the firmament and scrutinized its structure, and the lightning has been enslaved and city is made to talk with city at the speed of sunbeams.

Think of the immeasurable distance between God and man, and that the power to create is infinite with the Creator of the endless divisibility of particles of matter, and into the phenomena and laws of nature, and the answer must come, there is food for thought and enough for idle hands to do for all time.

California is blessed with a rich, deep and varied soil, a genial climate, a vigorous and intelligent class of men, unequaled in the spirit of enterprise, industry and perseverance, a splendid system of public instruction, and exalted by moral and religious institutions. Her earth teems with rare and useful productions, embosoming inexhaustible mines of metals and bearing mighty forests.

Commanding all these resources, no one need be solicitous of the future.

The rising generation need not be awed by what has been done. Let it turn its attention to the subject of irrigating the arid regions of the State, the reclamation of the millions of tule, marsh and overflowed lands lying in the great valley and bay region; to devising methods of increased production of fruits, vegetables and cereals, variety of production, the improvement in the breeding of cattle, horses, sheep and swine; improvement in machinery which agriculture naturally develops, a means of extracting from the mountains of gravel the gold therein, without polluting the highways which empty into the valley basins below, and to make a key which will unlock Nature's laboratory, wherein are stored more riches than have yet been found.

The friends of "the good old way" are getting to be very few. The spirit of progress is continually pointing out a "new way."

That is the spirit inculcated by these exhibitions.

Friends, join hands in laying deep and everlasting the foundations of this institution. It has already done ineffable credit to its projectors—let it be venerated by a grateful posterity, and let us hope that it shall continue to do good, and last as long as our Golden Gate is open to the commerce of the world.

The address of Mr. Wilson was followed by a laughing song, "Manon Lescant," by Miss Ellen Coursen and the Young Ladies' Choral, after which Fred Emerson Brooks read an original poem. The exercises closed with a cornet solo by Mr. Mahood, a chorus from *Lucia di Lammermoor* by the Choral, and music by the orchestra.

### The Origin of Cyclones.

Dr. Werner Siemens, in a recent paper on the "Conservation of Energy in the Atmosphere," gives a very interesting theory as to the origin of cyclones. He states that the comparative vacuum formed at the center of the cyclone can produce suction only in the direction of the axis of the cyclone, so that it either raises water from the surface over which it rotates or draws down air from the higher regions of the atmosphere. The clear sky and quiet air often observable at the center of a cyclone bear evidence that there is a descending current of air. According to Dr. Siemens, a local cyclone is produced by an impulse of the superheated air, due to some local cause, given at the boundaries of an upper and lower tract of disturbance of the neutral equilibrium of an atmosphere at rest, which reaches the boundary of the upper cooled strata of air, which have a tendency to descend. An outer descending current is thus formed around the inner ascending one, the amount of air descending naturally equaling the amount ascending. If the disturbance of equilibrium embraces extended upper and lower strata of air, the descending masses would produce an increase of pressure in the neighborhood of the cyclone, gradually extending to the surface of the earth and upward into the highest regions of the air, imparting its force continually to new superheated masses of air. This air ascends with the inner and upward current, descends with the cool outside current, to again ascend, producing a circular motion. The course of the center of the cyclone is determined by the direction of the mean velocity of all the air masses forming the cyclone, and its duration is that of the disturbance of the neutral equilibrium of the atmosphere which produces and maintains it. The local ascending current, by carrying dust and particles with it, may also produce rain by condensing the aqueous vapor of the higher strata.

HOW TO DESTROY COONS.—An Arkansas farmer writes that last year, when coons made havoc in his corn-field, he went to the drugstore to buy strychnine with which to kill them. By mistake the druggist gave him morphine, and the next morning he found his field full of sleeping coons. He advises the use of morphine instead of strychnine.

## HORTICULTURE.

## State Horticultural Society.

## Discussion on Plums and Prunes.

The regular monthly meeting of the State Horticultural Society was held August 27th at Irving hall, Vice-President A. T. Hatch in the chair.

The following were proposed for membership: W. H. Pepper, of Petaluma; G. M. Gray, of Chico; and David Lennox, of Colusa.

The secretary read a letter from J. Frazer Torrence, of Folleigh Lake, Nova Scotia, concerning the use of infusorial earth in packing fruit for preservation. The infusorial earth, in which the fruit is packed, is impervious to air. The cost of the earth, if imported here from Nova Scotia, would be about \$30 per ton. The letter maintained that the best way to pick fruit for eating was to pick it from the tree a little before it reaches maturity. After plucking, the fruit should be allowed to remain in an equable temperature, which would be secured by packing in infusorial earth. A number of delicate flowers packed on March 23d were, when taken out some two weeks later, almost as fresh as when first picked. This packet was forwarded to Queen Victoria, and reached its destination in splendid condition. This system of packing is thoroughly successful with regard to eggs, a quantity packed by Mr. Torrence, on January 16th, being perfectly fresh when taken out on April 27th. Apples put away in October were in good condition, though having lost something in flavor, when the package was opened in April.

In regard to bringing infusorial earth to this State, Mr. Wickson remarked that infusorial earth is a white deposit made of the siliceous shells of small animals known as infusoria, and abounds both in California and Nevada. Mr. I. A. Wilcox, of Santa Clara, and Mr. W. M. Williams, of Fresno, both stated that they had seen an abundance of the earth in their respective counties.

Some general discussion of methods of fruit preservation ensued. Mr. Wilcox said apples were kept for a long time at New Orleans by immersing in water, and Dr. Gibbons, of Alameda told of a man in Tuolumne county, whose cellar was filled with water all winter and yet the apples came out well in the spring.

A communication was read from H. Van Nostrand & Co., of New York, respecting the state of the fruit market in that city, and arguing that the present condition of the market afforded a grand opportunity to Californians to dispose of their dried fruit produce, as the New York market is bare of stock.

Mr. Hatch submitted a letter from Ellwood Cooper, of Santa Barbara, asking what arrangements were being made to market almonds, and suggesting that the large producers would do well not to ship their own produce all to the same markets.

## Fruit Exhibits.

Dr. Gibbons showed the Flemish Beauty pear, and spoke of its great productiveness in Alameda.

Leonard Coates, of Napa, showed the Lovell peach, originated in Solano county, and which is highly esteemed by canners. He had also fine specimens of the De Tongres pear from buds from the University orchard.

Gaspar Toietti, of San Leandro, showed the hardy Tuscan, an immense and handsome yellow cling peach.

Mr. Shinn showed Prince Egelbert plums.

Mr. Pepper, of Petaluma, showed an immense Souvenir du Congrès pear, and A. T. Hatch showed one of the same variety beautifully colored. Mr. Pepper finds this variety rather a poor bearer.

Mr. Hatch showed the Muir peach, which canners esteem so highly and are now paying five cents per pound for what they can get.

Mr. Wilcox complained that the Souvenir pear would not ripen with him at Santa Clara. His soil is low and full of water.

Mr. Shinn showed a clingstone peach of good flavor and size and one of which the leaves do not curl. He obtained it from Diamond Springs, El Dorado county. It is called the Odin. He showed also Cowan's cling, a good peach, but the leaves curl in his locality. It has no red at the pit. Another variety shown by Mr. Shinn was Seller's cling, which does not curl leaves, but may not be a sure bearer. He had also McKevitt's clingstone, pure white to the pit.

W. M. Williams, of Fresno, showed sun-dried fruit from that place which was so fine that experts in the city thought they were machine dried.

Rev. A. T. Perkins, of Alameda, showed Wager and Muir peaches, well grown and handsome.

## The General Bidwell Peach.

Mr. Wickson showed specimens of a new peach which originated on Rancho Chico, as described by the following note from G. M. Gray:

This box contains a few seedling peaches that grew on a sprout that came up from the root of a dead apricot tree which was budded on peach stock. The tree was found last year, the day Gen. Grant was buried, so we called it "Gen. Grant." You will find the flavor as good as the best, and this is only an average in size, some larger but too soft to send. Give room for a word for them. I wish you would.

—G. M. GRAY, Rancho Chico.

The samples were examined with interest, and were referred for examination to a committee—W. W. Smith, James Shinn and W. M. Williams.

Subsequently the committee reported the variety undoubtedly a seedling and as worthy of propagation and trial. They recommended that the variety be called General Bidwell, because there is already a variety called General Grant. It ripens one week later than the late Crawford, and is especially valuable on that account. It would come between the late Crawford and Piquett's Late. The report of the committee was adopted.

W. C. Blackwood opened the discussion on plums and prunes with the following essay:

## The Plum.

The plum in its wild state is found in the temperate zones of both hemispheres—on the eastern as well as the western continents. There are many varieties of the wild plum, a few of which have from time to time been domesticating. When Western New York was settled many varieties of the plum were found growing wild in the forests, some of much excellence. Such were transplanted by the settlers to their gardens and were highly prized. But in time the curculio came and also the disease known as the "black knot." Before these destroyers the wild plums of that State disappeared.

In the West there are only two varieties, so far as I know, now deemed worthy of cultivation—the Chickasaw and the Wild Goose. As compared with our cultivated varieties of plums these plums are very inferior. How these plums have obtained a standing among the orchardists of the Western and Southern States I do not know, but so it is. They are held in much favor in the West and South. Then there is the June or Myrobolan plum, cultivated to some extent in this State. It originated in Canada, or rather, it was there perhaps that it first attracted the attention of orchardists. The Myrobolan is as readily and as easily propagated from cuttings as the currant. It is valuable as a stock plum to graft on, as it is not given to suckering from the roots.

The natural soil for the plum is a rich, heavy, clay loam, and propagated on its own stock; an excess of moisture in the rainy season does not seem to injure it.

The cultivated varieties of the plum are very numerous, and have been produced originally from the wild plum by hybridized seedlings, and again have been improved upon by careful selection. Hence we have now such plums as the Washington, the Jefferson, Coe's Golden and the White Magnum Bonum—all white plums. Of colored plums we have the Columbia, Duane's Purple, the Engelbert, the Ickworth's Imperatrice, and many other varieties of great worth. I will not stop to dilate upon the excellence of any of the varieties named, as the members of our society are familiar with all the kinds mentioned.

The plum is only a plum, having the property of drying and curing without the seed being removed and making a superior dried fruit. The varieties of the plum are not numerous. Those more commonly known are the German, the Fellenberg or Italian, the Bulgarian or Turkish and the French or Petite prune d'Agén. The Robe de Sargent is another French prune which is just now being brought to the notice of our orchardists by some of the enterprising nurserymen of California. It gives promise of being a very superior prune. The German is probably the most inferior of the plums I have named. I do not think it worth cultivating, especially when the orchardist can have his choice of so many superior varieties. The Fellenberg and the Bulgarian make a black plum, and have a rich, pleasant, sub-acid flavor, when cured; and require only a little sugar when cooked and prepared for the table.

The Petite prune d'Agén is perhaps for all purposes the most desirable prune we cultivate. It has no acidity, or next to none. The stone is easily extracted. It may be used in any place where raisins may be used, and is equally palatable. It may be cooked and used as a sauce on the table the same as any other dried fruit, requiring no sugar. It is essentially the poor man's plum, as it can be grown, cured and put on the market at so low a price as will put it in the reach of every householder in the land.

Having briefly noticed the plum and named a few of its leading varieties, I will now leave the subject for others to dilate upon, with the single remark that I regard the plum as standing next to the apple in its uses in the domestic economy of the household.

## Discussion.

There was doubt expressed as to Mr. Blackwood's statement that the Myrobolan originated in Canada, but Mr. Blackwood had left the room and the matter was not pursued.

James Shinn, of Niles, spoke of the superiority of Coe's Golden Drop over the Yellow Egg. He also spoke of the Columbia as bearing rather sparsely—not every year.

Leonard Coates, of Napa, mentioned the great variation in the French prune grown in different situations and soils even in the same neighborhood. He knows of no fruit which shows such marked variations.

W. H. Aiken, who was selected at the last Fruit-growers' Convention in Los Angeles to prepare a paper upon the cultivation of the plum, stated that he is now studying the subject, and would, at the convention of fruitmen in Sacramento next November, present an exhaustive paper. He will be pleased to receive

samples of prunes from growers in different parts of the State, with notes concerning the quality of the soil where the fruit is grown, the rainfall and other particulars. His address is Wright's station, Santa Clara county. A few prunes by mail will be enough from each grower, and these he intends to put in preservative solution and have for comparison at the convention.

The secretary read the following letter:

## The Double Prune d'Agén.

Edward J. Wickson, Secretary of the State Horticultural Society:—At the November meeting of the society (1885) there was read a report on Fruit and Prunes, signed by Messrs. James Shinn, George Humann and Leonard Coates, the committee, from which I will quote the following extract:

"The prunes sent by Mr. Gillet have been carefully examined. The Double Prune d'Agén is identical with Grosse Prune or Hungarian, but not of so large a size as when grown in the valley lands."

With all due deference to the conclusions of the Committee on Fruit and Prunes, I will beg leave to differ, and will try to prove to said committee that they were entirely misled in their conclusions. I waited this long, so as to be able to lay before the society the fruit, twigs and leaves of the Double Prune d'Agén, and have the society compare them with those of the Hungarian.

I will say that when I sent those samples of the Double Prune d'Agén, a year ago, to be exhibited at the meeting of the society, it was simply to show the members of the society what kind of a prune it was, and not with the idea of ascertaining to what variety it belonged; for I knew more about this new kind of prune, or, rather, plum—originated by Mr. Louis Simon, of Metz, not very long ago, but long after the Hungarian, or Pond's Seedling—than any member of the society did, having introduced it myself into this country.

The Double Prune d'Agén is a different variety altogether from the Hungarian; the wood, buds, position of the latter on the wood, leaves, fruit, pit, time of maturity, differ considerably from each other. There is as much resemblance between the two as between the Hungarian and Duane's Purple—both large plums.

Last winter I sent cions of the Double Prune d'Agén to Messrs. Coates and Rock, and both gentlemen should be able to tell by this time the difference in wood and leaves between the two kinds. The Double Prune d'Agén is commencing to ripen up here, while the Hungarian, as I saw it at Mr. Allison's, a few days ago, half a mile from my place, is way behind. I will say that the Hungarian grows as large, if not larger, here than in the valleys, it measuring nearly three inches in length and two inches through. The Double d'Agén is very juicy, and I consider it one of the finest dessert plums; but on account of its juice it is hard to cure; in fact, I found out that it will not do to cure, for it loses all its juice in drying. I have ascertained since that this Double d'Agén prune is more recommended as a dessert plum, while the Hungarian or Pond's Seedling is not thought of except for its immense size.

With the twigs of the Double d'Agén I send you two cions of the same with leaves on, and also two cions of Hungarian. I will write to Mr. Rock to bring along twigs of Hungarian with fruit on to compare, not having any bearing Hungarians on my place, my tree having been killed by the gum. By examining more closely both kinds, I am satisfied that our committee will come to altogether different conclusions as to the identity of those two kinds of plums.

I will seize this opportunity to send you a sample or two of the St. Catherine prune, plucked on trees "true from the root" (not grafted). It is not ripe yet, as it ripens with the Petite prune. I send you those samples of unripe St. Catherine only to show those members of the society unacquainted with this famous prune, what it looks like. It is a yellow plum with red cheek, and in drying turns jet black.

My Lot d'Ente did not bear this summer, so I am unable to tell yet what difference there is between that type, sent to me as the purest type, or the d'Ente or d'Agén prune, and our Petite prune. I will, however, say again, in answer to many queries, that our Petite d'Agén is a true type of the d'Ente; but I will have absolutely to wait another year before being able to tell what difference there is between that kind and the Lot d'Ente.

D'Ente prune trees obtained from the northwest of France have been bearing with me this year; it is certainly a different variety of our Petite prune and also of the Lot d'Ente, and, I believe, inferior to both. That is the type that they have been replacing in France by a purer type from the Lot since I called their attention to it.

I find that the sun does not burn the St. Catherine as it does the Petite prune; this is probably due to the skin of the St. Catherine being more tough.

NEVADA CITY, Aug. 25th.

Mr. Gillet's communication was heard with interest and the specimens sent were examined by all present. Members of the committee stated that the fruit was certainly not the same as that they called Hungarian prune last year, and that some mistake must have crept into the fruit submitted to them. The samples sent by Mr. Gillet were referred to the same com-

mittee which made the report last year, for further elucidation.

## Curing Prunes.

Mr. Coates gave the method he adopted for preparing prunes. They were shaken from the trees when quite ripe, falling on canvas. They are then dipped in lye (one pound lye to 25 gallons of water) and are probably left in the lye 10 to 15 seconds. They are then plunged in clear water—the water being changed frequently to prevent its becoming impregnated with the alkali. After the rinsing the prunes are spread on wooden trays, like those used for raisin-drying, and are placed on the ground. When they are sufficiently cured they are dipped in syrup made from boiling down the juice of over-ripe peaches, or sometimes condensed cider is used. They are then packed in boxes for market. The peach juice or cider gives them a bright gloss.

Mr. Hatch spoke of the Silver prune and its identity with Coe's Golden Drop or otherwise. Three years ago the Silver prune was shown by Mr. Shaw, of Sonoma, and it was certainly different from Coe's. He finds this year that the trees he bought for Silver prune are, a few of them, bearing fruit like that shown by Mr. Shaw and the most of them are simply Coe's. He had a poor idea of the honesty of the Oregon nurseryman who sent down such trees. He bought a lot of trees for Yellow Egg and they turned out to be peach plum.

Mr. Coates remarked that the pit of the Silver prune is shorter than that of Coe's.

W. H. Pepper, of Petaluma, in answer to questions, stated that Coe's Golden Drop with him is not a regular bearer. He has seen no Silver prunes in his neighborhood which are different from Coe's. The French prune is inclined to over-bear. He believed that prunes to produce good dried fruit should be well grown, fully ripened and well developed. The apricot on the Myrobolan stock does well. The peach on Myrobolan, in Mr. Pepper's experience, does not do well; the union is good, but the after-growth is not good, the leaves turning yellow early in the fall and the tree stopping its growth.

Mr. Klee said he was endeavoring to get to the Myrobolan stock question, because of the importance of the use of the stock if it proves satisfactory. He had examined orchards about Haywards. In one case he saw peach trees, one on Myrobolan, the other on peach stock, and one was good as the other.

John Rock, in answer to a question, spoke in favor of the Myrobolan stock for low moist land. The growth on it seems to be good, but usually 10 to 15 per cent will be lost.

I. A. Wilcox, of Santa Clara, has prunes on Myrobolan on heavy land and they are doing well. Working the French prune on the apricot, he finds the prune overgrows the root.

Mr. Tompkins, of Alameda, spoke of the excellent growth of some false Myrobolan or cherry plum trees on his land in Alameda. He had been offered \$15 each for the trees by a man who wanted the wood for furniture.

Mr. Hatch showed a plum or prune without a name, of which a tree had been found in his neighborhood. It has a transparent skin and when dried makes a very translucent and beautiful dried prune. It was admired by those present, but no one could name it.

Mr. Wilcox asked if prunes grown on wet land would lose more in curing than those grown on dry land.

Judge Blackwood said yes, but he could not tell exactly how much difference there would be. He found that in curing the Italian or Fellenberg prune lost least weight, the French next and the Bulgarian would lose most.

Mr. Wilcox asked about the time for picking the prune to produce best results. He thought if they were ripe enough to be shaken off and then dipped in lye they would not lose so much, but he heard some advocate picking earlier.

Judge Blackwood said a ripe prune would dry down well, but an unripe one would puff up like a toad in the sunshine, and leak the juice out of the stem-hole.

W. H. Pepper exhibited a very handsome large yellow plum, a seedling of his growing, which was well commented upon.

L. F. Moulton, of Colusa, who is making a study of the prune, hoping to prove it a success in Colusa, said he found the French prune doing well there in orchards where it had been grown for some time. At Mr. Totman's place it is doing well, while the Bulgarian

prune, which is a success at Haywards, fails in Colusa. The apricot does excellently in Colusa, being bright-colored and perfectly free from blemishes and freckles. There was some rather rambling discussion on different stocks for fruit trees, but as the subject, "Stocks and Soils suited to them," was chosen for regular consideration at the next meeting, we will not attempt to follow the discussion at this time. Mr. W. W. Smith, of Vacaville, was appointed to open the subject at the next meeting.

Mr. Hatch introduced Mr. McGuire, who has lately come to the State as a member of a local company which will handle the "ripe fruit-carrier," which is already known to many of our readers through notices and advertisements in our columns. Mr. McGuire stated that they wished all fruit-shippers to try them, as they were confident of their good qualities. Experimental shipments of fruit East in these carriers are now being made, of which reports will be made later. The success which attended such shipments across the Atlantic leads them to expect very satisfactory results from California eastward.

The meeting then adjourned.

#### Nurserymen's Association Meeting.

Upon the adjournment of the Horticultural Society, a meeting of the Pacific Coast Nursery-

representing unreliable, and in a great man cases entirely fictitious establishments, they cannot be held as being applicable to the canvassers sent out by well-known and responsible firms. In all cases these latter are provided with proper certificates of their authority to act as agents—a fact to which we would earnestly call the attention of the purchasing public.—W. M. WILLIAMS, R. D. FOX, Committee.

#### Mr. Dickinson's Paper.

While I recognize the right of every American citizen to engage in any kind of legitimate business, or in the sale of any kind of fruit trees, shrubs, plants or flowers, and believe that it may be carried on properly and to the interests of all concerned; and secondly, while I believe the last is sometimes done, and that tree agents might traffic and sell trees in a way which would leave no sting of reproach, yet thirdly, I sincerely regret that I must, in the interests of right and justice, accuse these men of so much misrepresentation and fraud in their dealings, that I am compelled to denounce their course, as unworthy of the confidence of farmers or of any who buy trees. As instances of what I mean I may name the following:

1st. By false statements and outright lying they induce men to buy trees of them at almost fabulous prices, often charging for common apple trees as high as \$1 to \$2 apiece for trees which only cost 10 to 20 cents.

2d. They often get these prices by representing their trees as coming from some distant nursery when, in fact, they are the remains of some old nursery bought on this coast at low prices, so as to get trees to fill their orders cheaply.

3d. They invent names for their trees and

ness to his pal, after a successful day among the pushing, jostling crowd. It is a business, however, that this association does not wish to patronize or help forward. As nurserymen and fruit-growers we denounce all such proceedings. We regard it as the meanest kind of dishonesty to lie and cheat the unsuspecting. To be willing to sell fruit trees under false names is unworthy the character of any man. We believe in right names, honest prices and just dealings with all, and we believe the course of tree agents has been, and continues to be, contrary in all these respects to the interests of the fruit-growers of the country, and we sincerely hope our orchardists will have nothing more to do with them. They have no good name to sustain, no interest whatever to consult, except to get your money. They are not like the nurseryman, whose whole future reputation is tarnished by the least carelessness as to the names and character of the trees he sells. It is therefore hoped that we, as an association, will henceforth do all we can to stop the evils which the people suffer from the practices of these men.

#### Southern California Nurserymen.

The adjourned meeting of the Southern California Nurserymen's Association met at the office of T. A. Garey, Los Angeles, on the 13th inst., at which the following business was transacted:

The Committee on Constitution and By-laws made report, and after due consideration and amending they were adopted. The following officers were elected for the first year:

President, T. A. Garey, Los Angeles; Vice-

Flemish Beauty, Winter Nelis, Beurre Easter, Beurre Hardy, Beurre Clairgeau, Beurre Bosc, Clapp's Favorite, Seckel, Vicar of Winkfield, Doyenne d'Alencon and P. Barry.

Resolutions were passed requesting W. G. Klee, State Inspector of Fruit Pests, to visit the nurseries of Southern California and inspect the same. It was the general sentiment of the members present that if there were any infected nurseries in Southern California they wanted to know it, and the trees would be destroyed, and thought that an injustice was being done in the prejudice that had arisen in some localities against the nurseries of other localities.

Meeting adjourned to meet at same place at 11 A. M., Sept. 4th, and all nurserymen of Southern California are invited to attend.

BYRON O. CLARK, Sec'y.

#### The Percheron Horse Show at Chicago.

The illustration on this page represents the exterior view of a building 700 feet in length, erected for the exhibition of the American Percheron Horse-breeders' Association, to be held in Chicago in connection with the Illinois State Fair, Sept. 6th to 11th. The building itself is one of the best evidences that the Percheron exhibit has been planned and is being executed on a broader scale than any draft-horse show that has ever before taken place in the world, and no one who takes interest in any breed of horses should miss this, the opportunity of a lifetime, for certainly no such collection of draft horses has ever yet been seen together as this show will call out, and it may probably be many years before another such a grand exhibition will take place.

We are informed that nearly 300 pure-bred Percherons will be exhibited by about 50 breeders of the United States and Canada, and that a display of several hundred grade Percherons in harness will be made, showing the different purposes for which they have demonstrated their superiority over all other breeds of horses, thus giving the farmers and stock-breeders of the country an opportunity to see in large numbers the kind of horses that meet ready sale at the most remunerative prices. The State Agricultural Society and the Percheron Association are together offering about \$7000 in prizes, and a large number of gold, silver and bronze medals for Percheron horses.

The jury of awards has been appointed by the highest official representatives of agriculture in three great nations, the Minister of Agriculture of France having appointed Marquis de la Motte Rogné, Inspector-General of the National Studs; Commissioner Colman having appointed the Hon. George B. Loring, ex-Commissioner of Agriculture; and the Minister of Agriculture of Canada having appointed Prof. Andrew Smith, President of the College of Veterinary Surgery at Toronto.

Great interest is being taken throughout the world in the Percheron breed. The Governments of nearly every European country are buying pure Percherons to improve their native breeds, especially Russia, Germany, Italy, and Egypt. Large numbers have also been sent to Great Britain, and the South Americans are importing them in considerable numbers. One of the features of this show will be an exhibit of Percherons bred in the United States, that are to be sent to Japan, and the Japanese Embassy is expected to visit the exhibition and inspect this stock before its shipment.

The Chinese Minister and his suit, also the French Minister to the United States, at Washington, having expressed themselves as desirous of seeing this show, have received invitations, and will probably visit the grounds as guests of the Percheron Horse-breeders' Association.

#### Infant Smokers.

The Oakland City Council has passed and the Mayor approved an ordinance to prevent the smoking of cigarettes by minors in public, as follows:

Section 1. It is hereby declared unlawful for any minor under the age of 16 years to smoke any cigarette in any railway car, street, square, public building or public place in the city of Oakland.

Sec. 2. Any person violating any of the provisions of this ordinance shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not exceeding fifty dollars; and in case said fine be not paid, then the person or persons so fined may be imprisoned in the city prison of the city of Oakland at the rate of one day for every two dollars of the fine so imposed.

Sec. 3. This ordinance shall take effect immediately upon its approval.

Nothing is said as to pipes and cigars, and the practical use of the ordinance, as at present worded, is questionable.

The following, which has been adopted as a town ordinance in Fresno, comes nearer the mark:

Any minor or under the age of 16 years, who, in the streets, or in any of the public places of this city, smokes cigars, cigarettes, or tobacco in any form, is guilty of a misdemeanor, and, on conviction, is punishable by imprisonment in the city or county jail for 10 hours for such offense. And any person who directly or indirectly sells or gives to any such minor in this city cigars, cigarettes, or tobacco in any form, or cigarette paper, is guilty of a misdemeanor.

BUILDING ESPECIALLY ERECTED FOR PERCHERON HORSE EXHIBIT AT ILLINOIS STATE FAIR, CHICAGO, SEPT. 6-11.

men's Association was held, James Shinn, of Niles, presiding; R. D. Fox, of San Jose, Secretary.

A. T. Hatch, of Suisun; R. Brunson, of Oakland; G. M. Gray, of Chico; E. C. Clowes, of Stockton; W. W. Smith, of Vacaville; Luther Burbank, of Santa Rosa; T. C. Baxter, of Haywards; E. Bouguignon, of San Jose; C. M. Silva & Son, of Newcastle; Thomas Meherin, of San Francisco; J. F. Kennedy, of Los Gatos; S. Newhall, of San Jose; James Waters, of Watsonville; James Hutchinson and O. Dickinson, of Oregon, were admitted to membership.

Considerable discussion arose as to the advisability of holding a meeting later in the year, it being finally decided to do so, the matter of arrangements to be left to the Executive Committee. It was specified that such meeting should take place at Sacramento in November, during the session of the Fruit-growers' Convention.

It was ordered, upon motion, that the secretary withhold the tabulated amount of stock sold by members of the organization from all such members as do not send in their individual reports.

The remaining business of the meeting was principally in relation to perfecting the plan of organization.

#### Dishonest Tree Agents.

The following paper was read before the association by Mr. O. Dickinson, of Salem, Oregon, and referred to a committee with power to add to it or eliminate from it such remarks as they deemed proper. Believing that such could not be done without making an almost entirely new paper, the committee concluded to submit it, as read, with the remarks that while the strictures made by Mr. Dickinson are true to a great extent, so far as they apply to agents

shrubby, calling them Russian, Japan, Australian, as the case may be, to induce the buyer to pay the enormous prices which they demand.

4th. Some of these men pay no attention to rightly naming their trees, being as willing to lie and cheat about this as about anything else. A number of these tree agents were through our part of the country last year and took large orders for trees. To fill these orders they bought trees of a nurseryman with whom I am well acquainted, and who will bear testimony to what I say. This nurseryman brought the trees out of his field, all rightly labeled. The first thing these agents did was to take off all his labels and throw the trees promiscuously into one pile. They then went to work and filled their orders out of that pile, and this gentleman told me that they actually filled a family order, when a man wanted early fall and late winter-keeping apples, out of a large pile of sweet June apple trees, which he had thrown down for them as he brought them out of the nursery, so that this unsuspecting farmer actually got about 50 sweet June apple trees, tied in 10 or 12 different bunches, and named according to his order—Red Astracan, Fall Pippin, Northern Spy, Yellow Newtown, etc., to meet his family wants for early and late apples for the year's supply.

Now, it seems to me that this association is not acting improperly, nor unduly intermeddling with other people's business, when it puts forth these warnings to stop such nefarious business. It seems to me that each man is to some extent his brother's keeper, and that in putting forth these warnings we are doing no more than we ought to do—no more, in fact, than a neighbor does who stops a thief from stealing your horse.

These tree agents call it business, no doubt, when they lie and cheat, and call things by wrong names to get your money, and I have heard that the pickpocket calls his work busi-

ness to his pal, after a successful day among the pushing, jostling crowd. It is a business, however, that this association does not wish to patronize or help forward. As nurserymen and fruit-growers we denounce all such proceedings. We regard it as the meanest kind of dishonesty to lie and cheat the unsuspecting. To be willing to sell fruit trees under false names is unworthy the character of any man. We believe in right names, honest prices and just dealings with all, and we believe the course of tree agents has been, and continues to be, contrary in all these respects to the interests of the fruit-growers of the country, and we sincerely hope our orchardists will have nothing more to do with them. They have no good name to sustain, no interest whatever to consult, except to get your money. They are not like the nurseryman, whose whole future reputation is tarnished by the least carelessness as to the names and character of the trees he sells. It is therefore hoped that we, as an association, will henceforth do all we can to stop the evils which the people suffer from the practices of these men.

President, G. W. Ford, Santa Ana; Secretary, Byron O. Clark, Pasadena; Treasurer, J. L. Howland, Pomona; Executive Committee, T. A. Garey, Milton Thomas, of Los Angeles; L. H. Michener, Pasadena; T. S. Ingham, San Bernardino; Andrew Snyder, Los Angeles.

On motion of Byron O. Clark, the society then took up the discussion of "The best varieties of deciduous fruits for propagation and planting," and the following are recommended as the most reliable croppers and best suited to planting in Southern California, it being the general sentiment that we should plant fewer kinds than in the past, and those which had been tested and proved themselves profitable. For apricots it was unanimously decided that Large Roman (or what is known as Early Moorpark in some locations) was the best apricot grown in Southern California, and had always proved a reliable bearer. The Royal was indorsed as second best, and the Turkey was indorsed as a good apricot for home use, coming after all other apricots were gone, but were too juicy for market and canning.

The following kinds of peaches were indorsed for market and canning:

Early Crawford, Bergens Yellow, Foster, Late Crawford, Orange Cling, Sellers' Golden Cling, Salway and Smock. For family use the following, ripening about in the order named: Alexander, Early Strawberry, Early Hale, George Fourth, Stump the World, Old Mixon Free, and Morris White. For nectarines the Hardwick was the only one which had proven a satisfactory bearer. Of apples, the following are recommended: Yellow Newtown Pippin, White Winter, Pearmain, Yellow Bellflower, Ben Davis and Jonathan, for market; for family use, Early Harvest, Red Astracan, Fall Pippin, Skinner's Pippin, Gravenstein and R. I. Greening. The following list of pears were all considered good in their respective season: Bartlett,

## THE STABLE.

## State Fair Racing Entries, 1886.

Following is a list of the entries made for the State Fair races of 1886. It represents the best horses in the State, and in every race there will be so many contestants that the "glorious uncertainty" of the turf will no doubt be frequently exemplified:

## First Day, Sept. 9—Trotting.

No. 1—Occident stake for foals of 1883. Closed in 1884 with 16 nominations.

No. 2—Trotting; purse, \$1000; 2:24 class.

L. E. Clawson, San Francisco, blk. g. La Grange, by Sultan-Georgiana.

J. W. Donathan, San Francisco, blk. g. B. B. by Bellfounder, dam unknown.

J. A. Goldsmith, Oakland, ch. h. Dawn, by Nutwood-Countess, by Whipple's Hambletonian.

John Williams, Stockton, b. g. Wormwood, by Nutwood, dam by Belmont.

Palo Alto Stock Farm, br. m. Carrie C, by Electioneer-Maid of Clay.

E. H. Miller, Jr., Alameda, blk. m. Pansy, by Berlin-Lady Hubbard.

No. 3—Pacing; purse, \$600; 2:35 class.

Eugene Hart, Pleasanton, b. g. Fred Ross, sire and dam unknown.

H. G. Cox, Pleasanton, gr. g. Tony Lee, by Jim Lick, dam by Belmont.

W. M. Billups, Colusa, b. s. Almont Patchen, by Juanita, dam by Gladiator.

Albert Hiller, Woodland, b. g. Yolo, by Victor, dam by St. Clair.

James Lyndon, Sacramento, b. h. Pedro, by Kidder's Rattler-Democrat mare.

V. R. Raymond, Oakland, b. m. Patti, by Chrisman's Patchen, dam by General Knox.

L. H. Todhunter, Sacramento, b. g. Mink, sire and dam unknown.

Dan McCarty, San Francisco, b. g. Peruvian Bitters, by Electioneer-Nellie Walker.

T. Kennedy, San Francisco, gr. g. Peacock, by Whipple's Hambletonian-Patchen mare.

## Second Day, Sept. 10—Running.

No. 4—Introduction stakes, for two-year-olds, \$25 each, \$10 forfeit, \$250 added; \$50 to second, \$25 to third. Winner of any two-year-old race after August 1st to carry 3 lbs.; of two or more, 5 lbs. extra. Dash of six furlongs.

H. Lowden, San Francisco, b. f. Leap Year, by Norfolk-Lady Jane.

W. M. Murry, Sacramento, b. c. Del Norte, by Flood-Ester.

W. M. Murry, Sacramento, b. c. Oro, by Norfolk-Golden Gate.

W. M. Murry, Sacramento, c. h. Voltigeur, by Bullion-Jessamine Porter.

L. H. Todhunter, Sacramento, b. c. Safe Ban, by King Ban-Herzogovina.

Theo. Winters, Sacramento, b. f. Miss Ford, by Enquirer-Bribery.

Thos. Atchison, San Francisco, ch. c. Robson, by Joe Hooker-Roseland.

Albert Morine, Los Angeles, b. f. Carmelita, by Hardwood-by Shiloh.

W. B. Todhunter, Sacramento, ch. c. Jim Duffy, by Joe Hooker-by Wildidle.

M. F. Tarpey, West End, Alameda, ch. f. Not Idle, by Wildidle-Bonanza.

W. L. Pritchard, Sacramento, b. f. Lady Leinster, by Leinster-Addie A.

W. L. Pritchard, Sacramento, ch. f. Idalene Cotton, by Jim Brown-Lizzie P.

M. Johnson, Sacramento, ch. f. by Enquirer-Analyne.

W. L. Appleby, Santa Clara, ch. c. C. H. Todd, by Joe Hooker-Rosa B.

C. Dorsey, Oakland, ch. c. Fred Archer, by Thad Stevens-Brown Bess.

Matt Storms, Oakland, br. f. Narcela, by Norfolk-Addie C.

B. C. Holly, Butte City, Montana, br. c. Corrigan, by imp. Kyrle Daly-Daisy Miller.

No. 5—California Breeders' Stakes, for foals of 1883, \$50 entrance p. p., \$300 added; \$100 to second, \$50 to third. Closed in 1885 with five entries. Dash of one mile and a quarter.

No. 6—Capital City stakes, for four-year-olds, \$50 each, \$25 forfeit, \$15 if declared on or before September 1st; \$300 added; \$100 to second, \$50 to third. Weights five pounds below the scale; winner of any race over one mile after August 1st to carry rule weights. Dash of one mile and five furlongs.

W. M. Murry, Sacramento, b. h. Billy Ayres, by Shannon-Lady Clare.

Wm. Boots, Milpitas, blk. g. Index, by Thad Stevens-Gypsy.

S. C. Tryon, Sacramento, b. g. Jim Long, by Shannon-Florence Anderson.

W. L. Pritchard, Sacramento, b. h. Frank Rhoads, a., by Leinster-Abbie A; \$500.

M. Johnson, Sacramento, b. m. Leda, 3, by Nathan Coombs-Gypsy; \$1500.

S. C. Tryon, Sacramento, b. h. Pat Haydon, 4, by Leinster-by Norfolk; \$500.

J. B. Ramsey, Meridian, b. h. Monarchy, 5, by Monarchist-Notable; \$500.

W. L. Appleby, Santa Clara, ch. f. Laura Gardner, a., by Jim Brown-Avail.

T. G. Jones, Pleasanton, ch. g. St. Patrick, 5, by Hubbard by Monday; \$500.

Gus Pacheco's b. m. Dairy Maid, 6, by Shannon-Myrtle; \$500.

B. P. Hill, San Diego, gr. f. Mollie Capron, 3, by Reveille, dam unknown.

Hill & Gries, San Buenaventura, b. f. Allie Hill, 3, by Wildidle-Mary Wade; \$1000.

P. A. Finnigan, San Francisco, b. g. Edwin F, by Norfolk-Marian; \$300.

## Fifth Day, Sept. 14—Trotting.

No. 15—Three-year-old trotting stake. Conditions same as No. 8. Closed April 15th with eight nominations.

No. 16—Trotting; purse, \$1000; 2:36 class.

P. Garrett, Chico, ch. g. Wallace G, by Plumas-Princess.

Ariel Lathrop, San Francisco, b. g. Spry, by General Benton-Sprite.

T. W. Barstow, San Jose, b. m. Jennie B, Palo Alto Stock Farm, b. c. Azmoor, by Electioneer-Mamie C.

J. N. Ayres, Oakland, b. h. Bay Rose, by Sultan-by The Moor.

J. D. Carr, Salinas, b. g. Merchant, by Carr's Mambrino-Accident.

J. M. Learned, Stockton, b. m. Reality, by Reliance-Ernestine.

John Williams, Stockton, b. m. Lottie M, by Nephew-by Chieftain.

M. McManus, Oakland, ch. h. Como, by St. Elmo-Juno.

No. 17—Trotting; purse \$1200; free for all.

E. H. Miller, Jr., Alameda, b. g. Adair, by Electioneer-Addie Lee.

San Mateo Stock Farm, b. h. Guy Wilkes, by George Wilkes-Lady Bunker.

Santa Rosa Stock Association, b. h. Anteeo, by Electioneer-Columbine.

## Sixth Day, Sept. 15—Running.

No. 18—Sunny Slope stakes, for two-year-old fillies, \$25 each, \$15 forfeit; \$10 if declared on or before September 1st, \$150 added; \$25 to second. Those not having run first or second in any race this year allowed three pounds. Dash of five furlongs.

H. Lowden, San Francisco, b. f. Leap Year, by Norfolk-Lady Jane.

Albert Morine, Los Angeles, b. f. Carmelita, by Hardwood-by Shiloh.

Theo. Winters, Sacramento, b. f. Miss Ford, by Enquirer-Bribery.

M. F. Tarpey, Alameda, ch. f. Not Idle, by Wildidle-Bonanza.

M. Johnson, Sacramento, ch. f. by Enquirer-Analyne.

Ed. Hooman, Oakland, ch. f. Ellen E, by Wheatley-by Joe Daniels.

No. 19—Shafter stakes, for three-year-olds, of \$50 each, \$25 forfeit, \$15 if declared before September 1st, \$300 added; \$100 to second, \$50 to third. Winner of any three-year-old race after August 1st to carry five pounds; of two or more, 10 pounds extra. Dash of one mile and a quarter.

Kelly & Lynch, Sacramento, b. f. Moonlight, by Thad Stevens-Twilight.

L. H. Todhunter, Sacramento, ch. c. Monte Cristo, by King Alfonso-Galanthus.

Theo. Winters, Sacramento, b. f. Miss Courtney, by Norfolk-Ballinette.

F. Depositer, Sacramento, br. f. Edelweiss, by Joe Hooker-Yolona.

M. Johnson, Sacramento, b. f. Leds, by Nathan Coombs-Gypsy.

R. S. Fallon, Haywards, br. f. Harriet, by Flood-Hattie Hawthorne.

Caleb Dorsey, Oakdale, ch. c. Pickpocket, by Joe Daniels-Mattie C.

Hill & Gries, San Buenaventura, b. f. Allie Hill, by Wildidle-Mary Wade.

No. 20—Del Paso stakes, for all ages, \$50 entrance, \$25 forfeit, \$25 if declared on or before September 1st, with \$300 added; \$100 to second, \$50 to third. Three-year-old maidens allowed five pounds; four-year-olds, seven pounds; five-year-olds and upward, 10 pounds. Three-quarter mile heats.

B. P. Hill, San Diego, ch. g. 4, by Reveille.

W. L. Appleby, Santa Clara, b. m. Neilson, 5, by Wildidle-Susie Williamson.

Kelly & Lynch, Sacramento, ch. g. Tom Atchison, 4, by Joe Hooker-Bay Kate.

Kelly & Lynch, Sacramento, b. g. Jou Jou, 5, by Monday-Plaything.

J. C. Simpson, Oakland, b. g. Sir Thad, 5, by Norfolk or Thad Stevens-Lady Amanda.

T. Hazlett, Sacramento, b. g. Panama, 6, by Shannon-Abbie W.

C. A. Brown, West Berkeley, ch. m. Alameda, by Springbok-Alma.

D. Bridges, Los Angeles, b. h. Dublin Boy, 5, by Grinstead-Amanda Fortune.

B. C. Holly, Butte City, Montana, ch. c. Doubt, 4, by St. Martin-Perhaps.

No. 21—Free purse, \$300; \$50 to second horses that have not won this year allowed five pounds. Winners this year of any race of the value of \$400 to carry five pounds extra. Winner of No. 7, 10 pounds extra. Dash of one mile.

W. M. Murry, Sacramento, b. h. Billy Ayres, 4, by Shannon-Lady Clare.

Lee Shaner, Salinas, b. m. Daisy H, 4, by Wheatley-Black Maria.

H. J. Robinson, Gridley, b. m. Emma T, 5, James Foster, Chico, b. h. A. Walrath, for Heenan, by Norfolk-Ada C.

James Foster, Chico, b. m. Amy B, a, by Ballot Box-Lula Riggs.

### Relative Strength of Wet and Dry Timber.

In reply to a statement by the *American Miller*, that "wet timber is not as strong as dry; in some cases it has not half the strength of dry," a correspondent of that paper writes as follows: "In September, 1876, the Lanesboro Mills, Lanesboro, Minn., were burned, and that fall we rebuilt them, and began making flour the next March. We used sawed pine (taken out of the Mississippi river) for joists, 3 by 12 inches, 12 feet long, and sized them, laying them on top of the girders, to get their full strength, and then used ½-match flooring. The joists were placed 12 inches from center to center, leaving nine inches between them. In the fall of 1877 we piled wheat on the floor 26 feet deep in the bins, and the joists, yet wet and green, only sagged a trifle, and carried the immense weight safely. Two years later the same joists were dry from the heat of our very large stove. We loaded the floor with 24 feet of wheat and six joists broke off nearly square in the middle, and others were cracked. In the first instance the bins held 360 tons of wheat while the joists under them were green; when the joists were dry 300 tons or less broke several of them. This shows that green pine is stronger than dry pine, as the wood becomes brash, or brittle, on drying, and is not as strong as when green. This is caused by the sap drying and leaving only solid matter in the capillary tubes, and they cannot move one on another, while if the timber is green the tubes are full of water, and can bend or move one on another. I know of but two kinds of wood that are stronger dry than green, and they are maple and white oak."

**ANIMAL POWER VS. STEAM.**—Mr. A. Sanson, in an article in a recent number of the *Revue Scientifique*, states that from a comparison of animal and steam power, in France at least, the former is the cheaper motor. In the conversion of chemical to mechanical energy, 90 per cent is lost in the machine, against 68 in the animal. He finds that the steam horse power, contrary to what is generally believed, is often materially exceeded by the horse. The cost of traction on the Montparnasse-Bastille line of railway he found to be for each car, daily, 57 francs, while the same work done by the horse cost only 47 francs; and he believes that, for moderate powers, the conversion of chemical into mechanical energy is more economically effected through animals than through steam engines.

A BLACK SNAKE, measuring four feet three inches in length, has been captured in Tasmania, which, on opening, was found to contain the unprecedented number of 109 young ones. The greatest number ever found in a similar snake was 32.

### Irrigation Map of California.

In view of the great interest which the subject of irrigation is now awakening, and as the possibility is hinted at of a commission to examine the State and report on the feasibility of a general system of irrigation and the laws to secure it, we have thought it would be timely to present in this issue a sketch of a study of the subject and a report made upon it some years ago by a commission appointed by the United States Government. No doubt if the subject be taken up anew the conclusions of the early report will have fresh interest. This report is not available to the general public, as copies of it have long been scarce. By sketching the conclusions reached, and reproducing upon the following pages the map used by the commission to illustrate its points, we give information which we trust will be acceptable to our readers. The map shows only the great central valleys of the State and the adjacent country as they then existed. Since then, it will of course be understood, certain changes have taken place. Railroad lines have been extended, many new irrigation canals have been constructed, and perhaps the most notable geographical change is the vast decrease in the area of Tulare lake, owing to the taking out of the river water near the mountains for irrigation. To-day much of the area which was within the margin of the lake when the map was made is high and dry and forms a part of the famous artesian well region of Tulare county. The reproduction of the map and reduction in size to come within our pages has disarranged the scale to which it was originally drawn. The township lines which cross the map at right angles are six miles apart and can be taken as the basis of any measurement which the reader may desire to make.

Some years ago the President of the United States, by authority of Congress, appointed a Board of Commissioners on the irrigation of the San Joaquin, Sacramento and Tulare valleys of the State of California. This board consisted of the late Col. B. S. Alexander, Corps of Engineers, U. S. A., Col. Geo. H. Mendell, Corps of Engineers, U. S. A., and Prof. George Davidson, U. S. Coast and Geodetic Survey. This board made an examination of the rivers and lakes in these valleys, and submitted a report to Congress on the subject, accompanying which were several maps. One of these we reproduce on the following pages, as it shows the system proposed in the "great valley of California."

The map embraces the San Joaquin, Tulare, and Sacramento valleys, and shows the Sierra Nevada mountains on the east side of the valleys, and the Coast Range of mountains on the west side, to the summits of the respective ranges. It shows the great valley of California and the foothills and mountains by which it is surrounded; all the lakes, rivers, and principal creeks, with their catchment areas; the overflowed or swamp lands, of which there are about 1,225,000 acres; the division into counties, and the railroads and principal towns.

On this map the canals that had already been constructed when it was drawn are laid down, and also the canals that had been projected and actually surveyed. The main feature, however, is the hypothetical system of irrigating canals, shown in dotted lines.

On the eastern side of the great valley, all the way from the southern end of Tulare valley, south of Kern Lake to Red Bluff, the ground rises from the lowest depressions or central lines of drainage in a gentle inclined plain, swelling then into undulations, and then into foothills, which, as we proceed eastward, rise into mountains culminating in the Sierra Nevada.

On the western side of the valley, the ground rises in plains of gentle slope, then swells into foothills, then mountains, culminating in the Mount Diablo range on the west side of the San Joaquin and Tulare valleys, and in the Coast Range on the west side of the Sacramento valley.

The ascent from the foothills to the summit of the mountains is much steeper on the western side of the great valley than it is on the eastern side, and the drainage area is much smaller on the western side than it is on the eastern.

Again, the Sierra Nevada being much higher than the Coast Range or the Mount Diablo range of mountains, the consideration of moisture, or amount of rainfall and snow in a year,

lower mountains to the westward. An inspection of the map shows a marked contrast as regards the water supply of the eastern and western sides of the valley.

This great valley of California contains in one body an area of almost level plains equal in aggregate to the States of Massachusetts, Connecticut and Rhode Island, and greater than that of Maryland, or of New Jersey and Delaware.

The examination by the Board took them over the entire valley and foothills, and they visited all the principal and most of the small streams of the eastern and western sides. From rough measurements they became satisfied that with well-constructed main irrigating canals to receive and conduct the waters of its streams and lakes with the secondary, tertiary and other ditches leading therefrom, and with a proper system of distribution of water, there is ample water to irrigate a large part of the whole valley; and, moreover, that if the waters were properly stored in those localities where large areas of good land exist with the smallest amount of rainfall, there would be sufficient water to irrigate the whole valley. But the system of irrigation would have to be of the highest character to attain this end; with some exceptions the disjointed canals now constructed could not be made to approximate such a result, and when others are added in similar defiance of sound engineering, the result will be a partial good for only part of the valley, and will lead to an intricacy of endless legal troubles. Those canals that have been properly consolidated with an extensive system

#### The System of Irrigation.

We see from the topographical features of the eastern slope of the great valley that although water for irrigation is abundant, yet there cannot be any long or continuous canal on that side, because all main rivers and many smaller streams flow down from the Sierra Nevada mountains and enter the plains in a direction more or less perpendicular to the Sacramento and San Joaquin rivers, into which nearly all of these rivers finally empty. No continuous canal can, therefore, be built, without great cost, along the foothills on the east side of the valley, because such a canal would cross the rivers escaping from the Sierra Nevada mountains, generally at right angles. The expense of bridging these streams with aqueducts or siphons to carry an irrigation canal in this country, with the present price of labor and material, would be enormous. The system of irrigation on the eastern side of the great valley must, therefore, be by many short canals, so as to avoid crossing the different rivers and smaller streams by aqueducts. Each river may have one or more dams thrown across it in the most favorable places.

#### Dams.

All other considerations being the same, the higher up the stream the dams are placed the better, because it will always be desirable that the location and plan of the canal should be adapted to the irrigation of the largest area practicable at reasonable cost; and, besides, by the keeping the canals which draw their supplies of water from the main rivers on a higher level, we will be enabled to draw water from them to supply those canals which are fed from the smaller streams, such as the Fresno, Chowchilla, Calaveras, Cosumnes, and Bear rivers, as well as many others still smaller, which do not head in the high mountains, and whose water will, therefore, fail in the dry season. These dams across the larger rivers, as a general thing, will not be for the purpose of storing the river water, however desirable such storage might be, but for the purpose of raising the surface of the water to such a height as will enable it to be carried out over or through the banks of the rivers and get the canals into the plains which are to be irrigated at the least possible expense.

Each main river on the east side of the valley may thus have two canals, one on its right bank, the other on its left bank, and these main canals may be carried along on the proper grade, so as to intersect the similar canals of the adjacent rivers to the right and left, supplying water, also, where it is wanted, and where it can be made available to those smaller canals on a lower level, which draw their supplies from the streams that do not head high enough in the mountains to have a perennial supply.

The proper location of the dams across the main rivers, and of the head-works and alignment of the main exterior canals, will present the most difficult and important problem which the hydraulic engineer undertaking the irrigation of the eastern side of the great valley will have to solve.

The dividing line between a cost too great, in order to embrace more land, and the sacrifice of land that should be irrigated, will often have to be carefully determined by financial considerations.

It may be remarked that the banks of the rivers as well as of the smaller streams, as they flow through the lower plains, are, in many cases, higher than the plains to the right and left. The increased elevation of the banks of the rivers and creeks is usually discernible by the naked eye; but where instrumental levels have been taken, the increased height of the banks in some cases appears to be marked. Thus, on the Sacramento river, a few miles south of Colusa, the bank on the west side of the river was found by accurate levels to be 21 feet higher than the land at a distance of two and a half miles westward from the river on the lower parts of the plains. Where the river banks are higher than the adjacent country, it will be necessary to carry the primary or secondary canals along on these banks in order that the adjacent plains may be irrigated.

#### Influence on Navigation.

From observations of the board they believe that if a general system of irrigation of the San Joaquin, Tulare and Sacramento valleys is carried out, the effect of such irrigation will have very little influence on the navigation of the Sacramento and San Joaquin rivers, which are the only navigable rivers in the great valley of California.

It should be observed that the quantity of water that will be used for the irrigation of the valleys mentioned above will be only a portion of the flow of these two rivers at and below the points at which they are now navigable; and of this portion a certain quantity will find its way back into the rivers again by percolation and underground drainage after it has done its work of irrigation. This will be particularly true of the San Joaquin river, where the greatest amount of irrigation is required.

This river is navigable for steamboats in its high stage only as high as the mouth of Fresno Slough, where the head-works of the San Joaquin and King's River canal are located, and in its lowest stages only as high as Stockton Slough, which is below the influence of the tides. Now, during its high stages, when water is always abundant in the rivers flowing from the Sierra Nevada, the San Joaquin river receives the drainage of the whole Tulare valley through Fresno Slough, a few miles below Watson's ferry. The irrigation of the great valley above this point can therefore have very little influence on the navigation below it, for it is only the quantity of water which is taken up by the increased evaporation due to irrigation, and that going to form a component part of the increased vegetation of the country, that is lost to navigation.

After once wetting the soil down to the water-bearing strata, all the remainder of the water of irrigation will be carried off by underground drainage, and will find its way into the river at or above the point where winter navigation ceases. Indeed, it may well be questioned whether the irrigation of the southern end of the great valley will not tend rather to improve than to injure the navigation of the river; for the water of irrigation will be held back during the floods, when it is not wanted for navigation, and that portion of it which finds its way again into the river by underground drainage will do so in a great measure when the river is falling, and at the time, therefore, when it is wanted for navigation.

It is the belief of the Board of Engineers that the irrigation of the great valley of California in the general manner sketched on the map will have no injurious effect on the navigation of the San Joaquin and Sacramento rivers except for a short time, at a certain stage of the waters, and for a short distance below the points where the proposed canals leave them, viz., the mouth of Fresno Slough, on the San Joaquin, and Red Bluff on the Sacramento. Even here they do not think that the injury to navigation will be at all serious.

The canals for irrigation on the western side of the valley, owing to the necessity of giving them a gentle slope, may easily be made navigable. The San Joaquin and Kings river canal, as far as constructed, is navigable, and its continuation as projected will furnish a more certain and cheap navigation than that of the Upper San Joaquin river.

A canal from the Sacramento river, leaving it at Red Bluff, on its western side, may readily be made navigable. Thus these two navigable canals would afford compensation to any supposed or real injury they might do to the navigation of the rivers. When it is considered that no canal for navigation could be proposed in this or any other part of the United States without the possible or supposed injury of some railroad—and, in fact, that no great public work of any kind can be carried into execution without injuriously affecting some existing interests—the engineers think, if a comprehensive scheme for the irrigation of the great valley of California is ever undertaken, the effect of such irrigation on the navigation of its rivers may be disregarded.

## GOOD HEALTH.

### Disease Germs in Milk.

It is a well-recognized fact that the mother who is nursing her child is obliged to be very careful about her diet, for whatever she eats or drinks has its effect upon her milk, and consequently upon the health of her child. The most acute symptoms, and even death, may be produced by dietary indiscretion. But it is less appreciated that similarly alarming results may be produced in both children and adults by the use of milk taken from improperly fed cattle. There have recently been a number of mysterious poisoning cases, that after a great deal of random speculation have finally been traced to diseased milk. In spite, however, of these warnings, the subject has not yet received the sanitary attention to which it is entitled. Particularly is the danger of such contamination great in the neighborhood of large cities, where the absence of wholesome pasturage is a temptation to the less scrupulous to substitute all grades of organic refuse, the most of which should properly be consigned to the garbage crematory. In addition to this danger, however, it is discovered that even in the presence of abundant and suitable food, cattle are not discriminating in their selection, but exhibit frequently the most depraved tastes. In the neighborhood of large distilleries, it has been observed that the cattle become utterly demoralized by feasting on the refuse from the stills. In time they come to have the dull, stupid appearance characteristic of an opium eater. It is hardly possible that the milk produced by animals permitted to feed on such abominable stuff can be either wholesome or agreeable.

In other places the case is even worse, for the cattle have been observed to feed with evident relish upon unadulterated animal excreta and other highly pernicious food. Aside from the disgust which the practice excites, it is a source of actual and grave danger. When it is remembered that the fatal plague at Plymouth, Pa., was directly traceable to the careless disposal of the excreta of a single typhoid-fever patient, it can readily be seen that milk may become in this manner a vehicle for the distribution of the most malignant disease germs.

So large are the possibilities for evil which may result from the use of milk taken from animals improperly fed, either through design or carelessness, that it is not too much to ask that all public dairy farms should be placed under sanitary supervision, and that the food and quarters of all cattle whose milk is offered for sale should be regularly inspected by officials appointed for the purpose.—*Scientific American*.

**GALEN ON THE TREATMENT OF OBESITY.**—"The best method of getting thinner consists in gradually withdrawing from the body that whereof there is superfluity, and in strengthening at the same time those parts which had been expanded. Bodily exercise will undoubtedly prove very advantageous, as we see stout horses getting lean by heavy work. Thus, likewise, those will never grow fat who are obliged continually to toil with hard labor. This, however, requires great precaution, it being certain that fat people frequently run danger of death when attempting violent bodily exercise." And Galen says: "Regular alvine motions, energetic bodily exercise, a moderate life, a diet which, although satiating, yields but limited nourishment; which explains why Hippocrates advises stout people wishing to grow thin to dine on vegetables cooked with fat, in order that they may become satiated by a small quantity of food."

**MEDICINAL QUALITIES OF OYSTERS.**—It is not as generally understood as it should be that oysters have medicinal qualities of a high order. They are not only nutritious, but wholesome, especially in cases of indigestion. It is said "there is no other alimentary substance, not even excepting bread, that does not produce indigestion under certain circumstances; but oysters, never." Oyster juice promotes digestion. By taking oysters daily, indigestion, supposed to be almost incurable, has been cured; in fact, they are to be regarded as one of the most healthful articles of food known to man. Invalids, who have found all other kinds of food disagree with them, often discover in oysters the required aliment. Raw oysters are highly recommended for hoarseness. Many of the leading vocalists use them regularly before concerts and operas, but their strongest recommendation is the remarkably wholesome influence exerted upon the digestive organs.

**NEW TREATMENT FOR CONSUMPTION.**—The *Lancet* explains in a recent number a new treatment for consumption, as injecting carbonized iodine into the lungs by means of spray of the warmed fluid. The diseased cavities of the lungs are first localized by percussion; then a fine tubular needle, having openings at the point and attachment to a proper syringe, is introduced between the ribs, and the well-known antiseptic qualities of combination are relied upon to effect the healing of the affected parts. It is used once a week. So far, the treatment is quite satisfactory.

**A LINIMENT FOR EARACHE.**—According to the *Canada Medical Record*, Pavoni recommends a liniment composed of camphorated chloral 2½

parts, pure glycerine 16½ parts, and oil of sweet almonds 10 parts. This is to be well mixed, and preserved in a hermetically closed bottle. A pledget of very soft cotton is to be soaked in the liniment, and then introduced as far as possible into the affected ear, two applications being made daily. Frictions may also be made each day with the preparation behind the ear. It is claimed that the pain is almost immediately relieved, and even in many cases the inflammation is subdued.

**WHY DID THEY ESCAPE?**—Mr. D. F. Newsom, of Newsom's Springs near Arroyo Grande, San Luis Obispo Co., Cal., states that during the cholera season of 1850-51, while that disease was prevailing in New York City to an alarming extent, he was employed in the brass finishing establishment of Dietz Bros. & Co., in that city; that there were about 100 employes around the factory, none of whom were at all affected by cholera symptoms, while others were dying by hundreds around them. Mr. Newsom thinks this highly suggestive, and that the hint given by the fact recited might afford good foundation for medical experiment with a tincture of the metal indicated.

**THE SMALL BOY WHO ATE SORREL.**—It was a very curious and almost unprecedented chain of causes, we imagine, which brought about the death of a little boy at Birmingham the other day. The poor child ate during the day a quantity of sorrel which he found near his mother's house. In the night, feeling thirsty, he drank freely of some soapy water which stood near his bed-side. Next day he died, and an inquest being held, the medical evidence was to the effect that the alkali of the soap acting upon the sorrel had formed oxalic acid, a poisonous compound by which the child had been killed.—*London Globe*.

**HEART DISEASE.**—Dr. A. L. Loomis, in a paper read before the American Climatological Association, says that in four cases which he details persons with heart disease were fatally affected by visiting elevations of about 2000 feet. Two went to the Adirondacks, one to the Catskill mountains and one to Colorado. In 26 cases of his immediate experience, he concludes that the removal from a lower to a higher level is in this disease detrimental. The diseases of the Swiss Alps are largely those of the heart, brain or the larger blood-vessels. There is more oxygen at sea-level than at a higher level.

### Fairs to Come.

For the information of our readers, we give below a list of the coming exhibitions on this coast in the order of their occurrence:

Mechanics' Institute Fair, San Francisco, Aug. 24th to Sept. 25th.

Golden Gate Fair, Oakland, Aug. 30th to Sept. 4th.

Thirteenth District—Sacramento, Yolo, Yuba and Sutter counties—Marysville, August 31st to September 4th.

Eighth District—El Dorado, Amador, Alpine and Mono counties—Placerville, August 31st to September 4th.

Contra Costa Agricultural Society, Pacheco, Sept. 6th to 10th.

State Agricultural Society, Sacramento, September 6th to 18th.

Oregon State Agricultural Society, Salem, September 13th to 18th.

Eleventh District—Plumas, Lassen, Sierra and Modoc counties—Greenville, September 20th to 24th.

Second District—San Joaquin, Calaveras, Tuolumne, Stanislaus, Merced, Mariposa, Fresno, Tulare and Kern counties—Stockton, Sept. 21st to 25th.

Ninth District—Del Norte and Humboldt counties—Rohnerville, Sept. 21st to 24th.

Fifth District—San Mateo and Santa Clara counties—San Jose, Sept. 27th to Oct. 2d.

Seventh District—Monterey, Santa Cruz, San Benito and San Luis Obispo counties—Salinas City, Sept. 28th to Oct. 2d.

Tenth District—Siskiyou, Trinity and Shasta counties—Yreka, Sept. 29th to Oct. 2d.

Nevada State Fair, Reno, Oct. 4th to 9th.

Santa Barbara Agricultural, October 5th to 8th.

Twelfth District—Lake and Mendocino counties—Lakeport, Oct. 5th to 8th.

Los Angeles County Fair, Downey, Oct. 5th to 9th.

Santa Cruz Pavilion Fair, Oct. 6th to 9th.

San Diego Horticultural Society, Oct. 6th to 8th.

Sixth District—Los Angeles, Santa Barbara, Ventura, San Diego, San Bernardino and Inyo counties—Los Angeles, Oct. 11th to 16th.

Ukiah Park Association, Ukiah, Oct. 14th to 16th.

### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

JARED C. HOAG—California.  
G. W. INGRAM—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
GEO. McDOWELL—San Luis Obispo and Santa Clara Co's.  
FRANK W. SMITH—Utah and Colorado.  
M. S. PRIME—Alameda Co.  
A. S. LUCE—Nevada and Placer Co's.

### Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

MERIT will tell; misfit spectacles will ruin your eyesight; judge by comparison. Muller's optical depot, 135 Montgomery St.

### A TEASPOONFUL OF

**PERRY DAVIS' PAIN-KILLER**

in a little milk, or Sugar & Water, will cure Immediately!

Any attack of Cramps in the Stomach, or Any Bowel Complaint! For Sale everywhere by Druggists.

## HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blotches, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

J. R. GATES & CO. PROPRIETORS, 417 Sansome St. San Francisco

## H. H. BERGER & CO.

[Established 1878.] Import directly from Japan.

Plants, Bulbs & Seeds Persimmon, Mammoth Chestnut, Plum, Pear and Orange Trees.

Choice Camellias, Azaleas, Conifers, Magnolias and Bamboos.

First shipment will arrive in November. Send for Catalogue for Fall, 1886. P. O. Box 1501.

Depot, 317 Washington St. SAN FRANCISCO.

## SHENWOOD HARNESS

This is the Greatest Novelty ever offered, and a boon to Farmers. Traces and Doubletrees done away with.

Collar \$3.50 Lines 2.25 Bridles 3.25 EXTRA.

PRICE ONLY \$17.50 Sent C.O.D. by Express.

TRIUMAN ISHAM & HOOKER, San Francisco.

If not Satisfactory, we pay ALL FREIGHT

## NATIONAL ASSURANCE CO., OF IRELAND.

## ATLAS ASSURANCE COMP'Y, OF LONDON.

## BOYLSTON INSURANCE COMPANY, OF BOSTON, MASS.

## H. M. NEWHALL & CO., GENERAL AGENTS,

809 & 311 Sansome St., San Francisco, Cal.

## SOHMER & CO. PIANOS. PEEK & SON PIANOS.

BYRON MAUZY, SOLE AGENT, 922 Market Street, San Francisco, Cal.

SEND FOR CATALOGUE.

UNCLE Sam has found it at last! A sure remedy for Torpid Liver, Sick Headache, Habitual Constipation, Chills and Fever, and all affections of the Kidneys and Liver. This is a New Compound, and one trial will convince you that it is the Cheapest and Best Remedy in the Market for Diseases of Kidneys, Liver and Stomach. If you want a pure vegetable compound, that is positively guaranteed to contain no mercury, go to your Druggist, and get a Bottle of the Arkansasaw Liver and Kidney Remedy. Price, \$1.00 per Bottle.

For Sale by all Druggists.

## American Exchange Hotel, SANSOME STREET.

Opposite Wells, Fargo & Co.'s Express, one door from Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion of the city. The traveling public will find this to be the most convenient as well as the most comfortable and respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50 PER DAY, ACCORDING TO ROOM.

Hot and Cold Baths Free. None but most obliging white labor employed. Free Coach to and from the Hotel.

MONTGOMERY BROS., Proprietors.

## SPRAY PUMPS.

Fruit Growers, Farmers, and all desiring to purchase a Spray Pump that is far ahead of all others in the market, as it is the ONLY Pump made with all metal valves, should buy the "CLIMAX SPRAY PUMP," all complete with tube, spray nozzle, six feet of best Rubber Hose; capacity, 8 gallons; also plain nozzle, galvanized iron can, all ready to use. Price, \$15.00. Good Agents wanted at once. Send for Circulars. No. 211 CALIFORNIA ST., SAN FRANCISCO, CAL.

## SACRAMENTO

The Business Training School of the Pacific Coast. Graduates assisted in obtaining employment. Send for College Journal. Address E. O. Atkinson, Sacramento, Cal.

INTEREST MADE EAST, the shortest and most practical method, by mail, 50 cents.

## ORIENTAL FRUITS

Le Conte and Kieffer Pears on their own roots. Bartlett and other Pears on Le Conte roots. Prunus Simon and Japanese Plums; Peen To & Honey Peaches, Russian Apples. A large and general assortment of Fruit Trees. Catalogue with facts. Free. Address W. F. HEIKES, Manager, Hainesville Nurseries, Hainesville, Ala.

## FOR THE BEST IMPROVED ARTIFICIAL LIMBS

ADDRESS MENZO SPRING, 9 Geary St. SAN FRANCISCO, Cal.

OFFICE 5.

## A Good Opportunity for a Machinist.

A variety of good Tools, Patterns, etc., with business for sale cheap by a party retiring from business. A splendid opportunity for an enterprising mechanic. Address A. B. O., care of this paper.

## HEALD'S BUSINESS COLLEGE, 24 Post St. S. F.

# THE "NEW DEAL" SERIES OF WHEELED WALKING PLOWS.

Single, Double, Triple and Quadruple Furrow. Manufactured by JOHN DEERE & CO., Moline, Ill.

The Latest and Greatest Improvement of the Age in Plows. The "New Deal" is a Plow of the Times, made to suit the demands of the times.

THE "NEW DEAL." LIGHT WEIGHT, LIGHT DRAFT, LIGHT WORK for man and beast.

**TESTIMONIALS:**

DUNNIGAN, CAL.—We have a 3 and 4-Gang New Deal Plow; have used them in gravel, adobe and the ash hill land, and we find the Plow equally adapted to each kind of soil, and consider them the "Boss" Plow for the California farmer.—BOOTH BROS.

VIRALIA, CAL.—Having been extensively engaged in farming for a number of years, I can safely recommend the "New Deal" Plow to be superior to all others, for lightness of draft, quality of work, and adjusting facilities.—JOHN TUOHY.

MERCED, CAL.—I have the four 3-Gang, 10-inch "New Deal" Plows at work, and for completely turning the ground over and lightness of draft, they are the best Plows I ever saw.—V. C. W. HOOPER.

HUENEME, CAL.—The "New Deal" Plows have given entire satisfaction in our part of the country, and have plowed weeds under which no other Plow could have done. Mr. N. S. Cook, who had a "Stockton" Plow to use on the side-hill, could not do anything with it, and had to use the "New Deal," which worked satisfactorily.—WOLFF & LEHMAN.

YOLO, CAL.—The "New Deal" Plow is the best Plow that ever was made, excepting none. I have got "Brown's," "Cassady's," and "Eureka's," and the "New Deal" will do more work and better than any of them; furthermore, it can be worked in any kind of soil.—GEORGE WOODWARD.

LIVERMORE, CAL.—The 3 Gang, 10-inch "New Deal" Plow bought of you works first class. If I can sell my other gangs, I will use the "New Deal" altogether, as they do the work better and run much easier than any gang plow I have used or seen.—DETLEP LA FRENZ.

We can furnish one hundred more Testimonials, if desired.

For Lightness of Draft, Ease of Management, Strength, Durability and Quality of Work,  
**The "NEW DEAL" is without a Parallel.**

3-Gang, 8-inch.....	\$75 00	4 Gang, 8-inch.....	\$80 00
3-Gang, 10-inch.....	80 00	4-Gang, 10-inch.....	90 00

All with Extra Points.

## PERKINS' WIND-MILL.

EVERY MILL WARRANTED.

The Genuine Perkins' Wind-Mill has earned a reputation for excellence that will be maintained. It is unquestionably the most perfect and beautiful Wind-Mill in the market.

These Mills are reliable and always give satisfaction. Simple, strong, and durable in all parts. Solid wrought iron crank shaft with double bearings for the crank to work in, all turned and run in adjustable babbitted boxes. These Mills are perfectly noiseless, easy and graceful in all their movements. Positively Self-Regulating, with no coil springs or spring of any kind, no little rods, joints, levers, or balls to get out of order, as such things do. Mills in use six to twelve years in good order now, that have never cost one cent for repairs.

## The Hoosier Grain Drill.

The HOOSIER Force-Feed Grain Drill is universally acknowledged to have no superior. It is strongly built, handsomely finished, and has many improvements which no other Drill possesses. A POSITIVE FORCE-FEED, REGULATED WITHOUT CHANGE OF GEAR WHEELS OR STOPPAGE OF DRILL. Every Drill has a Force-feed Grass Seeder Attachment, constructed and regulated on the same principle as the Grain Feed. The Hopper is placed so as to balance weight that would otherwise rest on the necks of the team. This, in connection with the double-tree, being attached beneath the tongue, so that the pull is inclined upward, makes the weight very light on the horses. All HOOSIER Drills sold by us are especially constructed with heavily built wheels, with three-inch tires, which is of great advantage for the soft soil of this section. For Prices and further information, send for Catalogue.

Also Agents for the JOHN DEERE MOLINE GANG, SULKY and SINGLE PLOWS, SOUTH BEND CHILLED PLOWS, SCHUTTLE FARM and SPRING WAGONS, KEYSTONE DISC HARROWS, all kinds of Large and Small Farming Implements, HOWE SCALES, Etc.

**HAWLEY BROTHERS HARDWARE COMPANY, SAN FRANCISCO.**

## "NEW HOME."

EASIEST SIMPLEST.

Best Stand,  
Best Feed,  
Best Shuttle,  
Best Attachments,  
Best Woodwork,  
Best Wearing.

Territory Controlled by the S. F. Office:

E. W. MELVIN, Proprietor and Manufacturer.

## "The Great Carriage Firm"

# M. P. HENDERSON & SON

MANUFACTURERS AND DEALERS IN

## Finest Grades of Carriage Work,

HARNESS ROBES AND CARRIAGE MATERIAL.

Specialties: Work to Order, and Henderson's Pat. Buckboard; also Agents Studebaker M'g Co. Farm Wagons, Etc.

OFFICE AND FACTORY:

CORNER MAIN AND AMERICAN STS., STOCKTON, CAL., U. S. A.

## Italian Sheep Wash.

EXTRACT OF TOBACCO. Free from Poison.

Cures thoroughly the SCAB OF THE SHEEP. The BEST remedy known. Costs less than 1 cent per head for dipping. Reliable testimonials at our office. For particulars apply to

CHAS. DUSENBERG & CO., Sole Agents, No. 314 Sacramento St., San Francisco.

## ALMOND HULLERS

FOR SALE BY

# A. O. RIX,

Washington Corners, California.

PRICE \$5. The PERFECTION ELECTRIC BELT, for male or female, with all the latest improvements, will be sold until further notice at the remarkably low price of \$5. Call or address J. H. WIDBER, Druggist, 701 Market St., corner Third, San Francisco.

## The Combined Harvesters.

A representative of the PRESS who recently visited Stockton assures us that the Stockton Combined Harvester Works have had a very satisfactory season in 1886. They sold nearly all the machines they manufactured, and if any have not given satisfaction the fact has not been reported to them. Our reporter was told that no one had expressed even a desire to return a harvester. The Minge pattern did good work, but the works will, however, rely upon the Houser as a standard for a "pull" machine, and they are now getting in the stock for an increased manufacture of Housers this winter and spring. The Houser for 1887 will have an increased capacity in cylinder and separator, and the manufacturers assure us that the "best cleaner that has yet been put on a harvester" will add to the attractions of the Houser of next season. The Houser has made a most enviable record for itself, and is commended by hundreds who have had experience with it. The Shippee harvester has been reported as doing good work this season, and in its special field has a good outlook.

These combined machines have come in just in time to demonstrate how wheat can be profitably grown even at a low price, and comprise one of the most signal contributions made by our inventors and mechanics to the general prosperity of the State.

## Solano.

EDITORS PRESS:—The writer of the very interesting article in the last issue of the PRESS entitled "California Names" makes "Solano" in the name "Solano county" mean a potato, but in this he is mistaken. The name is derived from the Spanish and means primarily the "east wind," hence the "east," "the dawn," then "the morning," "the time of the rising sun." The county so called might be appropriately called "The County of the Rising Sun;" and this reminds the writer that the Japanese name for their country means the same—"The Land of the Rising Sun."

It is true the potato family is called botanically *Solanaceae*, and that the common potato is known as the *Solanum tuberosum*, the solanum in this case being Latin and derived from the deponent verb "solor," I soothe, because of the narcotic effects of several species of the *Solanaceae*. "The County of the Rising Sun" is a far more poetic idea than "The Potato County." GRANVILLE F. FOSTER.

Sunol Glen, Cal.

## The Armour Packing Company.

The combined packing of the Chicago and Kansas City houses foots up in round numbers about 1300 head of cattle and 5500 hogs daily for every working day of the year.

Their goods find a market all over the world, and they have filled a single order for 5,000,000 pounds of canned beef. It is a national pride to know that foreign nations are paying tribute to the enterprise, thrift and sagacity of an American plant managed by American citizens who have seized the opportunity to become masters in this branch of the provision trade.

A little over a year ago the managers arranged to make San Francisco a distributing point for the Pacific Coast. To carry out that policy James McCullough, whose many years' experience in the provision trade has evidently qualified him to take the management of an enterprise of this character and magnitude, was selected as the San Francisco representative of the Armour Packing Company.

The finest exhibition that was ever made in this line of goods can be seen in the Mechanics' Fair. This line of goods is a sample that is furnished in all the great markets of the world. There is a special selection for the Pacific Coast of bacon and ham known as the "49" brand that has no superior. At this exhibit may be seen a fine lithograph of the inside working of their great plant.

The standard and excellent quality of their goods has become so well established that the affable agent from his office, No. 123 California St., fills orders for all distributing centers on the Pacific Coast, to meet the growing demand. Their business has assumed large proportions, running up into tens of thousands each month, and with their commercial advantages and the trade of the Northwest, extending to Sitka and "islands of the sea," this distributing agency will be one of great importance.

For the sale and consumption of their provisions they rely on their merit. It is a fact worth knowing that all their goods are in original packages direct from their packing houses, and any provisions with the stamp and trade-mark of Armour Packing Company are warranted to the trade and the consumer.

CHOOSING SAN DIEGO.—We learn from the National City Record that our wide-awake friend, Prof. W. A. Henry, whose recent vacation-trip to California, from the Agricultural Chair of the University of Wisconsin, we noted from time to time, has purchased of the Kimball Brothers a ten-acre tract for himself and one for his foreman, Mr. Leslie Adams. These tracts are located across the Sweetwater in full view of the city and bay.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## The Grangers' Store, Sacramento.

A representative of the PRESS in Sacramento sends us the following: The Grangers' store at Sacramento, Tenth and K streets, is doing a fine business. They carry a full line of groceries and provisions, hardware and all kinds of agricultural implements. They also have a large stock of the celebrated Studebaker wagons, buggies, and carriages, which are so well known in this market. The central location of the Grangers' store gives a very great advantage in business. The association owns its own storehouse and warehouse, which is one of the best and most substantial in Sacramento. Their trade is largely with the farmers, and is steadily increasing and spreading out over Middle and Northern California. Farmers as well as patrons feel at home when they call at the Grangers' store, believing they will be fairly dealt with, and they seem to have confidence in the way and manner the business is conducted there. Everything is done on a cash basis. E. Greer, who has had many years' experience in merchandizing, has the management of the store. I found him a perfect gentleman, and his book-keeper and clerks are very courteous and gentlemanly. The store was in good order and the work well systematized. The Grangers' store is largely supported and patronized by members of the order. Judging from our observation, it merits the favor it receives.

## Wagon Axles.

EDITORS PRESS:—We noticed in your last week's issue of the RURAL a communication in regard to the iron axles used on wagons and suggesting remedies to cover defects which have been plain to every one in all solid iron axles made in the United States. It is impossible not to break and crystallize at the shoulders if made in the old style solid form which manufacturers have been using ever since wagons were made. There is only one factory in the United States which has struck the key-note of solving the problem of broken axles. The invention was patented and is now used by the Milburn Wagon Co., of Toledo, Ohio, who own the exclusive patent for the United States. They make a wagon with hollow iron axles; this gives a large bearing, great strength and makes them very light, and it is impossible to break the axles. There have been sold in California within the last two years over 4000 of these wagons, and only one axle has been broken; in fact, the manufacturers give an axle free of charge for every one that is broken. These wagons are sold at an advance over the ordinary old-style axles, because the patent is controlled by one who has made an immense fortune in manufacturing and selling these hollow axles, and has licensed but one wagon manufacturer in the United States to use them. We have been told that there are upward of 50,000 of these axles now in use and less than 10 have broken. It is a well-known mechanical fact that hollow iron columns will sustain more weight than if made solid, and the same with beams and girders. The reason why the hollow iron axle is so much stronger and runs so much lighter than any other wagon is because it has a larger bearing and more elasticity, carrying the load, as it were, on springs. TRUMAN, ISHAM & HOOKER.

## THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huerfano ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

## NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms offer the best inducements to those seeking homes on any part of the Pacific Coast.

The field work of the subdivision of the famous

## PASO ROBLES RANCH

Has been completed. The maps and catalogues are now being prepared, and will be sent free on application. This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

## TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

# BATCHELOR & WYLIE,

SOLE AGENTS FOR THE PACIFIC COAST FOR THE

## ACME STEAM HEAT EVAPORATOR COMP'Y, of Charlotte, Mich.

When any person investigates the different processes by which fruit is evaporated, with a view of making it a profitable business, he ought to look to the following vital points, to-wit:

- Absolute Safety from Fire.**
- Greatest Capacity with Least Labor and Fuel.**
- Quality that Brings the Highest Price, Produced with the Least Skill.**
- A Machine that is Durable, the Capacity of which can be Increased at Will, with a Proportionately Decreased Cost.**

We KNOW that all these qualities are embraced in our Acme process.

The subjecting of fruit to a high degree of heat, and forcing the moisture through fruit partially dried, is wrong. On the contrary, the true theory is—a direct, low degree of heat that will not burn or scorch, with good ventilation. Sufficient heat to force the moisture out of the article dried is all that is necessary, if the moisture is carried away immediately. Our machine does this in such a manner that the moisture from one drying chamber does not go through or interfere with the contents of the other chambers, and this is accomplished without cooling the steam chambers.

We have two sizes of the Acme Steam Heat Evaporator. The one shown here is the No. 2, which is only about half the size of the No. 4, and can be operated with heated water in the chambers instead of steam if desired. In using heated water we also use the heated air from the furnace in combination with the heat from the water. We believe we have the most perfect process of evaporating fruit yet introduced, and would be pleased to send catalogues to any persons interested in fruit evaporating. Address

**BATCHELOR & WYLIE,**

Dealers in Agricultural Implements,  
37 MARKET ST., SAN FRANCISCO.

IT WILL NOT BURN  
FRUIT.

SEE EXHIBIT AT  
STATE FAIR.

### THE MACHINE

By which the foregoing results are attained consists of a succession of flat steam chambers, placed one above the other, in close proximity, leaving room between them for the introduction of trays of fruit.

These chambers are filled with steam, or heated water, by a continuous current of even pressure, which imparts a uniform heat to the machine, thus securing even drying.

As the moisture is expelled from the fruit it is carried away from the machine, without coming in contact with any other fruit, thus preventing cooking or steaming, and also hastening the process.

Moisture thus removed does not need to be disposed of by evaporation, thereby avoiding the necessity for intense heat; while, by applying heat of the same temperature from both above and below, we dry the fruit on both sides (which no other machine does), thus inclosing, in a measure, the juice, which a further subjection to heat so cooks as to render it fixed and safe, so far as keeping is concerned, as jelly.

Thus we retain the flavor, so essential to good fruit, but impossible by any other process.

In these machines two tiers of steam chambers are placed side by side with a space between them.

The steam chambers are inclined toward the outside, which causes all water from condensation to flow to the outer edge, whence it finds its way out, through the lower connections. This arrangement enables us to have the spaces of uniform width, and leaves the second connection free at all times for the passage of steam.

Through the devices attached to the machine, the degree of heat is under the control of the operator; but it is also true that the immediate removal of moisture is as important as a high degree of heat.

The hood gathers the heated vapor which rises through the center of the machine, conducting it to the flue, from whence it passes out of the building.

In use there is a constant flow of vapor through the drying chamber into the space between the tiers of chambers, thence up through the hood and flue above it. So perfect is the operation that no moisture escapes into the room where it is operated.

## The Leading Institution of Business Training on the Pacific Coast.

Its teachers are competent and experienced. Its pupils are from the best class of young men in this State. It is under the very best discipline. Its Scholarships are good in the THIRTY-SIX Bryant & Stratton Colleges. It employs four of the best penmen in the State. It has the largest rooms, the largest attendance and most complete system of business training, of any commercial school on the Pacific.

### YOUNG MEN AND WOMEN

Wishing to prepare themselves for the practical duties of life, will find this the best school. Pupils learn just what they need to accomplish success, and do not meddle with superfluous studies. Each student receives separate instruction and can thus advance as rapidly as desired, not being kept back by those more deficient. All persons passing the final examination in a satisfactory manner, will receive our finely-engraved GRADUATING DIPLOMA. Graduates of this College are in demand among business men, and can readily find good positions. Such as are in good standing are assisted in obtaining situations, if desired.

### OUR BUSINESS COURSE

Is especially adapted to the wants of young and middle-aged men, who wish to prepare for the active duties of life, whether as book-keepers, salesmen, merchants, bankers, professional men, or even farmers or mechanics.

### ACADEMIC DEPARTMENT,

Where all the branches of an ordinary English education are taught, for those who are too young or not sufficiently advanced for the Business Course. Visitors are always welcome at the College.

### HEALD'S COLLEGE JOURNAL,

Which is issued monthly, by the College, contains full particulars regarding the Course of Studies, Expenses, etc.; also, a large amount of interesting reading. It can be obtained, free of charge, either at the College Office, No. 24 Post St., or by addressing

**E. P. HEALD & CO.,**

## The Latest Fashions.

## Ladies' Costume.

FIG. 1.—A simple and pretty costume is this, and the material and decoration here chosen render it especially dainty and summery. The material is pale blue linen lawn, and the decoration includes embroidered linen lawn, edging and flouncing. The upper part of the skirt, at the front and sides, is a deep, smooth-fitting yoke, to the lower edge of which is gathered the lower portion, which is overlaid with two rows of the flounce embroidery; the upper row being gathered in with the upper edge, while the lower row falls in points, even with the lower edge. The flounce embroidery may be continued across the back breadth, if desired. This breadth extends to the belt—its upper edge being gathered—and is finished without decoration.

The waist is a pretty novelty. In front it presents the effect of a baby waist, having a deep yoke upper part, and a full, loose lower part, the lower part being shirred twice across the top from the closing nearly to the arms' eyes and also for a similar distance at the bottom. The closing is made with buttons and button-holes in a fly, and the yoke is overlaid at each side of the closing with three forward-turning rows of the embroidered edging that slightly overlap. At the back the waist shows a pretty fullness down the center, and this fullness is produced by shirrings at the neck, and is disposed in gathers at the lower edge. The shirrings are sewed to a fitted stay arranged underneath, and a graceful close adjustment is achieved at the sides by back side gores. A belt

trimmed all round with rows of velvet or fancy ribbon or braid. The waist-yoke may be of contrasting material or of embroidered goods, and the skirt-yoke may correspond. Nun's-vailings, cashmeres, serges, chambrays, gingham, seersuckers, China silks, Surahs, foulards, piques, nainsooks, India muslins, etc., are

of a full vest and is very becoming. At the left side the front-drapery is raised high on the hip by a group of five deep plaits and curves away below the plaits to the left side, where the drapery falls straight almost to the edge of the skirt below a cluster of three upturning plaits. The back-drapery also falls straight below a

Fig. 4.—LADIES' HAT.

among the favored textures for costumes of this style.

## Misses' Polonaise Costume.

FIG. 2.—In this instance embroidered chambray is used for the polonaise and plain chambray for the skirt, which is in the popular four-gored style. The gores are deeply trimmed with rows of deep embroidered chambray edging alternating with deep folds of the plain

Fig. 3.—LADIES' BONNET.

cluster of four deep plaits at the right side, and is raised high on the hip at the left side by six deep plaits. At the center a handsome seamed

pongees, serges, nun's-vailings, cashmeres and plain and figured dress goods of all varieties, the mode will make up stylishly in this way. The skirt may be finished plainly or it may have only a narrow plaiting for its edge decoration. For thin goods a flounce of lace all round the skirt is very dressy and pretty. Lace nets and embroidered goods of all kinds, white and in colors, are especially suited to a polonaise of this style, and lace or embroidered edging may trim the edges of the front drapery.

The hat is a stylish shape in fancy straw. Its brim is faced not quite to the edge with velvet, and velvet ribbon and plumage trim it quite elaborately.

## Ladies' Bonnet.

FIG. 3.—Fancy yellow braid forms this bonnet, which, while a *capote* in general effect, is yet a little odd, inasmuch as it is flat just on top. As it is trimmed high, however, this is only noticeable in the outline. The ribbon used for the bows is dark blue grosgrain, with a *picot* edge of yellow that looks like straw work. The loops are brought sufficiently high on one side, and on the other is a mass of yellow wild roses. This arrangement of ribbon and flowers constitutes all the trimming, unless, indeed, the ties are counted as such. The latter are fastened at each side in a plait and then flare; they are of the ribbon and sufficiently long to tie in a graceful bow either under the chin or at one side, as is thought most becoming. For illustration see this page.

## Ladies' Hat.

FIG. 4.—This hat is made of dark-blue braid, a fancy weave adding to its beauty. The shape is not unlike the sailor, save that the brim is rather broader. A band of blue and scarlet grosgrain ribbon is drawn smoothly around the crown, the full width of the ribbon not being shown, as it is folded. On one side of the front are loops of the ribbon held by a silver pin; on the other is a blue tip, which is fastened at the top and drawn down and securely caught to the lower part of the crown. Between the ribbon and the feather is a *jabot* of lace, which emphasizes the contrast in the decorations. If a

Fig. 1.—LADIES' COSTUME.

finishes the bottom of the waist. The collar is of the standing style and is covered with an upturned row of the embroidered edging. The coat sleeves are shortened a little, and very dressily completed with a frill of the edging headed by an upturned row of the same. A ribbon belt is worn and is fastened under a pretty bow of flowing loops and ends of ribbon a little to the left side of the closing.

Lace flouncing may be used instead of the embroidered flouncing, or the entire lower skirt-section may be of either variety of flouncing. For washing goods particularly the mode is very pretty, and all standard and novel varieties will be selected for it. Sometimes the skirt will be

material, which is cut bias and put on to suggest deep tucks. The back-breadth is plainly finished.

The polonaise is an attractive and stylish novelty. Its front drapery is in one piece with the front, which is finished to a suitable depth for a closing at the center. At the neck and waist-line of the front are clusters of shirrings, which are secured to smooth-fitting lining-sections that pass under the fronts to the under-arm darts in with which they are sewed; and the adjustment is rendered smooth and graceful back of the shirrings by bust darts taken up in the lining and outside together. Between the clusters of shirrings the front is given the effect

*bourneous* is arranged below the center seam, contributing to the full, *bouffant* effect; and side seams are placed far to the back so that a close adjustment results without the use of side-back gores. A pretty bow of ribbon is fastened to the left end of the shirrings at the neck, and a bow of long flowing loops and ends of ribbon is fastened to the left end of the shirrings at the waist-line, with dressy and youthful effect. The high standing collar is covered with an upturned row of edging, and a row of edging turns upward in cuff fashion from the wrists of the coat sleeves.

For tissues, India and Swiss muslins, sateens, summer and foulard silks, Surahs,

plainer hat be desired, the entire garniture could be of the ribbon.

THEIR LOVE FOR LIQUOR.—"Yes," said a Kentuckian who had been in the far West, "Indians are powerful fond of whisky. Let them once get the taste of whisky, and they'll give up everything for it. An old chief out in Western Dakota offered me a pony, saddle, bridle, blanket and I don't know what else, for a pint of whisky I had with me."

"And you wouldn't give it to him?"  
"Not much. That was the last pint I had left. But it shows how fond Indians are of whisky."—N. Y. Sun.

## TILLAGE IS MANURE.

Increase the Yield of Wheat

BY PULVERIZING THE SOIL.

Plow Early

-AND-

Keep Your Land Clean

BY USING THE

"ACME"

PULVERIZING

HARROW.

CLOD CRUSHER

And LEVELER.

"Taking Mr. Brown's lowest estimate of five bushels increase per acre, with one dollar's worth of extra pulverization of the soil, or four dollars above cost, the great benefit conferred on farmers by a general introduction of the 'ACME' Pulverizing Harrow, Clod Crusher and Leveler becomes obvious. If the five hundred million bushels of grain raised annually in the United States, on forty million acres of land, could be so easily increased but three bushels per acre above cost, it would add more than a hundred million bushel of wheat to the product of the Union above actual expense. By assisting in the wider introduction of this efficient implement, enterprising farmers and citizens would promote the substantial interests of the whole country."

"The result of the experiment (thorough pulverization of wheat land) and observation was that \$1.00 of extra work per acre with good pulverizers adds from five to ten bushels per acre."

"The farmer will find that thorough cultivation of wheat land is manure, and that each of his teams earns \$10 each day they are thus employed."

Charles A. Green, editor of the *Fruit Grower*, in writing to the *N. Y. Tribune* of a crop of wheat, says: "The stubble lot was sown just before a rain. I harrowed it thoroughly with the 'ACME' Harrow, a man riding and sending the blades deeply down. To test the effect, strips were left without the harrowing. At this date (Nov. 22d) it is surprising how much more forward the wheat is on the part harrowed."

The "ACME" will cut from 3 to 5 inches deep; will cut up and turn under stubble several inches high, and will prepare the soil for grain with less expense and in a more thorough manner than any tool ever invented.

## STODDARD DISC HARROWS.

The Stoddard and the Climax Pulverizing Disc Harrows are the most convenient, effective, durable and reliable. They economize time, save labor and money, and secure the greatest yield of crops by the most perfect tillage. They are unrivaled for power, and incomparable for rapidity and effectiveness, for surface tillage of all tenacious and tough soils. Are often a substitute for the Plow. Positively the lightest draft Harrows of their kind.

The concave plate wheels are BEST QUALITY STEEL and are SELF-SHARPENING BY USE.

Each steel wheel or disc makes a groove for its passage through the soil, by clearing, crushing, and lifting FROM THE GROOVE ALL THE SOIL, and rolling it in a furrow one side.

All rootlets are cut off or torn from the groove and exposed to the air and sun, or buried below the surface.

Instead of a DEAD DRAFT BY IMPACT against heavy and inert soil, they cut it like a knife, and split it like a wedge.

They loosen, crumble, and lighten the soil, but do not harden it.

They roll and cover seed grain deeply and uniformly beneath the surface, and insure germination and growth by preparing a perfect seed-bed.

They cover broadcast grain so effectually and perfectly as to save from a tenth to a fifth part of seed commonly lost when scratched in with a tooth drag.

They take the soil from BELOW, and roll it upward to the surface, pulverizing and exposing it to the enriching sun and air. Good tillage requires this, and this is what no other Harrows can accomplish so effectively and speedily as the Stoddard and Climax Pulverizing Harrows with their double solid gang of steel wheels.

San Francisco, Ca

Business College.

Among the many private educational institutions of San Francisco, we are pleased to make mention of Barnard's Business College, No. 46 O'Farrell street, as one of the most prosperous. This practical school is conducted by Bro. G. B. Barnard, whose large experience in educational work enables him to offer the best inducements to those who need instruction in any of the branches pertaining to a practical business education. A thorough commercial education that may be obtained at this institution in a few months, at a trifling cost, will do vastly more for the average young man, so far as "getting on in life" is concerned, than half a dozen years and hundreds of dollars spent in the study of the sciences and classics. The system of individual instruction employed in this college enables the student to complete a thorough course in a much shorter time than is required in other schools where pupils are classified, and is therefore a great advantage to those who have neither time nor money to waste. Those who are interested in the subject of a special education for business, and particularly those who contemplate attending a commercial school, should visit Barnard's Business College, No. 46 O'Farrell street, N. E. corner Stockton; or, if not convenient to visit the college, send for a copy of "Our College Ledger," which contains full particulars regarding the college departments, courses of study, terms, etc. Parents are especially and cordially invited to visit this college.—*Fraternal Record*.

How to Eradicate from the Soil Mustard, Tar-weed, Cockle, Wild Oats, Etc.

Some Practical Words from a Practical Pacific Coast Farmer. The Farmers of the Pacific Coast Lost Many Thousands of Dollars on the Crop of 1886. Mustard, Tar-weed, Wild Oats and the Numerous Other Weeds do it.

Our present system of summer-fallow cultivates and increases, but does not destroy, these terrible pests. They increase year by year more than 500 fold. It means ruin to the farmers and bankruptcy to every material interest of the country. Can we destroy these weeds and avert this fearful calamity? He who can tell us how to do this confers a great favor on the farmers of this country worth millions of dollars. Well, here now is the benefit without charging a cent for it.

Soon after harvest start an *Acme harrow* through the stubble. Set it to cut three inches deep. One section, three horses and a driver will cut 15 acres a day. Two sections and six horses will cut 30 acres a day. The stubble will not interfere, as the *Acme* never chokes up. One time passing over it will cover all the seed, as the *Acme* turns every particle of the soil. The seed being covered insures its germination with the fall rains, it grows all winter, and in the spring when you summer-fallow you turn the weed, instead of the seed, under and you kill all that has vegetated. Follow this course a few seasons and you have the land cleansed of these fearful pests. The *Acme harrow* will soon supersede all other harrows. In fact, we have no use whatever even now for other harrows except to harrow growing grain. Take your summer-fallow. Set your *Acme* at full depth. It will cut five inches deep, is better than a second plowing, and puts the ground in a splendid condition for seeding. Take sod; plow four inches deep, mash down with roller, pass over both ways with an *Acme*, and you have a seed-bed like a garden. No tool ever invented will prepare ground for wheat, barley or oats, timothy or alfalfa, half so well as the *Acme*. On our mountain and other lands where wild oats and cockle prevail, and where the seed lies on the ground after harvest, if you wish to cultivate the land every year, run the *Acme* over the stubble after harvest, all that seed will come up in the fall and most of it can be killed by your spring plowing.

I have penned these reflections for the good of my fellow-farmers. They are the results of close observation and of actual trial. I firmly believe they are correct and that trial will satisfy the farmer.

JERSEY BULL FOR SALE. AT THE STATE FAIR.

ANSEL, No. 311, P. C. J. C. C. R. Dropped Aug. 14, 1884. By Buffalo Bill, No. 17. Ex Diana, No. 17.

This Bull has three crosses of Touchstone (No. 315, A. J. C. C. R.); one through his sire and two through his dam; is very handsome, being solid dark fawn. His dam is a large and very rich milker. Can be seen at Fair Grounds.

ARTHUR C. JELLY. P. O. Box 217. Sacramento, Cal.

THE PACIFIC RURAL PRESS.

THE LEADING AGRICULTURAL AND HOME NEWSPAPER.

[A Standard Authority on all the Branches of California Agriculture.]

PROUD OF THE RURAL.—We feel proud of the RURAL PRESS. It is a paper that we are not ashamed to send to our friends in the East. Every farmer on the Pacific Coast should take it, and it is a valuable paper for anyone to read. We appreciate your efforts. Long may you live to bless our cause.—James Blood, Santa Barbara Co.

THE RURAL BEST OF ALL.—I take from four to six papers but if I could take but one, I should unhesitatingly choose the PACIFIC RURAL PRESS.—J. M. Asher, San Diego Co.

INVALUABLE.—I congratulate you on the general excellence of the RURAL PRESS, and consider it simply invaluable to all residents of the Pacific Coast.—Frederick C. Sheldon, M. D., Los Angeles Co.

To Advertisers.

The PACIFIC RURAL PRESS has a greater circulation and influence, in the Pacific States and Territories, than all the other agricultural weeklies of the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns. Established 1870. Circulation, choice and extensive. Rates of advertising comparatively very low. Subscription, \$3 a year, in advance. Send for samples.

MANUFACTURERS AND DEALERS IN

Carriages, Buggies and Wagons.

Also, HARNESS, ROBES, WHIPS, ETC. 220 & 222 MISSION STREET, SAN FRANCISCO.

Steam Fruit-Driers.

We again call attention to the Acme steam evaporators, of which we gave a brief illustrated account June 12th. Since then we are told they have been tested practically and have given good results in two of the largest fruit-drying establishments on the coast, experts pronouncing their product superior to anything prepared by dry heat. The lessened fire risk attending the use of hot steam is a strong point in their favor. Batchelor & Wylie advertise them upon another page and will have them on exhibition at the State Fair in Sacramento.

Four of the largest Art Foundries in this country, with a cash capital of over \$1,000,000, and hundreds of skilled workmen, are employed in the production of this beautiful work.

Our Illustrated Catalogue contains a large amount of interesting information regarding White Bronze, and will be furnished free, with designs and prices, on application.

San Francisco, Jan. 15, 1882.

AGENTS WANTED to sell the MISSOURI STEAM WASHER.

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]

MARY J. TAPPAN, Reynolds, Neb.: They excel all other washers I ever saw. JOHN R. DODGE, Jr., Norwalk, Ill.: The best machine ever invented by man. H. H. DURANT, Cottageville, S. C.: Everybody likes them and everybody wants them.

S. B. ADAMS, Auburn, D. T.: My wife would not take a quarter section (160 acres) of land for her machine, if she could not get another.

MRS. JOSEPH SWIFT, State Center, Iowa: The most useful article about the kitchen. ANNA RANNEY, Milton, Tex.: Have thoroughly tested it on articles from two collars to bed quilts, given entire satisfaction.

ST. CLAIR INKSTER, JR., Egypt, Washington Terr.: Sells itself and can not be spoken of too highly. JOHN DETTON, Bangor, Ark.: Have given it several severe tests and it came out triumphant every time.

JNO. B. WHEELER, Kansas City, Mo.: They have proved treasures to the families who secured them. A. P. SHIPLEY, Toledo, Nev.: Gives entire satisfaction. Rather bristle the Washer than anything I have seen.

E. M. MANSEY, Lockport, Tenn.: Has proved a better Washer than I ever thought would be invented. JOHN C. EVANS, Springfield, Mo.: If you will get up any instrument that will take as much labor off of me as this Washer takes off the women, and cost no more, I would sell all one at every house.

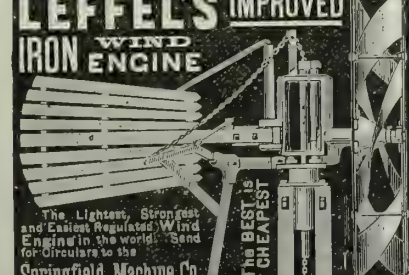

MRS. M. C. DUBBINS, Galveston, N. J.: Gives perfect satisfaction. I do my washing alone in same time I used to wash with help. MRS. W. WOODS, Newbern, Va.: Will do more than I say, especially washing flannels.

MRS. F. G. SINDEN, Sherman, N. Y.: Would not take \$50 for mine if I could not get another. Washes quicker and better than it can be done by hand. MRS. FRED H. HARRIS, Brattleboro, Vt.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. POND, Northfield, Conn.: Have used nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, Patoka, Ill.: Saved me \$5.00 per year for 12 months I've had it.

MRS. C. W. TALBOT, Northfield, Conn.: I have thoroughly tested it for five months with entire satisfaction. EDNA J. HUNT, Stanton, Mich.: I had rather give up my Jersey cow than part with my Washer.

I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand per cent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address J. WORTH, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

LEFFEL'S IMPROVED IRON WIND ENGINE

The Lightest, Strongest and Easiest Regulated Wind Engine in the world. Send for Circulars to the Springfield Machine Co. SPRINGFIELD, O.

A Treatise on the Horse and his Diseases

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7x5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address.

DEWEY & CO., 252 Market St., S. F.

Concrete Apparatus

RANSOME, 402 Montgomery St., S. F. Send for Circulars

CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th. TWO WEEKS.

The Attention of the Farming Community of this State is particularly called to the Liberal Awards, and advantages offered for COUNTY EXHIBITS.

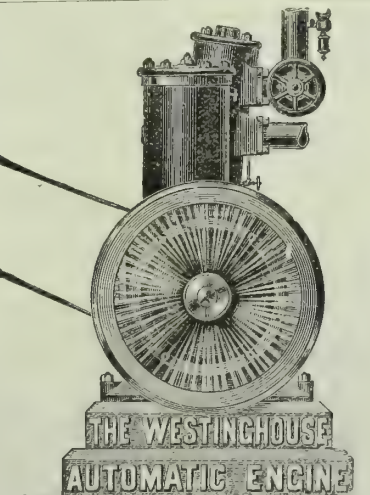

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions: To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.

JESSE D. CARR, President. EDWIN F. SMITH, Sacramento.

THE WESTINGHOUSE AUTOMATIC ENGINE

1,300 Engines now in use.

40,000 Horse Power now running.

## DEWEY & CO.'S

Scientific Press Patent Agency.

ESTABLISHED 1863.

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

A. T. DEWEY. W. B. EWER. GEO. H. STRONG.

## CHAMBERLIN AUTOMATIC

Machine-Made

“STANDARD”

SHOT-GUN

CARTRIDGES.

Sold by all Dealers in Ammunition.

ARE YOU USING

**Wellington's Improved Egg Food For Poultry?**

IF NOT, WHY NOT?

NOTE.—Eggs have now doubled in price and will continue to advance to 50 or 60 cents per dozen, and from this time on every one should feed this Egg Food in order to have plenty of Eggs to sell at those profitable prices.

**Excelsior Improved Hot Water Incubator.**

NOTE.—This is the only Incubator in the world which is run literally without any expense whatever, saving the full price of the machine every year used in oil alone. We use NO LAMP, no oil, no heating apparatus with the machine, and guarantee it to run strictly to any degree.

**EGG TESTER.** The long-needed Tester just a time, as quick as one at a time by the usual process, and six times as effectually.

**SEEDS.** Alfalfa, Grass, Clover, Vegetable, table, Flower, Fruit, and Seeds of every variety.

B. F. WELLINGTON,  
Proprietor, Inventor, and Importer and Dealer in Seeds,  
425 Washington St., San Francisco, Cal.

# GRAND SUCCESS OF THE

# Houser Combined Header & Thresher

IN THE HARVEST FIELD FOR 1886.

280 Houser Harvesters in Field Work.  
300,000 Acres of Grain Harvested this Season with the Houser Machines.

No Failures. No Dissatisfaction. All did Good Work. They are Pull Machines. Our Standard make is a "Belt," but will build them "Geared" to Order.

The Houser for 1887 will have an increased capacity of Cylinder and Separator, and the Cleaner will be the BEST that can be made. AN IRON STRAP BRAKE will be put on the Drive Wheel, rendering a runaway impossible, and every improvement added to the Harvester which the experience of the season of 1886 has proved practical.

The Houser Harvester enables the farmer to RAISE WHEAT AT A PROFIT, and do his own harvesting. With 4 men and from 14 to 24 animals will cut, thresh, clean and sack, ready for market, an average of from 20 to 40 acres a day. It is all that can be desired in a Combined Harvester. As light as is consistent with the strength required to cut, thresh and clean heavy or badly-lodged grain. There are a number of Combined Harvesters that will do fair work in average standing, clean grain, but for heavy, weedy, badly-lodged grain, the Houser has no equal. It has never failed to do good work.

**BEWARE OF EXPERIMENTS. BUY THE "OLD RELIABLE" HOUSER AND YOU TAKE NO CHANCES.**

EXTRAS WILL BE FURNISHED FOR 1887 AT REDUCED PRICES.

WE ALSO BUILD TO ORDER THE MINGES, SHIPPEE, AND POWELL COMBINED HARVESTERS. Send for Circulars, see, or correspond with those who have run the "Houser." Address

**STOCKTON COMBINED HARVESTER and AGRICULTURAL WORKS, Stockton, Cal.**

## THE ROYAL SINGER!

NEW SINGING CLASS BOOK BY L. O. EMERSON

THE BEST OF ALL!

Teachers of Singing Schools who examine this, the last of Mr. Emerson's series of successful class-books, will generally concede that it is, in some degree, superior to any of its predecessors. The elementary exercises, the graded easy tunes for practice, the part songs or glees, and the church tunes, anthems and chants, all excel in their selection or arrangement.

With its happily chosen title, good and interesting music and generally attractive character, there is good ground for hope that it will be the "favorite of the season." READY SEPTEMBER 1st. Price, 60 cents; \$6 per dozen.

## PARLOR ORGAN GALAXY.

A good and large collection of Reed Organ music, selected and arranged by W. F. STEWART; 40 good Marches, Galops, Waltzes, Rondos, Schottisches, etc., and 17 popular songs, covering 36 sheet music size pages, yet sold for the very low price of 50 cents.

Remember our superior new Sunday School Song Book, Songs of Promise, 35 cents, and our High School Song Book, Song Greeting, 60 cents.

OLIVER DITSON & CO., Boston.

C. H. DITSON & CO., - - - 867 Broadway, New York.

Fruit Engravings, The finest, best and cheapest Photographs and Engravings of Fruits, Vegetables, Houses, Farms, Landscapes, etc., made by S. F. PHOTOGRAPHIC CO., 659 Clay St., S. F.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially; is the best adapted to REMOVE STUMPS and TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing.

In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.  
For particulars how to use the same, apply to  
**BANDMANN, NIELSEN & CO., General Agents**  
**GIANT POWDER COMPANY,**  
SAN FRANCISCO, CAL.

## Feed the Land and it will Feed You!

FERTILIZERS and IRRIGATION.

### CALIFORNIA FERTILIZERS,

Ammoniated Bone Super-Phosphate, Pure Bone Meal and Special Fertilizers for all Crops.

Our Fertilizers lessen cost of irrigation, increase the yield, improve the quality of crop, and are cheaper than barn-yard manure.

Circulars containing prices and full information mailed free to any address.

### CALIFORNIA BONE MEAL AND FERTILIZER CO.,

Office, 116 California Street,

San Francisco, Cal., U. S. A.

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

### DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to

DANIEL BEST,  
513 Fifth Street, Oakland, Cal.

**HENLEY'S Monarch Fence Machine,**  
\$40.00.

With one of these Machines a farmer can build his own fence cheaper and better than he can buy it, or make it by hand. TRY ONE. Send for Catalogue.

## WINDMILL.

After many years' experience in the invention and manufacture of Windmills, among which may be named the "Hercules," "Saunders," "Cyclone," "Eureka," the subscriber has perfected a mill that infringes no patent; will face the wind; is direct action; solid wheel; no wood screws, pivots, loose joints, flapping sections or spider legs to get out of order. Is beautiful, strong, not liable to get out of order, and in cheapness below any other. Send for pamphlet of the "Eureka Improved Windmill." Pumps of various kinds at very low rates. Address

Wood Beam Slip Share, Stubble and Sod Plows.

Hardened Mold-boards, Shares and Landsides.

No. 19, Double Shin Steel Tapering Landside, 12 in. cut, 77 lbs., \$20.  
No. 21, Double Shin Steel Tapering Landside, 14 in. cut, 90 lbs., \$22.

**STUBBLE and SOD PLOW**  
Sizes, 12 & 14 Inches.

These Plows, as the name indicates, are intended to do old ground plowing. They are a medium between the more bold or abrupt old ground plow and the long, slow-turning breaker. They work nicely in old ground, being preferred by some to the regular Stubble Plow, and turn tame sod, such as Blue Grass, Timothy, or Clover, admirably. They are numbered 19 and 21. We make with them steel beam, also. The numbers of the steel beam plows of this style are 519 and 521.

THE CELEBRATED MONARCH POTATO DIGGER.

Twelve Smart Boys Required to Pick up Potatoes as fast as it can Dig.

MUST BE SEEN AT WORK TO BE APPRECIATED.

DIGS

IRISH and SWEET POTATOES.

A boy 16 years old can handle it with ease, and with a span of horses, in ordinary ground, can dig 600 bushels of potatoes in a day.

PRICE, \$15.00.

GARDEN CITY GANG PLOW, WITH FLEXIBLE POLE.

The work done by this Gang excels any plowing that can possibly be done with a hand plow. It will do good work where the ground is so hard that a hand plow cannot work. It works splendidly in trashy ground without clogging. It has a BRAKE ATTACHMENT for lifting the plows out of the ground, which we prefer on Gangs, they being heavier than Sulkeys. With this device they are handled with the greatest ease. We have added a Lever, by which the pole is moved to the right or left, for the purpose of giving the plow more or less width of furrow, as may be desired. It can be operated by the driver while the plow is in motion. For plowing around circular corners, or curved furrows of irregularly shaped lands, it works to perfection. We also make a JOINTED Pole, which allows a free up and down play of same, and does away with any pressure upon the horses' necks that might otherwise occur in plowing over uneven surfaces. They are guaranteed to do as good work as can possibly be done by any gang plow in existence. WRITE FOR PRICES.

### Admission Day.

Thursday marked the thirty-sixth annual mile-stone of the State. The story of the admission of California into the Union constitutes too important a page in our country's history to be neglected. We are glad the Native Sons of the Golden West have taken it into their special keeping.

On the 13th of February, 1850, President Fillmore transmitted to Congress, by message, a copy of the Constitution of California. A motion was made to refer it to a special committee. Many of the Southern Senators were opposed to a consideration of the matter. They said it was contrary to all precedent to allow a people to organize themselves into a government without the previous authority of Congress. On the 17th of April, after a long and stormy debate, the question of admitting California was referred to a select committee of thirteen, Mr. Clay, chairman, and on the 8th of May the committee brought in a series of resolutions, humorously called the "omnibus bill," because it was loaded down with so many different objects. It was the ingenious work of Mr. Clay. It was an effort, amicably, to arrange the great slave controversy. The principal points were: That California should be admitted as a State, without slavery; that appropriate government ought to be established for the territory acquired from Mexico, without the restriction of slavery; that it was inexpedient to abolish slavery in the District of Columbia, and that more effectual provisions ought to be made for the restitution of fugitive slaves. Mr. Clay, although 75 years old, led the debate that followed with all the ardor and fire of his youth. He was anxious to crown the evening of his life with one more brilliant triumph. His speech on this occasion was the last great effort of his eventful life. In the long debate that ensued, continuing till the last of July, the bill was so trimmed and pared down with amendments that the clause providing for "the Territorial Government of Utah" was all that was left. This dismemberment of Mr. Clay's pet scheme was facetiously called "upsetting the omnibus." Subsequently, however, the other portions of the bill were passed in separate bills. The bill to admit California as a State passed the Senate August 13th, 34 to 18; the House on the 17th, 150 to 56. The Fugitive Slave Bill was immediately taken up and passed the Senate August 23d, by a vote of 27 to 12. In the House, the bill passed under the action of the previous question, without debate, 109 to 75. The Fugitive Slave Bill was the price paid by the North for the admission of California. As the witty John P. Hale said, "it was an effort to split the difference between God and the devil," and no good could come of it. By the unerring logic of events the legislation of that Congress led to John Brown and the Border war, the election of Abraham Lincoln, the bombardment of Fort Sumter, the Emancipation Proclamation, the Fifteenth Amendment, and a regenerated Union.

**CORN CROP IN THE NORTHWEST.**—The summary of the *Farmers' Review*, telegraphed from Chicago, 5th inst., indicates that while drouth and continued hot weather seriously injured the general prospects of corn, it also accelerated ripening the grain; and in sections of Missouri, Kansas, Iowa and Minnesota a portion of the crop has sufficiently matured to be beyond danger from frost. The general prospects for

the output of corn show no marked improvement. The tenor of the reports from all States, except Ohio, Indiana, Michigan and Minnesota, continue to predict a short crop.

**KERN AND TULARE FAIR.**—They are talking up the project, in Tulare and Kern, of holding a joint exhibition of the agricultural, mining

### Cascara Sagrada.

The last report of the Commissioner of Agriculture has an interesting article on "Native Medicinal Plants," by Dr. Geo. Vasey, botanist of the Department. In this we find an account of the Cascara Sagrada (*Rhamnus Purshianus*), pictured upon this page. This

CASCARA SAGRADA—*Rhamnus Purshianus*.

three in width, with very fine teeth on the margin, which indeed is sometimes almost entire. The petiole or stem of the leaf is half an inch to an inch long, and covered, as are also the young twigs and the under side of the leaves, with a fine brownish down or pubescence. Upon the leaf there are 10 or 12 pairs of strong ribs or veins on each side of the central midrib. The flowers are small and appear in clusters of 10 or 12, proceeding from the axils of the leaves. There is one common stalk or peduncle and a more delicate pedicel for each flower. The blossoms are of a greenish hue, with five acute sepals and as many smaller, hooded petals divided at the point. They also have each four or five stamens, and a short style, three to four cleft. The flowers are followed by small black berries, as big as a pea, which consist of three bony seeds or nutlets, with a thin, pulpy covering. (At the lower left-hand corner of the cut are shown a flower, enlarged, and a cross-section of the fruit.)

The bark possesses active cathartic properties, and has been lately introduced into medical practice, large quantities for the drug trade being annually gathered in Oregon. The bark of *Rhamnus catharticus*, of Europe, has been thus employed since long ago, and these purgative qualities are probably common to many species. There is in this State a species called *Rhamnus Californicus*, whose bony seeds have been used now and then as a substitute for coffee; but they contain no caffeine, the peculiar principle of the true coffee.

### The Three-mile Line.

It was reported some time ago that Mr. Phelps was preparing a brief for the use of the State Department in its negotiations with England on the fisheries question, in which he strenuously opposed the position taken by the British Foreign Office in regard to the three-mile limit. Whether anything will come of the rumor remains to be seen. The attempt of two Canadian tide-waiters the other day to seize the schooner *Legal Tender*, in Barrington bay, shows how important it is to fix the line in dispute. And what is this three-mile line, about which we hear so much? By the treaty of 1818 it was declared that within the limit of three miles the Dominion fishermen should have the exclusive right to fish. But unfortunately, the basis of measurement was not defined. The Canadian authorities have arbitrarily assumed that it is a line stretching from headland to headland. For instance, there is a bend 30 miles long from North Cape to East Point, Prince Edward's island. They claim that under the provisions of the treaty they have the exclusive fishing privilege within a line three miles out from each headland, though at the intermediate points the line may be 23 miles or more from shore. The Americans, on the other hand, claim that the three-mile line should be considered as following the indentations of the coast; that the three miles from shore means three miles from shore, and not 15, 20 or 30 from the headlands, as terminal points.

THE San Miguel Inland Messenger says: Baron Von Schroeder, who has, without regard to expense, been fitting up a place in the mountains west of Cashin's station, has now 26,000 French prune trees over a year old. He has also a variety of other choice fruits, all inclosed with a rabbit-proof fence which is said to be four miles long.

and manufactured products of those counties some time this autumn, at Visalia. The two constitute practically a single district, whose inhabitants have interests so much in common that almost anything advancing the prosperity of the one is likely to inure to the good of the other. But, as the *Delta* observes, it will be necessary to move quickly if anything is to be done, for the fall is upon us, and the first rains may not be long delayed.

plant grows on the Pacific slope from Northern California to Oregon and Washington Territory, and also occurs sparingly in Idaho and Montana. It varies much in size according to location, being found in some places only as a shrub 10 or 12 feet high, in others becoming a tree 20 to 40 feet in height, with a trunk a foot or more in diameter.

The leaves are elliptical in form, undivided, from two to six inches in length and from one to

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Napa County.

EDITORS PRESS:—Napa county lies north of San Francisco about 50 miles, and borders the northern side of San Pablo bay. It is bounded on the west by Sonoma, on the north by Lake and on the east by Yolo and Solano counties. Topographically it is made up of mountains and valleys. Mt. St. Helena rears its towering head at the northwestern extremity of the county, and branches of the Mayacamas range shoot out to the southeastward, dividing into long ridges extending the whole length of the county, falling away into foothills near the southern boundary.

Between these ranges lie broad sweeps of beautiful and fertile valleys. Beginning at the eastern side we come first to Berryessa valley, which is justly noted as a grain-producing section. Next we come to Pope and Chile valleys, which are, in reality, one, there being only a slight divide between them. Here also grain is grown extensively. Passing over Howell mountain, we come down into the queen valley of the county—fair Napa. This extends from Mt. St. Helena at the north to the bay at the south, a distance of nearly 40 miles, with an average width of four miles.

These valleys are all filled with happy homes, fine orchards, thrifty vineyards and broad grain fields, and laugh with joy under their burden of crops every year. In the mountains lovely homes are springing into existence on every hand, for vine and fruit trees thrive even better there than in the lower valleys. Here, also, is found fine pasturage for stock and large droves of cattle, and flocks of sheep and goats may be seen quietly grazing and fattening for the ever-ready market.

Much indeed has been written of the beautiful climate of California, and yet nothing can be said of any portion of the State that cannot be truthfully asserted of Napa county. At Napa city, and south of it, the cool, moisture laden sea-breeze sweeps in from the bay, making the climate somewhat similar to that of San Francisco. Further north, and in the interior valleys, it is warm and dry. Thus can be found any kind of climate desired. The heat of summer is never excessive, and the cold of winter is modified by its nearness to the ocean. At a given height upon the mountain-sides lies the thermal belt in which all kinds of tropical fruits thrive luxuriantly. Lemons, oranges, olives, and such kinds of fruit do remarkably well in that belt, this being proven by the fact that at the citrus fair held at Sacramento last winter oranges grown at the Napa Soda Springs captured a blue ribbon.

The soils of Napa county are well adapted to the production of grain, fruits, vegetables, and grapes. No finer orchards or vineyards are to be found in the world than can be seen by riding through Napa valley. The wines of Napa valley have a reputation which extends far beyond the confines of our own country.

For pleasure and health resorts Napa county is unsurpassed. Soda and sulphur springs abound on every side, while there are many of other chemical combinations.

At the head of Napa valley is situated Calistoga, which is a flourishing place of 500 or 600 inhabitants. It is the terminus of the Napa Valley Railroad, and is surrounded by a good fruit, grape, and grain-growing section. There are also several mines in that vicinity.

Farther south some dozen miles is St. Helena, a beautiful town of 1500 to 2000 inhabitants. It is located in the heart of the wine-growing section of Napa valley, its surroundings being one vast vineyard.

At the lower end of the valley is the county seat, Napa City, a place of 5000 inhabitants. It is growing rapidly and many industries are springing into existence. These are represented at present by two tanneries, one woolen mill, two flour mills, one glue factory, one fruit cannery, one tile factory, one planing mill, five wine-cellars and a number of smaller industries, such as a macaroni factory, fruit crystallizing, etc.

The churches and schools of Napa are the pride of her citizens. The Presbyterian, Methodist and Catholic denominations are represented by stately and handsome edifices, and others by neat and commodious buildings. Beside the public school system, which is most ably conducted, and which occupies four buildings, there is a young ladies' seminary, a college and a private school for boys.

Napa City offers every inducement to industries and manufactures—it being so very accessible to market. The river opens an outlet by water, the run to San Francisco being but a few hours, while by rail it is in communication with the whole United States. The fruit cannery and the cellar of the Napa Valley Wine Company, which is just in course of construction, and the woolen mills, are so favorably located that they practically have the railroad at one door and the river at the other.

There is no more desirable location in California for homes than Napa county, and the rapid filling up of the valley by new-comers attests the fact that this truth is recognized by those seeking for homes. L. L. PALMER, Napa, Cal.

## Codlin Moth vs. Sweet Lures.

EDITORS PRESS:—Capt. D. B. Austin, of Los Gatos, one of the commissioners for inspecting orchards, fruit packages, nursery stock, etc., for insect pests in Santa Clara county, has tried to catch codlin moth with cans of sweetened water, with lanterns suspended near, and caught 25 distinct varieties of moth, but not one codlin moth. He would be glad to ascertain if others have experimented in the same direction, and if so, with what results.

MCD.

[With much the same results.—EDS. PRESS.]

## THE APIARY.

## Handling Bees.

EDITORS PRESS:—If it were not for the dread and occasional danger of stings, many more people would no doubt keep bees, at least to supply sufficient honey for their own use. The bee is, as everybody knows, provided with a formidable weapon, formidable in proportion to its size and effect; but this weapon, the sting, is very seldom used, except as a means of defense. The honey bee is naturally a peace-loving insect, and has no desire to molest anybody as long as it is left to pursue its industrious calling without interference. While flitting from flower to flower, or sipping the water at the bank of a babbling brook, the bee has no more thought of warfare than the man who peacefully works to provide for his loved ones at home. But let an evil-disposed person try to injure this home or its occupants, or rob it of its hard-earned stores, and the man is immediately on the defense with the best means at his disposal. Can you blame the bee, the most industrious and intelligent insect, for what you commend in man? Its sagacity and courage are to be admired rather than deplored. Without these qualities the bee and its precious stores would be a prey for numerous enemies, all too fond of insect-food and honey, and but little of the latter would fall to the share of him to whom the Creator gave "dominion over every living thing that moveth upon the earth." It then devolves upon man to learn the nature and traits of the bees, and to use this knowledge that he may reap the fruits of their industry without pain or danger to himself, and without unnecessary annoyance or harm to these humble servants. The time of cruelly submitting a colony of bees to a horrible death over the brimstone-pit, for the purpose of obtaining a scant supply of honey, is past. As well might we kill the sheep to obtain its wool, or the goose for her feathers. By proper precautions there is no more danger in obtaining the honey than the wool and feathers. Certain rules must be observed, to be sure; but by means of these rules the bee-keeper is as safe at his work as a workman in any other occupation.

## Aversions of Bees.

Bees dislike all black, dark or iron-gray colors; fur, hair and wool are an abomination to them. The bee-keeper should therefore avoid clothing of such material and colors when in the apiary. He should also keep his hair and beard covered; and as the eyes and nostrils present dark spots in the face, more liable to attack than the smooth skin, it is generally safest to keep the whole head protected by some kind of a bee-cap. This may be simply a sack of dark-blue mosquito-bar or tarlatan, or it may be a flour-sack with a piece of wire cloth inserted in front of the face. The best bee-hat is made by sewing a cylinder of wire cloth to the rim of a straw or calico hat, and adding a broad strip of cloth to the bottom of the cylinder. The cloth falls over the shoulders or may be tucked under the coat-collar. The hands should never be protected. Any kind of glove which may be worn will be more objectionable to the bees than the bare hands. If the bees are particularly irascible, singe the hair off the back of the hands and dip them frequently in cold water.

Quick motions and sudden jars to the hive should be avoided. Hives should therefore never be opened in cold weather, when the propolis, with which the cover and frames are fastened, is hard, and when everything comes apart with a snap. The breath of some persons is objectionable to the bees; but in hunting for a queen on the comb, I frequently blow hard on the bees to make them disperse and move around, and I find that such a blow of cool air is less objectionable and less irritating to them than smoke.

## Fright of Bees.

Bees have a natural fear of smoke. Taking advantage of this trait, smoke is the principal weapon in the hands of man with which to control, subdue or direct the bees. By judicious use of smoke the bees may be made to move in any direction desired, as they will always retreat from it. A roll of cotton rags of the size and shape of a bologna sausage makes a very good smoker. The rags should be rolled as hard as possible to prevent blazing, and tied every two inches. The bellows-smoker, now so commonly used by bee-keepers, is, however, a far superior implement, as it will burn anything that will burn in a stove, and avoids

danger of fire, which is often caused by the cotton roll. In the

## Manipulation

Of combs, great care should be used not to pinch or crush any bees, as the odor of poison exuded by such is exceedingly irritating to the other bees in the hive or to those flying about. If a bee is crushed or stings the hand, a few puffs of smoke on the spot will generally neutralize and conceal the odor of the poison.

When it is necessary to remove the bees from a comb, the best way is to shake them off, holding the frame so securely that it will not slip out of the fingers. As, however, some bees will hold on with the tenacity of a kitten, they must be brushed off. For this purpose nothing is better than a single, large eagle feather. This should be frequently dipped in water to keep it soft and pliable. A wing or brush is not desirable, as the bees may get entangled in the feathers, hair or fibers, which is very exasperating to them. If a comb contains queen cells, which it is desirable to save, such a comb must, however, not be shaken, as the sudden motion is liable to injure the embryo queens. The bees must then all be brushed off, and to dampen their possible ire at this proceeding it is advisable to sprinkle them slightly, and frequently dip the feather in water. This prevents them from taking wing immediately, and getting the impression that a shower is coming up, they are more desirous of taking care of themselves than of attacking their owner.

WM. MUTH-RASMUSSEN.

Independence, Cal.

## HORTICULTURE.

## Care of Orchards.

EDITORS PRESS:—There seems to be a good deal of complaint in various parts of the State respecting the condition of fruit trees. Some ascribe this condition to one thing, and some to another; but so far as my observation extends, I think the little word "neglect" will explain the whole matter. If the advice which Christ gave concerning the barren fig-tree were more generally practiced, there would be less complaint in this respect. If those having orchards would dig about and dung them more than they do, a far different aspect would be presented.

While plowing my orchard last spring I noticed that the soil around the trunks of the trees was almost as dry and hard as a sandstone. I dug all this hard, dry soil away to the depth of some 18 inches, leaving a hole about two feet in diameter. After two or three weeks all the weeds and grass in the vicinity of each tree were collected and thrown into each hole, and the loose soil hauled back over them, leaving the ground level and mellow. The trees soon showed the beneficial effects of this treatment in their healthy appearance and vigorous growth. In pruning an orchard adjoining mine, I noticed several of the trees had a scrawny, sickly appearance, and some of them appeared to be dead. While plowing in this orchard I found knotty excrescences on the roots of these trees, and on examination I ascertained this was caused by the woolly aphis puncturing the roots. I advised the owner to dig about all these trees and remove these knots. He did so, getting in some instances an oil-can full of knots from each tree. The result was that in a little while these sickly trees revived, and are now well loaded with fruit. Subsequently I whitewashed both of these orchards, and I doubt if any other two orchards can be found in the State presenting a healthier or cleaner appearance, or that have made so vigorous a growth both in wood and in fruit. There are 250 trees in these two orchards, and 10 days' work would cover all the time spent in digging about the trees and whitewashing them. J. S. TIBBITS.

Santa Rita, July, 1886.

[No doubt many unhealthy trees become so by neglect; but that does not meet the general trouble complained of this year. Great mortality has been observed even in the best cultivated orchards.—EDS. PRESS.]

## Codlin Moth.

"Prof. A. J. Cook tells, in the New York *Weekly Tribune*, that his students to the number of 30 or 40 secure hundreds of nocturnal moths for their collections by placing bright lights in front of their windows, making the institute halls look like a grand illumination. They also place sweets, scented with all kinds of odors, sweetened water, sour milk, etc., to attract moths, and, while hundreds of the latter, including cut-worm moths, are thus gathered, not a single codlin moth has been taken. The professor, therefore, feels justified in pronouncing the advice to entrap the codlin moth by any device in which sweetness or light is used as bait, stale and spurious. The reader who is not acquainted with the codlin moth can easily become so by putting a live, full-grown apple in a box, and when it develops he will find a little gray moth with copper-colored spots at the end of the front wings, but never its like in the molasses trap."—Ex.

James Waters, commenting on the above in the Santa Cruz *Sentinel*, says: If the above be true, those who are engaged in trapping the codlin moth in vessels of sweetened water, and by hanging bright lights in their orchards at night, have evidently been deceived by captur-

ing moths other than the codlin moth. This season so far has been exceptionally favorable for the increase of the codlin moth in our valley. The bright, warm days, freedom from fogs, with the pleasant, warm evenings, is just such weather as will bring to perfection every egg deposited in the apple or pear; hence it behooves every one who has an apple or pear orchard to be on the alert in the search for this great pest and destroyer of the apple and pear. Remember, it is much easier to keep them out of your orchards at the start than it will be to get rid of them after they have been allowed to increase in vast numbers. The apples grown in the Pajaro valley so far have been almost entirely free from worms, which has given profit to the growers. The codlin moth once in possession of our orchards, we will no longer find a profit but a job on our hands for perhaps all time to come. How much better will it be, then, if every owner of an orchard will use his every effort to prevent the increase of this fell destroyer of his fruit. Make thorough search in your orchards for wormy apples; see that every one found is immediately destroyed. The best trap to capture larvae is by banding your tree; cut old grain sacks in strips six or eight inches wide, have them long enough to go around the tree and top one or two inches, turn the edge of this cloth under and fasten it around the body of the tree one and one-half or two feet from the ground, with a tack in the upper edge of the cloth, leaving the lower edge loose, or, if preferred, place a strong string in the folds and tie tightly. This band should be examined every seven or ten days and all larvae found destroyed. If your trees are old and have rough bark on the bodies, scrape it off on to a cloth and burn it, for under the rough bark if there is codlin moth in your orchard, you will be almost certain to find the larvae. Hogs are excellent scavengers in an orchard, for they not only destroy all wormy fruit, worms and all, but by rooting up the ground near the tree will destroy whatever larvae may have found a home there. A small piece of old cloth or sack placed in the crotches of the trees is an excellent harbor for the larvae. These cloths should also be examined every seven days and all worms found destroyed and the cloths replaced. The practice of taking return boxes into your orchards is almost sure to carry with them the larvae of the codlin moth. By this means the insects have been generally distributed throughout the State. Free boxes are now furnished so cheap that they should take the place of the return box entirely and thereby avoid the great risk run in the use of return packages.

It is to be hoped that all orchardists in this valley will look closely after the codlin moth and use their best efforts to prevent it from obtaining a foothold in their orchards; for, once here, it comes to stay, to the destruction of the best fruit suited to our valley.

The *Sentinel* adds: One of our present Bug Commissioners, after experimenting in an orchard badly infested with the codlin moth, demonstrated some months since that they were not attracted by a light or tins of sweetened water, and could not be caught in this way, the results of his experiments being published at the time in this paper.

## THE STOCK YARD.

## Cattle Outlook in Nevada and Elsewhere.

A Reno *Gazette* reporter has had an interesting interview with J. T. Davis, of Texas, a gentleman of great experience and wide information, on the subject of the supply and the prospects for the cattle market. He reports prices for range cattle in Texas to be very low on account of the scarcity of feed, produced by drouth in the past two years. Good range cattle are the lowest they have been for years, and although there have been big "die-ups," he looks for heavy losses this winter. Feed is very scarce now, and there is no hope or chance for any until it is brought up by the spring rains. Before that a great many will be gone. There is no way to fatten steers for market, so that Texas will furnish very little beef this fall.

As to future prices, Mr. Davis thinks that the next few years will see beef bringing the highest figures ever reached in this country. The death rate is heaviest among female cattle and yearlings, and heavy losses will make the calf crop short for some years, and in addition to that, cattlemen have spayed and sold a great many cows to butchers and to cannery men when they were not in condition to bring any price at all. The same thing applies in less degree to Colorado, Nevada, and Wyoming. Feed is scarce on some of the best ranges in Central and Eastern Nevada, and with even such a winter as last, the loss will be heavy. The most intelligent cattlemen are preparing to relieve their ranges as much as possible. Scott & Co. have sent large drafts of cattle north. Russell & Bradley sold about a quarter of a million dollars worth, and Sparks & Tinnin are selling 9000 head of yearlings and two-year olds, besides their regular beef shipment. They are also shipping to their Cheyenne range all the two-year-old heifers they have room for there. For these reasons men like Mr. Davis confi-

dently expect to see beef scarce and high for several years to come.

The reporter asked Mr. Davis' opinion of Nevada from a cattleman's standpoint. He expressed it freely as his unqualified opinion that Nevada was almost the safest part of this continent for cattle. Nowhere is the loss by drouth or disease so little. There seems to be a certainty of snow in the mountains even in the worst years, so there are no such "die-ups" as there are in other countries by drouth. Texas sometimes goes two years without a drop of rain on the range lands. Nevada escapes the northern winters by having grease wood, willows, sagebrush and other bushes for cattle to browse on when the grass is snowed under for a week, which often happens in Wyoming and elsewhere. There may be a little poison among the weeds, but not much, and excepting a little black leg, Nevada seems to be almost absolutely free from disease, and with the high altitude, pure, bracing air, and excellent water, such plagues as pleuro pneumonia, Texas fever, etc., have no terrors for the cow-man. The increase seems to be certain, and the loss in young calves very light. The country, however, seems to be adapted to small ranges. From 5000 to 10,000 head of cattle seem to be about the limit that the ranges can safely carry. Many men own more, of course, but they divide them up and keep them on separate ranges. Sparks & Tinnin have five or six separate outfits for their 100,000 head, and the same with others who carry 20,000 to 25,000 head.

Mr. Davis thinks Texas is an easier country to handle cattle in. With the exceptions of the precipices 400 or 500 feet high that break off the table-lands from the plains it is very level and the round-up is much lighter work than it is among the broken mountains of Nevada. These same mountains, however, are forever secure to the cattle or sheep men because they can never be made into farms, while the Texas country will sooner or later be farming lands. With trees and crops being cultivated, the rains will be heavier and the necessities of population will press people out on to the dry lands. It is easier and cheaper to raise cattle in Texas, also, because no one puts up hay as they do in Nevada. It is cheaper while there is feed, but when a drouth comes there is heavier loss; but even to fatten beef for the butcher or wean calves, no one feeds hay. The grass there is different, too. The mesquite is like alfalfa; it grows low and spreads out flat. It is fine feed for stock. Gramma grass grows like Nevada bunch grass and is a seed grass. Nevada cattle are larger and have better blood than Texas herds. One reason is, the climate is better. A higher altitude than that of Texas is better for beef. But one great reason is, the Nevada man has imported full-blooded sires, while his Texas neighbor has used half-breeds. This is now seen to be a great mistake. Mr. Davis is delighted with Nevada in many respects and with her people in every respect.

THE VINEYARD.

California's Raisin Industry.

EDITORS PRESS:—Probably no industry in this State boasts a more rapid development than that of the raisin. It has only been a decade since the first raisins were packed and marketed; since then it has made yearly advances, except in 1879 and 1880, when it held its own. The following table gives the pack of the State the past 10 years:

Years.	Boxes.	Years.	Boxes.
1876	15,000	1882	100,000
1877	25,000	1883	125,000
1878	70,000	1884	175,000
1879	70,000	1885	470,000
1880	70,000	1886	*600,000
1881	95,000		

\* Estimated.

Although we will probably have, this year, a crop of 600,000 boxes, yet it will meet only about one-tenth of the consumption of the United States, which ought to convince the most skeptical that the industry cannot be overdone, provided proper attention is given to packing—herein lies the true secret of its future success.

A thorough canvass of the trade, and also criticisms of leading authorities at the East on commercial subjects, allows the writer to draw the following conclusions: Our market for the raisin crop is east of the Rocky mountains, and to gain and retain this trade we must pack according to all recognized trade terms which govern there. Three grades of raisins are absolutely necessary, viz.: The Sheshias, London Layers, and Layers. The only other grade should be packed as Loose Muscatels, and should average in quality between grades of London Layers and Layers. All raisins or grapes that do not come up to the standard of grades demanded at the East should be sold as dried grapes in large 50 and 100 pound packages. It is of vital importance to the industry that these recommendations be followed out to the letter; for at the East goods are sold on their merits, and only first-quality goods in all respects find quick sales at the highest prices. California raisins are there brought in competition with the finest products of Europe, which has enjoyed a monopoly up to last year, and to successfully fight the foreign, California raisin-makers must not make a false move.

Last year's crop was very generally dis-

tributed at the East, and found favor wherever introduced; not only this, but fancy grocers kept our best-selected put up in attractive style and packages, alongside of the best quality of Spanish imported, resulting in its being demonstrated that the major portion of consumers took the California article in preference to the foreign, even with the price the same. This is a great and substantial victory, and will tell most decidedly if the standard of excellence is maintained, and if possible, still further improved. To gain this there should be thorough interchange of views and opinions, based on practical results, between raisin-makers, by which the entire crop, not a few makes, can be brought up to highest grades. The matter of curing raisins can only be learned by experience, and it is safe to say that while our principal packers have now acquired such a degree of proficiency in curing they have little to fear from foreign competition, yet there are others who have much to learn, and it is these that should be given the benefit of the former's experience, so that a few thousand boxes of indifferent, if not poor, raisins will not be packed to mar, if not destroy, our hard-earned reputation.

We enter the season with a bare market, as all stocks have been cleaned up, and therefore it is expected that the better cured California raisins will find a quick market at the highest prices ruling about Thanksgiving and during the winter months. Last year the first shipments of last year's crop to the East were made in September, the largest shipments were in November. The exports by rail to the East were as follows by months:

Months.	Pounds.	Months.	Pounds.
September	407,780	January	139,800
October	2,104,580	February	703,270
November	2,160,380	March	197,149
December	845,800	April	191,730

Total..... 6,750,489  
J. R. F.

POULTRY YARD.

Spice for September.

EDITORS PRESS:—The longer I keep fowls, the more I see to do for them, in little cares and attentions, to bring about the desired result, viz., the most coin from the least expenditure of it. I do not know of any good thing, in temporal affairs, that comes to us for the mere asking; we must either furnish coin or the sweat of our brow as our part of the exchange. To put out the least of these two commodities for the greatest returns for the same is a problem you will meet at every turn in business life—in fact, we all have to do with it.

Whoever keeps chickens will find, I think, that much is made by little; and it is a great help in the business to be forehanded, or, in other words, to be looking and providing ahead. I firmly believe that many stumble out of the business on this very point.

Indolence has no part in the business, except total destruction; so beware. Who of us but will admire the place and the fowls where everything is kept neat and comfortable, and despise the person, place and fowls where ruin seems marked on all connected with them? Draw the two pictures in your own mind and then choose the one you like best.

But to the point. This month is perhaps the best time to select the breeding fowls for the coming year; select the large, well-developed pullets, and as fine a rooster as you have, or can get; the older they are the better for breeding purposes.

See to it this month that all buildings used by poultry are well cleaned up and whitewashed inside and out, using a tablespoonful of crude carbolic acid to two gallons of whitewash for inside work, and for outside no acid, but a good large handful of rock salt.

As soon as a rain comes have the runways plowed. It will do no harm to turn under the top filth once a month, where fowls are kept. There is no such thing as being too clean about a fowl-house and yard, and yet but few strive to be even clean. If you never have tried before, try this year to do your level best by your fowls, and see what they will do for you in return.

If you intend to buy a few birds for breeders, attend to it at once, for you will get a better choice now than a month or two later, and the price is apt to increase as time goes on.

Have an eye to business at all times, better the condition of your fowls if possible.  
South Pasadena. E. C. CLAPP.

Chicken Cholera.

EDITORS PRESS:—A recent experience with chicken cholera may be of use to some of your large family of readers.

Especial care had been given to insure cleanliness in runs, drinking cups and food. They were lively and bright until five weeks old, when, by a lad, who did not reason or ask, they were fed some tainted meat. In a few hours they began to droop, and passed rapidly into the comatose stage of cholera.

The symptoms were: First, drooping wings; second, diarrhea; third, white discharges like milk or thick rice water—in three cases tinged with blood; fourth, great thirst, clear, watery

discharges and putrid odor; fifth, cramping, and in 15 minutes to half an hour, death.

The successful treatment, after trying the remedies prescribed in poultry-books, until half the flock were dead, was:

Carbolic acid, three drops; glycerine, one teaspoonful or one dram well mixed with the carbolic acid; water, two ounces or 16 teaspoonfuls; of a saturated solution of alum, 30 drops.

Of this we let them drink only moderately once in 15 minutes. It was renewed twice a day. The sick chickens were put in a box containing an inch in depth of clean, dry, warm sand, first dropping in a few drops of pure carbolic acid. The weakest chicks had their feet washed in hot water until red; then dried and wrapped in flannel and put near a bottle of hot water to rest and sleep.

Those in the box were looked after and kept warm—much of the time were covered with hot flannel to insure quietness. In a few hours there was a change, and desire for food shown by working out to the light and picking the box. We gave them graham-flour biscuit crumbs, alternating with cracker crumbs, followed by only one or two sips of the carbolicized water.

At the end of a week a cake of scalded fresh cornmeal—adding a teaspoonful each of sulphur and bicarbonate of soda, and two tablespoonfuls of sweet oil. When baked brown it was  $\frac{3}{4}$  of an inch thick and covered a medium-sized pie plate. Pulverized this cake to fine crumbs; and fed it once a day.

Three times each 24 hours the soiled sand was burned that the disease should not spread by contagion. Experimenting, we lost half the flock; under the last remedy saved all but two, some of them being in the rice-water stage of the disease and quite helpless. At no time while in hospital were they permitted to eat more than a thimbleful at a time, and no more given until this had passed out of the craw.

Lesson: Absolute cleanliness, and food as pure as you would give your children.  
Y. Berkeley.

Ridding Poultry-houses of Vermin.

EDITORS PRESS:—If "A Subscriber" wishes to rid the hen-roost of fleas I would recommend, 1st, give the chicken-house a complete clearing out of all droppings, etc.; then, 2d, mix up two or three gallons of whitewash and into it put two tablespoonfuls of crude carbolic acid; go over the coop inside and outside; get some, yes, lots of it, into every crack and hole about the coop. Don't spare the whitewash; it is cheap and so is crude carbolic acid, which costs 25 cents per pint. After this take a fine-holed garden sprinkling-pot, and to each gallon of water used to sprinkle the floor of the chicken-house, put in a spoonful of crude carbolic acid. Put crude petroleum on the roosts and into the corners and cracks of the nest-boxes, and I think if the job is well done that in less than 48 hours after you will fail to find any fleas or other small vermin.  
South Pasadena, Cal. E. C. CLAPP.

THE DAIRY.

Bandaging Cheese in the Hoop.

We find the following article, signed "Dairyman," in the Gilroy Advocate of Aug. 28th: In 1871 or '72, Mr. Samuel Cole, of Gilroy, invented and brought into local use the telescope cheese-hoop which is now generally used by California cheese-makers. He also adopted a bandage, which had been for years used by some of our leading dairymen. Mr. Cole and the parties using his style of hoop were not aware that any one claimed a patent right to either the hoop or the bandage. Mr. Hubbell, of New York, comes with this claim and demands a royalty from all dairymen for "bandaging cheese in a hoop" of one dollar per year for each hoop used. Now we are at a loss to know in what way we have infringed on any patent he may have, as he does not claim it exclusively on the hoop or the bandage, but on the two combined. We can prove that the bandages were used by us several years before 1869 or 1870, the date of Mr. Hubbell's patents. We can also prove that we used bandages when we pressed cheese in the old style of hoop. In changing the hoop we made no change in the bandage. We did not know that we were making ourselves liable to royalty in the use of a device invented, as far as we knew, in our own community.

In a report printed in American papers in 1870 by a man who had traveled over England and Scotland, we find the same article described for filling the cheese-hoops which we have now in use.

Mr. Hubbell claims that his patent is used in the hoop known as the Wilson & Frazier gang-hoop. We do not use the gang-hoop or press, nor can we see any similarity between the kind we have and the above-named hoop.

With these facts before us, and after consulting lawyers of this coast best familiar with the patent laws, we must have better proof of Mr. Hubbell's claim for royalty before we can pay it. Judge Sawyer, of the United States Supreme Court, has lately rendered a decision in which he says that where a thing had been used

before it was patented, it was no infringement to use it afterward. There are other and stronger proofs which will be introduced in the resistance of this claim if it should be pressed upon the dairymen of Gilroy. We intend to make the case a common cause, and jointly help to defend it, and we call upon all dairymen of California who are using the telescope-hoop and bandages to help us to defend what we believe to be our just rights.

Ayrshires for Cream.

C. M. Winslow, Brandon, Vermont, Secretary of the Ayrshire Breeders' Association, sends us the following: While in Burlington, Vermont, a few days ago, Mr. L. S. Drew, manager of the Van Ness and American hotels, invited me to ride to his "Lake View Farm," about three miles south of the city of Burlington, and while looking over his herd of Ayrshires I learned some facts in regard to their ability to produce cream that may be of general interest.

In 1865, Mr. Drew selected a few Ayrshires of the choicest breeding he could find in Canada, and from that foundation, with the introduction of bulls from the choicest families, he has steadily bred with a view of establishing a herd that shall retain the characteristic type of the Ayrshire, and has steadily selected as breeders such as showed a large percentage of cream, and this spring, in addition to the periodical cream tests, he has adopted the daily weighing of each cow's milk, and these figures are from the records of weighing milk and testing for cream.

In looking at the entire herd as they stand in the yard one cannot help noticing the uniformity of size, style and color, being of dark red with white patches, of fine style and fair size, with a decided milky look to them all, as you might naturally expect from over 20 years' breeding to one purpose, without the addition of any females after the first purchase. The herd as they stand to-day are, except the bulls, all of his own breeding. The cows are fed on hay and a light feed of grain in winter, and in summer on pasture only, with no grain. They are milked in the stable, and the milk weighed and record kept. The cream test was made in June by taking a portion of each cow's milk from the pail immediately after it was weighed and placing it in a set of testing tubes plunged in ice water for 12 hours.

The following is the amount of milk from the record of each cow for the month of June, with the daily average for the month, and the percentage of cream as taken from the testing glasses:

Name.	Age.	Date of Calving.	Lbs. Milk for June.	Av. per Day.	Lbs. Cr'm.
Darling of Vt.	10	March 9	1102	37	23
Frunkey	9	June 10	742	37	28
Creamy	8	April 20	979	32	18
Miss Mabel	7	March 2	909	30	24
Miss Grace	7	March 24	692	23	22
Miss Flow	7	March 14	1106	37	30
Dolly Athol	4th.	April 14	1014	34	20
Miss Cornelia	6	March 7	1066	35	24
Lady Thorpe	2d.	April 26	1106	37	20
Jewel	2d.	March 21	719	24	17
Printsteps	4	April 17	1093	36	26
Early Rose	3	March 22	721	24	20
Miss Cornelia	2d.	March 18	910	30	25
Miss Grace	2d.	June 2	461	15	24
Frunkey	5th.	May 25	734	24	20

Average pounds milk for herd, 890; average percentage of cream, 23 per cent.

Mr. Drew informed me that he felt well paid for all the time and trouble it took to weigh his milk and test for cream, as it enabled him to know for a certainty which were his most profitable cows; and it would be well if all breeders of dairy stock would adopt some systematic tests, with a view of grading up the average yield of the herd, and retaining only the more profitable ones.

FINE MELONS.—Fresno is now almost as well known as a watermelon center as Lodi, and the deliciousness of Fresno melons has caused them to bring the highest prices wherever they have been offered for sale in competition with those from other sections of the State. We have had numerous opportunities to sample fine melons this season; but among the great number we have found none more delicious than those left at our office this week by Mr. W. D. Bowen, of the Fresno colony. The cantaloupes, propagated from seed obtained from Vacaville, were larger and finer flavored than those usually shipped from that noted orchard and garden region.—Expositor.

BERKSHIRE TRANSFER.—The last record of transfers of thoroughbred Berkshire swine, which we receive from Phil. M. Springer, secretary of the American Berkshire Record Association, contains note of the sale of Duchess 12375, by Andrew Smith, of Redwood City, to C. A. Chapin, of Kibola, Hawaiian Islands. Mr. Smith has a fine exhibit of his swine at the Golden Gate Fair this week. His stock came direct from the Queen's herd of Berkshires in Great Britain, and is naturally taking a high stand on this coast.

UTILIZING ESCAPING GAS.—It is reported that the natural gas escaping from the mains in Pittsburg is to be used in illuminating the streets.

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## Interesting Grange Meeting.

The Tulare Grange met on Tuesday afternoon of last week in the assembly hall of the public schoolhouse in Tulare City. Although but a small number were present of this newly-organized Grange a very interesting meeting was held.

The Grange was opened in ample form by A. P. Merritt, Master. The minutes of the preceding meeting were read by J. W. Mackey, secretary. Under "Good of the Order" Bro. A. T. Dewey, of Temescal, was invited to speak. He congratulated the Grange on its leading position in Tulare county, stating his belief that there was a fine opportunity for accomplishing great good for the farmers and the whole community by their efforts. He believed the establishment of an experimental farm near Tulare City, under the auspices of the Grange, could be accomplished if an active effort was made for the same; that it would be for the interest of Tulare City and the whole county, and that contributions could be secured to support such an undertaking whereby the best varieties of fruits and other products, of that soil and climate, could be ascertained. Also the best methods of cultivation. Such an establishment would most certainly add value to land and other property. He urged the agitation of all questions of special interest to farmers, that education may be extended through better understanding, and social acquaintance, confidence, unity of action and Grange strength would follow.

Bro. Samuel Fowler made a very earnest speech, illustrating how our too numerous lawyers, big and little, throughout the country, control our politics, giving the farmers and other industrial people little or no show in elections. In his opinion legislation on monetary affairs has been adverse to the good of the people. We must study our interests and combine firmly for the protection and advancement of our interest.

Bro. I. N. Wright declared that the farmers must take part in legislative affairs. We must educate the industrial masses in this direction. Let us discuss all questions of interest, read and study subjects of importance between meetings, and cling together in our work for the advancement of ourselves and humanity. Lawyers, bankers, mercantile and professional men in the cities and towns educate their children; it is equally important that farmers give their children a sound education, also as they have to compete with the others and should stand on equal grounds. Let us teach our children to do their whole duty, fearlessly, in all things. He believed the farmers in the valley could build a railroad connection with San Francisco on such a plan that the railroad stock would be held with the land, in a similar manner that water stock is held, permanently, in connection with the land that is to be irrigated. In this manner the control of the railroad must necessarily remain with the owners of the soil—the farmers. [We should be pleased to have Bro. Wright furnish the readers of the RURAL PRESS a further statement of his ideas on this subject, which would, no doubt, be of suggestive value.] What we need is unanimity of action. We have the richest and most fruitful land in the State, and the most beautiful country. We should certainly discuss and encourage a greater diversity of products. We are governed by officers, too many of whom are unscrupulous. Most of our laws are originated by lawyers and lobbied through for the interest of anything but the farmers, while the farmers, the bone and sinew of the land, keep on working and permitting such abuses. Truly, we have great need of the Grange. With due effort we cannot but increase our numbers. Let us select good members in the beginning and we shall secure a large and permanent increase.

Sister Merritt insisted that whenever the farmers build a railroad they should hold the offices and manage it, and not elect lawyers and schemers to run it for them, as has been the case with too many ditch companies. The farmers, however, too often do the work on the ditches, and let drones and middlemen do the managing.

Brother Mackie thanked the sister for her salient remarks. Farmers rise at 3 o'clock in the morning and work until after dark, retiring immediately after their late meal, leaving no opportunity to think and reflect for their own benefit. Farmers have voted themselves into this way, and have to let others do their thinking for them. Workingmen clamor for 8 hours, while the farmers often work 16. The cities are bringing up a thinking population, and the country is not bringing up a thinking population. A change must be made or we shall become swamped, as by a whirlpool. The change should be that of doing our own thinking and business. Education brings out all that can be made of us. Are any of us samples of such education? Truly, we are too much like our volunteer crops. We should change our system. People living 500 years hence will hardly believe that so many short-sighted fools could ever have existed. Let us come together,

each with new ideas to exchange. If we are determined, we shall progress. We must act and do something. We should take oath not to vote for or be represented longer by such unfit representatives as many who disgrace our legislative halls.

Worthy Master Merritt declared there was too much talk about farmers being beasts of burden. It would seem as if the Grange was too good for farmers. They do not appreciate its full value. Too many would rather talk politics on the street than to attend. Any sensible farmer need not be so busy but that he can read and vote right. More liberality should be shown to our sisters. They work 16 hours and no grumbling, and we hear no talk of their burthens.

A sister curtly remarked that politicians pay too many farmers off in whisky for their votes and take every other advantage possible. We tried four or five years here to sustain a Grange without success. Now we are reorganized and must gather in those who are fully interested with us. We have now a new element, as it were, in our settlement to draw from. Let us stir around and get those who are well fitted for membership, and our efforts will be successful.

Brother Fowler remarked that we have too trivial work in our Legislature by lawyers who speak against time and practice other devilry to defeat every good proposition. He believed Governor Stoneman meant well in calling the Legislature together, but the lawyers had managed to baffle the honest legislation needed and the farmers have to suffer and pay for it.

Brother Maples considered that we were drifting in our consultation. Let us come to some decided conclusions and work for their accomplishment. The Grange should declare itself more emphatically on leading questions. We have all kinds among us. Many are temperate, prudent and knowledge-seeking. We are now producing more than we can use, from pumpkins to hogs, and all too cheap for profit. If we cannot be a power at the polls now, let us go on talking and combining till we can conquer corruption. Men like Stanford and Jay Gould run California and the United States. If the farmers would stop to think, and ask every industrial man to vote for the right, a movement of that kind would succeed. We should act or quit complaining. A recess being declared, he moved that delegates be appointed to the State Farmers' Convention; the motion was carried. A. P. Merritt and I. N. Wright were elected.

Brothers Joseph Merritt and Maples and their wives also took part in the deliberations of the meeting.

Although this Grange numbers few at present it was plainly shown by the earnestness and ability of those present that it has as good material within its ranks for building up a large and flourishing Grange as any in the State. We hope and trust that in the new order of things, other Granges will spring up in Tulare, Fresno and Kern counties, sufficient to form a Pomona Grange which shall hold all together in effective and permanent work.

Tulare City presented a desolate appearance at the time of our visit, owing to the late conflagration, which devastated nearly the whole place. We are sure, however, that the town will be speedily built up more extensive and substantial, after this third fire, than it has ever been before.

## The Late Mrs. H. G. Mackie.

Rev. C. Rowland Hill, writing to the Tulare Register, of Bro. J. W. Mackie's departed companion, aptly says:

At our first meeting I was much impressed with her genial manner and kindly disposition, her humility and hearty support to further any good work. Her genuine goodness and sterling worth became more apparent upon a more intimate acquaintance. It would have been impossible for any one to be in her company for even a short space of time without being charmed with her loveliness of character and incited to engage in good work. It does seem a pity to have to lose such an earnest temperance worker, such a good lady, as Mrs. Mackie. Her home, with all its comforts and many luxuries, was a home to me whenever I wished to avail myself of its privileges. I mourn her loss as that of an intimate friend. If I place so much value upon her friendship—having known her but three months—how great must be the loss sustained by her husband, by her daughter, by her two boys. We are short-sighted that we cannot see what benefit will be derived by us by God removing such a one as our friend from our midst. "God is too wise to err." There is, we may depend upon it, some good being done by His calling her away from the cares, the troubles of this life. \* \* \* In taking Mrs. Mackie He has taken one of the most cherished and choicest roses from our Tulare garden to enrich the fragrance and to beautify the garden of heaven.

LOS ALAMOS.—John Newlove writes the Patron that there are a number of loyal Grangers at Los Alamos and deems the time auspicious for reviving the Order there. He believes that with a little judicious nursing, a strong Grange could be built up in that part of Santa Barbara county. Let the old Patrons there be encouraged from all quarters.

DELEGATES ELECTED.—During an intermission at the last meeting of the Temescal Grange, E. Kelsey, Newton Sewell and A. T. Dewey were elected delegates to the Farmers' State Convention. E. Kelsey and C. Bagge were also elected representatives to the Greenbackers' Convention.

## The Coming Farmers' Convention.

In our issue of last week it was mentioned that San Jose Grange had selected 10, and Sacramento Grange 15, delegates to the Farmers' Convention, which has been called to meet at the capital on the 15th inst. We have not been advised of the action of Patrons generally in this matter, but we trust the course of the two Granges above named is but typical of what has been going on throughout the State. We hope to see a large assemblage of representative farmers at Sacramento next week, able and ready to cope with the important questions which are to come up for consideration. There is plenty of need for the farmers of this State to come together for conference and united action on matters of vital importance to themselves, to the benefit of themselves, and the good of every honest citizen.

The meeting will be held on Wednesday, September 15th, and, we presume, at Grangers' hall, over the Granger Store, corner of 10th and K Sts. The State Fair excursion rates will favor all who attend.

## State Grange Literary Exercises.

It is hoped by the Committee on Literary Exercises that many of the contributors will send in their articles early, that arrangements may be made to occupy all spare moments of the early part of the meeting, when the order of business is always less crowding than in the middle or latter part of the session. We have many able and interesting writers, and all will wish to receive some good and helpful words from every part of the jurisdiction, even if some can contribute only a short letter containing the true ring in it. By the exchange of good and original ideas we shall progress, and it is hoped that writers in every Grange will assist. Do not forget to prepare for rendering musical contributions also. We have notice that Bro. Samuel Fowler, of Tulare, will be prepared to speak on "Political and Mechanical Science for Farmers."

## Memorial Resolutions.

At a meeting of Temescal Grange Sept. 3d, the following preamble and resolutions were unanimously adopted:

WHEREAS, It has been the will of the Divine Master above to remove our loved sister, MRS. MARTHA D. EWER, from our midst; and

Whereas, We fully realize that in her death our Order has lost a warm friend and her family a devoted wife, daughter and mother; and esteeming her many virtues and endearing qualities; therefore be it

Resolved, That we extend to Bro. Ewer our heartfelt sympathy and respect.

Resolved, That our charter be draped in mourning for the period of 30 days.

Resolved, That a copy of these resolutions be sent to our bereaved brother; also to the RURAL PRESS and the California Patron for publication and placed on the minutes of the Grange.—SISTERS L. FRINK, M. A. RENWICK, N. G. BABCOCK, Committee on Resolutions.

THE NEW BADGES.—North Butte Grange has adopted the new badges in place of the old regalia.

## Stockton Notes.

[Written for the RURAL PRESS by MRS. W. D. A.]

Arid summer heat has given place to the freshening airs of September, the month of fairs, chief of which is the State Fair, beginning the 6th, ending the 18th, notable three years for county exhibits. Pomona Grange, No. 3, sent this county's contribution the 3d, although it is a hard year to make up a show; but after deciding in the promising spring to do so, the Grange and its friends collected all possible things of merit to represent the varied and good soil and the skill of an industrious people. Willingness to help Pomona Grange has been shown by most citizens, but some promised things were withheld because of the poor year. The indifferent exist here as elsewhere. This hot summer, fruit is not so good as usual (except grapes), and bugs and beetles have held high carnival.

The S. J. V. Agricultural Society offered premiums for its district of nine counties to compete for at the fair, opening the 21st. The Pomona exhibit is to be set up at this fair also. The temporary pavilion, 260x80 feet, fronts on Hunter-street square, and is to be done by the 12th; indications promise that it will be well filled. Hon. P. D. Wigginton delivers the annual address September 23d. The speed program is said to be excellent, and it is thought that the stock show will be better than any before; so visitors will certainly be repaid for coming to our breezy, agricultural city.

This county, with its few fogs and many months of sunshine, cannot be excelled in grape-raising. Nowhere else does the Sultana attain such size of berry and cluster. A bearing vineyard pays three times as much as wheat, or \$100 per acre, when five years old.

Warehouse men are busy with the fast-coming wheat, which has advanced three or four dollars a ton since harvest, to help out farmers this second hard year.

Charles and Edwin Ashley, of Stockton, have

invented a cleaner for harvesters that excels all others. Different sized screens take the grain down an incline of nine feet of zinc, so that the smallest seeds are removed without scattering any to befool the ground. They have adapted it to the famous Houser and sold it to the "Combined Harvester Co." Visitors to Stockton Fair will have a chance to examine its merits as well as the exhibit harvesters.

Thomas Sedgwick, 92 years of age, a pioneer, was killed by the cars at the French Camp crossing on the 3d. The horse got across unhurt, but the buggy was broken to pieces and the poor old man so bruised that he died soon after being taken to the city. It is thought that the horse became unmanageable. Mr. Sedgwick was a successful farmer, active in body and mind, attending personally to his farm up to the day of his sad death. He was the father of Mrs. Gen. Ketchum.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

BLACKLEG.—Haywards Journal, Aug. 28: During the past two weeks blackleg has broken out among the cattle in Moraga valley, especially on the ranches of Tom Johnson and Wm. Fields. A number of fatal cases have already occurred. Vaccinating the cattle was at once resorted to, and the disease is now under control.

Pleasanton Star: A large number of cattle were vaccinated at Dublin last week, as a preventive against the dreaded blackleg. Mr. Dougherty had over 100, and Messrs. Green, Campbell and others also had some.

## Contra Costa.

FINE NEW SEEDLINGS.—Gazette, Sept. 4: We lately received a box of peaches from Mr. George Sellers, of Brentwood, of exceeding size and deliciousness. They are a seedling started by the Sellers family and are a valuable acquisition in the fruit line. In color they resemble the Crawford, and their period of ripening extends from August 1st to early September. The specimens sent to us—15 in number—averaged in weight 7½ ounces each. Mr. Sellers has also succeeded in obtaining an admirable seedling almond. The section of country where he resides is developing into a magnificent fruit area. The fruit raised there without the aid of irrigation equals the products of irrigated lands and has the advantage of a near market and shipping facilities. Mr. W. B. Holliday, fruit inspector for this district, is entitled to credit for originating a seedling apricot that presents the advantage of ripening very late in the apricot season. This apricot is not large, measuring only from 5 to 5½ inches in circumference, but is of good flavor. It ripens 15 days later than the Moorpark. Mr. Holliday would like to hear from other fruit-growers to learn if any possesses a variety that ripens that much later than the Moorpark. He has also a seedling plum which is earlier than any variety with which he is acquainted.

## Fresno.

FROM MINING TO FARMING.—Visalia Delta, Sept. 2: Nine miners from Calico, San Bernardino county, have recently filed on Government land in the region west of the Summit lake country, lying near the foothills, and have decided to try their lot as agriculturists for a time. The soil in that region is excellent, and if artesian water be obtainable that will be one of the best farming sections in the San Joaquin valley, but without water for artificial irrigation the land near the foothills of the Coast Range is dry in a season of light rainfall, the precipitation being lighter on the west than on the east side of the valley. We hope that some means will be provided for irrigating this vast section, which would thus become one of the most productive in the State. In the River-lawn settlement, in the Summit lake country proper, ditches will be constructed for supplying water to all the land in the settlement, and a considerable area outside.

NOVEL MELON.—Expositor, Sept. 1: T. W. Borchers has left a curiosity at this office. He calls it the "pumpkin muskmelon," from the fact that it represents in shape and outward appearance a pumpkin. It is a very delicious melon, and about the best in the market. They are raised by Mr. Peters, in Fresno Colony, and are said to be Armenian melons.

## Lake.

BIG VALLEY GRAIN.—Lakeport Democrat, Aug. 27: Messrs. Welty & Young, who have just laid their thrashing machine up for another year, thrashed 34,000 bushels of grain. Mr. Welty thinks they thrashed about half the grain in Big Valley. This being the case, the yield in Big Valley can be set down at 60,000 to 70,000 bushels.

A THIRTY DIGGER.—Lower Lake Press: An opulent Indian is something very unusual in California, i. e., among the thoroughbred Diggers. They are nearly always distinguished only for poverty, filth and general wretchedness; but we have one full-blooded Digger Indian in Lake who considers himself pretty well fixed, and, to tell the truth, we wouldn't reject a partnership interest with him. We speak of Bob Augustine, of Scott's Valley. He was down the other day and looked very much civilized with white shirt, diagonal suit and polished boots. He is in the hop business at Scott's

Valley, where he has a small piece of land rented, 15 acres of which he devotes to the growth of hops. When the bottom fell out of hops a couple of years ago, the bottom came near falling out of Bob's money-box, but he weathered the gale some way and held on to his hops. He didn't get mad and tear up the ground and yank out the hop-plants, but pursued the unimpassioned, even tenor of his way, until there came a turn in the tide that will now lead him out of trouble. His hopfield is said to be as good as any in the county, and the crop this season unusually large.

## Los Angeles.

**DOWNEY ITEMS.**—Los Angeles Times, Sept. 1: The grape crop throughout the valley is good, not having been afflicted with the peculiar blight which is playing havoc with the grapes at Anaheim. The president and secretary of the Agricultural Association are busy preparing for the fair, to be held October 5th, 6th, 7th and 8th at Downey. All indications now point to a most successful exhibit.

**A NICE DAIRY.**—Pasadena Union, Aug. 27: We went last Tuesday up to the headquarters of Messrs. J. W. Wilson & Son. Their dairy is at the home place of Mr. J. W. Wilson, one and a half miles west of town on the mesa adjoining the Arroyo Seco, and there the arrangements for keeping cows and caring for the milk are models of neatness and convenience. No mud and dirt, such as usually characterize a cowyard, are to be seen, but instead, a clean, dry corral and sheds that are agreeable to the eye and inviting to the visitor. Here is a barn 24x96, with 276 feet of sheds in which the stock find ample accommodation. It takes 50 cows to supply the large demand, 12 horses to do the incidental team work, and 4 men to attend them. It takes over a ton of feed per day to satisfy this large number of animals, the most of it coming from El Monte and Alhambra. The Messrs. Wilson find a great advantage in having a pure water supply for their cows, and inform us that they do better on it and give better milk than those compelled to drink stagnant, muddy or impure water. Certainly it is, as the water at this place is clear, cool and fresh from its source, and is an enjoyable luxury to those accustomed to the poorer article of the lower valley. The milking is done at 2 o'clock P. M., and about 3 the brightly painted wagon with "San Pasqual Dairy" blazoned on the side starts on its rounds and distributes its pure and wholesome milk to its many customers.

## Mendocino.

**HOPS.**—Covelo Cor. Ukiah Press, Sept. 3: Hop-picking is nearly over. Some yards which were only partially cultivated yielded but few hops, while those thoroughly cared for produced 1000 pounds to the acre.

## Napa.

**PECULIAR BARGAIN.**—Calistogan, Sept. 1: C. M. Burgess, aside from using the grapes of his own vineyard, will purchase Frank Ashton's crop. For these grapes he has agreed to pay as many dollars per ton as he receives cents per gallon for the wine when sold. We do not remember a similar agreement between the makers and growers.

## Placer.

**BANANAS ON TRIAL.**—Republican, Last spring O. W. Hollenbeck procured two bulbs of the banana tree from Sacramento and tried the experiment of planting them on his place here in Auburn. Both grew and are now thrifty young plants three feet or more in height. A few have been cultivated in Sacramento for a number of years, and the owner believes that they have become acclimated, and can be taken safely through the rainy season with a little care. Mr. Hollenbeck also has a thrifty young india-rubber tree—something uncommon here.

## San Benito.

**THE TRES PINOS REGION.**—"A Scribe," who has lately taken a drive from Hollister to Paicines and back, writes in the Independent: Never before was the country along the Tres Pinos creek more prosperous than now. It is being settled very rapidly, and there is a tendency to break up the large ranches. The number of new arrivals during the past year has been very great, and the best part of it is that the class settling in that section are the very best eastern people. We had the pleasure of meeting a number of the new-comers. They are not people of great means financially, but they have what is more valuable—a determination to succeed and the enterprise to work for success. On the whole, our impression of the Tres Pinos creek country was very favorable, and we returned home feeling more proud of the county, and of the people in the county, than ever before.

## Shasta.

**EDITORS PRESS.**—Anderson is situated on the California & Oregon Railroad, 27 miles from Red Bluff, and is distant about 270 miles from S. F. It contains about 2000 inhabitants, and lays claim along with several other towns to being the coming metropolis of Northern California. It has a fine location, being built upon a high plateau overlooking the Sacramento on the north, is tastefully laid out, and contains many handsome residences and public buildings. Anderson is one of the great wool markets of the State and very prosperous. There is a fine orchard on the east side of the town, owned by Mr. Pettigrove. They have a nice grist-mill, and the town contains many substantial business blocks and a number of factories and mills, including several carriage and wagon factories,

harness shops and waterworks—in fact, all the trades and professions are well represented. There are several newspapers, weekly and daily, a public school and a normal school.—E. G. H.

## San Mateo.

**RANCH FIRE.**—Redwood Times & Gazette, Sept. 4: A fire started in Menlo Park about 12 M. yesterday. It burned several stubble fields, three piles of baled hay on Con. Maloney's place, 400 cords of wood belonging to W. E. Stanton, the dwelling-house on the McKenzies place—rented by Con. Maloney—and ruined several fences. It was brought under control, about 5 P. M., by the efforts of 50 persons from Menlo Park and the neighborhood, before it got near to any of the fine residences east of the village. No persons or animals were injured at last accounts. The origin of the fire is not stated.

## Santa Barbara.

**MONEY IN MUSTARD.**—Lompoc Record, Aug. 28: In Lompoc valley, this year, lands costing from \$20 to \$50 per acre have actually yielded from \$40 to \$60 per acre in English mustard. It is reported that C. E. Carter has thrashed 28 sacks per acre, which, at the price now prevailing—\$20 per ton less than the highest paid in 1885—brings the gross product to about \$80 per acre. Those who are in search of good lands cannot do better than come to this valley; and if they want the pick, must come at once.

## Sonoma.

**MOUNTAIN ITEMS.**—Geysers Cor. Flag, Aug. 30: "Sly as a fox" has gone out of fashion in the mountains. Here it is "sly as a coyote." Thousands of lambs and sheep have been killed in the vicinity of the Geysers, and yet not more than half a dozen of the depredating coyotes have been caught during the entire season. Cattle have done remarkably well, but stockmen are disinclined to dispose of stock at present prices. Corn 14 feet high is grown up here at an altitude of 4000 feet above sea-level. The fire around St. Helena mountain is still burning and doing great damage. It has already destroyed 1600 cords of wood belonging to the Great Western mine.

## Tulare.

**ALFALFA-FED PORK AT A DISCOUNT.**—The Delta is informed by a representative of a leading pork-packing establishment in San Francisco that much dissatisfaction exists concerning hogs shipped from Tulare county, in consequence of which there is a light demand and the prices offered are lower than for the product of almost any other locality. The complaint is that the meat is soft and depreciates very rapidly in weight. This is accounted for on the ground that the hogs are kept too long on alfalfa, and are fed but little, if any, grain. Ranchers who are complaining of the unprofitableness of the business at present might do well to investigate the subject.

**SHIPPING BALED ALFALFA.**—Times, Sept. 2: A. W. Lane, of Mussel Slough, informs us that he shipped baled alfalfa hay to San Francisco last season and realized a fair profit therefrom. This is the first we have heard of hay being shipped to that market, and to many it has often been a query what would be done with that commodity when we should have a surplus. Mr. Lane says the only objection to his hay, and it was not a serious one, was that it was baled too closely, which he had to do to load the cars in quantities to make it pay him. He is of the opinion that if the railroad company would fix their freight rates lower large quantities of alfalfa hay would be shipped from this county, not only to San Francisco, but to markets south of us.

## Yolo.

**HOG CHOLERA.**—Democrat, Sept. 2: Our farmers continue to make grievous complaint of the ravages of the hog cholera. A large number of hogs have died and many others are suffering. There seems to be no remedy for the disease; hogs apparently well in the morning are found dead before night. The disease is in a virulent form.

## NEVADA.

**GOLCONDA NOTES.**—Silver State, Aug. 30: The wool shipments this season aggregated over 100,000 pounds, and occasionally cattle and horses are shipped from the station to San Francisco. On Lay's ranch, situated near the station, wheat, barley, alfalfa and vegetables are produced. This season, in consequence of the depredations of jack-rabbits and damages from water caused by a cloudburst in the mountains, the wheat and barley did not yield over half a crop. The alfalfa, however, is up to the average, and some 500 tons of this hay is now stacked on the place for winter use. The third crop, which will yield about one and a half tons to the acre, will soon be ready for the mower, after which the meadows will furnish good pasturage for stock later in the fall. The alfalfa fields, garden and orchard are partly irrigated with water from the hot springs, which is cooled in a reservoir before it is used. It has been demonstrated on this ranch that the most sterile-looking sagebrush land will produce good crops of grain and alfalfa when irrigated, and that less water is required each successive year for irrigating hay and grain lands.

**IMPORTING GALLOWAYS.**—Reno Gazette, Sept. 2: Thirty-one head of Galloway cattle from yearlings to five-year-olds, from Leonardville, Missouri, were unloaded at Winnemucca, Tuesday last.

## PACIFIC COAST WEATHER FOR THE WEEK.

(Furnished for publication in this paper by NELSON GOROM, Sergeant Signal Service Corps, U. S. A.)

## Fourth District Fair Awards.

The following were the awards for products of agricultural and kindred industries at the late Petaluma Fair:

## Horses.

**THOROUGHBREDS.**—All awards to P. Carroll, except the following to J. McM. Shafter, viz.: Best stallion colt under 12 months, no name; best mare 4 years old, Nighthawk; 2d, Proserpine; best mare colt under 12 months, no name.

**STANDARD TROTTERS.**—J. R. Rose, 2d best stallion 4 years old, McPherson; W. Page, best stallion 3 years old, Polo; W. P. Fine, best stallion 2 years old, Twilight; P. J. Shafter, 2d, Rustic Boy; A. L. Whitney, best stallion 1 year old, Pilgrim; P. J. Shafter, 2d, Hawkeye; J. & W. S. Fritsch, best mare 4 years old, Nellie R.; T. T. Unkless, 2d, Raka Patchen; F. W. Loeber, best mare 2 years old, Emma H.; A. L. Whitney, best mare 1 year old, Aurora; F. W. Loeber, stallion showing best 5 colts, Whippleton; A. L. Whitney, stallion showing 2d best colts, Dawn.

**NORMAN AND OTHER FRENCH DRAFT BREDS.**—J. P. Rodehaver, best stallion 4 years old, Beaufort; H. Wiley, 2d, Logan; J. R. Rose, best stallion 3 years old, Leon; T. Skillman, 2d, Brilando; I. F. Cook, best stallion 2 years old, Crown Duke; J. R. Rose, 2d, Pete; R. Crane, best stallion 1 year old, Duke de Chartres 2d; L. A. Devoto, 2d, Duke of Marin, and best stallion colt under 12 months, De Chartre; T. Maginnis, 2d best colt under 12 months, Rustic; R. P. Hill, best mare 4 years old, Lady Annie; P. Henley, 2d, Queen of the Valley; M. McLaughlin, best mare 2 years old, Bess; P. P. Rodehaver, 2d, Kittie; I. F. Cook, best mare colt under 12 months, Maud; R. P. Hill, 2d, Bess; J. P. Rodehaver, stallion showing best 5 colts, Tony Oakes; special premiums for get of Rotomago, given by D. R. Misner—all 3 to A. Keyser.

**CLYDESDALE AND OTHER ENGLISH DRAFT BREDS.**—Clydesdale Breeders' Ass'n, best stallion 4 years old, Pointsman; 2d, Morning Star; W. Page, best stallion 2 years old, Premier; E. Fine, best stallion 1 year old, Boss; R. H. Crane, 2d, Tam O'Shanter; L. A. Hardin, best stallion colt under 12 months, no name; P. Henley, 2d, Pointsman, Jr.; Clydesdale Breeders' Ass'n, best mare 4 years old, Maid of the Mist, and 2d, Blossom 2d; W. Page, best mare 2 years old, Lass; R. H. Crane, best mare 1 year old, Ann; W. Page, 2d, Freckle; Clydesdale Breeders' Ass'n, best mare colt under 12 months, Belle, and stallion showing best 5 colts, Pointsman.

**GENERAL PURPOSES.**—T. Skillman, best stallion 3 years old, Echausen; L. A. Devoto, 2d, Prince William; F. W. Loeber, best stallion 2 years old, Johnnie T.; W. P. Hinshaw, 2d, Dan; L. McDonald, best stallion colt under 12 months, Tom Paine; A. J. Show, 2d, George S.; L. A. Hardin, best mare 3 years old, Kate; L. McDonald, 2d, Daisy; G. A. Allen, best mare colt under 12 months, Queen Esther.

**CARRIAGE AND ROADSTERS.**—T. Skillman, best team shown to carriage, Elector and Echmul; J. R. Rose, best pair of mares or geldings to pole, Maud and Minnie; H. P. Brainerd, 2d, Ned and Joe; J. & W. S. Fritsch, best single mare or gelding, to buggy, Abe Ward; W. P. Fine, 2d, Daisy.

**SADDLE HORSES.**—L. W. Walker, best mare or gelding, Black Prince; A. L. Whitney, 2d, Duke.

**JACKS, JENNETS AND MULES.**—S. Gilmore, best jack, 3 years old, Dexter.

## Cattle.

**SHORTHORNS.**—All premiums for single head, herds and sweepstakes to W. Page, except the following, viz.: A. Smith, best bull (3 years old and any age), Pharaoh; Jno. Lynch, 2d bull, 2 years old, Sonoma Chief.

**DEVONS.**—All premiums to J. R. Rose.

**HOLSTEINS.**—All premiums for single head, herd and sweepstakes to J. H. White, except one to E. Steiger for 2d best bull, 1 year old, Wm. Tell.

**JERSEYS AND GUERNSEYS.**—Bulls—W. D. Bliss, best 4 year old, Favorite; E. W. Woolsey, best 3 year old, Ronda; L. Walker, 2d, Tom; E. W. Woolsey, best 2 year old, Miles Standish; Hall Bros., best 1 year old, Wildwood; W. D. Bliss, best calf under 12 months, Sarpedon; Dan Brown, 2d, Ivanhoe. Cows—E. W. Woolsey, best 4 year old, Berkeley Maid; Dan Brown, 2d, Moss Rose; E. W. Woolsey, best 2 year old, Princess; W. D. Bliss, best 1 year old, Juanita 2d.

**AYRSHIRES.**—Bulls—Tyler Beach, best 4 year old, Alexis; Geo. Bement & Son, 2d, Archie; T. Beach, best 2 year old, Burton; G. Bement & Son, best 1 year old, Ethelbert, and 2d Campbell; T. Beach, best calf under 12 months, Quicksilver; G. Bement & Son, 2d, Elector. Cows—G. Bement & Son, best 4 year old, Lady Faxon; T. Beach, 2d, Mamie Pearce; G. Bement & Son, best 3 year old, Marian, and best 2 year old, Sybilla; T. Beach, 2d, Dinah, and best 1 year old, Media; G. Bement & Son, 2d, Marilla, and best heifer calf under 12 months, Ethelberta; T. Beach, 2d, Mattie B.

**SWEEPSTAKES.**—T. Beach, best bull, any age, Alexis; G. Bement & Son, best cow, any age, Lady Faxon.

## Sheep and Fleeces.

**SPANISH MERINOS.**—All premiums to E. W. Woolsey, except the following to E. Mills, viz.: Best

ram 2 years old; best 3 ram-lambs and best 3 ewe-lambs under 12 months.

**SOUTH, SHROPSHIRE, OXFORD AND HAMPSHIRE DOWNS.**—All premiums to R. H. Crane.

**FINE WOOLS.**—All premiums to W. Page, except to E. Mills for best ewe's fleece.

## Swine.

**BERKSHIRES.**—All premiums to Andrew Smith.

**POLAND-CHINAS.**—R. H. Crane, best boar, 1 year old, best sow 1 year old, T. Skillman, 2d best sow 1 year old; best sow and 5 pigs.

**JERSEY RED OR DUROC.**—J. H. White, best boar 6 months old, sow 6 months old.

## Poultry.

Premiums to Morris Bros. for best pair Light Brahma fowls, best do. chicks, best pair White Cochins fowls, best pair Plymouth Rock fowls, best pair Wyandotte fowls, do. chicks, best pair Black Spanish fowls, best pair White Leghorn fowls, do. chicks, best pair B. B. game fowls, do. chicks, best pair Bronze Turkey fowls, do. chicks, best pair White Holland Turkey fowls, do. chicks, best pair Rouen drakes, best pair Pekin ducks, 2d pair Toulouse geese, best pair Embden geese.

To J. H. Gwinn—2d pair Light Brahma fowls, 2d do. chicks.

To P. W. Meadows—Best pair Buff Cochins fowls, do. chicks.

To S. H. Church—2d pair Plymouth Rock fowls, 2d pair Black Spanish fowls, best pair Brown Leghorn fowls, do. chicks, best pair Silver Spangled Hamburg fowls, do. chicks.

To O. E. Elmore—Best pair Plymouth Rock chicks, best pair Brown-red Game fowls, best pair Duckwing Game fowls, 2d pair B. B. Game fowls, 2d pair Pekin ducks.

To R. H. Crane—Best pair Toulouse geese.

To John Stewart—2d pair Wyandotte chicks.

To J. Bowles—2d pair White Leghorn fowls.

To L. W. Walker—Best pair Bantam fowls, do. chicks.

To A. J. Show—2d pair B. B. Game chicks, 2d pair Bantam chicks.

To F. Shattuck—2d pair Bantam fowls.

## Grains, Vegetables and Melons.

R. Crane, best exhibit grain, 4 or more varieties; I. F. Cook, best sack Australian wheat; C. S. Gibson, best sack barley; H. P. McCleave, best sack oats; D. F. Whitlatch, best sack wheat, any variety; C. S. Gibson, best sheaf barley, and best sheaf oats; W. C. Percival, best sack wheat flour, best sack buckwheat flour, best sack cornmeal; P. Mullally, best collection potatoes, best single variety do.; R. Crane, best sack shelled corn; H. S. Gossage, best exhibit squashes; R. H. Crane, best exhibit pumpkins; R. Crane, best exhibit sugar beets, and best exhibit Mangi Wurzel; B. Cary, best blood beets; D. F. Whitlatch, best exhibit rutabagas; H. S. Gossage, best exhibit corn on stalk; Andrew Polucca, best exhibit cabbage; E. L. Charles, best exhibit watermelons, do. muskmelons; C. S. Gibson, best exhibit cantaloupe; Andrew Polucca, best exhibit carrots.

## Fruits, Grapes and Nuts.

F. F. Ennis, collection fruits raised in one orchard; John Merritt, best exhibit apples, best single variety apples, best 6 varieties apples; C. S. Gibson, best collection pears, best single variety pears; R. Andrews, best 6 varieties pears, best exhibit peaches; G. W. Parks, best exhibit plums; A. H. Cassidy, best 6 quinces; Mrs. W. H. Pepper, best collection oranges; Morris Bros., best collection lemons, best collection grapes raised in one vineyard, best exhibit foreign grapes, best exhibit California grapes, largest and best bunch of grapes and variety, best collection almonds, best collection English walnuts.

## Preserved Fruits, Etc.

G. W. Parks, best exhibit sun-dried fruits, do. sun-dried apples, do. sun-dried plums; F. F. Ennis, best exhibit sun-dried peaches, do. dried plums seeded; Mrs. M. Carey, best exhibit domestic canned fruits, do. preserves, do. pickles; Mrs. J. C. Diamond, best exhibit jellies; Mrs. J. T. Merritt, best exhibit catsup.

## Butter, Cheese and Bacon.

L. Cantel, best exhibit cheese; R. Crane, best exhibit hams; W. R. Overholser, best exhibit side of bacon.

## Bread and Cake.

M. Carey, wheat bread, assortment tarts; Mrs. S. Cassidy, Boston brown bread; Augusta Dahlman, corn bread; Mrs. J. T. Merritt, fruit cake; Mrs. J. C. Diamond, pound cake; Mrs. J. C. Bowles, sponge cake.

## Plants, Bouquets, Etc.

All premiums to W. A. T. Stratton.

## Sericulture.

W. W. Stockdale—Best display of samples of silk culture, embracing eggs, worms, moths and cocoons.

## Saddlery and Harness.

All premiums to Ellsworth & Northrup.

## Agricultural Implements.

W. H. Worth, best horse power, best wine press; S. J. Tobin, best model fruit-drier.

### Remember Boys Make Men.

When you see a ragged urchin  
Standing wistful in the street,  
With torn hat and kneeless trousers,  
Dirty face and bare red feet,  
Pass not by the child unheeding;  
Smile upon him. Mark me, when  
He's grown up he'll not forget it;  
For, remember, boys make men.

When the buoyant youthful spirits  
Overflow in boyish freak,  
Chide your child in gentle accents;  
Do not in your anger speak.  
You must sow in youthful bosoms  
Seeds of tender mercy; then  
Plants will grow and bear good fruitage,  
When the erring boys are men.

Have you never seen a grandsire,  
With his eyes aglow with joy,  
Bring to mind some act of kindness,  
Something said to him, a boy?  
Or relate some slight or coldness,  
With a brow all clouded, when  
He said they were too thoughtless  
To remember boys made men.

Let us try to add some pleasure  
To the life of every boy,  
For each child needs tender interest  
In its sorrow and its joy.  
Call your boys home by its brightness;  
They avoid a gloomy den,  
Seeking elsewhere joy and comfort;  
And remember, boys make men.

### One Fair Time.

[Written for the RURAL PRESS by M. B. D.]

Nell and her mother sat on the porch, preparing peaches for the preserving kettle. The sunlight shone softly through a lattice of morning-glory vines, all aglow with pink and blue-bells that were yet heavy with dew; and the linnets had scarcely finished their usual concert.

"I am glad to get such a good start," remarked Mrs. Gillis. "We are likely to have all of these Early Crawfords in the jars before dinner-time."

Mrs. Gillis was noted in the neighborhood for her skill in preserving fruit. And what was quite remarkable, Nell, her piquant and sprightly daughter, had mastered the same art so thoroughly that she was a successful rival. They arranged their work so as to get out of it all the pleasure possible. No hurry and fret over a hot stove was connected with the process, but instead, it was connected with such care and deliberation that it interested them and secured their best efforts. It quite excited Nell's enthusiasm. Just now her brother Rufus came up from the orchard with two large baskets full of the nicest peaches they had.

"O mamma!" she exclaimed, "let me preserve those beauties and send them to the fair. I know they will bring a premium." Her eyes sparkled with the thought. After coaxing in her usual winsome way, her mother consented to the plan, and Nell set to work with renewed earnestness. A tress of glossy hair fell over her cheek and shaded her eyes, as she stooped to gather a lapful of peaches from the basket. When she looked up she started slightly to see Chauncey Kenyon close beside her. He stood leaning awkwardly against a pillar of the porch, and after bidding them good morning, continued:

"Mother has come a visitin'. She'll be round here in a minute—now she's a gettin' her fancy work out of the wagon. Give us a peach, Miss Nell."

Without further ceremony he reached his rough, sprawling hand into her lap, and grasped several of the large peaches.

"These are first rate," he said, as he proceeded to bury his teeth in the ripe crimson of one of them. Nell frowned. It seemed to her a pity that the sweet, delicate fruit should come in contact with those hideous, wide-set teeth, that had impressed her with their ugliness from childhood. She had always disliked him on her brother's account. Years before, when they were all children attending the same school, Chauncey had been apt to tease and play mean jokes on his schoolmates, and Rufus had sometimes quarreled with him in defense of those whom he would have discomfited.

Now he stood munching the fruit with his thin jaws, and staring at her in a half-admiring way that was irritating.

"You may keep on with the fruit, mamma, and I will get dinner," said Nell, gathering up her peaches, and she disappeared through the doorway, just as Mrs. Kenyon ascended the porch steps. She wore a stiff sunbonnet and large, fancy apron, and carried on her arm a basket.

"Well, how do ye do? Hard at work as ever, I declare," she began, as Mrs. Gillis rose to welcome her, and offer Nell's chair.

"Allow me to take your bonnet and make you comfortable," said the hostess.

"La, no! You keep right on to the paring,

and I'll soon be as much to home here as anywhere," replied Mrs. Kenyon. Opening her deep basket, she took out a ball of red knitting cotton and a large square of muslin.

"I am making tuft-work on a pair o' pillow-shams and I thought I'd come up here and get some fig leaves to draw from," she explained. "I've made 'em with plates and cups for patterns long enough. Don't you think the outlines of a fig leaf in each corner, and two large ones in the middle, would look nice?"

"Yes, certainly," replied her hostess. "I will ask Nell to gather the leaves for you."

"Now, Chauncey, is your time; make for the orchard," interrupted Mrs. Kenyon, and she had scarcely finished speaking ere he was making long strides in that direction.

Soon he returned, bringing a bunch of fig leaves, some ripe figs and more peaches. He sat down on the steps while the women worked and chatted together in a neighborly fashion. The several fruits suggested a discussion of their merits, and while they were talking Mrs. Gillis remarked that Rufus was very fond of the Early Crawfords. "He takes extra care of our two trees. They make fine preserves, too," and she went on to tell her daughter's plan.

In the meantime Nell had replenished the kitchen fire, put on the shining copper kettle and filled it with golden fruit. She felt very self-reliant and proud to be left thus entirely to her own resources. Occasionally she stirred the fragrant, bubbling mass on the stove as she flitted about preparing lunch. She exercised her art to the utmost in caring for the fruit. What dreams crowded each other in her fancy! What success and praise seemed to curl up with the thin steam that rose from the kettle! She tasted and examined the fruit carefully a dozen times to be sure that it should be done just right. If one had seen her standing in the open window, with the gilded saucer in her hand, moving attentively with a spoon the amber liquid and fruit it contained, she would certainly have suggested the thought of some pretty witch, preparing a magic potion. Her cheeks were flushed, and the swiftness and grace of every movement showed how intensely she was interested.

Half a dozen fine crystal jars were ready to be filled, and she stood pouring the hot fruit into the first, when Chauncey's gaunt figure suddenly darkened the doorway.

Slop, slop, slop, splashed the slow stream over the side of the jar on the table, and before she could stop pouring, the steaming syrup trickled down her apron and upon one little slipped foot. Her instep seemed on fire and she flew to relieve it, forgetting the preserves, her dreams and all. Chauncey stood wondering what was the matter, while the peaches in the kettle bubbled and sizzled strangely, filling the whole air with the odor of burnt sugar.

Still, he was standing there when she returned to the kitchen and saw her ruined work. The smarting pain of her burn and the disappointment were too much for her to bear with composure, so she sat down on the nearest chair, and covering her face with her hands, burst into tears. Chauncey could see the drops shining through her dimpled fingers, and her little sobs distressed him beyond measure. He felt that in some way he was to blame for them, and he longed to atone for his fault. In and out of his pockets went his hands several times while he hesitated; then, seeing Nell rest her head and shoulder against the side of the dresser, he imagined she had fainted. Quick as thought he filled the ladle with water and dashed it over her head. Poor Nell was perfectly surprised, and, catching a glimpse of his excited face, became so frightened that she really did faint.

In a moment more Chauncey had called his mother and Mrs. Gillis, who soon made Nell comfortable in her own room and restored order to the kitchen. As Nell looked ruefully at her pretty muslin dress, now soiled and limp, and combed out her damp hair, she declared that "she would never forgive that clumsy Chauncey Kenyon. He always was in some sort of mischief, and I believe he delights in it yet," she added.

At dinner, Nell appeared as radiant as though nothing unpleasant had happened. Her crisp lawn dress and wavy curls made her look even better than usual. Mrs. Kenyon and Rufus exerted themselves in their different ways, to make her forget her disappointment; so when Chauncey climbed into the wagon carrying his mother's basket overflowing with fruit, she felt no resentment toward him. He gave her a look of mute inquiry and appeal, as he started the horses, and Nell nodded and smiled pleasantly in return, to reassure him of her good-will. Rufus, and even her father, endeavored to persuade her not to change her plan about the preserves. "How glad we would all be to have you win a premium; and I think such success would deserve a present beside, from some one who approves of a bright, helpful daughter," said Mr. Gillis. These expressions were very encouraging, yet all the fine Early Crawfords were gone, and Nell thought that no other peaches would do so well.

She spent several of the long summer days with her mother, helping to fill the fruit-jars with preserves, and the result of their work was never more satisfactory. The polished glass seemed to contain liquid topaz and rubies, so clear and richly colored were the fruits and syrups within them. Nell labeled each one carefully with a little slip of white paper, upon which she had written the name of the fruit it held; and she arranged them all in even rows

along the cellar shelves. Not so much as a single jar was missed. While she was about this work, Rufus examined one of the jars, and after persuading her to let him sample the fruit, declared it to be superior to any that she had yet made.

"This very jar shall go to the fair," he exclaimed; "it is the best I ever tasted."

"You are very complimentary to mamma," observed Nell. "You know that she put up all of this fruit; I only assisted her."

These remarks settled the question, and no more was said about it. During fair time the Gillis family usually spent a few days in town. They all enjoyed the change, and profited by their observations of the various things exhibited. When driving to town over the winding turnpike, they saw a single horseman come in sight ahead of them, and as he approached, the gaunt figure and sunburned face of Chauncey Kenyon were soon recognized. Spurs jingled upon his heels, and he kept his horse in hand by a bridle gaily decked with chains and pendant horse-hair tassels that danced with every motion. On reaching the carriage he stopped and asked for a word with Nell.

"I've got a present for you," he said to her, holding out a small crumpled-newspaper package. "You can do somethin' with what is inside when you get to town, I guess. You recollect I upset your sauce and made you cry, and this is to pay you back a little."

Nell held the small, musny roll in her hand, and he had spurred his horse by them before she could reply. Unrolling it cautiously, she found that it contained a wide-mouthed vial half filled with grains of gold intermixed with rough garnets, which he had evidently panned out of the creek that flowed near his house. On reaching town, she took her present to a jeweler and had the stones, which were of a yellowish-red hue, set in a bracelet. When this jewel was finished it pleased her so much that she looked at the tempting jars of jellies and preserves at the fair with but little regret that hers was not among them.

She noticed a jar of peaches that appeared familiar, and examining it more closely, recognized her own writing upon the label.

"Look at your preserves, mamma," she exclaimed; "Rufus must have brought them here for you."

She guessed rightly, as he admitted when she asked him about it. This interest added to their enjoyment a new charm, and no premiums were more anxiously looked for than those upon the preserved fruit. Mr. Gillis came in one afternoon and exclaimed proudly: "Your peaches have won the first premium—" He was interrupted by Rufus and Nell, who mingled their lavish praises, bringing a rare bloom to their mother's cheek and a new light to her eyes. To be so appreciated, she found a delight more precious than any treasure would have been to her. Nell was elated over her new bracelet, and so this proved to be the most pleasant visit they had ever made to the fair.

### Why He Went Out of the Business.

"I hear that Smith has sold out his saloon," said one of a couple of middle-aged men, who sat sipping their beer and eating a bit of cheese in a Smithfield-street saloon the other night.

"Yes," responded the other, rather slowly.

"What was the reason? I thought he was just coining money there."

The other nibbled a cracker abstractedly for a moment, and then said: "It's rather a funny story. Smith, you know, lives on Mount Washington, right near me, where he has an excellent wife, a nice home and three as pretty children as ever played out of doors. All boys, you know, the oldest not over nine, and all about the same size. Smith is a pretty respectable sort of a citizen, never drinks or gambles, and thinks the world of his family."

"Well, he went home one afternoon last week, and found his wife out shopping or something of that sort. He went on through the house into the back yard, and there, under an apple tree, were the little fellows playing. They had a bench and some bottles and tumblers and were playing 'keep saloon.' He noticed that they were drinking something out of a pail, and that they acted tipsy. The youngest, who was behind the bar, had a towel tied round his waist, and was setting up the drinks pretty freely. Smith walked over and looked at the pail. It was beer, and two of the boys were so drunk that they staggered. A neighbor's boy, a couple of years older, lay asleep behind a tree."

"My God, boys, you must not drink that," he said, as he lifted the six-year-old from behind the bench. "We 's playin' s'loon, papa, and I was sellin' it just like you," said the little fellow. Smith poured out the beer, carried the drunken boy home and then took his own boys in and put them to bed. When his wife came back she found him crying like a child. He came back down-town that night and sold his business and says he will never sell or drink another drop of liquor. His wife told mine about it, and she broke down crying when she told it."

This is a true story, but the name was not Smith.—Pittsburg Dispatch.

A BASTING MACHINE capable of doing the work of 25 girls is being used experimentally by a large clothing firm in Boston, and the Knights of Labor are giving it their attention.

### Girls, Novels and Sentiment.

EDITORS PRESS:—We do not believe the columns of your paper are as free as the politicians would have us believe speech is in this country, nor yet with "Josiah Allen's wife" would we question, "How free?" But we trust since the "Girl of Twenty" has introduced the subject of reading, you will extend the courtesy of a small space in your paper to a few queries from another girl.

With all due respect for the gentle teachings of a "Woman of 4-," we are almost persuaded she is inclined to be severe with those of us who are forced to mature early. Therefore, it is immaterial if we are unknown beyond the walls of our sanctum (the kitchen), nor that we come of a somewhat modern family, clan, tribe or what not, who know as little of us as we of them, since we have not cared to trace the "bones of our ancestors" beyond the night that Noah entered into the ark. Of our immediate parents, of which we had two, we are more ignorant than we ought to be, they having left us to shift for ourselves (a thing of which we do not approve), at a verdant and tender age. Suffice it to say, they were respectable and intelligent (a trait they forgot to transmit), and of whom we might add, like Napoleon's brother Joseph, they were "too good to be great."

We live in the country—pure, primitive and solemn as it came from the hands of the Creator. There are no advantages of any kind, save gossip and a "school for scandal," in which no tuition is charged but which proves rather expensive in the end. All the other resources at hand to enliven the 365 days of the annual cycle are self-made, including the Fourth of July operations of dish-washing, baking, brewing, scrubbing and such like esthetic duties that come in civilization's train.

Periodically the great monthly magazines fall like so many meteors from a distant literary system, creating panic and consternation in our midst, we are so like the celebrated "Paul and Virginia" in one. This bait thrown in from the outside world relieves the monotonous excitement of our labors, and with the fierce appetite of a Roman gladiator we gather up our manna and proceed to digest it, clinging to it like a vampire.

For the time being we forget in these cultivated guests that the great hum of social life is not touched by the hem of our garments—that we are far beyond its ken.

We are too poor for luxuries; but in the struggle we have managed, by strategic economy, to save a few pittance for books that are veritable treasures to us, representing, as they do, many sacrifices. Withal a meager list, and eyed askance by our sentimental sisterhood; our choice lying, as it does, in books of natural history, history, biography, travel, science and the like. And in consequence we are accounted a youthful "blue stocking," and we are shunned accordingly. Not much sentiment, perhaps, but are we to be blamed if the "fever called living" matures us prematurely? Are we wrong to discount sentiment, and taboo the ordinary novels? Are we any the less womanly for it?

'Tis a hard battle at best that some of us have to fight, even when we can call to our aid patience and endurance to soothe the friction of

"Life's endless toil and endeavor."

Because we do not care for any but the choicest fiction are we necessarily cold and uncharitable? Have we not "heart histories" sufficient in life? And as a "Woman of 4-" told us, they are wonderfully like life, as witness the sensation and rebuke created by the finale of William Black's "Macleod of Dare."

'Tis better to banish the memory of these heart-aches by reading of a remoter nature. Ours is but the nucleus of a library, and we fear it may remain in its nebulous condition for years to come. But it hints of green pastures and flowing waters and ruins in ancient countries, travel, famous scenes, Meccas, history, art *ad infinitum* in that far-off "Beulah Land" we hope to traverse in the future. All things are possible to those who wait. However, we are quivering with desire, awaiting Sandalphon's pleasure. In the meantime we must keep on reading. Shall it be novels?

Josh Billings' substitute for wisdom was silence. It might be better for us to practice it. We are searching for the knowledge of good and evil. Pope said:

A little learning is a dangerous thing;  
Drink deep, or taste not the Pierian spring.

We heard an intelligent lady decrying advanced education only the other day. Fortunately she had not Goldsmith's words, "We grow learned, not wise, by too long a continuance at college," as a weapon to use against us. Not having possessed many of the good things of this life, we are open to conviction in this.

Being of the laboring female persuasion we have wrestled too much with life's great "furnace." The novelty has worn off and we sigh for relief. In all humility we ask for it in some shape. A dessert of novels is all right; but shall we cultivate sentiment by the wholesale?

Have we not enough and to spare by nature? Are we not impractical to a sad degree now?

Sentiment is well enough for ladies and gentlemen of leisure; but it will not earn a loaf of bread nor stave off starvation.

It leads to expectations that can never be realized. Ninety-nine girls out of a hundred expect in due time to marry. Yet they must

link their fortunes with men who banish sentiment at the altar. Henceforth the wife is relegated by her teachings to a life of disappointment, while her husband goes on his way rejoicing. Is it not so, girls? Sentiment as fostered by novels exclusively has the wings of riches.

Those having homes can afford to be indulgent to themselves if it shall please them. With working girls it is different, and something is radically wrong with a rule that will not work both ways.

How many mistresses would employ girls addicted to novel-reading? It grows upon one like the vice of opium or any other elysium-breeding drug. Can we hope to wash our dishes in nectar and survive the consequences? Who will broil the steak or bake the bread if the maid is a novel "fiend"?

"But why carry it to excess?" We do not. This is a terrible appetite, once formed, for sensational reading. It becomes an Erebus with which we cannot grapple. Granted an inch, it takes an ell. Some have not the judgment to discriminate, and novels become an ugly weapon with them.

Girls are in many respects like sheep—they must follow a leader, and they require a guard; for they, as a rule, are as helpless in an emergency or when danger threatens as real lambs, and are about as trustingly led to the slaughter.

Precedent is to girls everything—one would think so, at least. We know of a lady verging on three-score years whose mental repertoire is a series of sensational novels. She reared her daughters and granddaughter on a diet of the same trash. The granddaughter dreamed the days away with dukes and duchesses of a visionary creation, affected their ways, became morose and discontented because she was not as radiantly beautiful as her heroines, and finally, for a trifling offense, threatened to commit suicide. Only her aunt's hard, practical advice to "do so if she wished" brought the girl to her senses. It makes a girl prematurely old to read novels, if it does no worse.

Who of our readers would recommend a *Police Gazette* to a woman of refinement? Yet we could "name the names" of some who have gone as far in the search for sensations, and one a schoolmistress.

The days are long past when one's choice was perforce limited to "Pilgrim's Progress," "Rollin's History of England," and "Mother Goose Rhymes." There is a wide field of unexceptionable, charming literature, fresh and crisp, no trace of the "dust of ages" about it. Living close to the heart of mother nature, as the majority of rural individuals must, how few there are who know of the writings of such naturalists as Audubon, Thoreau, Burroughs, and Gibson. To some it is like a dose of ancient Saxon, and the Chautauqua circle does not reach as far as we wish it did, to assist them.

Go into a bookstore and see what novels three-fourths of the pretty feminine customers, bright, clever-appearing women, inquire for.

We enjoy as well as any one a good, wholesome novel, but it is not satisfying as a staple of food. Let your advice be sound. We girls are buried in Cimmerian gloom, but when we seek the light don't thrust us back. The question of reading becomes complicated—a babel of confusion. There are those far wiser than we. Influence is a great deal.

These theories may militate against yours—may sound aggressive. I submit them humbly. The most of us, then, must put sentiment aside. If it is our birthright we must sell it for a mess of pottage; but we wish its equivalent to do us good and not evil all the days of our life.

We ask for wheat, not chaff! Don't give us stones for bread! Don't place stumbling-blocks in our way! Rather help us to be "lifted up and strengthened." "Our pleasant vices are made the whips to scourge us."

WORKING GIRL.

**NO HEALTH IN IT.**—At a reception by the British National Temperance League, given to the Colonial and Indian delegates, Dr. B. W. Richardson, who presided, said: "They had learned that alcohol, unlike food, acted exactly as a medicinal agent. With regard to its (alcohol's) action, they had discovered that, in the words of the general confession in the Book of Common Prayer, it did those things which it ought not to have done, and it left undone those things which it ought to have done, and there was no health in it. It caused diseases, 24 of which were known to be specifically produced by it, and every day medical science detected more injury arising from its use." Dr. Richardson is a high and honorable authority. He is an M. D. and an F. R. S., and an honorary member of the American Philosophical Society of Philadelphia. He is well known to his profession as the maker of important discoveries, and as the author of valuable medical treatises. In his indictment of alcohol he is probably giving the results of his own experiments.—*San Diego Union*.

**CARRIAGES IN CHINA.**—A paragraph is going the rounds to the effect that the Emperor of China has ordered a carriage in this country, the implied inference being that they have hitherto been unknown in the Flowery Kingdom. As a matter of fact, as far back as the days when Lord Macartney went on embassy to that potentate, he took with him English carriages as presents from Great Britain. They were found still unused in the summer palace when it was looted by the French 20 years ago.

## YOUNG FOLKS' COLUMN.

### The Three Giants.

[Written for the RURAL PRESS by MRS. J. HILTON.]

"O mamma! tell us a giant story," said little Lewis, one morning.

Mamma, who was sitting before the fireplace, looking at the fire, called Lewis to her and told him that there was a big giant named Fire, and that he had a lot of little fairies, and every time a lot of dry wood, or paper, or coal was put together the giant Fire sent some of his little fairies to it, and the fairies danced about among the wood or coal until they burned them all up. When the sparks were thrown out, it was the fairies telling us to learn to be cautious and never play with them, for they say: "We will burn everything that will burn. If you use me well I will use you well and will serve you nicely; but just look out, for although I am a little fairy now I grow into a giant very quickly. Mammams and papas tell little boys and girls to be careful of me. Some little folks think they know more than papa or mamma, and come playing around me. Don't I pinch them quick, though, when they are so foolish? Then, when old Jack Frost has been pinching them, if they come near me I kiss them and make them warm and happy. But I will not be played with, because I grow too fast if I am allowed to play, the big giant, my papa, says. Oh, I tell you I have seen my papa very angry when some one has been careless. Whole houses and barns and even towns have had to disappear when he gets angry. Many little folks have lost their papas and mammams, and their brothers and sisters, and have even been burned up themselves, sometimes, when a little fairy Fire has been played with. So remember, little Lewis, and all the little—yes, and big—folks who read or hear read the RURAL PRESS, and don't play with Fire."

There is another giant who has lots of fairies, and his name is Water. The sea is the giant, and the rivers and brooks and the tiny rain-drops are the fairies. Some of the fairies go dancing through the grass and sparkle in the sunshine, and when the little rain fairies come dropping down so gently, moistening the earth and making the seeds to burst their shells, and the lovely little green spears of grass and grain spring up, how we love the tiny fairies. Sometimes they gather together so fast and get so large that they wash away the banks of the rivers and creeks and run all over the land, breaking up and destroying everything they touch. Then we are afraid of big giant Water, and he tells us that if we are not careful he will destroy us too. But God has given us sense to know how to use these giants, and if we use our senses we can make them useful to us. Those of us who have not lived long enough to have much experience with those giants and fairies must listen to and heed those who tell us how to use them.

Before I close these fairy and giant stories, I want to caution the readers of the RURAL as I did little Lewis, to beware of the Water-giant that has the Fire-giant in it. If you play with the little fairies that are sometimes put into glasses such as we drink out of, they grow fast, very fast, and they burn up and wash away not only the body but the soul. Be careful of the Fire-giant, be careful of the Water-giant; and, dear ones, be doubly careful and have nothing at all to do with the giant Fire-water.

Los Alamos.

### From Our Younger Readers.

#### Lake County Notes.

**EDITORS PRESS:**—As there is much talk about mixed farming in Lake county, I thought I would write you a few lines on the subject. Mixed farming is a thing which is carried on with good success in Lake county. Some people have their dairy, poultry and apiary and have fruit such as the peach, apple, pear and plum and a great many other kinds, and the grape-vine also grows splendidly. There is some talk of planting out the olive tree. Most all kinds of small fruit do well in Lake county, such as the blackberry, gooseberry, raspberry and currant. We have just finished picking a large crop of blackberries, which began ripening the last week of June. Vegetables do well here, and all kinds of grain are grown without irrigation. There is some talk of a railroad to be built through this county, the supposed terminus being the redwood forests in Mendocino county. There is considerable vacant land being taken up, and there are several cabins being built on the brushy hillsides.

Our fall term of school has opened. Our teacher's name is Mrs. Sherwood, and we all like her very much. There was a campmeeting held down near Kelseyville, and we have had two weeks' vacation.

Peaches are surely very scarce in this part of the county.—MINNIE FERGUSON, *Kelseyville, Cal.*

#### The Spider.

**EDITORS PRESS:**—We would hardly call a spider an insect, because a spider has eight legs and an insect has six legs. The spider makes her nest out of a web which is very strong. I expect you have seen a spider's web and some-

times notice a fly in the web kicking and struggling for life. I remember that I used to catch flies for the spiders.—H. P. C., *Poway*.

#### Tuna Birds and Roses.

**MRS. J. HILTON:**—The birds that eat blackberries is the Tuna bird. Will you tell me what I shall do with roses to keep them blooming all the time?—LEWIS L. STARR, *Lugonia*.

## GOOD HEALTH.

### Sunstrokes in California.

**EDITORS PRESS:**—In an article in your paper of recent date there was some speculation in reference to the cause of sunstrokes that have occurred in California during the past summer. Now, it occurs to me that the cause of these sunstrokes will be found in the fact that thunder showers have been so much more frequent this season than in previous years. These thunder showers, wherever they occurred or wherever there was cloudy, damp weather, during which they were likely to occur, produced exactly the same kind of an atmosphere that causes sunstrokes in the Eastern States. I think that if the facts are ascertained, it will be found that in every instance where these cases of sunstrokes have occurred there existed a humid state of the atmosphere, which has been so much more common during this season than during previous years.

Covelo, Aug. 28, 1886.

**SUCCESSFUL TREATMENT OF SCIATICA BY MASSAGE.**—Prof. Max Schuller, of Berlin, is convinced of the superiority of massage over other measures employed in the treatment of sciatica, and relates his experience of 15 cases—all in males, and except in one or two instances due to exposure to cold. Most of the cases were dealt with from the first by massage; but in a few instances electricity, vapor baths, etc., had been fruitlessly employed prior to coming under his care. The *modus operandi* is as follows: The patient lies on the unaffected side, with knees and hips slightly flexed. The course of the sciatic nerve is rubbed from below upward, partly with both thumbs, partly with the ball of the little finger or thumb; sometimes struck with the closed fist, sometimes the muscular mass over the nerve pressed and kneaded with both hands. The pain evoked by these manipulations soon passes away, and after a short time becomes less and less at each sitting. The neuralgic pains very soon abate, diminishing after a severe and painful massage, then recurring with less severity, and gradually disappearing entirely. The power of walking improves after each sitting. On an average the treatment lasts about two weeks and a half, but in one case nine days, and in several from 10 to 14 days, sufficed. One patient abandoned the treatment after five days, owing to the pain caused by it, and tried, without relief, a fortnight's course of electricity and vapor baths; he then returned to the massage treatment and was cured in two weeks and a half.—*Lancet*.

**LEMONS FOR "BILIOUSNESS."**—The lemon treatment of biliousness is quite fashionable at present. Most people know the benefit of lemonade before breakfast, but few know that it is more than doubled by taking another at night also. The way to get the better of the bilious system, without blue pills and other drugs, is to take the juice of one, two or three lemons, as appetite craves, in as much iced water as makes it pleasant to drink without sugar, before going to bed. In the morning, on rising, at least half an hour before breakfast, take the juice of one lemon in a goblet of water. People must not irritate the stomach by eating lemons clear, but diluted properly, so as not to irritate the throat, and taken on an empty stomach, the improvement is marked.

**COCAINE**, which has heretofore proven a useful remedy for such a variety of ills, is now claimed to be a preventive of seasickness. A Russian physician, having occasion to make several journeys by water, claims to have thoroughly tested its virtues in that direction, with almost magical effect. Several others have tried it under his advice, with equal success. The same physician, M. Manassein, of St. Petersburg, also claims that the drug is an effective remedy for cholera morbus, and thinks it probable that it may also be found useful in cases of Asiatic cholera.

**FATALITY IN MINING.**—In England in coal mines alone, since 1851, over 36,000 lives have been lost, and during the last 10 years upward of 12,000 lives have been lost, giving an average of more than 1200 a year.

**PHOTOGRAPHING CANNON-BALLS.**—It is well known that cannon-balls have been most successfully photographed when on their flight from the cannon's mouth, but it seems that quite recently such photographs have been obtained, many of which show, in a remarkable manner, the head of condensed air which precedes the shot. It is this head of condensed air which makes it almost impossible, even for the most skillful rifleman, to hit an egg-shell suspended by a longish thread; and doubtless it is this "head" of condensed air which first wounds when an animal is hit by a rifle shot.

## DOMESTIC ECONOMY.

### Pickle Points Wanted.

**EDITORS PRESS:**—Will you ask some reader of the RURAL PRESS to be kind enough to tell me how to make green string beans pickles? Also, to put up cucumbers in sweet water, so they will make their own vinegar and be nice pickles. B. J. S.

Eagle, Idaho.

**RASPBERRY SHORTCAKE.**—One quart of prepared flour, one tablespoonful of lard and one and a half of butter, yolk of an egg, beaten light, half-teaspoonful of salt, two cups of milk. Chop the shortening into the salted flour, stir egg and milk together and set the flour into a soft paste, roll out lightly and quickly half an inch thick, line a baking pan with the crust; bake 10 minutes in a good oven; draw to the door and cover quickly with black raspberries. Strew with sugar, lay upon them the upper crust, ready cut to the size of the pan, press lightly around the edges; shut up in the oven and bake until nicely browned. You may put both crusts raw, with the sugared berries between, into the oven all at once; but the lower may be made heavy by the process. Try both ways at different times. Send to table hot, cut into squares and split, buttering and sugaring before eating.

**CHILI SAUCE.**—Peel one-half bushel ripe tomatoes, 18 large red peppers and four onions. Chop all these fine. After chopping, squeeze out with the hands from their water, throwing the water away. Add to them four quarts best cider vinegar, two cups sugar, eight tablespoonfuls salt; four tablespoonfuls each ground ginger, cloves, allspice and cinnamon, also two tablespoonfuls ground mustard. Boil all together for two hours, then put into glass jars. Large, plump red peppers are much less sharp than the long, slender variety, so if the latter are used not over six or eight will be required.

**LENTIL SOUP.**—Take one pound of lentils and wash them in many waters, until thoroughly clean and free from weeds. Soak all night, then add as much more water as will make 2½ quarts. When this boils add carrot, turnip, parsnip, two onions and small pinch of carbonate of soda. Boil two hours, then strain, washing all thoroughly except the skins of the lentils, season, and serve. Lentil soup requires no meat, but a small piece of butter mixed with flour is an improvement, and serves to bind the soup together instead of separating into thick and thin.

**BEEF STEW.**—Cut underdone roast beef or steak into inch-long pieces. Have ready in a saucepan a cupful of skimmed gravy or broth, a quarter onion, minced very fine, a teaspoonful of minced parsley, a pinch of mace and a tablespoonful chopped cucumber pickle. Let it come to a boil, season well, thicken with a tablespoonful of browned flour, put in the meat and set in boiling water, closely covered, at the side of the range, for 20 minutes. If the meat be tough, chop it instead of cutting it up, then proceed as directed. Serve hot.

**LEMON JELLY CAKE.**—One cup of sugar, mixed with butter the size of an egg, one cup of milk, one egg, well beaten, and flour enough to make rather stiff, sifted with a heaping teaspoonful of baking powder, and bake in three jelly cake tins. For the jelly take the juice and grated rind of one lemon, one small cup of sugar, three teaspoonfuls of corn starch, mixed smoothly with a little water and one cup of hot water. Let all boil together until thick and spread on the cakes. This quantity makes two layers.

**CORN OYSTERS.**—One cupful of flour, half a cupful of melted butter, three tablespoonfuls of milk, two teaspoonfuls of salt, one-fourth of a teaspoonful of pepper, one pint of grated corn. Pour the corn on the flour and beat well; then add the other ingredients and beat rapidly for three minutes. Have fat in the frying-pan to the depth of about two inches. When smoking hot put in the batter by the spoonful. Hold the spoon close to the fat and the shape of the oyster will be good. Fry five minutes.

**BATTER AND FRUIT PUDDING.**—Chop up one pound of apples and put them in a greased pudding basin (gooseberries, plums or any other fruit will do), and sprinkle sugar over them; now make a batter of one egg, six ounces flour and one breakfast-cupful of milk; one-half a teaspoonful of baking powder must be added to the flour; when the batter is smooth press it over the fruit and steam gently for one hour; care must be taken that the water remains boiling and does not evaporate too much.

**TOMATO CATSUP.**—Cut up and stew ripe tomatoes, but do not peel them. When sufficiently cooked, strain through a sieve. To one gallon of the tomatoes, measured after straining, add four tablespoonfuls of salt, four tablespoonfuls of ground black and white pepper, three tablespoonfuls of ground mustard, three red peppers chopped fine and one pint of vinegar. Simmer all together slowly for four hours, then bottle and cork tight.

## SAN FRANCISCO:

Saturday, Sept. 11, 1886.

## TABLE OF CONTENTS.

**EDITORIALS.**—Admission Day; Cascara Sagrada;  
The Three-mile Line, 221. The Week, Earthquake  
Theories; Geronimo's Surrender; The Wire Age; Live-  
stock at the Golden Gate Fair, 228. Big Noses;  
Placer County at the Mechanics' Fair; How Can They  
Live; Concerning Poets, 229.

**ILLUSTRATIONS.**—Cascara Sagrada (Rhamus Pur-  
shianus), 221.

**CORRESPONDENCE.**—Napa County; Codlin Moth  
vs. Sweet Lures, 222.

**THE APIARY.**—Handling Bees, 221.

**HORTICULTURE.**—Care of Orchards; Codlin  
Moth, 222.

**THE STOCK YARD.**—Cattle Outlook in Nevada  
and Elsewhere, 222.

**THE VINEYARD.**—California's Raisin Industry,  
223.

**POULTRY YARD.**—Spice for September; Chicken  
Cholera; Ridding Poultry Houses of Vermin, 223.

**THE DAIRY.**—Bandaging Cheese in the Hoop; Ayr-  
shires for Cream, 223.

**PATRONS OF HUSBANDRY.**—Interesting  
Grange Meeting; The Coming Farmers' Convention;  
The Late Mrs. H. G. Mackie; State Grange Literary  
Exercises; Memorial Resolutions; Stockton Notes,  
224.

**AGRICULTURAL NOTES.**—From the various  
counties of California, 224-25.

**THE HOME CIRCLE.**—Remember Boys Make  
Men; One Fair Time; Why He Went Out of the Busi-  
ness; Girls, Novels and Sentiment, 227.

**YOUNG FOLKS' COLUMN.**—The Three Giants;

## The Week.

What with repeated shuddering of the  
ground in Southern Atlantic States and gentler  
tremors in northern California, the symptoms  
of out-breaking cholera in Japan and countries  
bordering on the Mediterranean, and telegrams  
as to the unstable peace of Europe, the Bible  
words come fittingly to mind: "Ye shall hear  
of wars and rumors of wars \* \* \* and pes-  
tilences and earthquakes in divers places." The  
stir of political conventions and striking seamen  
and workmen is in the air of the city, while  
not a few interior towns are enlivened with the  
more peaceful bustle of autumnal fairs. The  
unwonted sultriness of San Francisco, this  
Wednesday afternoon, seems hardly in keeping  
with the reported flocking to the marshes of  
the San Joaquin and appearance in San Diego  
county of those migratory birds whose coming  
is wont to prove the near forerunner of cold,  
rainy weather.

## State Fair.

The State Fair is being largely attended, and  
a fine exhibition of stock and good show in the  
pavilion are reported. We shall be able to give  
our readers important reports next week.

## Earthquake Theories.

The slightest earthquake tremor sets people  
to thinking. Nature is so reticent and freak-  
ish that no one knows what dread visitations  
may be on her program for the future. The  
recent physical disturbances in New Zealand,  
Greece and Italy, the terrible throe that has  
wrecked the beautiful city of Charleston, and  
the little jolt we had the other day in Cali-  
fornia, have started the editors and other per-  
sons of an inquiring turn of mind to searching  
the encyclopedias and other available books of  
reference, to see if they can learn the cause of  
such convulsions. But they will find the bit-  
ting satire of Bishop Watson, many years ago,  
that geologists were like a fly sitting on the  
back of an ox trying to make out what was go-  
ing on inside of him, is still largely true.

The cause of earthquakes is still shrouded in  
conjecture, but the theory has undergone a  
radical change within a few years. The well-  
known fact that every volcanic eruption is  
announced by precursory earthquakes, the vio-  
lence of which subsides as soon as the pent-up  
energy finds vent, long caused the belief that  
an earthquake could not occur without volcanic  
activity, open or masked, because not strong  
enough to force an outlet. The volcanic throb  
is still regarded as a cause. This was certainly  
the case in New Zealand, where many active  
volcanoes, geysers and mud springs abound,  
especially in the North Island, and prove that  
the crust in that whole region is still very thin,  
and that the chemical processes which have  
been finished in other parts of the earth are  
still in active operation here. The shifting of  
a large quantity of solid matter through a  
small space in the earth's crust is now believed  
to furnish an explanation of most of these dis-  
turbances. The concussion causes the vibratory  
motion described as "the shock."

The fact that earthquakes more frequently  
occur near the sea coast than far inland is  
thought to furnish collateral proof of this  
theory. It is well known that the vapor taken  
up in the air and precipitated as rain and snow  
is rapidly denuding the mountain slopes. Some  
idea of this mighty denudation may be formed,  
when geologists tell us that through the agency  
of trickling rills, mad torrents and sedate  
glaciers, the very Alps have been half wasted  
away, and where once even greater Alpine  
ranges ran, now a continent of rounded, grassy,  
forest-covered hills remain. This vast mass of  
detrital matter is carried down to the ocean  
and deposited near the coast line. Under this  
constant accumulation, the floor of the ocean,  
in time, becomes heavier than the adjacent  
land. The consequence is, there is an unequal  
pressure, which increases till it overcomes the  
cohesion of the subjacent rocks and the sea-  
floor gives way or caves in. The movement  
that restores the equilibrium may be so slight  
as only to cause a faint tremor, such as was ex-  
perienced last week in parts of this State, or it  
may be so violent as to produce the terrible  
shocks in South Carolina and over a wide area  
of our Southern Atlantic States. In either  
case it is a compensation to the influence that  
has been slowly destroying the land at the ex-  
pense of the sea.

But this explanation will hardly furnish the  
cause for the earthquakes that are felt far from  
the sea. The cause of these inland tremors is  
sought in the shrinkage of the earth's interior,  
owing to the slow cooling that has been going  
on since the earliest geologic times. The rigid  
crust is left behind in an arch-like shape, resist-  
ing the tremendous force of gravity toward a  
common center. This resistance must be tem-  
porary; it cannot always endure. At some  
point the bent and folded strata will break;  
there will be fractures, abrupt movements,  
"simple cavings-in in deep cavities," as one  
writer puts it. These displacements grow  
more rare and small in extent as the planet  
grows older and its crust thickens, but the  
quantity of matter displaced is still quite large,  
and the force generated is proportionately great.  
For instance, it has been calculated that the  
force exerted in the earthquake along the At-  
lantic seaboard in January, 1885, was due to  
the displacement of 400 cubic miles of rock only  
to the extent of two inches, and yet the shock  
was felt over as extended an area as the one  
last week, though not so violent. And yet,  
gigantic as this may seem, it was as the gentle  
motion of a feather compared to the mighty  
convulsions that marked the earlier history of

the globe, when the mountain ranges were  
thrown up on the crests of a molten sea and  
the continents shouldered out of the seething  
flood. We may project our fancy to a time in  
the future when the cooling process will have  
so thickened the earth's crust that such col-  
lapses will no longer be possible.

## Geronimo's Surrender.

The Apache war has at last come to a close.  
On the 13th of July, Capt. Lawton, who has  
been unusually active and vigilant, surprised  
the hostiles' camp on the Arras river in Sonora  
and captured all their stock. The Indians then  
raided through the districts of Saueripi and  
Ures, burning houses, killing a number of peo-  
ple and securing fresh horses. They then at-  
tempted to reach Arizona, leaving a track of  
blood and fire behind them. Capt. Lawton  
camped closely on their trail, and Gen. Miles  
promptly rushed fresh troops toward the line of  
march to head them off. This movement was  
completely successful. Confronted by a large  
American force at Fronteras, Geronimo, with  
his characteristic cunning, made overtures of  
peace to the Mexican authorities. The Prefect  
of Arizpe went to Fronteras to treat with them.  
Geronimo took advantage of the truce and  
broke camp in the night, again pushing toward  
the Arizona and New Mexico lines. Lawton's  
vigilant eye was upon him, and after two days'  
hard marching over bleak and craggy mount-  
ains that seemed almost impassable, he again  
caught up with Geronimo near the junction of  
the Barispe and San Bernardino rivers. Geron-  
imo now made overtures of peace to the Amer-  
icans, and went in person to Capt. Lawton's  
camp. He said that he and his men were tired  
of the war and wanted to surrender, but want-  
ed to be assured that their lives would be  
spared; that his two wives should be brought  
back from Florida, and that he and 19 of his  
men be given a separate reservation. The  
terms were rejected. Geronimo hesitated, par-  
leyed, but in the meantime was so completely  
surrounded that escape was impossible. At  
Skeleton Canyon he at last concluded to  
surrender unconditionally, and he is now  
safely under lock and key at Fort Bowie.  
There is great rejoicing in Arizona, and  
the citizens of Tucson last Monday held  
a tremendous mass-meeting to celebrate  
the capture of Geronimo and his hostile band.  
Cannons boomed, rockets lighted up the heav-  
ens, speeches were made, and a series of resolu-  
tions were adopted highly complimentary to  
the military skill, bravery and determination  
displayed by Gen. Miles and Capt. Lawton in  
the prosecution of this campaign. For cease-  
less vigilance and relentless pursuit through an  
unknown land, it perhaps has few parallels.  
The question now is, What shall be done with  
Geronimo and his brutal gang of murderers?  
The verdict is they are bloodthirsty fiends,  
and the sooner sent to the happy hunting-  
ground with a rope around their necks the bet-  
ter. This is the way the British authorities in  
Canada treat all such savages, and their fron-  
tiers are rarely disturbed by Indian raids and  
massacres.

## The Wire Age.

We have had the stone age, the bronze age,  
the iron age, and it is likely the future annalist  
will describe this period of American history as  
the wire age. In no part of the economy of  
daily life are we separated from wire. Sleep-  
ing, we repose on wire mattresses. Eating, we  
see foods that have passed through sieves,  
which are sheltered from the flies by wire cov-  
ers. Calling, we pull wires to ring curled-wire  
gongs. Traveling, we are conveyed by cable or  
electric railways, hoisted by elevators hung on  
wires and hurried over wire bridges. We an-  
nounce our coming by telegraph or telephone  
wires, and we thrud our way by night through  
streets lighted by means of electric wires.  
Across the prairies of the West are stretched  
thousands of miles of barbed-wire fences, against  
which dumb brutes protest, cowboys swear and  
draw the knife, and lawyers, juries, judges and  
reporters whet their intellectual blades. Our  
clocks are set by wires, our watches run by  
wires, our books are stitched with wires, our  
pictures hung on wires, and our politics man-  
aged by wire-pullers.

TRAMPS are overrunning Sonoma county in  
such force as to cause numerous complaints.  
They are reported swarming near Cloverdale.

## Live-stock at the Golden Gate Fair.

The Golden Gate fair always succeeds in gath-  
ering a fine display of horned stock. Coming  
the week before the State fair, and being at a  
convenient point for breaking up the journey  
thither, the leading breeders from around San  
Francisco bay come together there and have a  
general tilt for premiums before they meet the  
larger competition at Sacramento. This year,  
however, there was an important contribution  
in the shape of a Shorthorn herd from Tulare  
county, as will be seen below.

There were not permanent sheds enough this  
year to accommodate the exhibitors, so tempo-  
rary ones were constructed near by. This, of  
itself, shows that the exhibit was a large one.

First, on turning the corner from the en-  
trance gate nearest the railway, the writer  
found the well-known herd of Col. Younger, of  
San Jose, occupying its usual stalls. This herd  
is, perhaps, the best known show-herd in the  
State, as it has for years occupied a prominent  
place at the leading fairs. Col. Younger is a  
pioneer in the upholding of the Shorthorn in-  
terest, and he is now ably seconded by his son,  
Ed. Younger, who has a good eye for animals.  
The herd seemed to us in excellent condition.  
There were 20 head on exhibition, of which the  
2-year-old, 3d Kirklevington, of Forest Home,  
is undoubtedly a bull with a future before him.

Next in the order of the stalls was the Short-  
horn herd of Hyde & Moore, of Visalia.  
Although this herd has been mentioned in the  
RURAL, we have not had an opportunity of  
looking them over before. We were much grati-  
fied with the examination, and we are glad to  
know that such cattle are so well placed in the  
rapidly progressing county of Tulare. There  
were 10 head in good breeding condition, which  
gives the common farmer a much better chance  
to judge them than if they had been put in the  
highest show condition. The cows were fine  
specimens, and Kaweah Dukes 3d and 5th, one  
a yearling and the other a four-months' calf,  
were noticeably good.

Next came Thomas Ward, of Oakland, with  
his yearly increasing herd of well-bred Jerseys.  
Mr. Ward is a most careful and enthusiastic  
breeder. His cattle are his pets, and they are  
showing themselves worthy of his care. He  
has now 17 head. His bull Oakland Chief is  
a splendid animal, and the cow Oakland Bess is  
a worthy companion. Mr. Ward has a 10-  
month-old bull, bred by Camron, Prince of  
Tulare, which he has just had registered, and  
which bids fair to bring new honors to the  
herd. We are glad to see Mr. Ward's success  
in breeding and building up a good herd. He  
began small, with a single cow, if we mistake  
not, and now, by breeding and purchase, is com-  
ing into merited prominence.

The next herd was Tyler Beach's Ayrshires,  
14 head, including the bull Narragansett Chief,  
the latter bred by Peter Coult. The herd  
may be trusted to figure well in any premium  
list. As to the quality of their cream and  
milk, the guests at Mr. Beach's St. James  
hotel, in San Jose, can well testify.

Mr. J. H. White's splendid Holstein herd,  
from Petaluma, occupied the next 15 stalls.  
This herd is already well known to our readers  
through our Petaluma correspondence. The  
cattle show their breeding in every outline and  
feature, and justify the prominence which they  
are attaining.

Mr. F. H. Burke, of Madison & Burke, S. F.,  
had an interesting display of 16 head from his  
ranch in San Mateo county. Mr. Burke is a  
thorough believer in Holsteins, and his cir-  
culars giving his ideas of the breed are worth  
reading.

George Bement & Son, of Redwood City, ap-  
pear as usual with their Ayrshires. George  
Bement, Jr., who is now associated in the own-  
ership, has the responsibility of the herd, and  
he is well fitted for it by taste and training.  
We are glad to see the young men coming for-  
ward in important branches of agriculture.  
Bement's herd has for years occupied a leading  
place at the fairs, and it is gratifying to see  
that the breed is gaining ground, as other  
breeders are contesting the honors. Mr. Bement's  
cattle have been handled and bred with  
care for years and have shown their quality by  
the milking records which are kept in the herd.

Occupying the right flank of the stock ex-  
hibit were the herds of Page Bros., of Cotate  
ranch, Sonoma county, and Robert Ashburner, of  
Baden, San Mateo county. Just as we came to

them the stock were ordered out for parade and we defer our comments upon them until we see them again at the State Fair this week.

There were several creditable small exhibits. One was Andrew Smith's Shorthorn bull, Pharaoh, 60,664, and a good grade cow. Capt. Travers showed a very handsome graded Jersey cow, with horns as beautifully curved as a classic lyre. Peter C. Anderson, of Oakland, had a small group of grade cows, one named Fanny, a magnificent animal and evidently a deep milker. F. Rosenstock, of Oakland, had two good cows and a calf. George Ely showed a good Jersey bull calf, Charlie.

The display of swine and sheep was small, but included good specimens. Andrew Smith, of Redwood City, had a fine lot of his Berkshires from imported stock. George Bement & Son had a pair of Essex, showing the good marks of the breed. The sheep show consisted of R. H. Crane's Petaluma flock, which was favorably mentioned in our report of the Petaluma Fair in last week's RURAL.

## Placer County at the Mechanics' Fair.

Any one who likes to look at fine fruit, particularly if he is interested in the advance of California horticulture, can easily find enough to engage his time through one long visit to the pavilion in scanning the Placer county exhibit. This is placed under the middle of the south gallery—to the left as you enter the building. The principal table is in the form of a hollow square, about 30 feet on a side, and is wide enough to bear four ranks of ample plates. Within the square are three more tables, each 15 feet long, and still others have had to be provided outside to catch the overflow. Upon these are 600 or 700 plates of clean, beautiful fruit, neatly displayed in great variety, grapes, pears, apples, plums and peaches forming the bulk of the output.

The grapes, as a class, would be noticed as choice specimens; the size and perfection of the individual berries, as well as the weight and symmetry of the clusters, bearing witness to the care and judgment used in making the selections. As we looked, last Tuesday afternoon, upon the great, superb Muscats shown by G. D. Kellogg and J. A. Elliott, of Newcastle, L. A. Gould, of Auburn, and P. W. Butler, of Penryn, it appeared to us that one plate of the last exhibitor's held the handsomest bunch we ever saw—until we came to another! Then came the Rose of Peru, Black Morocco, Purple Damascus and Seedless Sultana, from parties already named, and others whom space fails us to specify. Zinfandels were shown by E. W. Maslin; the less familiar Verdelho by L. A. Gould, who also displayed the famed "Whoasco," with a medium-sized, oval, green berry. Elliott's Flame Tokays blazed with rare brilliance. W. A. Himes, near Rocklin, contributes 25 varieties, among which may be named Blue Malvoise, Sweetwater, Red Traumer, Catawba, Isabella, Malaga, Mission and Muscatelle.

Among the pears, the Bartletts of H. A. Frost, Dutch Flat, and J. M. O'Connor, Loomis, attracted our notice—those of the latter being distinguished by their brilliant red. L. L. Crocker, of Horse Shoe Bar, had a green Bell seven inches long and 15½ inches in girth, which it was easy to believe weighed two pounds six ounces. Beside Bartletts of fine, high flavor, C. F. Macy, of Iowa Hill, 2850 feet above sea-level, showed a Russet pear of 18 ounces and a Flemish Beauty of 19 ounces weight. And then there were Horseshoe Daisy, Easter Beurre and Winter Nelis.

There was a good assortment of peaches, embracing Salway, Late October, Day's Yellow Cling, Albright's Seedling, George's and Ward Late Clings, McDonald Cling and Corinne. Handsomest were the big McDevitt Clings, of deep rich hue, shown by J. A. Robinson, of Newcastle; and they had been two weeks upon the plate, as we were assured by Mr. J. J. Morrison, the courteous custodian of the exhibit. P. W. Butler, of Penryn, and G. L. Threlkel, of Newcastle, were well represented in peaches.

Hungarian prunes—great beauties, clothed with their delicate bloom, many of them double—were spread out lavishly. Coe's Golden Drop and Oregon Silver prunes, French prunes, Bradshaw and Columbia plums were beside them. The Yellow Egg plums, from H. A. Frost's, at Dutch Flat, 3400 feet above tide-water, were

most elegant. The dark purple wild plums, displayed by G. H. Davidson, of the last-named town, were very interesting. Though not so large as most of the cultivated varieties, they are of fair size and pleasant, piquant flavor.

Outside the railing, and not far from the plashing waterfall and cool grotto, were laid out the sound, bright mountain apples—three-score plates and upward of Baldwin and Bellflower, R. I. Greening, Newtown Pippin, Spitzenberg, showy Alexanders, Winesaps and Nickajacks, etc., etc. We cannot name them all, but the Canada Strawberry Gray is too conspicuous to be passed in silence. Among the contributors to this table were W. E. Linn, of Alta; E. Cavanaugh and John Smiley, of Iowa Hill; C. Hanson, of Colfax; and several parties from Dutch Flat. G. W. Snyder, of Damascus, claims for his orchard-site an altitude of 4100 feet.

Less prominent features of this exhibit were a few fine Brown Turkey figs, pomegranates, quinces, Spanish chestnuts, butternuts and English walnuts. Cases of East Indian curiosities and of garments worn in the days of our Revolutionary ancestors attract the eye, but are not claimed as products of Placer county. There is also a limited display of specimen vegetables, among which is a "pineapple squash," fair as alabaster and belted with five pair of uniform knobs.

A pleasing incident of our visit was the cheery, huddling irruption of some thousand glad-faced boys and girls from the public schools, a sight not less engaging and more moving than the fascinating fruits of orchard and vineyard.

## Big Noses.

The New Orleans States says:

There are some people in this world who should carry their noses in a scabbard, if for no other reason than to hide them from the public gaze. New Orleans is full of such people. Many of them have knotty, lumpy, flat, twisted and curly noses, which are a positive humiliation to the owners and a source of much mortification to the rest of mankind. But the ugly-nosed men and women need no longer suffer. The hour of their deliverance from ungainly breaks has come, and if they do not haul out the artillery and fire a salute it is their own fault. A Berlin surgeon has discovered the art of repairing and remodeling noses of all sizes and ages. He can take a nose shaped like an artichoke and by his peculiar method turn it into a beautiful and really classic snout. He bars nothing. The fact of the matter is, he invites the hideous, and pays a premium for it. The man with a nose twisted like a gourd handle or a ram's horn is his pleasure. The man with no nose at all is his delight and his joy.

Be all this as it may, there can be no doubt of the fact—we are not aware that Darwin mentions it—that in the struggle of life it is the big noses that win. It may not be exactly gratifying to one's vanity to be born with a huge nose, but it should be greatly soothing to his ambition, for men in all ages have thrown up their caps, kindled bonfires, and shouted after big noses. They are the men who have created epochs in history, founded States and empires and colossal systems of philosophy, science and theology. Plato, Aristotle, John Calvin, Swedenborg, Martin Luther, Newton and Galileo were all conspicuously endowed in this way. They have been the world's heroes from Julius Caesar to General Grant. They have been our leaders in law, literature, statecraft, science, music and invention. Washington, Franklin, Jefferson, Disraeli, Gladstone, Bismarck, Thiers, Goethe, Darwin, Beethoven, Mozart, Wagner, Fulton, Stephenson, and not only they, but all their famous contemporaries, predecessors and successors, have been marked with this symbol of greatness. A big nose is essential to the actor or opera singer. It is a mark of shrewdness, calculation and foresight. Who ever saw a big-nosed politician who was a failure? Who ever saw a man with a big proboscis in the poorhouse or lunatic asylum? They may sometimes get into jail, for a good character is not always coincident with genius, but they never stay there long. They elude the law, they are never hung. Mothers should find some consolation in this thought, for while her child's nose may be hideously out of symmetry with the rest of its face, she need not go to a phrenologist or fortune-teller to learn its destiny, for there it is sticking right out before her eyes.

## Concerning Fools.

It may be a matter of considerable regret that the Fool-killer has ceased to make his periodic pilgrimages through the land. He would have a big job on hand on the basis of Carlyle's estimate, when he speaks of England as an island of "25 millions, mostly fools." Upon the most optimistic view of the case there would be a serious thinning out of the population, when we consider how many, even hard-working people, there are who contrive to fool away their money at "chuckaluck" games and the like. For weeks past in this city, Oakland, and perhaps elsewhere, crowds might be seen every evening at certain street corners "bucking" at the new "tiger" in the shape of the O'Leary belt swindle, when on the face of it the chances of touching the winning card were all against them. And then, what scores of people there are who can never pass one of those itinerant venders of notions or lotions on the street without stopping to listen to his endless flow of froth-oratory; and to listen is to be convinced, and to be convinced is to buy. The amount of worthless lip-salve, eye-salve, corn-salve, shaving-soap, pens, pinchbeck jewelry and cement they manage to accumulate, the world may never know. No matter how often they have been "taken in," they never learn that street peddlers are licensed liars and swindlers, and the first harlequin who mounts a dry-goods box and shouts, "This way, gentlemen, if you would make your fortunes," will gain their attention and pocket their change. It is clear that if the Fool-killer attended to his duty there would be a lively boom in the undertaker's business.

But, perhaps, the most marvelous exhibition of the fool's mania is the extensive impulse to do something exceptionally dangerous to life and health, such as lifting of enormous weights, diving from high banks or platforms, or trying to swim rapid currents. More than half the charm of the circus or hippodrome is to see the perilous riding, jumping, somersaulting, ropewalking and the various trapeze dexterities. The feeling that enjoys this sort of sport is certainly closely akin to that which drew crowds to the gladiatorial combats or Spanish bullfights. Sometimes there seems to be an epidemic of fools. A few years ago there was such a widespread craze to jump from the top of the Column Vendome, in Paris, that the gates had to be locked to all visitors. There are just now so many cranks willing to risk their lives by jumping from the Brooklyn bridge that there is some talk of inclosing it in a network of wire. The fatal consequences that attended the first plunge from the bridge put a damper on the foolhardy jumpers; but the recent success of a crack-brained bootblack has revived the idiotic ambition. In like manner the fatal result of Captain Webb's effort to swim the whirlpool rapids threw a cold, wet blanket on all candidates to glory by that route; but since Graham went through safely in his barrel there are many men and women who seem anxious to make the voyage.

The English papers satirize what they christen the "Alpine fever," the singular fashion of making arduous and perilous mountain ascents, which no amount of suffering, fatigue or melancholy accidents can cure, or anything short of an involuntary descent of a few thousand feet into the abyss. A kindred mania, quite as acute and hard to cure, is that of Arctic explorations. But there is some semblance of glory in climbing rocky pinnacles, camping on glaciers, sliding on avalanches, or going off and getting oneself lost in the ice and fog and snow of an endless Arctic winter, and having the whole world out searching for you. But of what possible benefit can it be to mankind, or any one, that a man can swim the Dardanelles, fast 40 days or more, jump from the Brooklyn or Covington bridge and live, or go over the Horseshoe falls in a barrel or rubber vest? The New York Tribune demands a law "to punish persons who recklessly risk their lives for no useful purpose," but it is hardly necessary to go to that trouble, for, if the Fool-killer neglects his duty, Nature sets traps to catch all such fools and gudgeons that are very effective.

WOOD-WORKING AND WOOD-DESTROYING.—In no department of industry has there been more active progress made during the last few years than in wood-working machinery and in

the manufactures which have been built up by means of such machinery. It is wonderful to see how readily and rapidly all kinds of wood are worked up into almost every conceivable shape by these modern machines. Huge logs from the forest are cut up deftly and rapidly into little splinters for matches, shoe pegs or tooth-picks, or shaved out into immense sheets for veneering or other use as readily as though the material wrought upon was as plastic and yielding as a piece of cheese. Boards are sawed into short lengths, matched, put together and nailed into the shape of boxes with almost magic speed and accuracy—all by machinery. Huge lumber piles are thus transformed and worked up into useful articles for home, and farm, and shop and boudoir with almost incredible celerity. Smaller pieces of wood are twisted and bent into all manner of shapes, or by hydraulic pressure, under dies, made to assume the artistic finish of most elaborate carvings. By the aid of the almost endless variety and number of machines which are everywhere present, more wood is now worked up in ten years than was formerly used in a hundred years, when the saw, planer and chisel were almost the only tools applied to such manufacture. Of course, the same destructive and constructive energies are at work in our forests getting out and saving the timber preparatory to its more careful manipulation in the shops. From present indications it would seem that our forests must soon disappear, and inside of another century we may have to break up our saw-mills, destroy our wood-working machinery and turn them all into cash or new-fangled machinery for working up straw or other vegetable substances into lumber.

## How Can They Live?

"How in the world can they live?" asked a respectable citizen the other day, when informed of the approaching marriage of a young lady of his acquaintance. "Why, he only has a salary of \$600 a year, and she has been in the habit of spending that much annually in head-gear and dresses." Strange that no one promptly answered, "live on their income." The suggestion may seem as impracticable and visionary as the proposition to flood the Desert of Sahara or spring a telephone to the moon, and yet the chances are that their fathers and mothers started life on a much smaller sum.

True, the times have changed and civilized life is growing more expensive, still we can point out many couples in this city who have no greater income and yet manage to live happily within their means, suffer no privation and do not run in debt. But the lives they live, the economies they practice, and the sweet, chaste, simple pleasures they enjoy may be quite beyond the comprehension of the young man and young woman of the period. If this answer is not sufficient we hope the social scientists of the age will tackle the problem and give a better one. They must set their wits speedily and effectively to work if they expect to retain the confidence of the community, for it will hardly be denied that many young men and young women fight shy of the marriage compact and cling to single blessedness for want of a solution of the question.

## Fairs to Come.

For the information of our readers, we give below a list of the coming exhibitions on this coast in the order of their occurrence:

Mechanics' Institute Fair, San Francisco, Aug. 24th to Sept. 25th.  
State Agricultural Society, Sacramento, September 6th to 18th.  
Oregon State Agricultural Society, Salem, September 13th to 18th.  
Eleventh District—Plumas, Lassen, Sierra and Modoc counties—Greenville, September 20th to 24th.  
Second District—San Joaquin, Calaveras, Tuolumne, Stanislaus, Merced, Mariposa, Fresno, Tulare and Kern counties—Stockton, Sept. 21st to 25th.  
Ninth District—Del Norte and Humboldt counties—Rohnerville, Sept. 21st to 24th.  
Fifth District—San Mateo and Santa Clara counties—San Jose, Sept. 27th to Oct. 2d.  
Seventh District—Monterey, Santa Cruz, San Benito and San Luis Obispo counties—Salinas City, Sept. 28th to Oct. 2d.  
Tenth District—Siskiyou, Trinity and Shasta counties—Yreka, Sept. 29th to Oct. 2d.  
Nevada State Fair, Reno, Oct. 4th to 9th.  
Santa Barbara Agricultural, October 5th to 8th.  
Twelfth District—Lake and Mendocino counties—Lakeport, Oct. 5th to 8th.

**H. S. SARGENT**, Stockton, Cal.

## SHEEP AND SHEEPWASH.

**Italian Sheep Wash,**  
EXTRACT OF TOBACCO

Free from Poison.  
Cures thoroughly the SCAB OF THE SHEEP. The BEST remedy known. Costs Less than 1 cent per head for dipping. Reliable testimonials at our office. For particulars apply to  
**CHAS. DUISENBERG & CO.** Sole Agents,  
No. 314 Sacramento St., San Francisco.

Calvert's Carbolic  
**SHEEP WASH**  
\$2 per Gallon.

After dipping the Sheep, is useful for preserving wet hides, destroying the vine pest, and for wheat dressings and disinfecting purposes, etc. T. W. JACKSON, S. F., Sole Agent for Pacific Coast.

## THOROUGHbred SPANISH MERINO SHEEP.

Have taken the First Premiums at the State Fair for the last three years.

CHOICE  
**BUCKS and EWES**  
FOR SALE.

ORDERS PROMPTLY FILLED. Address  
**FRANK BULLARD**, Woodland, Cal.

## LITTLE'S CHEMICAL SHEEP DIP.

Price Reduced to  
**\$1.25**  
PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for Scab in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (internal and external) sheep are subject to.

**FALKNER, BELL & CO.,**  
San Francisco, Cal.

Recommended by Professors Hilgard, Cooke, etc.  
**Powdered Potash & Caustic Soda**

**KILLS GOPHERS, INSECTS, Etc.**  
Makes a pure Soap at a cost of \$1 per 125 lbs. Send for directions to **T. W. JACKSON & CO.**  
304 California St., S. F.

**AGENTS WANTED**  
to sell the  
**MISSOURI STEAM WASHER**

Active, honest persons all over the country, with or without team.

[Extracts from Reports of Purchasers.]  
"MARY J. TAPPAN, REYNOLDS, Neb.: They excel all other washers I ever saw. JOHN R. DODGE, JR., Normal, Ill.: The best machine ever invented by man. H. H. HILGARD, COTTAGEVILLE, B. C.: Everybody likes them and everybody wants them."  
"S. H. ADAMS, ANDERSON, D. T.: My wife would not take a quarter section (except of land) for her machine, if she could not get another."  
"JOSEPH SWIFT, Santa Clara, Iowa: The most useful article about the kitchen. ANNA RAMSEY, MILBURN, Tex.: Have thoroughly tested it on articles from New Orleans to bed quilts, give entire satisfaction."  
"ST. CLAIR INKSTER, JR., Keweenaw, Washington: This machine itself and can not be spoken of too highly. JOHN DETTON, IRISHMAN, Ky., Va.: Have given it several severe tests and it came out triumphant every time."  
"JNO. B. WHEELER, KANSAS CITY, Mo.: They have proved themselves to be the best machines I have ever used. A. P. SHIPLEY, TULSA, Okla.: Give entire satisfaction. Ladies' laundry the Washer than anything I have seen."  
"E. M. MANSEY, LAWRENCE, Texas: Has proved a better Washer than I ever thought would be invented. JOHN E. EVANS, STANTON, Mo.: If you will get up any instrument that will take as much labor off of me as this Washer takes off of the women, and cost no more, I could sell one at every house."  
"MRS. M. C. DORRINS, GALLOWAY, N. J.: Gives perfect satisfaction. I do my washing alone in one hour. I could not do it any other way."  
"MRS. F. G. SMITH, SHERMAN, N. Y.: Would not take \$5 for mine if I could not get another. Makes quicker and better than it can be done by hand. MRS. FRED H. HARRIS, HARTFORD, Vt.: Is all that is claimed. Would not be without one for twice its price. MRS. ISAAC B. BOND, NORWICH, Conn.: Have used it nearly four months. Am perfectly satisfied. I freely recommend it to all housekeepers. MRS. MARY E. VAIL, PATONIA, Ill.: Spend me \$200 per year for 16 months I have had it for five months with entire satisfaction. EDNA J. HUNT, STANTON, Mich.: I had rather give up my Jones cow than part with my Washer."  
I will ship a sample to those desiring an agency on a week's trial on liberal terms. A thousand percent the best washer in the world for saving labor, clothes and soap. Pays capable agents BIG MONEY. Write for particulars. Address **J. WORTH**, Box 516, St. Louis, Mo.; or Box 1968, San Francisco, Cal.

## CALIFORNIA STATE FAIR—1886.

At Sacramento, Sept. 6th to 18th.  
TWO WEEKS.

**The Attention of the Farming Community** of this State is particularly called to the Liberal Awards, and advantages offered for  
**COUNTY EXHIBITS.**

The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions: To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.

For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.

The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.

Address the Secretary at Sacramento for Premium Lists and other information.  
**JESSE D. CARR**, President.  
**EDWIN F. SMITH**, Sacramento.

## THE GOAT-BREEDERS' ANNUAL MEETING

Will take place on Thursday, September 16, 1886, at Pioneer Hall, SACRAMENTO, at 8 o'clock P. M. of said day.

All Goat-breeders invited to attend at that meeting, and also requested to exhibit specimens of their flocks at the State Fair.  
**O. W. SCHLEIFER**,  
July 23, 1886. Chairman.

Pacific Barley Crushing Roller Mill

WITH SHAKING SCREEN.

These Mills are constructed in the least complicated and most substantial manner possible, with rigid iron frame, long bearings, adjustable boxes, with coil springs to allow any chance obstruction, such as nails, screws, etc., to pass through without injury to the rolls. This feature is found on no other roll made on this Coast. Send for prices to

## S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Sept. 8, 1886.

The market, the past week, for cereals has been more active, with the tendency upward. In other lines, while a general active market is reported, yet prices have shown few changes. On Tuesday last the traffic managers of the Southern and Central Pacific roads made a cut of 50 per cent in freight rates to Missouri River common points and to Chicago common points. The cut was made on all classes of freight, inclusive of fruit and live-stock. This reduction will have a direct bearing on the prices of several leading articles in the produce line, which will show itself within a few days. Private cables report 35s per quarter bid in Liverpool for cargoes of No. 1 wheat for prompt shipment from hence; this advance is not given in the semi-public cables received to-day.

LONDON, Sept. 8, 1886.—WHEAT—Cargoes off coast, very slow; cargoes on passage and for shipment, slow; California wheat, off coast, 34s 3d; California wheat, just shipped, 34s 6d; California wheat, nearly due, 34s 6d; English country market, quiet and perhaps a little lower; Liverpool wheat, spot, firm; Liverpool wheat, California, 6s 9d to 7s; weather in England, fine.

## Foreign Review.

LONDON, Sept. 6.—The *Mark Lane Express* in its review of the British grain trade for the past week says: The rainfall of the week has done no harm to crops. In the earlier districts the bulk of the harvest had been secured, and where crops had not been reaped, strong winds counteracted the wet. The change in the weather will retard the appearance in market of new wheat, and will also be an important factor in determining values. Sales of English wheat during the past week were 29,892 quarters at 33s 1d, against 39,709 quarters at 33s 3d during the corresponding period of last year. Foreign wheat is steady, but with little doing. Fifteen cargoes of wheat arrived; three were withdrawn and 12 remained, including four Californian and one Oregon. There is a fair supply of new English wheat. Flour is dull and cheaper. Corn, beans and peas are unchanged. Oats are dull and 3d cheaper. Linseed is cheaper on spot.

## London Wool Market.

LONDON, Sept. 7.—The fourth series of the wool sales of the current year, at which 266,000 bales are to be disposed of, commenced to-day. There was an equally large attendance of home and continental buyers and competition was very active. Since the close of the last series there has been an active demand, which has resulted in private sale of about 20,000 bales at 1s 2d above the average rate of the series. The sales to-day show the following advances as compared with the closing sales of July: Australian greasy and merino, 3½d; washed and scoured, 2½d; do cross breeds, 1d; Cape of Good Hope and Natal greasy, 2d; do fleece and scoured, 3½d.

## Eastern Wool Markets.

NEW YORK, Sept. 5.—The market shows just enough uncertainty to create a slightly nervous feeling among the more impatient, but without apparently altering the general situation. Among sales were 20,000 pounds spring California, at 18½¢; 20 cents; 27,000 pounds Montana, at 30 cents; 12,000 pounds Oregon, at 23½¢. The Boston market is more active. The miniature panic following upon the Snelling, Gray & Payson developments has subsided, and wool has been sold during the week generally at higher prices than would have been readily accepted two weeks ago. Among sales were 378,000 pounds California spring and Oregon, on private terms; 25,000 pounds medium Montana, at 28 cents; 15,000 pounds fine medium Territory, at 25 cents. The Philadelphia market developed a stronger undertone and a little more activity. Among sales were 6,000 pounds scoured California, at 50½¢; 10,000 pounds scoured California, at 61 cents; 50,000 pounds fine Territory, at 25½¢.

NEW YORK, Sept. 7.—Wool is firm and moderately active. Domestic fleeces, 30½¢ to 31¢; pulled, 14½¢ to 15¢; Texas, 9½¢ to 10¢.

PHILADELPHIA, Sept. 7.—Wool is in improved demand at unchanged prices.

BOSTON, Sept. 7.—Wool is steady and firm. Michigan extra, 32¢ to 33¢; Ohio and Pennsylvania extra, 32½¢ to 33¢; XXX and above, 34½¢ to 35¢; other grades unchanged.

## New York Wheat Market.

NEW YORK, Sept. 5.—Wheat has been unsettled, and speculation only moderately active, with export movements considerably less than last week. The reports of unfavorable rains in Great Britain on Thursday caused a firmer feeling, with a somewhat increased export demand. The market reacted somewhat, later, but prices closed a shade higher and near to the top figures: September, 87 cents; October, 88½¢; November, 90½¢; December, 91½¢; January, 93 cents; May, 98½¢.

## California Products at the East.

NEW YORK, Sept. 5.—Seeds—Sales of 50 bags reported of California yellow mustard seed, on spot, at 5½¢; 50 do, to arrive, of August shipment by railroad; 500 do, September shipment, 4½¢.

Canned Goods—California canned peaches, \$2.25 @ 2.50; pears, \$2.25; plums, \$1.90 @ 2.00; grapes, \$2.00; apricots, \$2.15; salmon, \$1.60.

Honey—Extracted, 5½¢.

Beans—Quint, California, \$1.70.

## New York Hop Market.

NEW YORK, Sept. 5.—Returns from various sections of the State, showing as they do a much smaller yield than was estimated a week or ten days ago, are developing a gradual undertone of strength to the local market for fine goods of either 1885 or 1886 growth. There is some buying going on in a quiet way, but the general disposition is more care-

ful, and the most confident believers in higher prices seem inclined to assist, rather than resist, any uneasiness that may be caused among timid holders by various offers made of inferior at low figures. No first-class State's are offered at the present time, and attractive Pacifics are by no means plentiful. It is reported, however, that some medium quality Pacifics have been purchased at about 21 cents for local account.

## Local Markets.

BAGS—There is very little trading reported in grain bags. The market is strong at 6½¢ cts for standard Calcuttas, in sympathy with an advance in Calcuttas.

BARLEY—Under heavy receipts and a strong bear pressure, the market weakened off, but has since recovered, closing strong on yesterday. Call sales to-day were, at the morning session: Buyer season—500 tons, \$1.04; 200, \$1.04½; seller season—100 tons, 91½¢; 100, 92¢; seller 1886—100 tons, 92½¢; 100, 92½¢; 300, 92½¢ cts. Afternoon session: Buyer season—200 tons, \$1.04½; 100, \$1.04½ cts.

BEANS—The market is quiet but steady.

CORN—Nebraska has come in quite freely, causing lower prices to obtain.

DAIRY PRODUCE—Gilt-edged fresh roll is strong, higher, with all other grades doing better. The hot weather is against shipping on land orders, but by sea all orders are filled.

EGGS—The market is strong for strictly choice, and also choice California, but fair to good are slow and lower.

FEED—The market is quiet for ground feed and choice hay, but slow for poor hay. The following is the range for hay: Barley \$4 to \$7, oats \$6 to \$9; wheat \$8 to \$11, with something extra selling higher.

FRUIT—Full particulars given elsewhere.

HOPS—Late private advices give an improved market in the East. In our market no trading is reported.

HONEY—The demand is strong, with stocks well cleaned up. The buying has been for shipping and local canners. A slight advance is reported.

OATS—The market has a steadier tone, with the consumptive demand increasing.

WHEAT—Owing to holders' firmness in not selling, buyers have been forced into the market at an advance on last week's bids. The market to-day closed strong for sample lots. To-day's call was as follows: Morning session: Buyer season, 100 tons, \$1.45½; 500, \$1.46½. Buyer 1886, 100 tons, \$1.41½; 300, \$1.42; 500, \$1.42½. Seller 1886, 100 tons, \$1.35½; 500, \$1.35½ per cts. Afternoon session: Buyer season, 100 tons, \$1.46½; 300, \$1.46½; 1000, \$1.46½; 100, \$1.47. Buyer 1886, 100 tons, \$1.42½.

[COMMUNICATED.]

## Market Information.

## Cereals.

European advices are confirmatory of previous reported shortage in this year's crop, compared with last year's. England's requirements are placed at 154,000,000 bushels, and France's at 52,000,000; Italy's is also increased. Eastern advices report the United States crop at 420,000,000 bushels, but in the estimate, California's crop is placed at 60,000,000 bushels, while the very best informed only give us 38,000,000. Deducting the difference, 22,000,000 bushels, and the crop of the United States is placed at 398,000,000 bushels against 357,000,000 last year; but then this year the carryover was all of 60,000,000 bushels less than last year's carryover. In this State alone it was 4,000,000 bushels, with flour reduced to wheat, less and in Oregon, 1,000,000.

European semi-public cables have reported a dull, weak market throughout the week in England for cargoes, with quotations fully 6d per quarter for prompt shipment below private cables. Acting on the semi-public advices, export and speculative buyers, with the aid of the daily press, commenced bearing the San Francisco market—buyers bidding extremely low and the newspapers quoting these bids, but farmers did not appear to be fooled, so no business was done. Finding they could not buy, they increased their bids on Friday, Saturday, Monday and Tuesday, paying as high as \$1.38½ for good to choice No. 1 shipping and not below \$1.36½ for barely No. 1. Even at this advance they cannot buy much. Milling wheat sold at \$1.37½ to \$1.41½, according to quality and where delivered. No. 1 Sonora sold at \$1.36½.

Corn has ruled very strong, with all received gone into consumption. The crop in this State will not be as large as was claimed in July last. Western advices continue to place the crop of the United States this year at 300,000,000 bushels less than last year's.

Receipts of barley the past week were very heavy, but they were either warehouse or went into consumption, for there was very little selling pressure, causing prices to be maintained, with a strong market at the close.

Receipts of oats from Puget Sound and Oregon increased the past week, but all that came to hand was placed at unchanged prices, particularly if good to choice.

In rye and buckwheat no transactions are reported.

## Dairy Produce.

Butter is stronger and higher, owing to the market being better cleaned up, due to lighter receipts and a good demand. The retail trade have about out their own pack of pickled and are coming in to the general market for supplies.

Cheese is very strong with stocks well in hand, and a good consumptive demand ruling.

Eastern eggs continue to arrive by the carloads, flooding this market with inferior and trashy stock which are sold at very low figures and keeping California eggs down. Strictly choice and also choice eggs are still wanted at good figures, but poor are hard to sell at any price.

## Fruits.

The market is glutted with wormy and otherwise defective apples and pears, which are hard to sell at any price; choice sound apples and pears are in good request at top figures. Some extra from Oregon fetched \$1.25 per box, and fair, 75 cts per box. Bartlett pears are very scarce and high; Oregon

Bartletts continue to fetch from \$1.50 to \$1.75. Some choice Hungarian pears were received this week by Eveleth & Nash, from San Jose, that showed on the stem the scale.

Plums and prunes are without change; choice continue to move off steadily, while indifferent are hard to sell.

Peaches have ruled steady and firm throughout the week.

Table grapes, under continued heavy receipts, ruled weak and low throughout the week. This morning they opened strong at a slight advance, owing to free shipping orders from the North, but weakened off again. Canners only paid from 20 to 30 cts per box for choice, with now and then a slight advance for something extra. Wine grapes have ruled steady and strong throughout the week.

Figs dropped under free receipts and only a moderate demand. They closed weak.

Strawberries and raspberries have ruled strong throughout the week, but blackberries barely remained steady.

Watermelons under heavy receipts have shaded off, closing weak at \$30 to \$35 per carload and \$2.50 to \$5 per 100 from stores.

Cantaloupes have been demoralized, with more or less dumping through the week. To-day the market closed weak and dull.

## Feedstuff.

Choice to extra choice hay continues in light supply, causing a strong market for these grades, but poor to good is in large offerings, with prices in buyers' favor.

Ground feed of all kinds are strong, with a free demand reported from consumers, but at unchanged prices.

## Hops.

The market is quiet pending the receipt of this year's pickings. Buyers claim to be indifferent and name lower prices, but it is noticed they are still ready to close a contract at good round figures. The consumption on this coast promises to be all of 10 per cent greater than last year, while brewers are lighter stocked than for several years past, in this month.

## Live-stock.

The market for beef cattle is very weak, with buyers masters of the situation. The hot weather keeps consumption down, while slaughterers confine purchases to actual wants from day to day. Mutton sheep also in liberal supply, but the market is steady. Choice lambs and calves are scarce and fetch good prices. Block hogs, young, weighing from 80 to 150 lbs, meet with a fair demand, but large hogs are not wanted, as packers are not buying; while the former sell at the highest price, for the latter it is hard to get 4 cts. Horses are without change, the inquiry reported in last week's Press for carriage horses and roadsters continues good this week, but draft and general utility horses are slow and lower.

The following are to-day's meat prices: Beef—Stall-fed, 7½¢ to 7¾¢ lb; grass-fed, extra, 6½¢ to 6¾¢; first quality, 5½¢ to 6¢; second, 5½¢ to 5¾¢; third, 4½¢ to 4¾¢. Calves, small, 9¢ to 10¢; larger, 7½¢ to 8¢ lb. Mutton—Ewes, 4½¢; wethers, 5¢. Lamb—Spring, 6½¢ to 7¢ lb. Pork—Live hogs on foot, 3½¢ to 4¢ for grain and dairy fed; 2½¢ to 3½¢ for soft; dressed, 6¢ for hard, and 5¢ for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Vegetables.

Potatoes held up well up to Monday, when a weaker feeling was noticeable, and still more marked on Tuesday and to-day. The weakness is due to heavier receipts—averaging fully 4800 sacks per day—and dealers being well stocked. The general run of potatoes appear to be of a better quality than those received in July and August.

Sweet potatoes, under fair receipts and a good demand, ruled strong throughout the week, with an advance on Monday which has been further advanced since.

Onions have ruled in buyers' favor, with some difficulty reported in working off consignments at full quotations.

Green okra, green peppers, cucumbers, cabbages and root vegetables in general, have ruled weak and in buyers' favor, but with few concessions reported. Tomatoes have ruled steady, with at times a strong feeling, and slight advance reported, but the next day they would be back again. Canners are only buying poor and cheap stock at from 15 to 25 cts per box.

## Wool.

The market continues exceedingly strong, with a slight advance paid the past week. The demand is more of a consumptive than speculative character. The clip of the United States is 15,000,000 lbs short of last year, while the Australian clip, compared with last year, shows a larger shortage, as does the River Plate clip. All these shortages tell in favor of wool. European advices report a very strong and higher market.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	295,798	225,239
In port, disengaged.....	67,519	109,789
In port, engaged.....	73,367	12,373
Totals.....	436,694	347,401

The above gives a carrying capacity as follows: 1886, 695,772 short tons; 1885, 562,180 short tons; increase over last year, 173,592.

Tonnage on the way to Portland, Oregon, 49,012 tons; same time in 1885, 36,223.

The exports by sea from this port from July 1, 1886, to date, compared with the like time in 1885, are as follows, in cents:

	1886.	1885.
Wheat (flour reduced to wheat) 2,010,472	979,624	
Barley.....	229,943	20,132
Oats.....	2,529	3,813
Corn.....	4,094	969

Poultry has ruled weak and dull for poor stock, but strong for choice. Ducks and young turkeys are scarce.

Game is coming in, but, owing to hot weather, is unsalable.

San Francisco, September 8, 1886.

348,368.—INCUBATOR—W. Worswick, S. F.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

- JARED C. HOAG—California.  
G. W. INGALLS—Arizona.  
E. L. RICHARDS—San Diego Co.  
R. G. HUSTON—Montana.  
GEO. McDOWELL—San Luis Obispo and Santa Clara Co's  
FRANK W. SMITH—Utah and Colorado.  
M. S. PRIME—Alameda Co.  
A. S. LUCE—Nevada and Placer Co.'s.

Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to anyone who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

PROF. A. VAN DER NAILLEN, who has been sojourning at that delightful resort and sanitarium, the Rural Health Retreat, near St. Helena, in a brief letter, says: "Here I am and well contented. It is about the calmest and healthiest place I ever saw—Switzerland and Italy notwithstanding. They have a kind remembrance of you here, and of Dr. McKaig."

CLOVER BLOAT IN CHILE.—The effective cure here for alfalfa bloat, almost in the last stages, when horned stock fall to the ground, with mouth wide open, unable to breathe, is by turning the following dose down the throat, when immediate relief takes place: Two ounces of ammonia to a quart bottle of water.—Cor. S. F. Bulletin.

Cheap Money for Farmers.

Farmers in this State will be glad to learn that they can borrow on mortgage any amount, from \$5000 to \$500,000, from S. D. Hovey, 330 Pine St., San Francisco, at 6 to 7 per cent and taxes.

Situation Wanted.

A married man, recently from the East, wishes a situation as coachman or to do general work. Understands management of horses thoroughly. Best of references given. Address, JOHN CRANDALL, Davisville, Cal.

TAPE WORM

REMOVED alive in two hours, with head complete, or no charges. More than 1000 Tape Worms removed at my office. Send for circular giving symptoms. Medicine sent by express C. O. D. for \$10. PROF. SHIPLEY, 930 Market St., near Baldwin Hotel, San Francisco, Cal.

Fruit Engravings, The finest, best and cheapest Photographs and Engravings, etc., made by S. F. PHOTOGRAPHING Co., 659 Clay St., S. F.

HALL'S SARSAPARILLA

Cures all Diseases originating from a disordered state of the BLOOD or LIVER. Rheumatism, Neuralgia, Boils, Blisters, Pimples, Scrofula, Tumors, Salt Rheum and Mercurial Pains readily yield to its purifying properties. It leaves the Blood pure, the Liver and Kidneys healthy and the Complexion bright and clear.

J. R. GATES & CO. PROPRIETORS, 417 Sansome St. San Francisco

THISSELL'S CODLIN MOTH TRAP

Will destroy every Codlin Moth Larva that crawls up or down the tree. The best, cheapest and simplest trap now invented. No orchardist can afford to do without this trap. It is a sure cure for the codlin moth. For further information, address G. W. THISSELL, Winters, Yolo Co., Cal.

A NEW COLONY

On the new extension of Southern Pacific Railroad, on the lands belonging to R. T. BUELL, Esq., near Los Alamos, Santa Barbara county, Cal. Parties desiring to visit the property now, can go via San Luis Obispo and take the cars from thence to Los Alamos, thence by stage to the Colony. 20,000 acres of the best lands in California, subdivided into 20, 40 and 80-acre farms; \$20 to \$30 per acre. INTERNATIONAL IMMIGRANT UNION, 401 California St., San Francisco.

IRRIGATION.

The Law of Water for Irrigation in Colorado.

By S. W. CARPENTER.

This book is intended to present in a clear and concise way the Colorado law of this very important subject at the present time, with all the latest decisions. It also contains many suggestions of the greatest value to those interested in securing and preserving water rights in Colorado.

The information will be found of great value to those who are interested in irrigation laws for California. We append, by permission, a notice of the book from Hon. H. P. H. Bromwell, of Denver, a member of the State Constitutional Convention, and of the General Assembly at the time much of the legislation on the subject of irrigation was framed, and later referee in the establishment of priorities in Water District No. 3, Cache la Poudre river, and a well recognized authority in such matters.

DENVER, COLO., June 2, 1886.  
S. W. CARPENTER, Esq.—Dear Sir: I have examined the digest and compilation entitled "The Law of Water for Irrigation in Colorado," which you have prepared, and beg leave to say that in my opinion it will prove to be of much use and value to the community. The work so much needed has been done by you remarkably well, considering the brevity necessary in preparing a book for the use of all parties interested in irrigation, as well as of members of the bar. Respectfully and truly,  
H. P. H. BROMWELL.

Price, \$1.25, Post-paid.

FOR SALE BY

DEWEY & CO., - 252 Market St., S. F.

H.H.H. HORSE LINIMENT.  
THE H. H. H. Horse Liniment puts new life into the Antiquated Horse! For the last 14 years the H. H. H. Horse Liniment has been the leading remedy among Farmers and Stockmen for the cure of Sprains, Bruises, Stiff Joints, Spavins, Windgalls, Sore Shoulders, etc., and for Family Use is without an equal for Rheumatism, Neuralgia, Aches, Pains, Bruises, Cuts and Sprains of all characters. The H. H. H. Liniment has many imitations, and we caution the Public to see that the Trade Mark "H. H. H." is on every Bottle before purchasing. For sale everywhere for 50 cents and \$1.00 per Bottle.

For Sale Everywhere.

DERICK'S HAY PRESSES.  
The customer keeping the one that suits best.  
Order a trial, address for circular and location of Western and Southern Branches and Agents.  
DERICK & CO., Albany, N. Y.  
N. B.—Other manufacturers combined against the original patentee (DERICK), to appropriate his continuous bale chamber, falsely publish challenges and premiums over Derick. Get any of them if you can, on any conditions, to meet in the field the inventor of the press they copy. Derick guarantees his press the best, or failing will buy the best for the customer. Give the inventor of the continuous press at least a competitor's chance during the time for which his patent was granted. Unquestionably the invention has greatly benefitted the public.

American Exchange Hotel, SANSOME STREET.

Opposite Wells, Fargo & Co.'s Express, one door from Bank of California, SAN FRANCISCO.

This Hotel is in the very center of the business portion of the city. The traveling public will find this to be the most convenient as well as the most comfortable and respectable Family Hotel in the city.

Board and Room, \$1.00, \$1.25 and \$1.50 PER DAY, ACCORDING TO ROOM.

Hot and Cold Baths Free. None but most obliging white labor employed. Free Coach to and from the Hotel.

MONTGOMERY BROS., Proprietors.

San Diego County!

16,500 acres, known as the Jarvis Tract, situated 13 miles from San Diego, surrounded by high hills, protected from winds and fogs—the most equable climate in the world—rich soil and ovely surroundings. Will be offered as a whole or in subdivisions, from 10 acres upward, at prices according to desirability, from \$10 to \$75 per acre, part cash, balance on time. The wonderful Raisins and Olives grown in this valley command the admiration of every one. Water from 6 to 12 feet. No irrigation, and Fruit and Raisins cured by solar heat. All the Semi-Tropical Fruits raised to perfection.

Also 1000 acres, the Smith Tract, adjoining, now in grain.

G. W. FRINK, General Manager Pacific Coast Land Bureau, 618 Market St., opp. Palace Hotel, and 16 & 17 Post St., San Francisco.

DR. JOSEPH JARVIS, Riverside, California.

Lands For Sale and To Let.

SMALL TRACTS OF LAND

FOR HOMES

Are offered for sale in 10 and 20-acre tracts, one mile from Tulare, the most rapidly growing town in the State, at prices ranging from \$15 to \$40 per acre, to those who WILL MAKE HOMES ON THEM.

The land lies in the northerly limit of the Artesian Belt, and is also easily supplied with ditch water. Soil, sandy loam. Good surface water at 10 to 12 feet.

ALSO LARGER TRACTS

Of 20 to 50 acres, on my home place, 7 miles S. W. of Tulare, 3 miles from Tokay Switch, S. P. R. R., centrally in the

ARTESIAN BELT,

Lying on north side of Elk Bayou. Smooth, clean, alfalfa land; \$15 to \$30 per acre.

A good flowing well, capable of irrigating 80 to 160 acres, is obtainable here at a cost of about \$500. The soil is dark, ancient lake bottom sediment. The land is fenced and mostly in cultivation; one flowing well on the place and others near by, with growing orchard, vines, grain, alfalfa, etc., showing adaptability of soil. The best of surface water is obtained at 10 feet from surface. Perfectly healthy locality. Plenty of oak timber near by.

This land, in whole or part, is bound to be sold soon, and rare chances are offered. Address, E. M. DEWEY, Box 27, Tulare, Cal., or call at the home premises.

FOR LEASE AND FOR SALE, 40,000 ACRES

Of good land in Fresno, near the County Seat. Some of this land is already irrigated, and all can be easily irrigated. It is adapted not only to grain, but also to Alfalfa, Fruit and Vines.

1000 ACRES

Of the above land for sale at the low price of \$20 per acre.

Apply to

E. B. PERRIN, 402 Kearny St., San Francisco.

CHEAP LANDS FOR SALE.

5680 Acres of rolling adobe hills, situated in Tehama County. Well watered by numerous springs, etc. Several thousand acres suitable for cultivation. Good two-story House, Barn and other out-buildings. Seven miles of fine wire fence.

FIRST-CLASS CATTLE OR SHEEP RANGE. The Cheapest tract of land in Tehama County. Price, \$6.00 per acre. Fair time and interest. Apply to

J. E. CROOKS, Benicia, Cal.

N. B.—Upon timely notice, intending purchasers will be taken from Cottonwood to the ranch and returned free.

\$500 to \$50,000.

BARGAINS in ORCHARDS and VINEYARDS, STOCK and Grain Ranches in every County in the State. Send Stamp for Catalogue. We can find quick sale for your farm, large or small, if it is cheap and you will send us full description. If you want to buy, tell us what you want, and we can suit you.

GAMAN & CO.,

339 Kearny St., San Francisco.

## THE ROYAL SINGER!

NEW SINGING CLASS BOOK BY L. O. EMERSON

THE BEST OF ALL!

Teachers of Singing Schools who examine this, the last of Mr. Emerson's series of successful class-books, will generally concede that it is, in some degree, superior to any of its predecessors. The elementary exercises, the graded easy tunes for practice, the part songs or glee, and the church tunes, anthems and chants, all excel in their selection or arrangement.

With its happily chosen title, good and interesting music and generally attractive character, there is good ground for hope that it will be the "favorite of the season." READY SEPTEMBER 1st.

Price, 60 cents; \$6 per dozen.

## PARLOR ORGAN GALAXY.

A good and large collection of Reed Organ music, selected and arranged by W. F. STUBBS; 40 good Marches, Galops, Waltzes, Rondos, Schottisches, etc., and 17 popular songs, covering 90 sheet music size pages, yet sold for the very low price of 50 cents.

Remember our superior new Sunday School Song Book, Songs of Promise, 35 cents, and our High School Song Book, Song Greeting, 60 cents.

## HORTON &amp; KENNEDY'S

FAMOUS

ENTERPRISE

Self-Regulating

WINDMILL

Is recognized as

THE BEST.

Always gives satisfaction. SIMPLE, STRONG and DURABLE in all parts. Solid Wrought-iron Crank Shaft with DOUBLE BEARINGS for the Crank to work in, all turned and run in adjustable babbitted boxes.

Positively Self-Regulating.

With no co springs, or springs of any kind. No little rods, joints, levers, or anything of the kind to get out of order, as such things do. Mills in use 6 to 12 years in good order now, that have never cost one cent for repairs. All genuine Enterprise Mills for the Pacific Coast trade come only through this agency, and none, whether of the old or latest pattern, are genuine except those bearing the "Enterprise Co." stamp. Look out for this, as inferior mills are being offered with testimonials applied to them which were given for ours. Prices to suit the times. Full particulars free. Best Pumps, Feed Mills, etc., kept in stock. Address,

HORTON &amp; KENNEDY.

## VETERINARY SURGEON,

Late Veterinary Inspector of Cattle for the State of Kentucky.

Operative Surgery and Treatment of Chronic Lameness Specialties.

DR. S. B. SWIFT, San Jose, Cal.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially; is the best adapted to REMOVE STUMPS and TREES.

FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.

For particulars how to use the same, apply to

**BANDMANN, NIELSEN & CO., General Agents**  
GIANT POWDER COMPANY,  
SAN FRANCISCO, CAL.

## Feed the Land and it will Feed You!

FERTILIZERS and IRRIGATION.

## THE CALIFORNIA BONE MEAL AND FERTILIZER CO.

—MANUFACTURERS OF—

## CALIFORNIA FERTILIZERS,

Ammoniated Bone Super-Phosphate, Pure Bone Meal and Special Fertilizers for all Crops.

Our Fertilizers lessen cost of irrigation, increase the yield, improve the quality of crop, and are cheaper than barn-yard manure.

Circulars containing prices and full information mailed free to any address.

**CALIFORNIA BONE MEAL AND FERTILIZER CO.,**

Office, 116 California Street,

San Francisco, Cal., U. S. A.

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

## DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufacturers), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to

## PRESCOTT HOUSE.

S. W. Corner Kearny and Montgomery Avenue, San Francisco.

Free Coach to and from the House.

J. W. BECKER, proprietor.

## THE PACIFIC ASYLUM,

STOCKTON, SAN JOAQUIN COUNTY, CAL.

## PRIVATE ASYLUM for the Care and Treatment of Mental and Nervous Diseases.

The Proprietary Institution called THE PACIFIC ASYLUM, where the Insane of the State of Nevada have been kept for several years, was opened as a PRIVATE ASYLUM for the care and treatment of Mental and Nervous Diseases, on the 10th of August, 1882, the Nevada patients having been removed to the new State Asylum at Reno. The buildings are capacious and comfortable, having been constructed for the accommodation of over 200 patients, and they are pleasantly situated in the suburbs of Stockton, and are surrounded by attractive grounds of 40 acres in extent, with cultivated gardens and pleasant walks. Its advantages over public institutions in facility of admission and procuring extra accommodations, if required, are obvious. For terms and other particulars apply to the proprietor and Superintendent, DR. ASA CLARK, PACIFIC ASYLUM, STOCKTON, CAL.

REFERENCE—Dr. L. C. Lane, San Francisco.

**HORSE POWERS, WINDMILLS, TANKS**  
H and all kinds of Pumping Machinery built to order. Awarded Diploma for Windmills at Mechanics' Fair, 1885. Windmills from \$65. Horse Powers from \$50. F. W. KROGH & CO., 51 Beale Street, San Francisco.

This paper is printed with Ink Manufactured by Charles Eneu Johnson & Co., 500 South 10th St., Philadelphia. Branch Offices—47 Rose St., New York, and 40 La Salle St., Chicago. Agent for the Pacific Coast—Joseph H. Dorety, 529 Commercial St., S. F.

## WINDMILL.

After many years' experience in the invention and manufacture of Windmills, among which may be named the "Hercules," "Saunders," "Cyclone," "Eureka," the subscriber has perfected a mill that infringes no patent; will face the wind; is direct action; solid wheel; no wood screws, pivots, loose joints, flapping sections or spider legs to get out of order. Is beautiful, strong, not liable to get out of order, and in cheapness below any other. Send for pamphlet of the "Eureka Improved Windmill." Pumps of various kinds at very low rates. Address

E. B. SAUNDERS, San Jose, Cal.

## RUPTURE

RADICALLY CURED BY Dr. Pierce's Great Discovery. Thousands of patients cured AT THEIR HOMES. No experiment! It does the work. DR. PIERCE & SON, 704 Sacramento St., San Francisco, Cal.

## Hardware and Agricultural Implements.

The regular has the barbs seven inches apart, and the "Thick Set," or Hog Wire, has barbs three and one-half inches apart. PRICES ARE SAME ON BOTH KINDS. IN ORDERING, STATE WHICH KIND IS WANTED.

The 7-inch weighs 352 pounds to the mile.  
The 3½-inch weighs 410 pounds to the mile.

Our Wire is put up on spools in lengths of about 100 rods, weighing from 100 to 120 pounds, so as to be easily handled. One pound of 7-inch measures 15 feet in length. Our staples run about 80 to the pound.

A great many kinds of inferior four-point wires have been placed on this market, and are still sold in competition with our Iowa, and the agents often say that they

THE STANDARD BARBED WIRE OF THE WORLD.  
WITH BARBS 3½ OR 7 INCHES APART, AS ORDERED.

are the same as the Iowa. The fact is the Iowa is the only good four-point wire in this market. You can buy some four-pointed wires for 25 cents to 50 cents per hundred pounds less than the Iowa, but they are inferior in quality. If you want a good quality of wire, you cannot afford to buy these inferior grades at any price.

Of the various kinds of four-pointed wire barbs, the Iowa is the only barb which is locked between the two wires, and also wound around both wires. The lock prevents it slipping on the wire, and winding around holds the two wires together.

Made only from the best of annealed steel, fully warranted, either galvanized or painted.

## IOWA TWO-POINTED BARBED WIRE.

While we have sold the four-point Iowa Wire almost exclusively, and still continue to recommend it as THE BEST, yet, as some prefer a two-point wire, we are now prepared to furnish the two-pointed Iowa Barbed Wire, made from the same material as the four-point and equal to it in quality, strength and durability. In offering this to dealers and farmers we point with pride to the universal satisfaction which the Iowa Wire has given. Our prices are always as low as first quality wire can be bought for. Remember that the Genuine Iowa Barbed Wire can be obtained only from Baker & Hamilton, Sole Agents for Pacific Coast. Prices quoted on application.

### AMOUNT OF BARB FENCE REQUIRED TO FENCE FIELDS OF DIFFERENT SIZES.

1 Square Acre.	2 Square Acres.	1 Plot of 640 Acres or 1 Square Mile or Section.	Divided into 16 Plots of 40 Acres Each.
200 feet, or 12½ rods, on each side. 836 feet, or 50½ rods around, requiring 56 pounds of wire for each strand.	296 feet, or 18 rods on each side. 1184 ft. or 71½ rods around, requiring 79 pounds of wire for each strand.	Entire distance to be fenced, 1280 rods, requiring 1405 pounds of wire for each strand.	
When Posts There are required for each strand are placed of wire, for 1 mile of fence feet apart.		It requires less fence for a square plot than an oblong one of the same area.	
		Each division line run parallel with the border of a square plot requires one-quarter as much fence as the entire distance around.	Entire distance to be fenced, 3200 rods, requiring 3320 pounds of wire for each strand. Distance around each plot, 320 rods, requiring, if fenced separately, 352 pounds of wire for each strand.
8 10 12½ 16 20 25 30 33	660 528 440 320 264 212 176 160	81 63 51 44 36 28 24 2	352 352 352 352 352 352 352 352

### DIRECTIONS FOR PUTTING UP FENCE.

The height of an ordinary fence is, say four feet. First firmly fasten with staples the wire to the starting or end post, which should always be of good size, say 6x8 or 8x10, firmly imbedded in the ground below frost, and well braced. Then two men carry the spool of wire between them, unwinding as they go, to the next straining post—which may be set from 600 feet to 800 feet from the other—apply the stretcher to the wire and strain it up taut; after fastening securely, go back, and staple to the intermediate posts, which may be set from one to two rods apart; twenty feet will be found to be a good distance. If over 20 feet apart, a picket or lath should be stapled half way between posts, the end resting on the ground.

### NUMBER OF WIRES AND DISTANCES BETWEEN POSTS.

Although fences are sometimes made of two wires, to fence against cattle only, we recommend not less than three, and as many more as desirable. Five wires make a good fence—such is used by nearly all the railroad companies.

The following are the distances apart at which the wires are generally placed:

TWO-WIRE FENCE—1st wire 22 inches, 2d wire 44 inches from the ground.

THREE-WIRE FENCE—1st wire 16 inches, 2d wire 30 inches, 3d wire 48 inches from the ground.

FOUR-WIRE FENCE—1st wire 12 inches, 2d wire 24 inches, 3d wire 36 inches, 4th wire 48 inches from the ground.

FIVE-WIRE FENCE—1st wire 8 inches, 2d wire 15 inches, 3d wire 24 inches, 4th wire 36 inches, 5th wire 48 inches from the ground.

One less strand can be used with four-point than two-point wire.

In regard to the distance apart that posts should be set, most farmers, having been accustomed to put up a board fence, with posts 8 to 12 feet apart, find it hard to adopt the way of putting them from 16 to 30 feet from each other for barb wire; but it should be remembered that there is no strain against a barb fence; it affords no resistance to wind or snow, and cattle cannot get against it to push it down.

## FRESNO COUNTY. BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

### THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without teams are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

### THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions. This immense body of land, including 12,000 acres unsold of the Huerfano ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

### NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms offer the best inducements to those seeking homes on any part of the Pacific Coast.

The field work of the subdivision of the famous

### PASO ROBLES RANCH

Has been completed. The maps and catalogues are now being prepared, and will be sent free on application. This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

### TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

W. B. EWER, } 1860.  
GEO. H. STRONG, }

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enabled us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

## A Grand Galloway.

One of the features of the live-stock show at this year's State Fair is the advancement of the black. Any one would notice it on the parade. The reds, once supreme in men's minds, are becoming rare. The Galloways and the Aberdeen Angus with their black hides—solid black as though cut from the heart of midnight—are bringing their jetty color to support the black and white of the Holsteins, and as both breeds seem in the height of the fashion, one riding the beef and the other the dairy wave, there bids fair, in the near future at least, to be a growing prevalence of black at all our cattle-shows. No doubt the color argument will be revived as this startling innovation becomes more apparent, and we believe the black-cattle men are fortifying themselves with arguments to show that even in warm latitudes the black is desirable.

One of the most striking exhibits at the State Fair is the herd of Galloway cattle shown by George L. Goulding, as manager for Leonard Brothers, of Mt. Leonard, Mo. There are 31 head in the herd, and they are a most excellent showing of the breed. They are all either bred or imported by Leonard Brothers, and they are descended from strains of blood the most fashionable and most successful in the prize ring. As the cattle were brought here for sale, a sale catalogue was prepared giving the pedigrees and interesting notes of the ancestry in the famous prize contests of Scotland. As the interest in Galloways on this coast is fast increasing, we give a few notes on the breed for those who have not yet informed themselves. The Galloways as a breed are of great antiquity. Their home is the province of Galloway, which now comprises the two southwestern counties of Scotland, but in ancient time had a much larger territory. Cumberland, the most northwesterly county of England, had the same race of cattle. The origin of the breed is lost in antiquity. The good quality of the cattle in that part of the kingdom was put upon record, however, as early as 1573. Efforts to improve the breed by intelligent and systematic breeding was commenced very early, some think it was before any other British breeds started upon their courses of improvement. They began to be sought for and taken to other parts of Great Britain about a hundred years ago, and there is abundant testimony as to their popularity thus long ago.

The claims made for the Galloways by the Rev. John Gillespie, editor of the Galloway Herd Book and a generally recognized authority, may be briefly summarized as follows: They do not claim superiority as a dairy breed; as a source of high quality beef, juicy, and with fat and lean well marbled, they are praised by the most respected and trustworthy judges; the complete absence of horns is a mark of purity of breeding in the Galloways, and the absence of horns is of decided advantage in handling the cattle in cars and otherwise; the hardiness of the Galloway is universally admitted and they are fitted to thrive even when not well sheltered, thus giving them especial fitness for range stock and as "rustlers" in an open country. Another important point is the impressiveness or prepotency of the Galloway sire. He stamps his form and color irresistibly upon the offspring of the common dams with whom he may be associated. Excellent examples of this were some grades shown upon the fair grounds this

year in connection with the exhibit by the Marysville Association.

The Leonard Brothers, who have brought the large band of Galloways to California, is a firm composed of three brothers—Leverett, Abiel and W. H. They have long been stock-breeders, and are now breeding Shorthorns as well as the black cattle. They were led to the Galloways by their special fitness for range purposes. The father of the Leonard Brothers was Nathaniel Leonard, who began importing cattle from Great Britain as early as 1831. The present firm began operations in 1878, and have since then imported over 2000 head. Mr.

IMPORTED GALLOWAY BULL, BORDERER OF DRUMLANRIG (2628).

George L. Goulding, who comes to represent the firm in this State, is a thorough cattle-man, and has an address and bearing which will recommend him to California people.

We come last of all to the noble fellow who rears his head aloft upon this page. His portraiture is one of the best we have seen from the brush of Lou Burk. Borderer, of Drumlaurig (2628), was selected in Scotland by Leonard Brothers, for Bush & Morse, of the Windsor hotel, Denver, the order being for a bull which could beat anything in this country. The portrait would certainly indicate that he is endowed with some such quality. He is said to have cost his present owners \$2500. He was bred by the Duke of Buccleugh, Drumlaurig, Thornhill, who is one of the leading breeders of Galloways in their native country.

MONTANA WOOL.—Wm. Macnaughtan's Sons, wool merchants, 79 Spring street, New York, report 5518 bags of Montana wool shipped to New York this season from Fort Benton and Judith by the Missouri river. They promise a similar statement from Helena, and quote Montana wool, average clips, at 27@30 cents.

EVAPORATED VS. SUN-DRIED.—Mr. E. E. Morris is making Los Angeles county quite a long visit in the interest of Bigelow & Lafauci, of Chicago. He is attending particularly to dried fruit. The Anaheim Gazette says he deems the future for evaporated fruits of all kinds exceedingly promising, as the demand for them in the Eastern market is far in excess of the supply. He finds it impossible to fill his orders for evaporated peaches. California peaches are the favorite in the markets supplied from Chicago. The only other peaches that come to that market evaporated are from Tennessee, and this year the crop in that State

is a failure, and when California peaches are selling at nine cents a pound, the Tennessee article brings but five cents. By evaporated fruit is meant that dried by other processes than sun-drying, the latter bringing much less money. A sale of evaporated apricots was made by Mr. Morris in Chicago, last week, at 24½ cents per pound, and the same fruit would have brought but 16 cents if it had been sun-dried.

THE FORESTRY CONGRESS.—The American Forestry Congress met at Denver, Sept. 14th, in the Chamber of Commerce. The officers, most of whom are attending, are: Warren Highley, N. Y. City, Pres.; H. G. Joly, Quebec, 1st V. P.; J. Sterling Morton, Lincoln, Neb., 2d V. P.; J. S. Hicks, Roslyn, L. I., Treas.; N. H. Eggleston, Washington, D. C., Rec. Sec.; Bernhard E. Fernow, N. Y. City, Cor. Sec. Addresses of welcome were delivered by Gov. Eaton and the mayor of the city, and Pres. Highley responded. Committees on order of business, nominations and resolutions were appointed. Subsequent session will be devoted to the reading of papers.

## Another Hour in the Pavilion.

A brief visit to the Mechanics' Fair in San Francisco, last week, sufficed for little more than a study of Placer county's exhibit, and passing glances at some others which one needed more leisure to inspect.

Another stroll, since Sunday, brought us to the tables of the unirrigated Vaca valley fruit exhibit. The first, devoted to grapes, upheld about 50 plates of most superb clusters of well-known varieties, among which Fred. Buck's Emperors and M. R. Miller's Black Moroccos were eminently handsome. The Balkans, from the ranch of A. Montpelier, are a novelty. The berry is shaped somewhat like the Cornuchon, but less elongated, is colored like the Flame Tokay, and is firm-fleshed and deliciously sweet. Fine Tokays and Muscats are shown by the brothers Bassford from a three-year old vineyard of 50 acres, which has this season averaged over seven tons to the acre. Most of their grapes have been sold in Chicago, under the auspices of the Cal. Fruit Union. The branch of White Syrians, forming the centerpiece, carried four adjacent clusters, crowded into the semblance of one, which weighed 28 pounds.

A second table was freighted with a fine selection of peaches—nearly all Clings—apples, pears, plums, quinces and nectarines; and a third with exceedingly choice samples of both evaporated and sun dried fruit, and of fruit in glass put up at the orchard. This part of the exhibit is worthy of more extended notice, and should be examined by every visitor who can appreciate and admire the useful work of preparing fruit for keeping, done in a way thorough, tasteful and even artistic.

We understand that this display was got up on very short notice by some young men in J. & I. Blum's store for Admission Day, in Vacaville, and brought down to San Francisco by Messrs. Allen & Pratt, who have it in charge.

Two tables of citrus products, shown by J. S. Harvey, San Diego, include St. Michael, Konah, Mediterranean Sweet, Wilson, Malta Blood and Navel oranges, Eureka, Genoa and Sweet Rind lemons and limes.

The elegant raisins from the Fresno vineyard of T. C. White, who took the silver medal and diploma for the best display of California raisins last year, are finished and set forth in a style of attractive beauty, rivaling the finest imported.

The magnificent output of Sonoma county products under the auspices of the Pomona Grange demands a more elaborate treatment than we can undertake to-day; but we hope, in our next issue, to do it a measure of justice, and also speak of some other exhibits specially interesting to such good folks as enjoy the RURAL.

THE FRUIT UNION sent a train of 16 cars eastward on the 9th, and expect to dispatch another before the close of this week. They are also forwarding from four to six carloads daily by passenger train. Many shippers choose the latter mode of sending, though at double rates, because the fruit-trains lose from 24 to 36 hours between Sacramento and the Missouri river, and the time thus lost is often worth more than the \$300 difference in freight-charges.

The C. P. R. Co. is said to be building 200 improved fruit cars, which will be ready for the next crop. They are to be larger than those now used for this traffic.

## THE DAIRY.

## Marin County Dairies.

A correspondent of the *Bulletin* gives the following notes on some features of dairying in Marin county: Dairying is one of the leading industries of the county. The Assessor's returns for 1886 show 23,104 milch cows, calves 4256, stock cattle 4221, and 36 thoroughbred bulls in the county. Well-informed dairymen place the average number of pounds of butter from each cow a year at 175. Multiplying this by the number of milch cows, we have 4,112,500 pounds of butter for the yearly output of the dairy business. San Francisco is the great market for this product, and it is sold at the average of 25 cents per pound. The sum of \$1,028,125 is therefore the annual income from butter alone to the dairy people of Marin. This income is almost a clear profit, for on looking over the Assessor's list a little further I find the number of hogs put down at 6716, and in a year they double themselves. A number of dairymen boast that from sales of hogs and poultry they pay help, regular current expenses and taxes, and the principal feed of this stock consists of sour, skimmed milk.

On Point Reyes there are dairymen who claim that they can make 250 pounds of butter per cow per year. Certain it is, the grass in that immediate vicinity is very nutritious, although of a native wild growth. Beside Point Reyes country, in which Bolinas is included, the other great dairying sections are Nicasio, Tomales, Novato and San Antonio. Cheese-making has fallen into desuetude from all appearances, as I have not seen in all my rambles so much as one small cheese; yet I remember that J. McM. Shafter exhibited a mammoth cheese a few years ago at the Mechanics' Fair that ran away up into the tons. That industry was booming then; it now seems to be dead, butter-making being more profitable.

Alderneys and Jerseys, with their graded offspring, have taken the place of the wild-eyed Spanish stock, with their horns a yard long; and on the sentimental side of the question I think Marin owes Adolph Maillard a debt of gratitude for introducing them in 1870, as they are gentle and handsome, light and active, produce more butter and consume less grass than the common breeds, therefore more can be kept on a certain amount of pasture. The profits to the county cannot be estimated, but a little thought will never fail to bring it appreciation.

Almost half of Marin county, 350,000 acres, is owned by a dozen people, and dairying is carried on largely by tenant dairymen. One ranch, that of State Senator De Long, will give one an idea of the management of rented dairies in the county. I am told it is the custom to give long leases at so much a cow, the land thrown in; but Mr. De Long chooses to furnish all the necessities, as land, cows, buildings, churns, pans and packing-tubs, etc., while the tenant does all the work, the product being divided share and share alike, between landlord and tenant. The cost of selling, transportation, salt and wrapping cloth are borne by each one in equal ratio, so that at the end of a good year both have prospered, and if the income, by some unforeseen power, has been small, the landlord has not had his harvest and left his tenant a beggar. So, in the end, the De Long method is the most just of all the rental systems, as both parties share alike the losses as well as the profits.

## A Napa County Butter Dairy.

The *Napa Register* gives the following interesting account of one of the leading dairies of that county. We quote as follows:

The well-appointed dairy of J. W. Grigsby, situated four miles north of town, at the extreme end of the Big Ranch road, stands among the foremost in the county. With many other dairymen in the valley, Mr. Grigsby has paid much attention to every detail of the business and is ever making improvements in this or that department. It is because of these practical methods, ever kept in mind by our dairymen, that the dairy interests of Napa county have developed so rapidly during the last decade.

Mr. Grigsby's farm comprises 475 acres and is especially adapted to dairying. Here nutritious grasses grow rapidly and produce a large amount of pasture, owing to the character of the soil and the nearness of water to the surface of the ground. One hundred acres are seeded to alfalfa, which is used with other forage, as, fed by itself, it is too heavy and has other disadvantages. Alfalfa here grows rapidly and luxuriantly, and one of the finest sights you see, in going among our valley farms, is the large herd of cows leisurely grazing in these rich pastures or moodily chewing their cud in the shade of the many wide-spreading oaks that dot the fields.

Mr. Grigsby has sown 25 acres to rye grass, a variety that has succeeded well in many parts of this State and one that is highly recommended by many dairymen. It has many advantages, and, should it prove a success here, it will add much to the resources of the dairyman. To furnish a variety of fodder, several acres are planted to corn, a part of it drilled in, the balance sown broadcast. A portion of this is cut daily after the grasses commence dry-

ing up. Quite a large amount of sugar beets, or mangel wurtzels, are annually raised for the cows, so that our readers will observe that a generous variety of nutritious food is provided for the cattle. About 200 tons of hay were cut on the farm this season.

"In my opinion," said Mr. Grigsby, "the full-blooded Jersey, or the high grade, is the best cow for dairy purposes, though I am desirous of trying the Holsteins, and think of purchasing some of these cows at an early date."

Sixty cows, well cared for in every particular, are milked the year round. During the summer they are, at night, kept in the open corral, but are well sheltered during the rainy season. Their stables are on either side of a large barn, 32x80 feet in size, kept scrupulously clean. Stanchions are used for fastening the cows which can be very quickly unhinged. In the stables we saw one of the finest full-blooded Jersey bulls in the State—raised, we believe, by Mr. A. McFarland—and were told that two very fine Jersey bulls were with the herd at pasture.

A stone dairy, in size 18x26 feet, built last March, adjoins the smaller wooden dairy building used for several years. The floor is of cement or concrete, and the building during the hot summer weather is cool. Instead of racks extending along the inside walls of the building, upon which the milk, in pans, is set for the cream to raise, several revolving shelves are used, extending from the floor to the ceiling. They work like a charm, and are much more convenient than those ordinarily used in dairies. Standing in one place, the dairyman can skim 20 or 30 pans of milk, as by simply turning the shelves each pan is brought directly before him. A Stoddard, or barrel churn, of the largest size is used, revolved by horse power, the cream being churned every other day. During the flush season, or from April to July, about 60 pounds of butter are made daily, in the dryer portions of the year about 40 pounds. The dairy is completely shaded by locust and other trees, and the butter room—the old dairy building—is always cool. The butter we saw on the large, marble-topped table looked like so many rolls of solid gold. No butter coloring has ever been used on the place. Most of this butter is marketed in Napa and St. Helena. Three men are employed to care for the dairy in the busiest season, at other times two.

Mr. G. is one of the most modest of men, yet he is a very practical farmer, a keen observer, ever on the alert to seize hold of and utilize any improvement that will enable him to be more successful in his occupation. Success rarely fails to attend such men in any path in life.

## THE BOTANIST.

## The Ferns of Ceylon.

At the August meeting of the Santa Barbara Natural History Society, the following paper, prepared by Dr. Lorenzo G. Yates, was read:

The island of Ceylon, in the Indian ocean, is almost connected with India by rocks and shoals. It is 271 miles in length by 137 miles in width, and contains about 26,000 square miles. The coast on the south and west is uniformly low and fringed by coconut trees, the interior of the island being mountainous and surrounded by the low belt, of from 30 to 80 miles in width. The mountains are clothed with verdure from base to summit, and the beautiful valleys at their base were, until within a few years, covered with magnificent forests, which have mostly fallen before the ax of the coffee-planter.

The length of the days throughout the year does not vary more than one hour, owing to its proximity to the equator. In localities near the coast, and up to an altitude of 300 to 400 feet, the mean daily maximum temperature in the shade is from 82° to 87° F., with a range of from 16° to 34° F., while in some more elevated localities, for instance at Nuwara Eliya—altitude 6000 feet, the mean maximum temperature is 65°, the minimum 38°. Owing to its similarity of climate at that altitude to the climate of some portions of Southern California, it is probable that many plants of the two countries could be advantageously interchanged.

The climate seems to be peculiarly favorable to the growth of ferns, there being 235 species, representing 43 of the 75 accepted genera of ferns, found on the island of Ceylon; while North America, with its immense area, has only 213 species and varieties, representing 32 genera. Of the 235 species of Ceylon, 26 only are peculiar to that island; of the others, 3 species are found in North America (north of Mexico); of these eight, four are found in California, and of these four, two—*Adiantum capillus-veneris* and *Pteris aquilina*—are found in Santa Barbara county. Of the remaining species, much the larger proportion are found in India and the Malayan peninsula. This, taken with the fact of the close proximity to India, and the shallowness of the intervening sea, would indicate that Ceylon had not been long separated from the continent.

This indiscriminate destruction of the forests and the cultivation of the soil by the coffee-planters are causing the rapid extermination of many of the species. Many of the species dry up and rest during the prevalence of the monsoon winds. The writer's collection of Ceylon ferns, consisting of 180 species, was collected almost entirely by Dr. Thwaites, accom-

panied by manuscript notes by that eminent botanist, with comments on the rare species, and those nearly extinct. Other additions have been received from the Royal Gardens, at Kew, London. Some of the specimens are very old, yet finely preserved, and highly valued because collected by eminent travelers and botanists nearly 50 years ago. I am expecting shortly to receive such species as are lacking to complete the collection of Ceylon ferns.

As Dr. Yates was not able to be present, his fine collection was not exhibited at the meeting; but members of the society and others present were invited to call at his office and see them.

## PUBLIC AFFAIRS.

## Women's Rights and Influence.

EDITORS PRESS:—The declaration by the Revolutionary fathers, "that all men are created equal," etc., is as broadly liberal as justice could demand or truth indorse touching men's rights, but it said nothing about women's rights, and for nearly a century it was construed as referring only to white men's rights; but that "self-evident" truth was too evident for such limited application, and the stain of slavery left upon our nation by its founders was washed away in the blood of their children.

Another "self-evident" truth, as declared by the same authority, is that "governments derive their just powers from the consent of the governed;" yet for more than a century the men of this nation have governed its women without allowing so much as an expression of consent, dissent or participation by the ballot. Woman is allowed her full share of being governed, but of the governing part she is prudently relieved. For such political gallantry woman may be expected to be respectfully grateful and affectionately submissive. But is not that second "self-evident" truth herein practically ignored? We know it is said that women are exempt from military service and therefore should not vote. We also know that thousands of our men are legally exempt from military service, yet vote all the same. Is that "military service" argument a reality or a sham?

It is also said women are not qualified to vote intelligently. In view of the fact that our women average about the same educational advantages as men, and many of them have done public service as teachers under Government certificates of necessary intellectual and moral qualifications, does not this talk about unintelligent voting sound a little queer, and the more so when we remember that a foreign-born embodiment of ignorance and degradation, if of the male sex, can procure a government certificate of eligibility, get drunk on licensed whisky, be led to the polls and voted, while native-born refinement, intelligence and virtue, if set in feminine groundwork, has no representative rights that "white men" (black men, native or foreign born) "are bound to respect" at the ballot-box. Women, idiots, lunatics and felons must not vote. I have heard something about "the eternal fitness of things." Is this one of the fitnesses?

It is said that contact with politics would degrade women; that our elections are unfit places for women. The corruption of our politics and elections I admit is past dispute, and, in my opinion, there is a perfectly natural cause thereof. The most common observation shows that promiscuous gatherings of men, where women are excluded, uniformly relax the higher and bring out the lower elements of manhood. Female influence, the most potent of all human agencies in development of all that is pure and noble in man, is ruled out of our political representation, and, as a consequence, the balance of power therein, which woman should hold on the side of virtue and morality as opposed to masculine depravity, is thrown on the side of the latter. As we have sown, so have we also reaped. And now, after a century's practical denial of rights on which the Government professes to be founded; after a century's discrimination against worthy women, and in favor of unworthy men, is it any wonder that we cry out, O the corruption of politics! Like a man poisoning his own food, then, moaning with pain, wonders what ails him.

Is it a wonder that our elections are "unfit places for women"? When I hear men advocate withholding the ballot from woman for fear it would degrade her, I think their philosophy about as deep as that of the child who feared that if the lamp was taken into a dark room its light would all turn black. The moral atmosphere of our elections is unsuited to woman's presence, and will continue so while she is kept away from them, and no longer. When she attends them the fitness will accompany her presence; the uncongenial element will vanish as the darkness before the light. Instead of women falling into men's habits of drinking, smoking, swearing and betting, men would be put upon their better behavior, drunken voters and whisky bribery, with kindred evils, would disappear, and the preponderance of the ballot change from vice to virtue. A government that has cost so much as ours in life and treasure should not die of blood-poison through corruption of the ballot. In point of importance, next to a reverent regard for divine law, I would place good human government, and next to a sacred sanctuary a pure ballot casting.

Paskenta.

THOUGHTOGRAPH.

## SWINE YARD.

## The Swine Industry.

The latest publication on the hog is a neat pamphlet of 72 pages by Rufus Bacon Martin, published by O. Judd Co., of New York. We quote the introductory chapter as follows:

The term hog is stated by Carpenter to be derived from a Hebrew noun, while others are inclined to refer this name to the Arabic, signifying "to have narrow eyes," and there is much in favor of the probability of this latter supposition. Judging from some characteristics, swine seem to form an intermediate link between the whole-footed and cloven-footed animals, and from other peculiarities to occupy the same ground between the cloven-footed and the digitate animals; but look at them from whatever point of view we may, these animals present distinctive characteristics and are of vast importance as affording the economical means of sustenance to millions of human beings in all parts of the world. As far back as the records of history enable us to go, the hog appears to have been known and his flesh used as food. The various allusions to this kind of meat, which appear again and again in the writings of the old Greek authors, show the esteem in which it was held, and it appears that the Romans early made the art of breeding and fattening hogs a special study.

Swine were brought to this country by the earliest settlers. Many of them soon became wild and found habitation in the back woods and lonely solitudes, which then abounded in the now thickly populated East. As no care or attention was given them, they migrated and increased, until in later years the country had an abundant supply of what were called "native hogs." These have since improved, slowly at first, until now there are several distinct and unquestionably good breeds of swine. The larger number of hogs raised in this country are produced in the States of Ohio, Indiana, Illinois, Iowa, Kansas, Nebraska, Minnesota, Michigan and Wisconsin, and it is in these States that the greatest improvement in their breeding, feeding and fattening has occurred.

A statement of some of the statistics of this industry will probably be of interest to those who have never before had them brought to their notice. The number of hogs packed in the West in 1884 was 10,519,108, against 9,183,100 in 1883. The gross weight of all hogs packed in all parts of the country in 1884 was 3,691,513,000 pounds, an increase of 272,597,000 pounds over the previous year. It would be impracticable to ascertain the amount paid to the producer for all these hogs; but a fair average price would be four cents per pound, at which rate their total value would have been \$147,660,520. This sum represents the extent of the swine industry in dollars and cents. Of the packed produce, a large portion, nearly half, is exported, as will be seen from the following tables:

Hog products	1883.	1884.
Bacon.....	\$38,161,198	\$30,087,879
Hams.....	6,624,866	5,617,541
Pork.....	5,891,317	4,517,001
Lard.....	28,618,576	20,059,834
Totals.....	\$79,295,957	\$60,282,255

From these figures it will be seen that the exports for 1884 were about \$19,000,000 less than for the previous year, and the reason for this is largely that some European countries prohibited the import of American pork products.

The total number of live hogs in the hands of the producers in the 12 packing States, in January of 1884 and 1885 is shown in the following table

	1884.	1885.
Ohio.....	2,442,701	2,446,128
Indiana.....	2,642,652	2,801,211
Illinois.....	4,010,472	4,090,681
Iowa.....	4,800,998	4,200,998
Missouri.....	4,087,556	4,210,193
Kansas.....	2,103,725	2,208,911
Nebraska.....	1,780,383	1,079,200
Minnesota.....	411,325	431,902
Wisconsin.....	1,046,014	1,066,934
Michigan.....	840,766	849,174
Kentucky.....	1,594,919	2,052,665
Tennessee.....	2,127,966	2,021,568
Totals.....	27,895,477	28,230,595

The total number of hogs packed and marketed in the year 1884 in the above States was 10,500,000, or about 37 per cent of the entire product. The whole number of hogs in the United States in January for the last five years were as follows:

January, 1885.....	45,142,657
January, 1884.....	44,200,893
January, 1883.....	43,270,086
January, 1882.....	41,127,200
January, 1881.....	30,227,903

There are a large number of hogs marketed and consumed each year that are not included in the previous statement, for the reason that many of them never reach a market of record, being sold to local butchers, and many more are consumed at home. Taking 37 per cent as a fair percentage of the number sold during a year, we have about 17,000,000 as the whole number of hogs brought to a market during each year.

Having seen the extent of this industry in

figures, let us look at the improvements and facilities that have been developed during the past few years. Intelligent and energetic men have given much time and patient study to that part of the business pertaining to the raising and fattening of swine, and as the result of their labors we have to-day not only improved breeds of swine, but we have also been educated to a more thorough and scientific management in their production. Better systems of feeding and fattening have been suggested, which tend to an economy of labor as well as in the quantity of the food consumed, and these consequently lessen the cost of production, which is, in the case of swine, one of the price-making facts.

Transportation has been facilitated, improved stock-cars have been built, local packing-houses have been established and in many other ways have the marketing facilities been improved. Agricultural colleges have devoted much attention to this industry and have conducted experiments in breeding and feeding, the results of which have been of great value to the more intelligent and progressive class of farmers. The United States Department of Agriculture has also had a hand in the advancement of this industry, more particularly in respect to swine diseases. It has conducted exhaustive and expensive investigations into the diseases of swine, notably hog cholera, the results of which have been most gratifying and beneficial. Several individual veterinarians have also devoted themselves to similar investigations, with equally good results. What is now wanted is more attention and care on the part of the farmers and raisers to keep up with the advancement of the scientific men.

### Curing the Sick Pigs.

W. F. Cutler writes the *Bee* in regard to the cause and cure of the malady which has been so fatal to swine in the neighborhood of Sacramento. He says that this disease (which is *diabetes cholericus*) is produced by feeding too much raw vegetables, and is very easy to stop. First, cook your hogs' food, add one-third of boiled potatoes, with a little short bran if possible, and the following mixture:

Bi-carbonate of iron.....2 drachms  
Sulphate of magnesia.....2 drachms

This dose is for each pig about five or six months old. They would get fat so quick, and the flesh and lard be so firm and healthy, that it pays for the little work that it requires. This disease is very easy to observe. First, the pig doesn't eat so voraciously as before; second, the disease being very injurious to the kidneys and bowels, the pig doesn't walk straight, but drags its hind quarters, discharges urine very often and also fecal matter.

## THE IRRIGATOR.

### The Sierra Madre Tunnel.

To any one not familiar with the mode of developing mountain water in Southern California it is an interesting trip up the Little Santa Anita canyon, which winds a long way up, and nearly to the summit of, the Sierra Madre mountains. This canyon contains several prominent springs of water gushing forth from among the rocks, which have heretofore supplied the wants of the new but ever-increasing and prosperous settlement of Sierra Madre. E. J. Baldwin, the original owner of the tract, and the Sierra Madre Water Company, having in view the increased needs of the settlement and others adjacent, have caused a tunnel to be drilled in the canyon to concentrate the water from the springs mentioned above, and then conduct it economically through a 12-inch pipe, down to where smaller connecting pipes are laid to distribute it to the shareholders. The writer hereof is no land and water sharp, but, with an eye for the picturesque and grand, visited, on the first instant, the "source from which the waters flow." The cry has been industriously sounded by some that damaging scarcity of the irrigating fluid was imminent, but present indications point to an everlasting sufficiency for all practical purposes for generations to come, with proper means put forth to draw it from the almost innumerable fountains in the mountains. The representative of the *Times* rode by carriage, with a "pilot," nearly to the entrance of the before-mentioned tunnel, and there donned rubber coats for the occasion. The darkness in the tunnel demanded a "glim," and, at the entrance, a candle was lighted and we plodded along with careful steps through the "hole" in the granite-bound mountains, until arriving at the farther end. As we passed through the darkness, there was picturesque scenery before us. The clear, sparkling water, reflected by the lights of the workmen, gushing forth through the uneven granite walls on either side as through immense sieves, and giving a shower-bath to the rubber-mantled workmen, produced a grand effect. At the time of the visit the tunnel was in 181 feet. Mr. Smith, of Richardson & Smith, of Sierra Madre, gave kindly information pertaining to the tunnel, which said firm have contracted to push 300 feet. The tunnel itself indicates a thorough knowledge of the art of penetrating the huge mass of mountainous solidity. It is incased with woodwork three feet in width and six feet in height, as fast as drilled and in readiness.

The rock is blasted by giant powder, touched off by an electric battery, to which is attached a cord that extends the whole length of the tunnel. The fragments of rock, after blasting, are placed in a hand-car, which runs on a track over the pipe laid at the bottom of the tunnel, conducted outside and conveniently "dumped." There is a large flow of water from the tunnel, increasing all the time, and the vacuum has already enticed into it several open springs, as shown by their decrease of bubbling flow, and in some cases an entire drought to outward appearances. The indications are that the tunnel is producing the desired effect of concentrating the surrounding beds or springs of water into it for profitable diffusion.—*J. F. Cook in L. A. Times.*

## THE VINEYARD.

### Grapes in San Joaquin.

The Stockton *Independent* of last week has an interesting article on grape-growing in San Joaquin county, from which we take the following: There are in this county upward of 2000 acres of grape-vines, but the larger proportion of vines are of young growth. In 1884 there were in this county 300 acres of vines one year old, 270 acres of two-year-olds, 75 acres of three-year-olds and 523 acres of vines four years old and upward. Last year there were 400 or 500 acres added to the grape-vine acreage. This year one Italian vineyardist has set out 5000 cuttings of the Black Prince and California varieties. In 1884, when the last statistics were taken by the county assessor, there were 38,500 gallons of wine made in this county, and 552,320 pounds of table grapes were sold from San Joaquin vineyards. The yearly increase since 1884 has been large, but the figures for a careful estimate are not at hand.

The grape crop in San Joaquin county this year is very large and of the best quality. Buyers from abroad have visited the vineyards in this county and have offered top prices for entire crops. A Sacramento dealer recently went over the county buying Black Prince, Emperor, and Flaming Tokay grapes for shipment East, at prices ranging from \$40 to \$60 per ton. The Black Prince grapes grown in this county are plump and luscious, and the color is perfect. This variety grown in this county is the favorite in the markets, and brings from 10 to 15 cents more per box than grapes of the same kind grown in any other county of the State. The Flaming Tokay grown here also command top prices, and are the best in the market.

The Mission or California grape this year brings from \$10 to \$12 per ton, and the average yield is from five to six tons per acre. The Zinfandel variety bears well here, averaging from 8 to 12 tons per acre, and the price paid for such grapes is \$20 per ton. The market price for other varieties which are lighter bearers, averages about \$40 per ton.

John Gambetta, of this city, has purchased for the San Francisco market this year the crop of 56 acres of common grapes, paying for the same \$4100. He buys grapes in lots and picks and hauls them away. He recently offered Philip Fitzgerald, who lives near Waterloo, \$1500 for the crop of 15 acres of Zinfandel and California grapes on the vines, but the owner refused to sell at that figure. Mr. Gambetta paid Mrs. Girard, of Woodbridge, \$400 for a crop of grapes from less than four acres of land. It will be seen by these prices quoted that grape culture will pay handsomely.

### Grape Prices and Labor.

The Santa Clara County Viticultural Society met September 4th, in San Jose, J. B. J. Portal in the chair. We quote the *Mercury's* report:

The Chair announced that the subject for discussion was the price of grapes, wine, and material for wine-making.

Mr. Kerwin saw no reason why grapes should not bring a fair price in this county this season. In San Francisco they were paying from \$22.50 to \$27.50 per ton.

Mr. Portal considered the prospects for good prices better now than three weeks ago. The crop in the northern part of the State had been greatly diminished by blights and other causes. He intends to double his wine-making capacity and to pay ruling prices for grapes. Contract had been made for from \$17.50 to \$22. Some varieties had been contracted for at \$30, and it been stated that Mr. Estee was paying \$50 for the true Cabernet.

Mr. Pfeffer thought the prospective prices was a poor subject for discussion among the grape-growers and wine-makers.

Mr. Combe thought they should all be interested in the matter. The trouble was they did not have confidence enough in each other. If they worked more in concert it would be for their interest. He intended to buy no grapes and very likely would sell none. He had it from good authority that \$22.50 had been offered for grapes in this county, and he thought there was no reason why the price should not reach \$25.

R. C. Stiller did not see how any standard of prices could be fixed by the society. The growers were at the mercy of the San Francisco merchants and would have to accept the prices offered by them.

Mr. Daggett stated that he had been told by D. C. Feeley that grapes in this county ought to bring \$25 per ton. In Napa they were paying as high as \$30 for Zinfandels and similar varieties.

The labor question was next discussed. Mr. Portal asked if any of the members had arranged to get white labor.

Mr. Daggett stated that he had partially made provision for all the labor he would work. So far he saw no indications that there would be a scarcity of white labor. He paid \$1 a day and found.

Mr. Portal stated that he had made arrangements for nearly all the labor he would need. He would pay \$1.75 per day, the hands to board themselves. He thought that plenty of white labor could be had to pick all the grapes, and the result would be more satisfactory to the growers. He expected to be able to secure good men at these rates, and if it proved otherwise he would be obliged to employ Chinamen. For the purpose of picking he would probably get white women and girls, as he believed in encouraging the women when they showed an inclination to work. For this work he would pay \$1 per ton.

### Santa Cruz Mountain Grapes.

EDITORS PRESS:—Mrs. MacKenzie, of Ardanna vineyard, Santa Cruz mountains, began her first picking, or vintage, of her grapes on Sept. 4th, with a showing of 21 degrees at a temperature of 60 Fahr., on Balling's saccharometer. This is the earliest case of proceeding to vintage in the county, or even the State, we have yet heard of. There must be something peculiar in her Ardanna vineyard, for the vintage began there last year on the 20th of August, with a showing of 22 degrees by Balling's saccharometer. The wine has developed a bouquet like that of a nosegay of opening vine-flowers, and is otherwise of much promise.

The grapes picked on the 4th inst., as also those that were picked on the 20th of August, last year, are of the Meunier variety, which forms the principal vine of the valley of the Loire, from Orleans to Blois, and thence toward Angoulême and Poitiers and the district of the Charente. J. A. S. Santa Cruz.

GRAPE SALE.—According to local papers, R. R. Givens, in Alexander valley, has sold to Conner's winery, at Calistoga, his entire crop of the Reising, Chasselas, Grenache, Burgundy, Carignan and Fehr Zagos varieties, for \$25 per ton, to be delivered at Calistoga. Mr. Givens says he can have the grapes hauled to Calistoga at a cost of \$3 per ton, which will leave him the very good price of \$22 per ton. His vineyard will produce about 25 tons of the varieties named.

GRAPE STATISTICS.—Chas. Thorn, general freight agent of the S. F. & N. P. Railroad, has sent a circular to all grape-growers in Sonoma county, for the purpose of ascertaining the number of vines, variety, age and probable production of wine for 1886 and 1887, on all lands in Sonoma, Marin, Lake and Mendocino counties, the owners of which use the S. F. & N. P. and Sonoma Valley Railroads for transportation of wine coming to San Francisco or over these roads to an Eastern market.

## THE FIELD.

### Economic Ornithology.

The good and bad deeds of the birds are of importance in agriculture in California as elsewhere. We have previously mentioned the effort which was inaugurated some time ago by the U. S. Department of Agriculture to ascertain definitely concerning the characteristics of the different birds. The following circular, which we have just received, will explain fully the aim of the Division of Economic Ornithology and Mammalogy of the Department, and will, we trust, secure the co-operation of Californians in the important work:

#### Circular on the Food Habits of Birds.

It is well known that certain birds are directly destructive to farm crops, causing a loss of many thousands of dollars each year, and that others are highly beneficial, preying upon mice and insects which are injurious to vegetation; but the extent and significance of these effects, and their bearing on practical agriculture, is little understood. Moreover, great difference of opinion exists, particularly among farmers, as to whether certain well-known species are, on the whole, beneficial or injurious, and many kinds which are really of great practical value are killed whenever opportunity offers. For example, hawks and owls are almost universally regarded as detrimental, while as a matter of fact most of them never touch poultry, but feed largely, and some almost exclusively, on mice and grasshoppers.

The wholesale slaughter of small birds has been known to be followed by serious increase of noxious insects, and invasions of insects which threaten to devastate large tracts of country have been cut nearly short by the timely services of some of our native birds.

In view of the above facts, and many others which might be cited, it is clear that a comprehensive, systematic investigation of the interrelation of birds and agriculture will prove of

enormous value to farmers and horticulturists. Such an investigation has been undertaken by the newly-established Division of Economic Ornithology of the Department of Agriculture, and the assistance and co-operation of persons interested are earnestly solicited.

The food of all birds consists either of animal matter or vegetable matter, or both, and its consumption must be serviceable or prejudicial to the interests of mankind. Therefore, according to the food they eat, all birds may be classed under one of two headings—beneficial or injurious. Many species are both beneficial and injurious, and it is impossible to assign them to either category until the percentages of their food elements have been positively determined and the sum of the good balanced against the sum of the evil.

In a very large proportion of our small birds the food varies considerably with the season, sometimes changing from vegetable to animal, or from injurious to beneficial. Furthermore, many birds feed their young upon substances which the adults rarely or never eat, and the young, on leaving the nest, sometimes greedily devour things which are discarded as they grow older. Hence it becomes necessary to ascertain the food of each species at different times of the year and at different ages.

Information is desired on all questions relating to this inquiry, and special attention is invited to the following:

1. Has the common crow been observed to catch young chickens or to steal eggs?
2. Has it been observed to eat corn or other cereals in the field? If so, how long after planting, and how extensive was the injury done?
3. Has the crow been observed to feed upon injurious insects? If so, what kinds of insects were thus destroyed, and to what extent?
4. Has the crow blackbird or grackle been observed to carry off the young of the robin or of other small birds, or to destroy their eggs?
5. When breeding near the house, has it been observed to drive off small birds (such as robins, bluebirds, etc.) which had previously made their abode on the premises?
6. Has it been observed to eat corn or other cereals in the field? If so, how long after planting, and how extensive was the injury done?
7. Has the crow blackbird been observed to feed upon injurious insects? If so, what kinds of insects were thus destroyed, and to what extent?
8. What birds have been observed to feed upon or otherwise injure buds or foliage, and what plants or trees have been so injured?
9. What birds have been observed to feed extensively upon fruit? What kind or kinds of fruit have been most injured by each species, and how extensive have been the losses thus occasioned?
10. The bobolink (ricebird or Maybird of the Southern States) congregates in vast flocks during its migrations and commits extensive depredations in certain parts of the South. The Division will be glad to receive detailed accounts of these depredations from persons living in the affected districts, to whom a special circular will be sent on application.
11. What birds are considered to be injurious to grain crops, and what kinds are regarded as beneficial? On what facts are these opinions based?
12. What birds have been observed to feed upon injurious insects, and upon what kind or kinds does each bird feed?
13. Do blackbirds (other than the crow blackbird already mentioned) commit serious depredations in your vicinity? If so, which of the several species of blackbirds are concerned, and what crops are affected?
14. Has any kind of bird been observed to feed upon the honey bee? If so, what species, and how extensive has been the injury done?

When possible, the exact date should be given of all occurrences reported. Persons willing to aid in the collection of birds' stomachs will be furnished with the necessary blanks and instructions. Special circulars on the English sparrow, and on the economic relations of mammals, will be furnished on application.

DR. C. HART MERRIAM,  
Washington, D. C. Ornithologist.

### The First Combined Harvester.

EDITORS PRESS:—Seeing in a late copy of the *RURAL*, among the notes by Mrs. W. D. Ashley, of Stockton, that the credit of inventing the combined harvester is given to Oregon, which is a mistake, I thought, perhaps, you would like to know where the first harvester ever made did come from.

The first harvester was built in Schoolcraft, Kalamazoo county, Michigan, in 1840, by Hiram Moore and my father, Geo. W. Leland. Their attention was first called to it by Mr. Moore's wife, who dreamed of seeing such a machine at work in the harvest field. Her dream was so vivid and she was able to describe it so clearly that her husband, who was a draughtsman, was able to draw an almost complete plan of the machine. He was a capitalist; and my father being a mechanic, they went into partnership and built one, with very few changes from the original plan, which proved a good machine but a financial failure, on account of the shortness of the season and uncertainty of the weather.

They obtained a patent on the machine for seven years, and then had the patent renewed for seven more years. In 1854 my father bought Mr. Moore's interest and shipped the machine to California, and harvested grain in Alameda county for a number of years with good success. W. W. LELAND.

Walnut Creek, Sept. 4, 1886.

[Was this the machine which was used on John M. Horner's ranch, in Washington township, Alameda county? If so, we think Mr. Horner gave us a letter on the subject a few years ago.—EDS. PRESS.]

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

## The Irrigation Question.

EDITORS PRESS:—In the issue of your paper for August 21st, under the above heading appears a communication from the hand of James Boyd, dated Riverside, August 12, 1886, in which I am taken to task for an extract published in the RURAL of August 7th, and taken from the Patron, of a previous date. Unfortunately the RURAL did not publish my premises and chief argument as they appeared in the Patron. Had it done so, Mr. Boyd might have received some light on the subject treated, and saved himself the worry over a communication so ill-advised as the one to which reference has been made. For the modicum of argument therein contained I should not have considered an answer necessary; but his slurring allusions to my ignorance of the Constitution and of the subject treated are sufficient incentives to reply.

He starts out with the assertion—"In your issue of August 7th is an article on the Water Question from the Patron, by Brother Webster, which, being written under a total misapprehension of facts, I propose to set him right from our standpoint here in Southern California."

This is equivalent to saying that everything and everybody is wrong who does not view the subject "from our standpoint here in Southern California." After quoting from my article—"It is rather late in the history of the world to make many converts by misrepresentation; and he who endeavors to foist a fraud on his neighbor is usually the first to bite the dust," Mr. Boyd continues: "Such is the quotation, and it is applicable to Mr. Webster in an eminent degree—not that we accuse him of willful misrepresentation, but he has taken his facts (?) from papers interested on the side of the monopolists."

In answer I have to say that this quotation is not "applicable to Mr. Webster in an eminent degree," for the reason that he has never attempted to "foist a fraud upon his neighbor," and moreover, situated as we are here, absolutely independent of all artificial irrigation, it is impossible to affect his private interests by any turn the case may take. So far as taking my "facts from papers interested on the side of the monopolists," I will say, for the information of Mr. Boyd, that my facts on which the article was based, as published in the Patron from which the RURAL, in part, published my conclusions, were taken directly from the decision of the Supreme Court in the case of *Lux et al. vs. Haggin et al.*, and contained the complete syllabi of said decision, which decision Mr. Boyd manifestly never has read. In the matter of papers being "interested on the side of the monopolists," the less Mr. Boyd says on that subject the better it will be for the cause he is endeavoring to advocate. For, if there is any one thing relating to this subject, well settled in the minds of most people, it is the indisputable fact that Haggin & Carr and their ilk, on the side of the appropriators, have wasted more money in manufacturing conventions and buying up newspapers with the view of controlling and directing public opinion than has been expended from all other sources combined.

Moreover, if the application, as quoted, does not rest heavily and directly on the heads of the appropriators and their proposed legislation, I certainly fail to understand the situation. Haggin and Carr, having held their convention in San Francisco, that their program of appropriation might have a seeming indorsement; having spent thousands of dollars in the publication of the proceedings of said convention and for anti-riparian literature; having traveled, individually or through paid agents, all over the State, circulating petitions for signatures, and pledging 90 members of the Legislature to vote solidly for their appropriation measures; having induced Stoneman to convene the Legislature in extra session, in order that their dirty work might be consummated—have, at the last moment, signally failed of their nefarious purpose, simply because public indignation reached such a point that the pledged statesmen went back on their promises to Haggin & Co., in order, if possible, to save what little reputation they had left, and, by order of the Governor, are now out on short pasture until the 7th of this month, when they will be again corraled with the hope of getting the appropriators' bit in their mouths. But it is no use; the cat is out of the meal-tub and has scattered hair and consternation all along the road to the capitol.

Again we quote from Mr. Boyd's communication: "Mr. Webster says: 'There is no alternative left the producer in the irrigated districts but to pay the price demanded for water or to perish.' Now, Mr. Webster, the shoe is just on the other foot; for if this doctrine of riparian rights is to prevail, we will have no alternative but to pay the price demanded by the riparian proprietors for water or to perish."

In this quotation Mr. Boyd has cut a single clause out of a full sentence, in order to make its meaning suit his purpose. As printed in the RURAL, the sentence which he has garbled reads: "A railroad may be so exorbitant in its charges for transportation as to bar its use

by the producer; nevertheless, he has his old facilities of hauling or driving his products to market; but with the waters of the State under the control of corporations, there is no alternative left the producer in the irrigated districts but to pay the price demanded for water or to perish." It will be observed that Mr. Boyd simply quotes the last clause of the sentence, whereby its meaning is perverted. But this is a fair sample of the literature and perverted argument employed by the appropriators.

"If Mr. Webster had studied the Constitution of the State he would have found that it was mandatory on the part of Boards of Supervisors of the several counties to annually fix the rates to be paid for water for the ensuing year, so that we are not by any means at the mercy of any corporation." In answer to this profound disquisition on constitutional law, I will say that if Mr. Boyd had studied the Constitution of the State with the commonest intelligence he would have discovered that it contained no such provision as indicated in his statement. He has evidently been looking at Section 1, Article 14, of our Constitution, which, so far as applicable to the subject in hand, reads: "The use of all water now appropriated, or that may hereafter be appropriated, for sale, rental or distribution, is hereby declared to be a public use, and subject to the regulation and control of the State, in the manner to be prescribed by law; provided that the rate of compensation to be collected by any person, company or corporation in this State for the use of water supplied to any city and county, or city or town, or the inhabitants thereof, shall be fixed annually by the Board of Supervisors, or city and county, or city and town council, or other governing body of such city and county, or city or town, by ordinance or otherwise, in the manner that other ordinances or legislative acts or resolutions are passed by such body, and shall continue in force for one year, and no longer." It will be noticed that where the words "city and county" occur in the above extract they are in conjunction, and refer directly and only to the city and county of San Francisco, which is the only "city and county" in the State combined under one corporation. The term "Board of Supervisors" is used because the governing power in said city is vested in a Board of Supervisors. That portion of the section preceding the proviso vests the control and regulation of "all water now appropriated or that may hereafter be appropriated in the State, in the manner to be prescribed by law." This is exactly the position taken by the Supreme Court in its recent decision, which has been harped on so much by men who never read it.

So far as my being ignorant of the "true status of land ownership here in Southern California," and "the average resident of the upper portion of the State being as ignorant of the true state of affairs in Southern California as the average Eastern man is ignorant of the Chinese question on the Pacific Coast," and being "just as unwilling to learn," is concerned, I will say that the charge may possibly be true, but it appears to me that some one who has sufficient intelligence to comprehend a plain proposition of constitutional law should make the charge.

If the little colony of Redlands has profited by the experience of the Riverside colony—the most important one in Southern California—where the water is controlled by a corporation and the rates for its use are fixed by the "powers that be," we congratulate Redlands, and if it has not robbed somebody else in the appropriation of its water, neither the Supreme Court nor the State authorities will ever interfere to mar the happiness of the inhabitants thereof.

## Land Monopoly.

Section 2, Article 17, of the Constitution (to which Mr. Boyd calls my attention, and which he misquotes), is as it should be, and I did all I could in the convention to place it in the Constitution in its present form. The reason why its spirit is not more generally enforced is that assessors disregard the law, in failing to make an equitable assessment on lands held in large tracts.

Continuing, Mr. Boyd declares: "In Southern California we went to work to carry out these principles, and bought out large ranches and dug ditches, and sold the land and water with it in 5, 10, 15 and 20-acre lots." Further on he says: "We set to work and appropriated water and built ditches, and ran it on to land which had no actual value."

After giving us a glimpse of the growing glory of Southern California, in which he states that the assessed value of property in the colony of Riverside aggregates \$1,286,168, and that "it is safe to say that the property could not be bought for three times that amount" (to which statement I beg leave to call the attention of the State Board of Equalization, whose duty it is to see that all property is assessed at its full cash value), Mr. Boyd indignantly exclaims: "Now, the riparian owners propose, if they can, to carry this exploded English doctrine of riparian rights into our midst; and what does it mean? Simply, that we shall pay them for something which they had not the slightest hand in making valuable. \* \* \* Because Haggin and Carr are on our side, should we be deprived of our rights? \* \* \* If Haggin and Carr appropriate water and build ditches, they will be obliged to sell their lands in small tracts, for land will then be too valuable to farm in large tracts."

Now let us examine these statements. If

reduced to a fair and consecutive declaration, with sufficient wording thrown in to fill out the manifest discrepancies, the language of Mr. Boyd, above quoted, will read about as follows: "In Southern California, we, with an eye on the main chance, went to work to carry out this principle of dividing up large tracts of land and selling the subdivisions, with water, at a large profit over cost. With this end in view we bought out large ranches, dug ditches, and ran the water on to land which had no actual value; but when we got the water on it (which we had taken out of the channels of the rivers flowing through the county, along the margins of which there were many riparian owners whose rights we contemptuously disregarded), the land became of so much value that we readily sold it in 5, 10, 15 and 20-acre tracts, at immense profits—just as Haggin and Carr will do if they are not molested in the appropriation of sufficient water to irrigate their 600,000 acres of desert land; for I am sure that they are as much opposed to land monopoly as we were when in possession of large tracts. In fact, they will be obliged to sell their lands in small tracts, for land will then be too valuable to farm in large tracts."

"Now, when everything is running along lovely, when we have appropriated all the available water in the county, and applied it to our own use or to the use of our neighbors at a profit, here come these riparian owners whom we robbed of their water years ago, claiming under this exploded English doctrine of riparian rights that we shall pay them for something which they had not the slightest hand in making valuable. It is true that the Supreme Court, in the *Lux vs. Haggin* case, presents a line of decisions in favor of riparian owners, running back a hundred years without a break, 51 of the 183 cases cited being California cases, and directly relating to the rights of water in this State. Nevertheless, we at Riverside call the doctrine exploded—the Supreme Court and the balance of the world to the contrary notwithstanding."

"The people of Southern California are sound on the doctrine of appropriation, and no judge can get any support who will not support the state of things as they exist here at the present time. If our judges are antiquated and fail to catch the spirit of the age in Southern California, they ought not to stand in the way of our progress. What are our laws for, anyhow? If they are helps, viewed from our standpoint here in Southern California, all is well; but if they run counter to our interest, we will appeal to the higher law. We know that Herr Most made the same declaration in Chicago something like a year since, and that because several of his associates attempted to carry out his conceptions of the 'higher law,' by throwing dynamite bombs among innocent people, they are under sentence of death at the present time. Nevertheless, we won't submit to the decision of any court that recognizes a riparian right to the waters that we have already appropriated to our own use, and for the benefit of the community in which we live."

Creston, Sept. 3, 1886. J. V. WEBSTER.

## Shall we Go to the State Grange?

Of course we will, and must. Health and rest pilgrimages should be regarded as a law of nature—which we fear is almost universally evaded—but when such calls are backed by a sense of duty to an accepted and honored brotherhood, then surely going on a trip is, or should be, deemed quite as necessary as the incoming doctor's bill, and oh, how much more pleasant to cancel. Then, for health and recreation's sake on the one hand, and duty's call on the other, the Patron's going is a foregone conclusion; therefore, in the early days of October we expect to greet you all in the city of Marysville.

Patrons, like the busy bee, you labored while the sun shone, and, unlike that buzzing monitor, rainy and dark days found you still at your post. During the winter, between her clouds and sunshine, many acres of newly upturned soil gave proof of your faith in the harvest-time, and when the heat of summer came you verified the writ, that by the sweat of the brow shall thy bread be won; and now, as the waning ruddiness of summer merges itself in the golden, fruitful mellowness of autumn, surely the sabbath time of the farmer should be in time and keeping with nature's rest, and State Grange services afford a fit and appropriate medium by which his adoration for Creator and zeal for profession may be made manifest. In such utterances is labor's weal not only for today, but living practical truths and principles are compiled into such form as to become no little towers of strength in the great Grange superstructure that is being built for generations to come.

During the past year subordinate work has been successful in accordance with the manner in which we as combined co-workers have planned and labored; and in our pilgrimage to the State Grange is stamped the seal of loyalty to that higher Mother power, which is the Creator and preserver of the scattering Granges that dot our young State. In these several home Grange thoughts, words and acts have been so freely given, it is oftentimes a mystery these motors do not become poverty-stricken. That such is not the fact exemplifies that hom-

ily, "In use there is growth." And the more extended use the greater power and depth is given. Thus the rough diamonds of labor and hopeful thought will be found to have been most wonderfully polished by that pumice stone of thought contact; many truths seen in the solitariness of home, "as through a glass darkly," by the airings of friendly criticism are made to shine in very different tints and give entirely new colorings. Thus by friendly controversy are we imperceptibly made to see ourselves as others see us, and, presto, is taken the first step in wisdom.

California tips the western end of our continent and sends across mountains, rivers and plains iron horses freighted with Aladdin-like stories, tinged with colors of Oriental extravagance. The past year's wonderful G. A. R.'s incoming to thousands of Eastern homes gave these almost fable-like tales a reality and semblance of truth not heretofore realized. The fruits of such a realization are hard to conceive or measure. Westward ho! has already received a new impetus, and these western waves of emigration will bring to California new sons and daughters who look to the native-born for elements not unlike those around the eastern Puritan—like home behind them. These Grange principles for which you are called to fight, be they enacted in secret or social conclave, are no mean nor feeble liftings of the whole State into such expected higher grade, both mentally and socially. Even though this leverage of power comes not from those clad in purple, must it be any the less tenacious of truth, or will its acknowledged weight in this upheaval of farm, social and political life be any less to the coming man and woman?

Marysville sends forth her invitation to all Patrons. Brothers and sisters of that region will give a royal welcome, in keeping with the known hospitality of the Pacific Coast, and it becomes not only the duty, but should be the pleasure, of every Granger to test the welcome of this alikeness-ridden brotherhood.

Co-operation is one of our best watchwords. Co-operation of presence and thought in these, our yearly meetings, is but the forerunner of another prosperous year for the Grange. Therefore, Patrons, think well and seriously before you say "I cannot go." These State Grange meetings are milestones, marking the pathway trodden by the pioneers of our Order, and each absentee loses not only a pleasure but a prestige in the unfolding of the labors credited those present.

May the year 1886 mark the presence of all the old familiar faces, as well as the advent of many new ones, is the prayer of

MRS. MARIA B. LANDER.

Martinez, Sept. 12, 1886.

FARES TO MARYVILLE AND ACCOMMODATIONS THERE.—By order of the Committee of Arrangements, Bro. George Ohleyer informs the Patron that ample hotel and lodging accommodations for the coming State Grange will be furnished in Marysville at from \$1 to \$1.25 per day, board and lodging. They hope in a few days to be able to give names of places and capacity, and other information in season for their expected visitors. The usual excursion rates from points on the line of the Southern Pacific Company to Marysville will be given, delegates and members to pay full fare to Marysville and one-third the regular fare for return.

IN ELECTING ALTERNATES, Granges should refer to the provisions in the latest edition of Constitution and by-laws governing the membership of State Granges. See if there is any law for electing more than one alternate, and that in place of the Master. If the alternate elected is married and his wife is a Matron, she will be an alternate. Those Granges that have elected two alternates other than man and wife should look into the matter and govern their final action according to the Constitution.

W. L. OVERHEISER, overseer of the State Grange, long a prominent Patron of Husbandry, has received the Republican nomination for the State Assembly from San Joaquin county.

TEMESCAL GRANGE meets at 2 P. M., Saturday, Sept. 18th. Besides work in the first and second degrees, matters of interest are to be discussed.

## The Heath Amendment.

The proposed amendment to the Constitution of California, relating to the assessment and taxation of property, and generally known as the "Heath Amendment," will come before the people for adoption or defeat on Tuesday, Nov. 2d. The Governor's proclamation, fixing the date of the election and containing the full text of the Amendment to be voted on, was published in the RURAL PRESS of Aug. 14th. We invite the farmers of the State to give, through our columns, a free expression of their views upon the questions involved in the measure.

THE EXTRA SESSION OVER.—The Legislature reassembled on the 7th, and held various discussions thereafter daily, Wednesday excepted, until the 11th, when both houses succeeded in adjourning sine die. The valuable results of their deliberations are yet to be seen—that is to say, they are not yet visible; but it is to be hoped that the general agitation of the water question is preparing the people's mind for more intelligent action and equitable arrangements in the future.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Humboldt.

**GOOD AUTUMN FEED.**—Salmon Brown, of Bridgeville, Humboldt county, informs the *Eureka Advocate* that, although feed has in a measure become dry, it is yet excellent, and that cattle and sheep are thriving splendidly. There is every evidence that stock will be in fine condition to meet the coming of the winter or wet season. This has been an unusually prosperous season in the hills country.

## Lassen.

**THAT SHEEP CASE ONCE MORE.**—Red Bluff *Sentinel*, Sept. 4: M. Marsteller, Judge of the Superior Court of Lassen county, twice decided in favor of the right to run sheep in that county without paying a license tax. The third time he decided in favor of the county, remarking that he hoped it would be appealed. He expressed doubts as to the validity of the ordinance, but gave a judgment for the plaintiff, expecting the defendant would appeal. The papers are being prepared and a decision this fall may be expected.

## Monterey.

**SUNFLOWERS AND MELONS.**—EDITORS PRESS:—I can't quite come up to the Los Angeles sunflower, but I have some 14 inches across, and one with 30 heads, varying in size from a silver dollar to a tea-saucer. I haven't discovered any horns yet, but they may appear later on. Have watermelons as large as a wooden water-pail, of the Ironclad variety. Have squashes—Boston Marrow—as large as a good-sized wash-tub. Have lots of luscious sweet Nutmeg muskmelons and canteloupes, and wish you were here to help eat them.—J. S. TIBBITS, Santa Rita, Sept. 6, 1886.

[The Los Angeles sunflower above referred to was said to be 17 inches in diameter.—EDS. PRESS.]

## Napa.

**JAPANESE CATTLE BUYERS.**—Reporter: T. Katow and Y. Kadoi, the two Japanese gentlemen who paid this city a visit some days ago, are at present in Petaluma. They have been making a tour of this part of the State for the purpose of procuring fine cattle and sheep for the Japanese Government and private parties in Japan. For this purpose they have visited Solano, Napa and Sonoma counties. Both gentlemen state that they are highly pleased with the fine live-stock in the three counties. Mr. Katow came from Japan only about two months ago. Mr. Kadoi has been at the State University for some time studying horticulture.

**CODLIN MOTH.**—Iowa Hill Cor. *Republican*, September 8: The Codlin moth has made its appearance in all the orchards in this neighborhood, and at Yankee Jim's, Wisconsin Hill, and Monotonatown. The apples and pears are falling from the trees; it is impossible to find a sound specimen of either fruit in any of our orchards. Figs do well in this section and it is to be regretted that a larger number of trees have not been planted. The second crop is nearly ripe and the third will follow next month.

## San Benito.

**HUGE HAY CROP.**—*Independent*, Sept. 7: There is more hay now held in the county than ever before in its history. At R. P. Lathrop's hay warehouse there are now about 2000 tons. This includes a number of large stacks back of the warehouse and that in the warehouse. The scarcity of cars is very annoying. Although there seems to be considerable hay moving, Mr. Lathrop says there is strong probability that a vast amount of hay will be entirely lost, as the farmers are holding it back and we are liable to have rain any day now. The San Francisco hay market is badly overstocked, and as a consequence prices are ruinous.

## Santa Barbara.

**RAFFLING FOR AN ARTESIAN WELL.**—Santa Maria Cor. *Lompoc Record*: Tickets are selling rapidly for an experimental artesian well. Two hundred have been issued at \$10 each. When all are sold a drawing will be had and the lucky holder can have the well on his own land, or sell the right to locate it. Five hundred dollars have been offered for the winning ticket. Now, Mr. Miller offers \$1500 for a six-inch well, 500 feet deep, water or no water.

## Stanislaus.

**BOUND TO IRRIGATE.**—*Modesto Herald*, Sept. 3: G. Manuel, a civil engineer, will be in Stanislaus county on the 13th inst., to survey the route for a canal from the Merced river. It is expected that this canal will carry sufficient water to irrigate most of the land on the south side of the Tuolumne river, conveying the water to the section lying between the railroad and the San Joaquin river. We are not advised as to the capacity of the canal under project by the citizens, but they seem determined in their efforts to test the fruits of irrigation.

## Tehama.

**SPECIMEN FRUIT.**—*People's Cause*: John Clements has in his store quite a collection of fruit which is "offered in evidence" of what Tehama county can do in the fruit line. We saw there on Tuesday a variety of black prune and the Gross, a beautiful red plum and a fine large seedling peach produced on the farm of A. O. Peden; also a mammoth late Crawford peach grown by W. W. Dollings, and a fine apple from the same place, a few miles northwest

of Henleyville. A variety of peach called the Indian Queen, very handsome and of fine flavor, is among Mr. Clements' collection. It is worth the while of visitors here as well as that of our own people who are skeptical about fruit-raising to call and be convinced that Tehama county does produce the finest fruit in the world.

## The Farmers' Convention.

In accordance with the notices heretofore published, delegates to the Farmers' Convention met at Sacramento on the 15th. The only word thence as we go to press is a brief telegram to the S. F. dailies that they propose to nominate a ticket from the Democrats, Prohibitionists and Republicans, and that they declare in favor of Government ownership of all railroad, steamboat, telegraph and telephone lines, in opposition to the Heath Amendment and in favor of State control of all water. We expect to give a full report in our next issue.

## FORESTRY.

## Arbor Day at Goat Island.

It now seems that Arbor Day for California is virtually settled upon. On Friday morning of last week, Sept. 10th, through the kindness of Gen. Howard, commander of this department, some 40 persons interested in State forestry went on board the government steam-launch, *McPherson*, for a trip to Yerba Buena, or Goat Island. The party included Gen. O. O. Howard, Joaquin Miller, Adolph Sutro, Major W. W. Blow, F. M. Pixley, Sands W. Forman, Secretary of the State Board of Forestry, Col. George Weeks, John Vance Cheney, Judge Waymire, Major John A. Darling and several other gentlemen, besides a number of ladies.

Arriving at the island, most of the party at once ascended to the summit, and there held an informal council, a report of which we compile from some of the San Francisco daily papers.

Mr. Sutro was looked upon as the chief expert of the party, and great deference was paid to his opinion as he probably has planted more trees than any other individual in California. His experience has been with half a million shrubs of all descriptions, mostly set out on eminences similar to that of Goat Island. The island was found to be covered with a rank, matted growth of dry grass, and after a slight exploration the soil was pronounced fit for the intended purpose. The proposed day, October 30th, Mr. Sutro regarded as too early, since there is considerable doubt of there being any rain whatever before that date, and without moisture preceding the operation the trees would surely die. The most favorable time to plant would be early in December or late in November, as the rainy season opens about that time, and it is necessary that the young trees be placed in damp ground in order that they may be firmly rooted. Tree-planting in the spring is unprofitable, on account of the young shoots missing so much of the season's strengthening moisture that they are unfitted for the ordeal of the summer. In consonance with his views the last Saturday in November, the 27th, was finally decided upon. Mr. Sutro was asked for suggestions as to the varieties of trees he would set out, and after further study of the soil named the marine pine (*pinus maritima*), the Monterey cypress and the eucalyptus, with the *acacia latifolia* or *lophanta malva* for protection. In his opinion the trees should be planted not more than three feet apart, and after the hardy varieties mentioned had taken root others of a more tender nature could be put in beneath their shelter.

"Very well," said Mr. Miller, "we will now adjourn until the 27th of November, when I trust and expect all now here, with hundreds of others, to visit this island, and contribute a tree each toward starting the great work." With this the company took its departure, the details of preparing the ground being left to the active workers, who have the preliminary organization in hand.

Yerba Buena is about one mile long and three quarters of a mile broad, 344 feet above low water at the highest point, and has an area of about 160 acres. The south side was formerly covered with heavy oak timber, which was cut by the whalers. As the island has once afforded soil for such sturdy trees, there is every reason to expect that the new planting will be a success.

The trees will be planted across the west side of the island. The design of the first planting will be a huge Maltese cross, plainly visible to ferry passengers. It is expected that there will be many hundreds more trees than will be required to complete the figure, and they will be set out by their donors wherever fancy and favorable soil dictate.

In order to arouse a public interest, Mr. Sutro has indited a note to Supt. Moulder, stating that he will donate a tree to each of the 40,000 school children in the city, if they will plant them on some regularly organized excursions. As it would be hard to provide ferry facilities for such a host, General Howard promised to prepare a tract near the Presidio, to receive the overflow from Goat Island.

Mr. Forman will bring the matter before the notice of the Forestry Commissioners, who will

all be here before the settled date, and he was able to assure the projectors of their hearty co-operation and support. The State Board will introduce measures at the next session of the Legislature to establish Arbor Day as a legal holiday. They will also make an effort to have a bill passed awarding prizes to such children in the public schools as shall plant and rear the largest number of trees. They will also recommend that assessors be required to make returns as to the quantity and value of timber lands in their counties.

## Placer County State Fair Exhibit.

Nearest to the north entrance to Horticultural hall, in the State Fair pavilion, is the exhibit of Placer county, covering a floor space 50 feet square and 150 feet of wall space. There are 11 tables on the main floor and terraced tables all around the wall, above which the wall display is made. The exhibit is comprehensive and varied, showing nearly everything, from soils and rocks, up through the whole range of field crops, orchard and vineyard products, to the wood of majestic forest trees. It is late for many kinds of fruit, and yet the display included 14 varieties of peaches; 13 of pears; 26 of apples; 4 of quinces; 3 of pomegranates; 3 of walnuts; 7 of almonds; 2 of chestnuts; 5 of watermelons; 42 of grapes; 10 of plums and prunes, etc., these varieties being, of course, largely multiplied as they came from different growers.

The Placer county work at the fairs came about in this way: For a few years the display of Placer county products has been mainly made by four residents—G. L. Threlkel, J. J. Morrison, R. Williamson and E. W. Maslin. They had secured about \$200 in awards, and they agreed to donate that amount toward showing up the county at this year's fairs, provided the county supervisors would appropriate \$400. The enterprise was taken up by the Placer county branch of the Northern California Immigration Association, and at their solicitation the supervisors voted the amount named. It was decided to make three county exhibits—one at the Seventeenth District Fair, the charge of which was given to W. B. Hayford, of Colfax; another at the Mechanics' Institute Fair, in charge of J. J. Morrison, of Loomis; and the third at the State Fair, in charge of J. F. Madden, of Newcastle. Mr. Madden is assisted by W. B. Gester, of Newcastle; G. W. Turner, of Loomis; J. T. Terry, of Newcastle. We give below an outline of the material shown, with the names of the contributors, and by looking this over the reader can get the best idea of the extent and variety of the collection:

J. H. Lewis, Newcastle: Wheat and oats in the sheaf; White Adriatic figs.  
M. Mansfield, Dotan's Bar: Muscat grapes.  
Joseph Kelly, Manhattan Bar: Hungarian prunes and Salway peaches.  
John C. Boggs, Newcastle: Pomegranates and quinces.  
Jacob Working, Newcastle: Salway peaches.  
J. B. Sisley, Newcastle: Collection of peaches and grapes.  
R. J. Becker, Newcastle: Vegetables and raspberries.  
Auburn Orange-growers' Association: Watermelons without irrigation, large and fine.  
C. Estrada, Ophir: Green peppers, dried figs and grapes, also quinces.  
Frank Robles, Ophir: Corn on stalk.  
C. Foster, Ophir: Hungarian prunes.  
James Johnson, Newcastle: Lemon Cling and Salway peaches.  
Wm. Foster, Mt. Pleasant: Fine collection of grapes, including 21 varieties.  
Frederick Becker, Newcastle: Peaches and grapes in variety.  
J. W. Hulburt, Auburn: Collection plums and prunes.  
Wm. Ingram, Jr., Ophir: Hungarian prunes.  
A. Freitas, Newcastle: Oranges, lemons and peaches.  
T. F. Perry, Newcastle: Salway peaches.  
S. K. Harned, Rattlesnake: Quinces.  
J. B. Evans, Newcastle: Peaches and grapes.  
W. E. Richey, Newcastle: Vegetables.  
Philip Theasley, Newcastle: Pepper tree boughs.  
G. L. Threlkel, Newcastle: Grapes and peaches in variety.  
S. Quinn, Ophir: Hungarian prunes.  
C. T. Adams, Newcastle: Four varieties peaches, five varieties plums, eleven varieties grapes.  
J. A. Robinson, Newcastle: Six varieties peaches, including the McDewitt Cling, a deep yellow peach with very bright red cheek.  
J. L. Robertson, Newcastle: Four varieties apples, four varieties pears, six varieties grapes; also prunes, quinces and pomegranates.  
M. Bauman, Ophir: Fruits in variety.  
Hall Brothers, Penryn: Salway peaches and Muscat grapes.  
Gladding, McBean & Co.: Sewer pipe and tile; also architectural terra cotta in variety.  
J. R. Marston, Newcastle: Plums and prunes in variety.  
P. W. Butler, Penryn: Day's Yellow Cling, Lemon Cling, Salway, George's Late and Butler's Cling peaches; also other fruits in variety.  
M. Enos, Newcastle: Salway peaches.  
Hawk & Wood, Rocklin: Wine and table grapes in variety.  
Robert Sims, Newcastle: Grapes.  
J. D. Pratt, Roseville: Red building brick.  
P. H. Smith, Colfax: Watermelons and squash.  
R. Roster, Loomis: Grapes in variety.  
J. H. Gregory, Penryn: Watermelons.  
A. J. Goding, Alta: Ten varieties apples, fine collection; also Bartlett pears.  
J. F. Hill, Loomis: Corn on stalk about 14 feet high.  
J. W. Smyth, Horse Shoe Bar: Vegetables, fruits and nuts in variety; an orange from the crop of 1884

and from the coming crop of 1886; manufactured tobacco, dried figs, etc.

J. F. Madden, Newcastle: Collection natural grasses, pomegranates, English walnuts, black walnuts and almonds.

G. Griffith, Penryn: Three pairs beautifully polished granite vases.

H. E. Parker, Penryn: Pine apple squash.

S. F. Woodworth, Clipper gap: Berry and grape baskets, fruit boxes, also samples of smooth sawing and thin veneers.

Chas. Schutt, Rattlesnake: Tobacco in stock and leaf, and sample of straw covering to protect orange trees from frost.

J. G. Norris, Newcastle: Grapes.

R. Kayo, Plums and grapes.

R. Hector, Rattlesnake: Pears and grapes.

E. W. Maslin, Loomis: Grapes in variety.

E. Booth, Roseville: Fine collection dried fruits also fresh fruits in variety.

Olsen & Nelson, Clipper gap: Pears and apples. L. L. Crocker, Horse Shoe Bar: Fruits and vegetables in variety, also samples of Bartlett pears first, second and third crop of the present year.

W. & P. Nicholls, Dutch Flat: Apples in variety, and walnuts.

J. H. Greely, Newcastle: Large collection of grapes and pears, also squashes.

N. B. Lardner, Penryn: Dried and preserved white figs and grapes.

J. F. Talbott, Shady Run: Tomatoes, Para cucumbers and several fruits grown at elevation of 4150 ft. Contreras & Kette, Manzanita bush in native soil. M. Yarbrough, Loomis: Squashes.

J. A. Grant, Loomis: Sample lot of rye.

Brown & Kette, Applegates: Plums and Para cucumbers.

P. H. Smith, Colfax: Squashes.

G. W. & E. H. Honn, Applegates: Fruits in variety; also flowers, hops, nuts, etc.,

J. E. Simpson, Applegates: Apples.

G. W. Applegate, Applegates: Vegetables in variety.

J. F. Wall, Alta: Pears and apples.

Wm. Eddy, Dutch Flat: Bartlett pears.

J. H. Runkel, Dutch Flat: Apples in variety; also pears and plums.

H. A. Frost: Large and fine collection of orchard fruits.

W. H. H. Hudson, Dutch Flat: Apples.

P. Norburg, Penryn: Oranges, lemons, peaches and grapes.

Jefferson Wilcoxson, Applegates: Collection apples, grapes, pears; also nuts and vegetables; very interesting exhibit.

W. Shillingsburg, Gold Hill: Quinces.

C. Hanson, Colfax: Fine varieties of apples.

C. H. Roberts, Landers: Large collection of the woods of Placer county; also fruits; year's growth of a grapevine, 86 feet; also collection of soils and various native and introduced products; a unique display.

G. W. Turner, Loomis: Specimen woods of forest growth.

J. M. Gayetty, Penryn: Collection rocks and minerals.

Dr. H. E. Stafford, Rocklin: McKay's pruning shears.

A. Caldwell, Penryn: Pears.

J. B. Evans, Newcastle: Grapes.

W. Hazen, Newcastle: Grapes in variety.

H. P. Markert, Roseville: Prunes and peaches.

M. Borah, Shady Run: Plums and apples.

A. Freitas, Newcastle: Peaches.

M. Bannon, Penryn: Collection grapes, including Eastern varieties.

Mrs. Annie M. Fiellen, Alta: Apples and pears in variety.

A. L. S. Martin, Ophir: Grapes.

Mrs. Mary Grafmiller, Spring Valley: Grapes, and sample of rye.

R. Boles, Riverside: Grapes, Eastern and European varieties, and oranges.

W. A. Hines, Rocklin: Large collection European grapes; a splendid display.

J. H. Reith, Penryn: Watermelons.

H. H. Taylor, Ophir: Cucumbers.

John Woodward, Newcastle: Beets and carrots.

M. Pranzi, Newcastle: Red and Silverskin onions.

Jacob Miller, Dotan's Bar: Wine, white and red, grapes, string beans and pomegranates.

Jones & Perkins, Ophir: Peaches.

W. H. Threlkel, Newcastle: Peaches.

W. Barry, Ophir: Peaches.

G. T. Bartlett, Lost Camp: Vegetables and fruit in variety; also hops grown on ranch, near Blue Canyon, 4500 feet above sea level.

J. W. Smith, Horse Shoe Bar: "Hong Choy" or "Chinese date."

J. B. Whitcomb, Colfax: Large collection grapes, 22 varieties.

N. Mertes, Roseville: Collection wine and table grapes, well grown and handsome.

Andrew Ryder, Loomis: This season's growth of plum trees without irrigation, about eight feet long. Philip Dippel, Lincoln: Chili wheat.

Jesse Thompson, Lincoln: Cultivated wild oats.

**A LUSCIOUS DONATION.**—Last Friday week a note came to us from Merced, running thus:

EDITORS PACIFIC RURAL PRESS:—You will please accept a box of Bartlett pears. You can get them by going to the Pacific Fruit Company's store.—MARSHALL HARRIS.

The pears themselves—a generous supply—arrived at the office Monday morning in condition for immediate eating. We put a tape-line around one of the largest, and found its girth to be 10 inches. Employees of the business office, as well as the editorial staff, showed their practical gratitude for the welcome present, and can testify that the favorite epithet, "melting," well befitted the fruit.

**THE VIOLET APPLE.**—While at his place in Sacramento, Mr. Robert Williamson, of W. R. Strong & Co., called our attention to his trees of the Violet apple, which he considers of great promise. It is a large red apple resembling, in size and form, the 20-ounce pippin, except that it is rather more flat. It was found on the place of Mr. Violet, of Ione, the origin of the tree being beyond memory. The apple ripens with the Bellefleur and Rhode Island Greening. It has proved valuable for shipping to the Colorado and Wyoming markets.

### Somehow Or Other We Get Along.

The good wife bustled about the house  
Her face still bright with a pleasant smile,  
As broken snatches of happy song  
Strengthened her heart and hand the while.  
The good man sat in his chimney nook  
His little clay pipe within his lips,  
And all he'd made, and all he'd lost,  
Ready and quick on his finger tips.

Good wife, I've just been thinking a bit;  
Nothing has done very well this year—  
Money is bound to be hard to get,  
Everything's bound to be very dear.  
How the cattle are going to be fed,  
How we're to keep the boys at school,  
Is a kind of a debit and credit sum  
Can't make balance by my rule."

She turned her round from the baking bread,  
And she faced him with a cheerful laugh.  
Why, husband dear, one would think  
The good rich wheat was only chaff.  
And what if the wheat was only chaff,  
As long as we both are well and strong  
I'm not a woman to worry a bit—  
Somehow or other we get along.

"Into some lives some rain must fall,  
Over all lands the storm must beat;  
But when the rain and storm are o'er,  
The after-sunshine is twice as sweet.  
Through every strait we've found a road,  
In every grief we've found a song;  
We've had to bear and had to wait  
But somehow or other we get along.

"For thirty years we have loved each other,  
Stood by each other whatever befell;  
Six boys have called us father and mother  
And all are living and doing well.  
We owe no man a penny, my dear,  
We're both of us loving, well and strong;  
Good man, I wish you would smoke again,  
And think how well we've got along."

He filled his pipe with a pleasant laugh,  
He kissed his wife with a tender pride;  
He said: "I'll do as you tell me, love—  
I'll just count up on the other side."  
She left him with his better thought,  
And lifted her work with a low, sweet song—  
A song that followed me many a year—  
Somehow or other we get along.

—Philadelphia Times.

### In a Garret.

When old Squire Marcy died, having lived  
20 years beyond his allotted time, the neighbors  
were very curious as to the existence of a will.  
For if there were none "the girls" would have  
to give up their home and "do something for a  
living." The little farm, which had yielded a  
comfortable living for three persons, when sold,  
and its proceeds divided among 10, would give  
but a pittance to each. It was generally con-  
ceded that "it would come hard on the girls."

"Squire Marcy was always a good provider,"  
said Mrs. Denison to her husband, who hoped  
to "administer" the estate if no will was found.  
"Sabra nor Cynthia, neither of 'em, have ever been  
stinted. They'll feel it dreadfully if they've got  
to give up their comfortable home and come  
down to earning their own bread and cheese."

"I shall advise the girls to bring in a bill,"  
said Mr. Denison, "a bill for their services.  
The Probate Court will allow it quicker'n light-  
ning."

"The girls won't bring in no bill," said his  
wife; "Sabra told me that if her father didn't set  
enough by them to provide for them, she should  
not make any claim on the estate."

"That's just like a woman," said Mr. Den-  
ison, testily.

But no will, and no evidence that the old  
gentleman had ever contemplated making one,  
could be found; Mr. Denison received the cov-  
eted appointment, and the settlement of the es-  
tate by law went forward.

Cynthia and Sabra were the children of their  
father's third wife. A delicate creature she  
had been, who accepted Squire Marcy's offer  
because, homeless and friendless, the prospect  
of a home tempted her. But her home was  
made wretched by eight children, sons and  
daughters of her predecessors, some of them  
nearly as old as herself, coarsely organized,  
quarrelsome, but agreeing upon one point—to  
make life as intolerable for their young step-  
mother as possible. She could not bear up un-  
der their petty persecutions. In a few years  
she was laid to rest with the other wives, leav-  
ing her two little girls to fight their way as  
best they could. It had been a hard life for the  
children at first, but one by one the older ones  
had drifted away, and finally the Western  
fever seized upon them all, and they went, one  
after another, to make homes on the broad,  
fertile prairies. So, for many years the sisters  
had lived happy, peaceful lives in the old home-  
stead with their father.

They were quiet, gentle women, inheriting a  
poetic temperament from their mother. They

loved the old house and the woods about it.  
They knew where the earliest spring flowers  
grew and where to find the brightest autumn  
leaves. They would not have dared to let their  
neighbors, who disapproved openly of their  
"traipsing about all over the woods," know  
what treasures of pressed flowers and leaves  
they had carefully put away. Not for worlds  
would Miss Cynthia have told of the timid at-  
tempts at flower-painting she sometimes made,  
in the solitude of her own room. They had not  
felt much in sympathy with their neighbors  
heretofore, but now that real trouble had come  
upon them, every one was kind; the sisters  
found they had many warm friends where they  
least expected to find them. They were middle-  
aged women now, well advanced in their fifth  
decade. Of their half-brothers and sisters they  
knew little, but it was certain there would be  
no mercy from them. They would grudge the  
sisters the "living" they had had, and each one  
would claim every penny due, eagerly. Once  
Mr. Denison ventured to suggest his idea of "a  
bill," but an ominous gleam in Miss Sabra's  
eyes warned him, and he left his sentence un-  
finished.

"Cynthia," said Sabra, one bright September  
morning, "Mr. Denison said last night that he  
thought brother James would be here pretty  
soon. Don't you think we had better look  
over the things in the garret before he comes?  
I don't feel as if I could have any one but our-  
selves touch mother's things."

"Just as you think best, sister Sabra," an-  
swered Miss Cynthia, meekly. The coming  
change was an even greater grief to her than  
to her elder sister. She loved her old home  
with an almost passionate tenderness, and it  
seemed to her, sometimes, that leaving it would  
almost break her heart.

The two sisters finished their morning tasks  
in silence, and without a word climbed the nar-  
row stairs that led to the old garret. Such a  
treasure-house of family relics as it was! Not  
a child of all the 10 whose development could  
not be traced in cast-off clothing and old school-  
books. There were boxes and trunks, carefully  
packed, standing primly against the wall. Old  
garments, dating back to old Squire Marcy's  
first wedding coat, hung above them. Near a  
window was a broken looking-glass, with gilt  
and ebony frame, the upper portion filled with  
a gay flower piece, and Miss Cynthia, in a sub-  
dued tone, asked Miss Sabra if she didn't re-  
member "hearing tell how sister Jemima broke  
that glass just before mother died?"

The timbers of the old roof were enormous,  
suggesting an abundance of lumber to which we,  
in these modern times, are strangers. Many  
pegs and nails were driven into them, from  
which swung paper bags filled with dried herbs,  
spearmint, boneset, pennyroyal, all diffusing a  
pleasant odor through the garret, which Miss  
Cynthia thought more agreeable than the huge  
bowls full of steaming hot herb tea, which Miss  
Sabra always made her swallow, her feet in a  
pail of hot water meanwhile, whenever she took  
cold. Two large wooden chests stood far back  
under the eaves—so large that they could never  
have been brought up the narrow stairs, but  
must have been built where they stood. In  
them were piles of old papers, years upon years  
of Springfield Republicans and Massachusetts  
Ploughmen, Old Farmers' almanacs for more  
than half a century; and there were carefully  
cherished a pile of "Journals of the House,"  
containing the doings of the Legislature when  
Squire Marcy represented the town.

Miss Cynthia gave a pitiful look into a chest,  
and then sat down in a basket of newly-sewn  
carpet-rags and began to cry. "Oh, Sabra,"  
she sobbed, "I've been used to seeing these  
things all my life. Seems as if it would break  
my heart to part with them. I've a great mind  
to bring in a bill."

"Cynthia," said Miss Sabra, "this is foolish-  
ness. There's no use in givin' way so. We  
can't help ourselves."

"Well," said Miss Cynthia, extricating her-  
self from the carpet-rags and wiping her eyes,  
"what shall we do first?"

An old spinning-wheel, which had stood for  
years in its own nook, resting after long service  
in spinning yarn for blankets and stockings to  
keep the Marcys warm, quivered a little, as  
if with grief at the coming change, and the crad-  
dle, wherein all the little Marcys had been  
rocked, rocked gently once more, in a deprec-  
atory way, as the sisters turned toward the  
closet where one or two trunks, more precious  
than the rest, were stored.

"I thought we'd better look over mother's  
things first," said Miss Sabra, opening the shut-  
ters and letting in a flood of autumn sunshine.  
A faint odor of camphor and cedar and pungent  
spices filled the closet, for this was the store-  
room for winter clothing and wraps in summer.  
The sisters' cloaks and woolen dresses hung on  
the wall. Broad shelves, piled with home-  
made blankets and patchwork quilts and com-  
fortables, filled one side of the little apartment,  
and in a band-box in one corner, carefully  
wrapped in linen and packed away in red pep-  
per and camphor, were the sisters' furs, the  
one spontaneous gift their father had ever given  
them. For Miss Sabra's and Miss Cynthia's  
wearing apparel usually represented sundry  
sacrifices of eggs and poultry and fresh butter,  
exchanged at the village store for something to  
wear. But once, when the old gentleman had  
made an exceptionally good sale of fat cattle,  
he opened his heart and purse-strings and pre-  
sented his daughters each with a set of gray  
squirrel furs, more precious in their eyes than  
sealskin or sable.

"Well, Cynthia," said Miss Sabra, "this is

the trunk of mother's things. We'd better  
open it to make sure there's nothing else in it,  
and then we'll take it down-stairs and look the  
things over. I guess they're all right, but it's  
three years, come October, since we went  
through them."

Miss Sabra knelt down before the little hair  
trunk, studded with brass nails, fitted the key  
in the rusty lock, and with some difficulty  
turned it and raised the lid. The clothing,  
yellow with age, lay neatly folded, with leaves  
of "Sweet Mary" scattered through it to give it  
a pleasant odor. But upon the top lay a fold-  
ed paper, long and blue, with a formidable air  
of business about it.

"Why, sister," said Miss Cynthia, "what is  
that?"

"I don't know," said Miss Sabra, under her  
breath; "I never put it there. I'm most afraid  
to touch it."

But Cynthia, more impulsive than Sabra, had  
already seized and opened it. She whitened to  
her lips.

"Sabra," she whispered, "it's a will!"

"Then," said Miss Sabra, "we mustn't look  
at it. We must go and give it to Mr. Denison  
right away and let him read it first. If we go  
right off now, we can get there in time to see  
him when he comes home to dinner."

So the sisters put on their sun-bonnets and  
went "cross lots" through the fields to  
Mr. Denison's house, climbing fences and open-  
ing heavy gates, taking with them the mysteri-  
ous document which was of such terrible mo-  
ment to them. It was duly delivered to Mr.  
Denison and the story of its discovery told.  
"And whatever could have possessed father to  
put it there is more than I can tell," added  
Miss Sabra.

But Mr. Denison was already absorbed in  
reading the will and hardly listened to Miss  
Sabra's story. They waited, breathlessly,  
trembling in every limb, wondering what was  
coming to them, fearing the worst, not daring  
to hope for good fortune. But presently Mr.  
Denison turned on them a beaming face,  
saying:

"This is all right. It is duly signed and  
witnessed, and I am the executor. You are  
given the use of the real estate for your lives,  
or until you marry"—Miss Cynthia blushed—  
"and the stock and furniture and farming uten-  
sils are given you outright. Now we'll have  
it probated right away. And I must say I'm  
glad of this. It's just as it should be."

Miss Cynthia broke down and cried like a  
baby, and Miss Sabra's eyes were full of tears  
as she said: "Now, Cynthia, ain't you glad we  
didn't bring in a bill?"—Julia A. Sabine.

**WAGE WORKERS' LIQUOR BILL.**—There are  
some facts connected with the Internal Revenue  
which should be faithfully studied by every  
citizen. During the last year 624,000,000 gal-  
lons of beer were used, which would be 10.83  
gallons for every one in the land, babes in-  
cluded. During the same time 70,763,010 gal-  
lons of whisky were drunk, or 1.19 gallons per  
capita. One hundred and ninety-one million  
twenty-three thousand six hundred and sixty-  
three pounds of tobacco for smoking and chew-  
ing are reported, or 3.22 pounds for each person.  
There were 3,510,372,539 cigars consumed, or  
59.2 per capita, and 1,310,556,512 cigars, or  
22.1 for each one. The *Tribune* remarks in  
relation to these figures: "It remains to add  
that, supposing cigars to average only 5 cents  
each, and cigarettes 20 cents a package, tobacco  
a dollar a pound in retail forms, beer 5 cents  
a glass and spirits 5 cents for half a gill (prices  
which are certainly not as high as those paid by  
most consumers), the cost of these articles to  
the people of the country is over \$1,189,000,-  
000, or \$19.82 for every inhabitant. This  
burden is borne by about 20,000,000 wage-  
earners, however, and for them it averages  
\$59.46 yearly. All the money that trade unions  
have added, or ever will add, to the wages of  
labor, will not equal half the sum spent last  
year, mainly by working people, in the con-  
sumption of liquor alone, which costs them much  
over \$800,000,000." Accepting these state-  
ments as reliable, it follows that at least half of  
the American nation is made up of fools, and  
the other half has hardly good sense. Just  
think of the sums lavished on appetite! The  
complaint about hard times seems shameless.  
Here is a splendid chance to reform and bring  
on universal prosperity. There is need for it  
among the disciples of Christ, for they are as-  
sisting in this foolish expenditure.—Midlands.

**BRYANT'S SIMPLICITY OF HEART.**—A very  
pretty anecdote is told of the late William Cul-  
len Bryant, the poet, by a former associate in his  
newspaper office, which illustrates the good  
man's simplicity of heart. Says the narrator:  
"One morning, many years ago, after reaching  
the office, and trying in vain to begin work, he  
turned to me and remarked: 'I cannot get  
along this morning.' 'Why not?' I asked.  
'Oh,' he replied, 'I have done wrong. When  
on my way here, a little boy flying a kite passed  
me. The string of the kite having rubbed  
against my face, I seized it and broke it. The  
boy lost his kite, but I could not stop to pay  
him for it. I did wrong. I ought to have paid  
him.' This tenderness of conscience went far  
toward making the poet the kindly, noble, hon-  
orable and honored man that he was, whose  
death was felt throughout the land.—Phila-  
delphia Call.

**CONFIDENCE** is a plant of slow growth in an  
aged bosom.—William Pitt.

### Thorwaldsen—The Celebrated Sculptor.

(Translated from the German of HANS CHRISTIAN ANDER-  
SEN by PROF. GRANVILLE F. FOSTER.)

The moon is supposed to be relating the story.  
Several years since, in the city of Copenhagen,  
I looked through the window of a dwelling be-  
longing to the poorer class. The father and  
mother were sleeping, but the little son was  
lying awake. I saw the bed-curtains of figured  
calico move and the little child peeped forth.  
At first, thought I, he is interested in the great  
clock, fixed to the wall, which was painted in  
glaring red and green; above sat the cuckoo,  
beneath hung the heavy leaden weights and  
the long pendulum, whose ball was a brass disk,  
brightly polished, going ever backward and  
forward with the measured monotonous tick,  
tack. But it was not the clock that attracted  
the child's attention, but his mother's spinning-  
wheel, which stood directly beneath. Of all  
things in the house, this was the most coveted  
object to the boy, and yet had he never dared  
to touch it, the least attempt causing him to be  
rapped on his fingers for his pains. During  
whole hours, while his mother was spinning,  
would the boy sit motionless by and intently  
observe the whirling spool and rapidly turning  
wheel, while all the time his developing mind  
was filled with peculiar thoughts. Oh, if he  
could only once turn the spinning-wheel, what  
a heaven of delight it would be! Now father  
and mother were sleeping, as he perceived on  
the one hand, while on the other there stood  
the coveted spinning-wheel. First a little  
naked foot is stretched forth, then the other,  
and finally two bare little legs are seen. There  
he stands before the bedstead. He pauses to  
examine once more whether his father and  
mother are asleep. They are indeed asleep;  
how happy for him! How quietly he glides in  
his little, short nightgown to the spinning-  
wheel and commences to spin. The whir be-  
gins. It grows louder as quicker and quicker  
the wheel is turned. I kissed his flaxen hair  
and deep-blue eyes—'twas a beautiful picture.  
At this moment his mother awakes, moves  
quickly the curtains aside, and looks out to  
behold a goblin or some diminutive ghost.

"In the name of Jesus!" cries she, and anx-  
iously strikes her husband on the side. He  
suddenly awakes, rubs his eyes with his hands,  
and looks at the little, nimble fellow. "Ah,  
indeed it is Bertel!" cries he. Just here my  
eye looks away from the humble cottage, for I  
have so many things to see! At the same time  
I looked into the rooms of the Vatican, where  
the marble gods stand. My beams fell on the  
Laocoon group, and the very stone seemed to  
sigh. I pressed a still and quiet kiss on the  
breasts of the Muses, and it seemed as though  
these were heaving. At length my beams rest-  
ed on the group of the Nile, represented as a  
colossal god. There he stood, leaning on the  
Sphinx, full of thought and dreaming as he  
considered the fleeting centuries passing before  
him. Near by, little Cupids are busy in play  
with sportive crocodiles. In a cornucopia sits,  
with folded arms, a very young Cupid, ear-  
nestly looking up at the great stern river god—  
a true picture of the little boy at the spinning-  
wheel, for the features in either case were the  
same. Living and charming appeared here the  
marble Cupid, and yet had the great wheel of  
the passing years turned a thousand times since  
½ sprang forth from its lifeless bed in the heart  
of the stone. Just as often as the little boy in  
the humble dwelling at Copenhagen has turned  
the spinning-wheel, must the wheel of time in  
the whirling course of revolving years turn  
from this early period before another age could  
appear in which it was possible for these marble  
gods to be recreated.

Since the time of the scene in the cottage  
many years have passed away. Yesterday I  
looked down on the east coast of Zealand; here,  
amid lofty hills and beautiful forests, stood an  
ancient knight's manor, with red walls. In the  
waters of the moat swam beautiful swans. In  
the rear of the manor appeared, somewhat in  
the distance, a handsome little village sur-  
rounded with gardens and orchards, out of the  
midst of which towered to the sky the spire of  
a Christian church. Here and there, over the  
calm, quiet surface of the adjoining sea, glide  
numerous boats all lit up with torches, not for  
the purpose of eel-fishing so common in these  
waters, but for festive holiday purposes. Mu-  
sic fills the air. A song is sung. In one of the  
boats stands up the man whom all delight to  
honor—tall, vigorous-looking, handsome; cloth-  
ed in a cloak, there he stands, with his deep  
blue eyes and long white hair, the personifica-  
tion of beauty and manliness. I recognized  
him, and my mind wandered at once to the  
Vatican, and I looked again upon the group of  
the Nile and all the marble gods; and I also  
thought on the bedchamber in the humble  
Danish dwelling, where little Bertel, in his  
white nightgown, sat at the spinning-wheel.  
That long revolution of time has been accom-  
plished; new gods, liberated from their stony  
bed, stand forth to the gaze of an astonished  
world. My reveries are broken by the loud,  
continued shouts of the multitude, arising from  
the thousand boats that skim the sea: "Three  
cheers for Bertel Thorwaldsen!"

**INQUISITIVE** people are the funnels of conver-  
sation; they do not take in anything for their  
own use, but merely to pass it to another.—Sir  
Richard Steele.

## Gems of Thought.

AVOID shame, but do not seek glory—nothing so expensive as glory.—*Sidney Smith.*

THERE is something exceedingly thrilling in the voices of children singing.—*Longfellow.*

THE yoke a man creates for himself by wrongdoing will breed hate in the kindest nature.—*George Eliot.*

WE are apt to be deluded into false security by political catchwords, designed to flatter rather than instruct.—*Garfield.*

THERE are three things in speech that ought to be considered before they are spoken—the manner, the place and the time.—*Southey.*

THERE is not in nature anything so remotely distant from God, or so extremely opposite to Him, as a greedy and griping niggard.—*Barrow.*

PROFITABLE employments would be no less a diversion than any of the idle sports in fashion, if men but be brought to delight in them.—*Locke.*

LET every man take care how he speaks and writes of honest people, and not set down at a venture the first thing that comes uppermost.—*Cervantes.*

GOD is present in the consciences of good and bad: He is there a remembrancer to call our actions to mind, and a witness to bring them to judgment.—*Jeremy Taylor.*

SUBMISSION is the only reasoning between a creature and its Maker, and contentment in His will is the best remedy we can apply to misfortunes.—*Sir W. Temple.*

I THANK God that if I am gifted with little of the spirit which is able to raise mortals to the skies, I have yet none, as I trust, of that other spirit, which would drag angels down.—*Webster.*

To believe your own thought, to believe what is true for you in your private heart is true for all men—that is genius. Speak your latent conviction and it shall be the universal sense; for the inmost in due time becomes the outmost, and our first thought is rendered back to us by the trumpets of the Last Judgment.—*Emerson.*

## Chaff.

IT is a curious fact that whenever a British Parliament gets into hot water it is sure to dissolve.

THE days are growing shorter and shorter, and the hours for leaning over the front gate longer and longer.

"Is the man dead?" asked the reporter of a policeman after an accident. "Not yet," replied the officer. "The doctors haven't come."

SNOBBY—"Aw—aw—it must be very unpleasant for you Americans to be governed by people—aw—whom you wouldn't ask to dinner." American belle—"Well, not more so, perhaps, than for you in England to be governed by people who wouldn't ask you to dinner."—*Punch.*

IN response to an advertisement of a Brooklyn church music committee for an organist, the following was received: "Gentlemen, I noticed your advertisement for an organist and music teacher, either lady or gentleman. Having been both for several years, I offer you my services."

MAUD—"Well, commencement is over, thank goodness, and the seminary is closed for the summer. When do you start for home?" Nellie—"In the express to-morrow morning." "Have you anything to read on the journey?" "Yes; I am going to look over my school-books; papa might be inquisitive."

"MAMMA," said Johnnie, still smarting from a shingle application, "is the roof of anything on top of it?" "Of course it is," she said, shortly. "And don't shingles always go on the roof?" "Certainly they do." Then Johnnie was silent for quite awhile. Finally he said, in a quivering voice, "Mamma, ain't my roof upside down?"

THE story is told of Senator Evarts, of New York, that he once sent a donkey up to his farm, at Windsor, Vt., and about a week afterward received the following letter from his little grandchild: "Dear grandpa—The little donkey is very gentle, but he makes a big noise at night. He is very lonesome. I guess he misses you. I hope that you will come up soon, and then he won't be lonesome."—*Waif.*

"ONE of my ancestors won a battle during the crusades by his skill in handling his artillery," said the Baron. "But, my dear Baron," said his friend, "at the time of the crusades gunpowder had not yet been discovered." "I know that as well as you do, and so did my ancestor." "How did he win the battle, then?" "He brought his artillery to bear on the Saracens, and the stupid fools, seeing the guns, supposed that powder had at last been discovered, and fled in dismay."—*Texas Siftings.*

OFFENDED THE GOVERNING CLASS.—A telegram from Nashville says that Rev. G. C. Rankin, one of the leading ministers in Chattanooga, has been making war on the saloons. He made personal inspection of all of them on two different nights, and has since been making startling exposures. He handled the whisky men without gloves, and they are mad. The latest rumor in connection with the matter is that saloonists will boycott all business men who are members of the church.

## YOUNG FOLKS' COLUMN.

## Stella's Medicine.

[Written for the RURAL PRESS BY BECCA M. SAMSON.]

Stella's little brother Charlie was very ill; so ill that a solemn old doctor, with gold-rimmed spectacles on his nose, came three times a day to visit him, and mamma's pretty eyes were red and swollen from crying, and papa, each morning as he kissed his little daughter before going to business, would whisper softly in her ear, "Pray God, Stella, to take care of brother Charlie while I am away to-day." And Stella would promise with a look of wonder in her big gray eyes.

She was not old enough to understand what sickness meant; she knew only that she was very lonesome without her little brother to play with, and she had cried because they had carried him away from his cot in the nursery to shut him up in a big room downstairs.

The door of this strange room was always shut. The servants stole into it on tiptoe and came out of it with grave faces, but Stella could never discover what made them so sad, because when she asked them they always told her to run away and play in the garden. Stella grew tired of playing in the garden by herself. There wasn't much fun in talking to the flowers, who never did anything but nod their silly heads to everything she said. She wanted to see her little brother and ask him why he staid away from her such a long time.

It was now three weeks since she had last seen him, and so many wonderful things had happened during that time—the blossoms in the orchard had all changed into fruit, the garden was full of roses, and under the fragrant lilac bushes the old gray pussy cat had hidden away six little kittens. How Charlie would love the cunning things! How he would laugh to see them open their funny pink mouths and wriggle their tiny mites of tails!

Suppose she should carry one of the prettiest to him? They would surely let her in when they saw what she had brought for her little brother.

But when Stella reached the sick-room door she was met by a strange woman, who called herself "Nurse," and who very sternly bade the little girl run away and never dare come near the sick-room again.

This made the poor little girl very unhappy; she thought she must have done something dreadfully naughty to never be allowed to see her little brother again, and she thought the new nurse a wicked woman to punish her for nothing.

She told her papa all about it when he came home that night and asked him why everybody was so unkind to her. Her papa tried to make his little daughter understand what sickness really meant, and told her she would have to keep very quiet and be a good girl; then when Charlie had taken all the medicine the doctor gave him, perhaps he would get well and she would see him again.

Stella tried to wait patiently, but day after day passed and no little brother came. Then she grew miserable indeed, and one morning when she asked the nursery-maid, who came to dress her, if God had made Charlie well, the girl burst into tears. Everybody looked very sad that day; Jane, the house-maid, did nothing but sigh, and the cook made Stella a beautiful apple-turnover for her dinner, because, as she said, the little creature needed something to comfort her. Stella took her lunch in the kitchen, because it was too lonesome for the little girl in the dining-room without mamma to talk to.

On this particular day, as Stella sat at the big pine-wood table munching her nice tart and wishing she could carry up a piece of it to Charlie, who should come down the back stairs but the same cross old nurse, of whom Stella was so much afraid. She didn't look very cross now, only pale and tired, as she said to the cook on entering the kitchen, "I hope, Mary, you have a good fire. The doctor may be here any minute, and I must have baby's broth ready before he comes. I declare," she continued, dropping down into a chair and leaning her head on her arm as though she were about to take a nap, "I'm quite worn out with nursing!"

Before nurse had finished talking, Stella had slid down from her high chair and was up and away before any one knew she was gone. What would that fussy old nurse have done, could she have seen the little girl a moment later, standing outside the sick-room door and holding tight in her two arms a little struggling mewling kitten?

Stella had some trouble in turning the heavy door-knob, and when she did at last succeed and found herself standing in a big gloomy room, pussy, with a "meow" of terror, squirmed out of Stella's arms and scampered away as fast as it could on its weak little legs.

For a moment, the little girl was tempted to run away too. The room with its silence and darkness frightened her; and the strong odor of drugs and liniments made her feel sick.

Presently, she made out in the corner a big bed, upon which was lying a tiny, white-faced little creature, who tossed and moaned among the soft pillows, as if they were full of thorns. In a low seat by the side of the bed sat Stella's

mother. Her face was buried in the bed-clothes, and from her outstretched hand there dropped an open fan. The tired mother had fallen asleep while fanning her sick child.

Stella's two big, wondering eyes were fastened upon the little sufferer on the bed. It could not be her pretty brother—he had rosy cheeks and bright hair, while this little moaning thing was whiter than Stella's linen frock and had no pretty curls at all.

By-and-by Stella crept close to the bedside and said softly, "Charlie, the kitty-cat wouldn't stay." Then the sick child opened wide his great blue eyes, and that was how Stella knew her little brother. Now she knew why everybody was so unhappy. Now she understood why Charlie was so sad and pale. The wicked old doctor had shut him up in that dreadful dark room where he never saw the sun nor the flowers, nor heard the birds sing—dear, dear baby brother, who used to clap his hands at the pretty sunlight, and laugh when anybody gave him a flower!

How was the poor little boy ever to get well in that dreary room?

No wonder he was afraid to speak to her! Perhaps he thought she had come to give him some of that nasty medicine she saw upon the table. No, no! Little Stella knew something better than that. "I'll cure you, Charlie," she lisped in her sweet voice. "I'll find you a nice medicine to make you well."

Out of the great gloomy room stole the little girl, down the long stairs that led into the beautiful, blooming, sunlit garden, where birds were singing, bees buzzing and gay butterflies flitting about in an ecstasy of happiness. The air was as sweet and soft as the breath of a child.

Stella looked toward the window of the sick-room, from which all this beautiful world was hidden by heavy, dark shutters which were fastened tight and close as the doors of a vault. Bright roses, nodding and bobbing on their slender stems in the pretty fashion roses have, peeped here and there and everywhere for a glance between the slats of the shutters, while a trembling yellow sunbeam tried vainly to find some crevice through which to creep.

Everything was bright and beautiful except this one gloomy spot that frowned in the midst of the flowers and sunlight, as a storm-cloud frowns in a summer sky.

"Bright sun, bright sun," Stella cried, pointing with her tiny finger toward the darkened window, "yonder lies my baby brother, sad and suffering, because they have taken you away from him. If I open the shutters and let you in, will you promise to make him well again?"

And all the golden sunbeams came and gathered themselves in Stella's flowing hair. It was their way of showing how ready they were to help her.

"Gentle breeze, gentle breeze," cried the little girl once more, turning to where the soft air crept down from the tall tree tops and through the fragrant flower beds, "you come straight from heaven. Can you not bring something to make my little brother well?" And the breeze hastened to kiss Stella's cheeks, fluttering as though impatient to do her bidding.

"Bright flowers, bright flowers," whispered the loving child, holding out pleading hands to all the listening blossoms, "my little brother does not like the doctor and his bitter medicines, but he loves you dearly and will gladly take whatever you bring. Will you not come and make him well?" And the flowers nodded their pretty heads, saying "yes" in a thousand graceful ways.

Then Stella stole over the grass, softly as an angel bearing gifts from heaven, until she stood beneath the sick-room window. High upon the tips of her tiny toes she stood, reaching up her chubby arms, and with a touch of her baby fingers threw open wide the lattice that shut out from the sick child the air and light of heaven. In rushed the waiting breeze, bearing health and happiness upon its eager wings. Sunbeams darted everywhere, slaying with golden arrows the evil spirits of death and darkness that haunted the sick-chamber, while a thousand warbling birds poured forth a hymn of rejoicing for the victory. When the doctor came a moment later to pay his daily visit, he found a room flooded with air and light, and standing in the center of the floor a little girl, who pointed to where the sick child lay among the pillows, not moaning from pain, nor tossing with fever, but laughing at the merry sunbeams that danced upon the wall and holding out his feeble hands toward the roses that nodded to him from the open window.

"See," cried the little girl, triumphantly, "the good medicine has made brother Charlie well."

And the tired mother awoke from a startled slumber to fall upon her knees and thank God for the child that had brought such a blessing to her; the grave doctor smiled as he laid his hand upon Stella's bright head; and even the cross old nurse was too well pleased to scold.

From that day forth the sick child was never without Stella's medicine; it made him so well and strong that before many days he was changed from a helpless, white-faced invalid into a stout, rosy-cheeked little boy, who spent the long summer days with his happy sister chasing bees and butterflies about the beautiful garden. And all this was owing to the wonderful medicine of a wise little girl.

WHY is a young lady of the present age like a careful housewife? Because she makes a great bustle about a little waist.

## DOMESTIC ECONOMY.

## A Desirable Recipe.

IN Sacramento county, says the *Record-Union*, resides a lady who is locally famous for the excellence of her make of jams, jellies, pickles and chow-chow. The goods of her manufacture were on the market as long as she desired, and were always eagerly purchased. In recent years she has not cared to manufacture much for sale. Recently, by solicitation, she gave several ladies her method of making chow-chow, and these, to oblige others, desire the recipe to be published. While it is true that with every housewife, in her skill in the art of cookery, there is something that cannot be conveyed, a knowledge gained by experience how to produce results that she cannot explain, and in which she cannot instruct others, still a recital of her methods may lead others into equally happy results after some experimental effort. The chow-chow of Mrs. H. is thus made: Two dozen large green tomatoes, one large red onion; slice; green peppers, a half-dozen; mix, salt and let stand four hours. Then spread and drain four hours. Put in a porcelain pot, and pour over enough white-wine vinegar to cover, with one cup of brown sugar, one large tablespoonful of ground mustard, two tablespoonfuls white mustard seed, one teaspoonful celery seed, one tablespoonful ground mace. Boil all in a porcelain pot thoroughly. Seal hot.

GRAHAM ROLLS.—Mrs. Susanna Dodds gives the most minute and accurate directions for a perfect gem, of which the following is an abstract: Mix graham or whole wheat flour, which, if very coarse, must first be sifted, with ice-cold water in the proportion of two-thirds of a pint of water to a quart of flour; more wetting must be used if the flour is very coarse. Stir fast until a moderately stiff dough is formed, and knead thoroughly from 10 to 15 minutes, till the dough is fine and elastic to the touch. Roll half of it at a time into long rolls a little over an inch in diameter; cut off and shape into rolls three or four inches long and three-quarters of an inch thick, to which no dry flour is left attached. Make them rapidly and place a little apart in a pan; prick them with a fork and put the pan in a hot oven. When done, they should not yield to pressure between thumb and finger. They are to be eaten warm or cold, and are just as good rewarmed as when new. To do this, dip in cold water, cover with cloth and set in a moderate oven, when they will puff up lighter than at first. These require slow mastication, and are sweet as a nut and very nutritious.

MUSHROOM CATSUP.—After cleansing and thoroughly washing the mushrooms, stalks and all, cut each into two or four pieces, according to its size. Put the pieces in a stone jar, sprinkling salt on each layer, and let them stand for 24 hours. Then take them out of the jar and press them to extract all the juice, which must be bottled immediately and corked. Put the mushrooms back in the jar, and at the end of 24 hours press them again and bottle the juice. Again return the mushrooms to the jar and repeat the pressing process at the end of the 24 hours. Mix thoroughly the juice of the three pressings, adding pepper, allspice and one or more cloves, according to quantity, broken in pieces. Simmer and remove the scum as long as it rises. When no more scum appears, strain, and when cool, put into bottles. In each bottle put two cloves and a pepper-corn and seal airtight. In a cool, dry place the catsup will keep for years.

CUCUMBER SALAD.—This receipt is from "Good Housekeeping." Be careful to get only firm, fresh cucumbers, and not those that are at all wilted; choose small cucumbers rather than large ones, as the latter are apt to be flabby and seedy. Lay on ice until ready to use them; then wash, pare and slice as thin as possible; sprinkle salt over them plentifully and let them stand for half an hour; then press or drain all the water from them and mix with the dressing as for bean salad. Prepared in this way, the cucumbers are not as crisp as when the water is not drained from them, but they are a great deal more wholesome. A very nice salad can be made by taking two-thirds beans and one-third cucumbers; mix them together and prepare as above.

TOMATO SOUP.—Two quarts of tomatoes, peeled and sliced; three pints of broth—veal or chicken is best; one tablespoonful minced parsley and the same quantity of minced onion, one teaspoonful of sugar; pepper and salt to taste; browned flour for thickening; tablespoonful of butter, fried bread dice. Stew the tomatoes in the broth until they are broken all to pieces, add herbs and onions, stew 20 minutes, rub through a colander, season, thicken with a tablespoonful of browned flour, rubbed in one of butter; boil two minutes and pour upon the fried bread in the tureen.

SAVORY POTATOES.—Mince a quarter-pound of fat salt pork, add a teaspoonful of chopped onions and a tablespoonful of minced parsley, eight potatoes, peeled and quartered; cover with cold water and cook until the potatoes are done. Drain, mash, mound on a pie-plate, sift crumbs over them and brown in the oven.

## The Week.

We give all the space we can command the present week to the State Fair reports, which we are receiving from our editorial correspondent at Sacramento. There is necessarily much of the fair which cannot be reached in this issue—as for example the implements and machinery. These and other important matters will be presented another week, with full lists of premiums awarded. We are obliged to omit, at least for the present, any report of the Contra Costa Fair, and particulars as to the awards at Marysville and elsewhere. What with the coming agricultural events at Rohnerville, Greenville and Stockton, the gathering of the farmers at the capital, and the meetings of nominating politicians, the State seems fairly whelmed in an atmosphere whose component factors are fair and convention.

## Are We Degenerating?

The notion has somehow become current of late years, especially among the ethnologists of Europe, that there is a natural tendency in the human race to die out on any given spot unless rejuvenated by alien blood, and that this tendency is particularly noticeable in America. In proof of this curious and doubtful theory, we are referred to the relics of several distinct races that died out on this continent long before the coming of white men. It is claimed that the red Indians were in a state of degeneracy, and would have ultimately disappeared had no wave of immigration ever struck the shore; that America is the graveyard of races; that this deteriorative tendency still goes on, and that there are many evidences of a vicious departure from the normal English type in America that would certainly end in extinction were it not arrested by the constant influx of foreign blood.

It is unquestionably true that the European races have undergone great constitutional changes in America. The Englishman is short of stature, round and smooth in face, has dumpy hands, short legs, large feet, a florid complexion, a jolly temperament; is given to the animal indulgence of eating and drinking, and loves home and children. His descendant in New England is tall and slender in body, limbs, hands and feet; his skin is dry, his teeth decay early, his hair soon turns gray. He has a nervous temperament, and a romantic disposition; he is ready to emigrate anywhere, and is fond of adventure. All this has taken place within 200 years. Whether the ultimate result of this change is toward physical degeneration or not is a question for scientific observers to determine. There are some facts, however, that will do us no harm to look in the face.

There is certainly a growing distrust of old men in this country, and a disposition to relegate them to private life, at what, in Europe, would be considered the prime of their powers and usefulness. Our army generals are retired from active service by an Act of Congress at 64, and it has been urged that the judges of the Federal Courts should be shelved at the same age. The chief objection to Tilden, Thurman, Morrison and Payne as candidates for the presidency at the last Democratic convention was their age. Europeans note these facts and jump to the conclusion that our climate has cut off at least 10 years from the average period our race attains in the older country.

It is certain that the public men of Europe retain their physical vigor and mental powers to an age greatly in advance of men engaged in the same sphere of activity in this country. The greatest achievement of statesmanship in this century was the restoration of France after the Prussian conquest. And this was performed by M. Thiers at the age of 75. Beyond that age Palmerston was Prime Minister of England—a position which entailed on him the onerous duties of leader of the House of Commons. Gladstone has passed his 76th birthday, and is yet recognized as the ablest leader of the Liberal party. Gortchakoff was Prime Minister of Russia until he was 82, and died in the harness. Metternich, the great Prime Minister, was 76 when displaced by a revolution. The Emperor of Germany is 87, and Von Moltke planned the campaign which resulted in the conquest of France when he was over 70 years old. Bismarck is now 70.

England has a long roll of Chancellors who were eminent when over 80. Men above the age of 65—mostly above the age of 70—govern Europe to-day, and rule it as well as it was ever governed. Men above the age of 65 hold the most of the great judicial and civil positions. This is the measure of the mental vigor of our race in Europe. Whatever may be the cause, it is certain that very few men of that age are found in public life in our country.

## The Stockton Fair.

The pavilion for the Second District Fair being completed, was opened for exhibits on the 11th, and a large portion of the space allotted is already occupied. The fair opens on Tuesday next and a large attendance is anticipated. The RURAL PRESS has made arrangements to have a representative at Stockton throughout the week.

## Timber Claims and Timber Culture Claims.

A reader at Napa lately asked us a number of questions regarding timber claims. Going with them to Mr. C. H. Street, Secretary of the Immigration Association, we were instantly favored with clear, succinct answers on all the points involved. Believing that this information will prove interesting and serviceable to others beside the one who sought it of us, we publish it for the benefit of our readers generally.

It should first be noticed that there is a distinction between a "timber claim" and a "timber culture claim," and there are two laws—one allowing any head of a family or other person over 21 years of age to purchase 160 acres of timbered land—that is, land more suitable for lumbering than for farming purposes. Under this law a person files in the U. S. local land-office an application to purchase, and has 90 days thereafter in which to pay for the land at the rate of \$2.50 an acre.

Under the Timber Culture Act, a person is entitled to 160 acres, upon application at the local land-office and payment of \$14 fees, provided that during the first year he shall plow five acres of the land, and the second year five more and cultivate the former five, and the third year cultivate the latter five and plant trees on the first five. The fourth year he has to plant the second five acres likewise, thus making 10 acres in trees, which he must keep growing for five years thereafter. These trees must be for firewood or lumber (e. g., ash, oak, black walnut, willow, cottonwood, blue gum, etc.); fruit trees will not answer the purpose. There must be 2680 trees set out on each acre at the time of planting, and at the time of proving up there must be 760 thrifty-growing trees on each acre.

A man who has homesteaded is not thereby precluded from entering land under either the Timber or Timber Culture Act, and it is not necessary for him to reside upon the premises. It should be observed that only American citizens, or those who have recorded their intention of becoming such, are entitled to the benefits of the statutes herein referred to.

## The Geyser Hotel Case.

As disputed titles are a common occurrence arising from the inaccuracy of the original government survey, a synopsis of this case will be of interest to the readers of the RURAL. It settles the question that a title granted under an untrue government survey is valid and cannot be disturbed. The case is as follows: A certain person purchased the northeast quarter of section 13, in township 11 north, range 9 west, Mount Diablo base and meridian, acquired possession and made extensive improvements. Subsequently another person purchased the adjoining quarter section and secured the title. A new survey proved the original government survey to be wrong, and the land purchased by the second person is really a part of that in possession of the first purchaser, on which stands the Geyser hotel and other valuable improvements. Number two instituted proceedings in ejectment. The action was brought in Sonoma county and transferred to the county of Napa and there tried by the court without a jury and judgment rendered in favor of the plaintiff, from which judgment the defendant appealed. The Supreme Court has decided that a title acquired to any particular piece of land under the original government survey is perfectly valid, no matter how imperfect the survey may have been. The court says:

How then stands the case? Defendant was the owner of a house and outbuildings known as the "Geyser hotel" property.

The approved official plat of the Government of the United States showed this property to be upon the northeast quarter of section 13, with the line of demarkation between this and the southeast quarter of the section plainly laid down and running south of the premises owned by her.

She purchased the northeast quarter of the section. Plaintiff's grantor subsequently purchased from the Government the southeast quarter, and the patent refers to the same plat and surveys according to it as hereinbefore mentioned.

Under such circumstances, we are of opinion that the line as designated upon the plat, and running south of defendant's hotel, whether accurate or not, is to be deemed and taken as the true division line between the north and southeast quarter of section 13, and that neither a private survey nor parol evidence was admissible to show that the line should, in fact, run north of defendant's hotel.

## The State Fair.

## Notes of the Opening Week.

[Editorial Correspondence.]

The close of the first week of the State Fair finds a very complete and varied display of California's industrial products duly installed and awaiting the coming of visitors. The opening week did not bring great throngs either at the Park or at the Pavilion. Locally, there seems to be some dissatisfaction concerning some new ticket regulations, and some reflections are made upon the members of the State Board. We think them misplaced. In our opinion the fair is, on the whole, of high excellence, and in some respects, as for example the live-stock department, it excels any previous State exhibition. The pavilion, too, has displays which in money or time, or both, have cost more than any hitherto set up. It is too early to complain and find fault. Perhaps the inflocking during the coming week will compensate for a slow opening.

## The Live-stock.

The first grand stock parade occurred on the morning of September 11th. It was the largest aggregation of well-bred animals ever witnessed in this State. We could not but think as the hundreds of noble beasts passed before us how wide and rapid has been the development of this very important branch of our agriculture. Notwithstanding all the prominence the orchard and vineyard industries have attained, the State has been gaining most notably in horses and horned stock and in the lesser animals. The impression becomes all the stronger when it is remembered that some of our best known herds (like those of Henry Pierce and others) are not represented this year.

In the parade the horses held their usual place of honor, and the line of horses alone more than encircled the mile-track. The horse parade was headed by the fine team of grays owned by Colonel James McNasser, and driven by himself. There were 11 double teams in line. Following the double teams came 60 roadsters, standard trotters, etc., driven single. Among these were Miller's Maid, Exchequer, Lucy, Cora, Chesley, Chico and Buccaneer, Jr. Directly behind these came a long line of thoroughbreds, draft, trotters, etc., being led by the halter. In this list were the thoroughbreds Joe Daniels, the famous four-mile racer, Todhunter's Monte Cristo, Kelly & Lynch's Arthur H, and Halverson's Maggie S. These trotters were also noted: Berlin, Sterling, Prompter, Caliph and Brilliant. The rear of the line was brought up by a very long string of Normans, Clydesdales, Percherons, horses of all work, mules, etc. Among the many fine draft horses, the animal which seemed to catch all eyes was the grand dark bay Percheron stallion "Ber-tem," imported by Skillman, of Petaluma, and owned by C. E. Porter, of Central House, Butte county. Ber-tem stands 17 hands high, weighs 1855 pounds and is five years old. He is a majestic animal. Other horses were, of course, good also, and the premium list which we hope to print next week will give them fitting recognition.

## The Cattle.

The cattle were in too great profusion to admit of note-taking while they passed in line, consequently we visited them in their stalls. Nearest to the main entrance was the herd of Major Robert Beck, comprising 17 head. Major Beck has offered his stock at auction on September 15th.

A. D. Jelly, of Sacramento, showed a well-bred 2-year-old Jersey bull, Ansel, from Major Beck's stock, which he advertises for sale in the RURAL. We were quite pleased with the animal.

Next came the Ayrshire herd of George Bement & Son, which we mentioned in our report of the Golden Gate Fair last week. We obtained from Mr. Bement his last milk record, which we publish as follows:

Cow.	Days milked.	Yield	
		1 month, Lbs.	full time, Lbs.

Sybillia.....	123	...	3179

Next came Senator Stanford's herd of Holsteins, of which 28 head were shown in charge of Mr. Van Buren. This herd, which made a good record at the last State Fair, has been enriched since then by the importation of three cows of the best of Smiths, Powell & Lamb's stock, which we noted in the *RURAL* at the time of their arrival last winter.

In the following stall was a good-graded dairy with young calf, owned by P. Sullivan, of Sacramento.

Next came a three-year-old and over thoroughbred Shorthorn, owned by Charles Scott, Oxford Duke, from the stock of Sylvester Scott, of Cloverdale.

The Holstein herd of F. T. Underhill, Ontare ranch, Santa Barbara, was shown by C. F. Swan, manager, and filled a host of stalls. The bull Strathmore, now at the head of the herd, was weighed on the track, and threw up the beam at 2530 pounds. There was a large group of calves. The surplus of the herd was announced for auction during the fair.

E. K. Alsip, of Sacramento, showed a very pretty yearling Jersey named Blanche of Devon.

Next came the Durhams of Hyde & Moore, of Visalia, which we noted at the Golden Gate Fair, and which seem to be favorably regarded by the visitors to the State Fair.

In the succeeding stalls were Thomas Ward's Jerseys, Col. Younger's Shorthorns and F. H. Burke's Holsteins, all of which our readers will remember as taking honorable place at the Golden Gate Fair.

J. T. McIntosh, of Chico, showed a three-year old bull, Prince Alto; and A. L. Nichols, of Sacramento, had five head of Jerseys.

R. McEnespy, of Butte county, had the whole duty of showing Devons, and did it well with a small but choice herd, headed by the bull Salute. These herds filled the long sheds nearest the entrance. Very good quarters were, however, improvised near by for a few herds. Tyler Beach's Ayrshire herd was thus quartered. Mr. Beach's bulls were especially praised when on parade. They are very shapely and handsome.

Near by were nine head of Jerseys, owned by Prof. J. D. Smith, of Livermore—excellent animals; also P. H. Murphy's six head of Shorthorns and grades—very good cattle.

Owing to the exigencies of the occasion, the balance of the cattle exhibit, in fact, quite half of it, was housed about half a mile away, on the other side of the grand stand. Seeking them there, we came first upon the 10 head of Shorthorns of R. J. Merkeley, of Sacramento. These cattle would please the lovers of the solid reds.

Following were 31 head of Galloways imported by Leonard Bros., of Mt. Leonard, Mo., and brought to California under the management of Geo. L. Goulding. This is the most notable introduction of Galloways into California and has, we understand, been so successful that more will follow. We give elsewhere something more in detail about the Galloways.

Next came Robert Ashburner's 13 head of Shorthorns, led by the noble Royal Duke, whose grand form was much praised by the on-lookers at the parade. Mr. Ashburner took the herd premium at Golden Gate Fair for Baden Duke 7th, Frantic 4th, Frantic 9th, Minstrel Gwynne 1st and Minstrel Gwynne 2d, and the decision of the committee was favorably received. Mr. Ashburner's stock, as our readers know, are bred especially for their milking qualities, and his cows show their depth in this regard to any practiced eye.

P. Stanton, of Sacramento, who has been long in Jersey breeding, showed a few good animals.

The Herefords shown by Williams & Saxe were a recent importation, and attracted much attention.

E. W. Maslin, of Loomis, Placer county, showed four head of Jerseys—very neat, handsome animals.

The show by the Marysville Live-stock Association was varied and interesting, and included good specimens of several breeds. There were two Galloway bulls; three Galloway

grades which showed the prepotency of the Galloway sire very clearly; two Arberdeen or Polled Angus bulls and eight heifers; two Holstein heifers and a two-year-old Holstein bull recently sold to R. C. Kells, of Sutter county. The Marysville Association is doing a good thing for the improvement of live-stock in the upper part of the State.

H. S. Sargent, of Stockton, had a Jersey herd of 16 head which was notably good. Mr. Sargent has been breeding Jerseys for some time, and is doubtless well known to *RURAL* readers through his advertisements. He has good blood, and handles his animals in a sensible way, believing in their merit as useful stock.

The Cotate ranch Shorthorn herd, owned by the Page Brothers and managed by Wilfred Page, numbered on Saturday last 20 head. It left the ranch two weeks before with 18 head. If the fairs were long enough there might be a trainload to return to take home. The two little newcomers to the herd were strong and hearty when we saw them and their dams doing well. The Cotate herd is one of our older herds, and has been bred with the greatest care for purity. We are glad to see herds like Page's and Ashburner's returning to the State show ring.

Peter Peterson, of Maxwell, Colusa county,

BLACK JAVA FOWLS. BY CUTTING & ROBINSON, STOCKTON.

showed 13 head of Durhams, headed by his three-year-old, Colusa Chief. Mr. Maxwell's herd entered for the over two-year-old class comprised Maxwell Chief, Belle of Antelope, 2d, 3d and 4th Belles of Antelope, and formed a very nice group of cattle.

Last in the long line of sheds were the Holsteins of J. H. White, of Petaluma. We were much taken with these cattle when we saw them at Oakland, and our judgment as given in last week's *RURAL* was evidently in accord with the committee, for Mr. White was awarded three sweepstake premiums, ten first premiums and four second premiums, aggregating \$225 on 15 animals exhibited. This is a pretty good record, certainly.

#### Sheep and Goats.

The display of Angora goats was much larger than usual this year, so we mention them first. There were three exhibitors. We mention first Julius Weyand, of Little Stony, Colusa county, because he always comes to the fair and is entitled to credit for it. Mr. Weyand showed us a band of 32 head, showing their breeding in every point. Their fleeces were beautiful beyond description. At the pavilion Mr. Weyand has a well-arranged mohair display, showing the hair at different ages, also some of the fabrics, especially the gorgeous mohair plushes now being made from the fleece of the Angora.

Thomas H. Harlan, of Williams, Colusa county, was another exhibitor and had 24 head. He made his exhibit very interesting by showing some animals, just in from the

mountains, and some with cleansed fleeces. His goats are exceeding well fleeced, holding out length where goats are apt to be deficient, sticking on hair wherever it can find lodgment over the carcass.

Moses Wick, the well-known stock breeder, of Wick P. O., Butte county, showed 10 head of Angoras; a very good exhibit, also.

The sheep classes were not very full this year. James Roberts, of Irvington, Alameda county, had 25 head of French Merinos. F. Bullard, the well-known Spanish or American Merino breeder, had a fine show, comprising 40 head good animals, well fleeced and with wool of very fine quality. R. H. Crane, of Petaluma, showed Southdowns, which he finds are increasing in demand in this State. Southdowns were also shown by George Bement & Son, of Redwood City.

#### Swine.

The show of swine, especially in Berkshires, was very good. The largest exhibitor was Andrew Smith, of Walnut Grove Farm, Redwood City, San Mateo county. Mr. Smith showed 36 head descended from his stock imported from the Queen's herd. John Rider, of Sacramento, the well-known Berkshire breeder, had 25 head of Berkshires of notable excellence. The leading exhibitor of Poland Chinas was J. Melvin, of Davisville. He had 25 head, all im-

ported or descended from imported stock. Especially noticeable was Angela Gold Dust, pig of Young Gold Dust, a famous Indiana hog; also, The King, five months old in August, and just brought out. Mr. Melvin finds the Poland Chinas all they are cracked up to be. Poland Chinas were also shown by Moses Wick, of Butte county, and P. H. Murphy, of Brighton. A very interesting show was the Durocs of Thomas Waite, of Brighton, and J. Kennedy, of Sacramento, who also showed a few Berkshires.

#### Poultry.

The poultry exhibit included many fine birds. We had not time to look them over carefully, but will take another occasion. The exhibitors were as follows: M. W. Parker, Biggs; Jasper J. Jones, Martinez; Thomas Waite, Sacramento; W. H. Hobby, Sacramento; Pacific Incubator Company, Alameda; E. I. Robinson, F. S. Tryon, J. M. Scott, P. J. Williams and W. F. Smith, Sacramento.

COPPER, SALT AND CHICKEN.—At a marriage supper in a western town, last week, about 50 people partook of boiled chicken and salad. An hour later the bride and groom showed symptoms of having been poisoned. Part of the company had left, but those remaining were also taken sick. Great fright followed, and all the physicians within reach were called in to treat the wedding guests. The chickens had been cooked and salted in a big copper kettle. It is supposed the salt caused the metal to corrode and mix with the chickens.

## The University Exhibit at the State Fair.

The display of the College of Agriculture, of the University of California, is much praised for the interesting character of its materials and the attractive manner in which the display is made. It is situated in one of the conservatories on the south-east side of the pavilion, and is visible from the main floor and the galleries, from many points of view. About 42 feet of wall space and table are occupied. There is first a background of a rich red color. Upon the center of this there is a panel upon which the word "University" is wrought out of small sheaves of cereals, the letters being so large as to be easily read from the most distant point in the building. Around the letters there is an ornamental arrangement, also of grain sheaves, which serves as a frame, and still outside of that there are various ornamental designs, also made of small grain sheaves. There are in all 213 varieties of cereals used in the arrangement, each one being clearly labeled, and no duplicate being used. There are 98 varieties of wheat, 55 of oats, 38 of barley, 14 of rye, and eight of spelts. Along the base of this wall design there is a row of bottles, each containing a variety of grain, and all beautifully labeled. This portion of the exhibit gives opportunity for a most comprehensive comparative study of the characteristics of the different varieties of cereals, both in straw and in grain, and it is being well used by the grain-growers, who spend much time in viewing and discussing the specimens.

Another feature of the exhibit is the showing of 104 varieties of fruit from the Standard orchard of the University. There are 57 varieties of pears and 47 varieties of apples, all correctly named and marked, with date of picking. This affords quite a clue to the keeping quality of some of the varieties, as for example, the De Tongres pear, picked August 9th, is still firm and beautifully colored, although six weeks from the tree, and having undergone a freight carriage from Berkeley, with the thermometer over a hundred. Some other varieties show similar durability. The correct naming of the fruit shown is made of use by many exhibitors in identifying the fruits they show.

All the grains and fruits shown were grown upon the University grounds, at Berkeley. One of the objects of the experiments is to secure authentic seed for trial by the correspondents of the Experiment Station, who are located in all parts of the State, and all can obtain seed samples of varieties they wish to try by applying to Prof. E. W. Hilgard. The Standard orchard is open to similar public use. Scions can be obtained at the proper season, either for budding or grafting, and thus many varieties may be obtained without cost for trial in all the conditions of soil and climate which exist in the State.

Aside from the agricultural products, the University exhibit is ornamented with photographs showing all the larger buildings of the University, and a table is devoted to the various publications of the institution, which are given to all who are interested. The conservatory in which the display is made is furnished with seats, and the cool air and attractive sights make it quite a place of resort in the pavilion.

## Black Java Fowls.

We give herewith an engraving of a pair of Black Java fowls, as bred by Cutting & Robinson, of the California Poultry Farm, Stockton. The Black Java fowl is one of the latest breeds introduced, and is of American production, with little or none of the blood of the Java of 25 years ago. The breeders, in their catalogue, give this description of the breed:

In them we have the best possible make-up for a valuable table fowl, viz., breast deep and full, body long, broad and deep; just the right shape to put on flesh where it is most needed. They have a rich yellow skin, which is very desirable for market poultry. They have single combs; their color is a rich, glossy black, with metallic reflections, and large, handsome tails and sickle feathers. They have smooth black shanks; bottoms of feet yellow. They are totally unlike any other known breed. They are early and persistent layers of very large tuff-colored eggs; are good setters, and will defend their chicks equal to a game. The Javas differ from most other birds in one important respect, and that is, they breed truer to form and feather, and breed less culls and more good birds, than many other varieties. The Javas are a remarkable bird, and are in a high demand for their many excellent qualities. They are sure to make their mark wherever introduced. In weight they nearly equal the Brahmas and Cochins.

## Sacramento County State Fair Display.

The county exhibit for Sacramento county is made under the auspices of Pomona Grange No. 2, E. Parsons being intrusted with the arrangement furnished. The display occupies about twice the space taken by any other county, and as there are fewer contributors some of the individual displays are of great extent and variety. J. Rutter, of Florin, has three large tables well laden with a grape collection of 38 named varieties of wine and table grapes; also a collection of figs and English walnuts. Mrs. Purrington, of Sacramento, also has a display of grapes and a collection of orchard fruits in variety, fruit in glass and dried fruit—the latter of excellent quality and well displayed. Her exhibit is ornamented with a large bouquet of natural grasses laden with silkworm cocoons, producing a pleasing effect. Another large exhibitor is Mrs. Lansing, of Sacramento, who has a fine display of fruit in glass and jellies; also fine apples and pears. Near Mrs. Lansing's stand is a neat collection of cut flowers from the capitol grounds. Mrs. R. S. Lockett, of Brighton, occupies two tables, one with a great variety of deciduous fruits and vegetables, and the second table with a handsome display of grapes and raisins. A novelty in Mrs. Lockett's exhibit is a cotton plant with unopened bolls.

The next table has a group of exhibits from several growers. There are peaches and grapes by H. O. Morgan; grapes by M. Sprague; peaches by G. T. Rich, of Florin; table grapes by Jacob Seitz, and fine boxes of almonds from W. H. Williamson. G. Wilson, of Brighton, shows a collection of grapes, and D. Hull has a display of quinces.

The next large exhibitor is P. H. Murphy, of Brighton. He has two well-filled tables, one of about 30 varieties of table grapes—a very handsome display. His second table has an assortment of orchard fruits, and fruit in glass, fine almonds and figs. In another place, Mr. Murphy has a good show of large vegetables. Weinstein & Lubin fill a table with choice fruit from their ranch near Mayhew's station.

The vegetable department of the Sacramento exhibit is very fine. W. O. Davis, of Florin, shows four varieties of watermelon—majestic specimens. P. H. Smith, of Sacramento, has one variety of watermelon—very good. Felice Gabriella fills a table with a general assortment of "garden sass" which is much admired. W. W. James, G. F. Bronner, J. H. Hamilton, John Williams and P. M. Artz all show either squashes or melons of mammoth proportions.

E. F. Aiken, of Glen Gardens, has the best collection of the squash family we ever saw, embracing a number of varieties but little known, as the New China Red squash, Cocoonut squash, Turban squash, etc. He has also fine specimens of the Pera cucumber, and a sack of peanuts. Mr. Aiken's collection is worth much study.

E. Greer, of Sacramento, has a very interesting exhibit of alfalfa of different cuttings, showing the wealthy growth of the plant in the Sacramento valley. H. W. Foster shows two varieties of wheat. Other samples of wheat, in sheaf and sack, were shown by A. M. Plummer, T. C. Perkins, John Reith, Thomas Morse, E. Vitrus, and the Natoma Vineyard Co. The judges will have to say which is best. Sacramento field growths were well shown by the tall corn, 17 feet high, by G. W. Hancock, and by W. E. Grimshaw. Mr. Hancock had alfalfa trying to reach up to his corn.

Isaac Lea, of Florin, had a unique display of oranges, olives and licorice root. Mr. Lea's licorice plants have grown fast and filled the soil with roots. His introduction of the plant has attracted the attention of an Eastern man who is the largest manufacturer of licorice products in this country, and he has lately visited Mr. Lea's place to see about his crop, prospective supply, etc. A number of others have started the plants. Growers must look out about getting the plants started where they are not wanted to remain, as the plant will probably be hard to eradicate. The member of the same genus, *glycyrrhiza*, indigenous to this State, is a pestiferous weed.

Daniel Flint, the pioneer hop-grower, has a bale of hops and heavily laden hop plants which are very handsome. Mrs. J. R. Lockett has flax straw and thrashed seed. O. E. Hughes has an example of early-bearing walnut, showing nuts of the second crop borne on a three-year-old tree.

There is a case of bread made up of the baking of a number of house-wives. The samples made us so hungry that we had to escape from the vicinity without waiting to take the names. We were somewhat similarly affected by a grand pyramid of preserved and canned fruits and jellies—the manufacture of Mrs. H. Cronk-hite, who has taken many premiums for her masterpieces in this line. This year she does not make a full display, and yet her collection of these articles and of domestic wines is very fine. Around the base of the pyramid are fruits grown without irrigation by E. Greer, a notable item being a seven-pound bunch of Flame Tokay grapes.

A very artistic display is made by D. H. Clippinger of his dried fruit—dried by sun-heat under glass. The fruit is very fine, and the arrangement upon a rustic terraced-table is very attractive. Mrs. W. H. Hobby shows some very good dried figs.

Included in the Sacramento county exhibit are some very creditable local manufactures. George Maddux, of the Capitol Pottery, shows drain-pipe and sewer-pipe, crocks and jars of all kinds and of extra quality. His grease-traps are excellently adapted to keep drains from filling up, and such arrangements should enter into every system of house-sewage. McCreary & Co. show mill products very artistically. All the flour shown is made from Sacramento-county wheat. The mill rollers shown attracted much attention.

Dairy products included a fine jar of butter from Nellie Burns, of Sacramento, and another without a card, suspected of being from the dairy of Hon. William Johnston, of Richland.

## San Joaquin County State Fair Exhibit.

Occupying the most prominent place on the main floor of the pavilion, and arranged in a style fit to attract and delight, is the San Joaquin county exhibit, made under the auspices of Pomona Grange, No. 3. The space secured for the display was but 30 feet square, but the material would have well filled twice that area, for the contributions were more liberal than was anticipated. The moving spirit in the enterprise was Mrs. J. L. Beecher, of Stockton Grange, for she has a genius for such matters, and was gladly accepted as a leader by the others, and they all worked zealously under her leadership. E. R. Elliott, of Lodi Grange, was chairman of the Pomona Grange Committee; Ezra Fiske, Master of Pomona Grange, No. 3, and S. C. Waters, of Washington Grange, were constant in their efforts in setting up and expounding the display to visitors. Mrs. E. J. McIntosh, of Woodbridge Grange, remained all through the fair and did grand service. Mrs. W. C. Ramsey, of Stockton Grange, Mrs. E. G. Williams and Mrs. W. B. White, of Woodbridge, were also busy with the display, the latter two for a portion of the time only.

The display occupies a square space inclosed in a neat manner, and in the center is a high rectangular framework covered with blue cloth, in the shape of a canopy, and looped up gracefully at regular distances at the sides. Over the front, in letters made with small heads of wheat, are the words, in oval position, "San Joaquin County," and beneath, in letters of evergreen, set with red berries, are the words, "Pomona Grange." The canopy is pleasingly dressed with wheat and barley heads, grasses, corn-tassels, pampas-grass plumes, etc. In front is a flower-bed rich in colors and perfume, and at the side a miniature garden, in which is seen fresh growing wheat, barley, corn, beans, peas, carrots and strawberries in bloom. By the side of it is a farm-yard museum, in which are displayed, in very natural arrangement, stuffed hens and chickens, ducks, lamb, owl, birds, etc., designed and constructed by Mrs. E. G. Williams and Mrs. McIntosh. The lamb was from the flock of W. L. Overhiser. Upon a larger canvas are displayed, in the shape of an immense bouquet, a great variety of native grasses, grains and other products, this design being dedicated to Flora. It was arranged by Mrs. Beecher and Mrs. McIntosh from a selection of native grasses furnished by Mr. J. D. Hoffman, of Lodi.

The exhibit, as a whole, would repay hours of study. The following is the list of contributors and materials, which will be read with interest:

D. A. Learned: Raisins, almonds, pecan nuts, walnuts, live boxes of grapes—four varieties.

M. Garfield: Dwarf and running beans, two varieties of squash seeds, Arkansas pea and lettuce, three varieties of flower seeds, pomegranates, pears and apples.

Mrs. Wm. B. West: Loquat seeds, specimens of painting on plush, tidy, magnolia seeds, French walnuts, very large and fine, and ten boxes of dried and crystallized fruits.

Mrs. E. S. Beecher: Apple and grape jellies, five varieties of flower seeds, lace edging and insertion, figure of pea in wheat, also a cake.

Mrs. J. L. Beecher: Three dozen glasses jelly, 22 varieties; one dozen raspberry jam, five jars

sealed fruit, one case seeds containing 165 varieties, three varieties potted meat, four varieties fruit stones, beet seed, Swiss chard, onions, red corn, variegated corn, flower stands, lentil, sample pomegranate.

Lucius Alling: Cuck wheat.

Mrs. W. F. Sibley: Four varieties flower seeds, one set cradle shams, dried grasses, cornflowers, samples of wheat in figures.

Mrs. J. L. Beecher, Jr.: Painting on velvet, lambrequin and table scarf, worsted knit slippers, point lace ties.

Mrs. Alge Kelsey: Samples flower seeds.

Mrs. A. Rose: Two varieties potted meat, lambrequin in worsted embroidery.

Mrs. Joseph Hale: One dozen jellies, seven jars sealed fruit, of plums, two kinds of peaches and pears.

Mrs. W. D. Ashley: Five varieties of corn, beet seeds, varieties watermelon seed, cucumbers, peas, beans, tomato, parsley and balsamine seed, onions grown without irrigation, almonds from trees grown from cutting which was planted in 1856, now eight feet in circumference; jar dried figs.

Mrs. J. Adams: Five varieties of fruit, in jars, of 1884; crystallized fruits, jellies and crab apples, pampas and other grasses, and four varieties of seed; pickled capers grown on plants sent out by the College of Agriculture, Berkeley.

W. F. Sibley: Specimens of club wheat, black barley and soil where raised, sheaf of bearded wheat, Cuban Queen watermelon.

Mrs. Sabin: Samples flax seed and "four o'clocks."

Mrs. Kuhl: Ten varieties of flower seeds, five varieties of beans, flax, eggs, native oats.

L. A. Richards: Samples of wheat and specimen of soil where grown—West Side, San Joaquin river.

J. D. Peters: Bald barley, chevalier barley and common barley. Exhibit of buhach, also three specimens of rye.

Jos. Hale: Five specimens of Heath and cling-stone peaches in alcohol; dried figs.

G. W. Andrews: Specimens of seven-headed wheat; corn on stalks.

C. A. Bachman, San Joaquin river: Specimens of barley and wheat.

Miss Alice Ashley: Specimens of beaten brass.

Mrs. Dohrmann: Specimens of kindergarten school work.

D. Hildreth: Wheat (Salt Lake Club), winter sown, produced 40 bushels per acre; sample soil where grown.

G. F. Stafford: White Australian wheat.

L. A. Richards, West Side: Two varieties wheat and specimen of soil.

Chas. A. Beecher: Giant or ironclad watermelon; also seed from specimen which weighed 72½ pounds.

Mrs. W. H. Post: Two jars pickles, four jars fruit, wheat and barley.

W. L. Overhiser: Salt Lake club wheat, barley, oats and corn.

Mr. Middlekoff, Linden: Specimens giant sunflowers.

C. V. Thompson: Four white cucumbers, one Hercules club gourd, and garlic.

Mrs. James Marsh: Seeding clingstone peach.

Mrs. Pickings, of Lodi, a lady 82 years of age, contributed a bed-quilt, which is one of 18 which she pieced during the past year.

Mrs. E. Williams: Two samples green corn, field beans and two varieties squash.

A. J. Woods: Peaches, two varieties; apples, five varieties; pears, three varieties, and Hungarian prune.

Mrs. A. J. Woods: Bag carpet, one bed-spread, one jar buckwheat and one of pop corn.

Crown Mills, Stockton: Specimens of flour and cornmeal.

Sperry's Mills, Stockton: Samples of wheat, rye, flour and Germea.

Stockton Broom Factory (A. Hemingway): Eight samples brooms.

Norman E. Alling: Sample of club wheat in sheaf.

Mrs. N. E. Alling: Box of dried figs.

Miss Annie Smythe: Six glasses of apple jelly.

Mrs. J. H. Lander: Six glasses apple jelly.

Mrs. Charles Merrill: Eighteen glasses jelly in variety.

Mrs. W. L. Overhiser: Five glasses jelly, seven varieties seeds, six jars canned fruit, flowers and grasses.

Mrs. S. P. Sabin: Samples of orange cling peaches.

Mrs. E. M. Stowe: Cut flowers.

Mrs. E. P. Cogswell, Bellota: Three varieties corn.

Mrs. Boisellier, Stockton: Specimen of beeswax.

A. P. Buell, Stockton Box Factory: Case of 12 boxes.

J. M. Beecher: Six miles from Stockton, east—samples of white wheat.

Miss Sadie Russell, Linden: Log cabin quilt containing 5411 pieces; elegant crazy quilt.

Mrs. J. D. Utt: Four pieces point lace.

Miss Eva Utt: Three pieces point lace.

Mrs. W. C. Ramsey: Two embroidered picture frames, lambrequin, table scarf embroidered on plush.

Mrs. Alex. Chalmers, Stockton: Crocheted and couched specimens of fancy work.

Miss Eva Phillips: Wheat figures for decorations.

Jim Wah: China squash, seeds and green beans.

Stockton Paper Mills: Five samples in bales.

H. C. Southworth: Two samples White Australian wheat.

P. Fitzgerald: White Australian wheat.

W. J. Gray, Linden: Sample white wheat.

T. E. Ketchum, Linden: Barley and wheat thrashed and in sheaf, superior White Australian; three samples of pears, two of apples.

Bachman & Brant: Fine display of chicory—seed, root, dried, parched and ground fine and coarse.

Minnie Shippee: Plaque of oil painting.

C. O. Burns, China Hall, Stockton: Two jars cherries.

F. R. Elliott: Early Spanish corn, sweet corn, broom corn, sheaf of white Australian wheat, seven varieties of wheat, namely, Propo, Club, Chili, White Australian, Red Chaff and sack Tuscan wheat.

Mrs. R. N. Willing: A specimen hat.

Miss Sadie Hemphill: Point-lace work.

J. House: Sample Siberian crab-apples.

Mrs. E. Sabin: Two floor mats, dusting bag, stocking bag, six jars mixed pickles, log-cabin quilt, and jar pickled figs.

Robert Howes, Stockton: One sample of barberies on branch.

Mrs. J. Nelson: One box pressed figs, 1 jar dried

Mrs. F. W. Langhaust: Embroidered table cover.

Miss Alida Allison: One slumber robe.

Miss Nellie Hutchins: Sofa pillow.

Mrs. J. M. Fowler: Corn-husk mat.

Mrs. C. Allison: Jar of pickled figs, two samples of almonds, dried grasses.

James Talmadge: Jar of castor beans and a growing plant of same.

Mrs. E. S. Sabin: Jar sunflower seeds and one candied orange peel.

Mrs. J. Bunch: Two drawn worsted mats.

apples, 1 jar cherry plums, 2 jars grapes and pears mixed, 1 jar crab-apples, 1 jar applesauce, 2 jars pear pickles, 2 jars purple plums, 1 jar apricots of 1884, 1 plate pomegranates.

Mrs. E. J. McIntosh: Hair wreath, seed wreath, can mutton tallow; a miniature ranch, prepared by Mrs. E. J. McIntosh and Mrs. E. G. Williams, of Woodbridge.

A. J. Nelson: Sample of wheat.

Daniel Sheen: Squashes and samples of sweet potatoes, box of Mohomic potatoes.

John E. Thompson, Woodbridge: Sample of beets, sample of quinces, box of grapes, two varieties of Egyptian corn.

E. Fiske: Two samples of wheat (Australian and Propo), one of barley, two of corn, sample white figs, plate of pears, two jars almonds, one of peas, one of dried figs, watermelon seeds, bottle white grape vinegar.

Henry Beckman: Sample Snowflake wheat.

H. W. Cowell: Sample of rye.

Mrs. Dustin: Jar soft soap, dried grasses, samples wheat and three samples seed.

Mrs. Eva Toni: An Indian bed-quilt.

Mrs. Henry Beckman: A slumber robe.

Miss Mabel White: A silk bed-quilt.

Mrs. McAfee: Original Indian corn, (husk on each kernel,) sorghum seed, Egyptian cora.

E. Thorp: Sample broomcorn.

Mr. Emde: Sample of tobacco and of red pepper.

G. P. Martin: Cotton plant and hemp plant.

C. P. Allison: One sheaf of oats.

James A. Anderson: Sixteen nursery trees, eight varieties of fruit, two varieties of peaches (Salt Lake, Chung and Salway).

Joseph Putnam: Eight varieties apples, seven varieties pears, two varieties of peaches, and a bale of hops.

S. C. Waters: Sample of tomatoes.

T. Clements: Sample of tall corn and sample of hops on pole.

Mrs. E. G. Williams: Jar of figs, two jars of prunes, one jar of pears, one jar of plums, two jars of almonds, one sample of niacreme work, sample of beardless barley, sample of Egyptian seven-headed wheat, and one jar of black walnuts.

Andrew Meyers: Sample of bald barley.

C. P. Munson: Sample of wheat.

Wm. Young: Sample of wheat.

Mrs. Gerrard: Sample of wheat, one sample of barley, and an embroidered table cover.

George Hogan: Samples of wheat and corn.

J. F. Stafford: Sample of wheat.

Samuel Woodruff: Samples of corn and barley.

C. Bainer: Two boxes grapes (four varieties), and sample of pomegranate.

J. D. Huffman: Seventeen varieties of native grasses and five samples of wheat.

George Houskins: Sample Pride of Butte wheat.

## Smaller Exhibits from Several Counties.

There are in the pavilion a number of small but very interesting exhibits representing certain counties, but not brought in as comprehensive displays. They are the thoughtful contributions of enterprising residents, who, rather than have their counties unnamed, have brought such materials as they could command on the moment.

There is from Nevada county a small collection of fruits, including pears, peaches and plums. Near by is a collection of ores from the Nevada county mines, which is rich and interesting. Chunks of gold-bearing quartz, said to be worth \$2000 each, lie around like two-bit pumpkins. In a case there are boxes of native gold, nor more protected than the dried peaches in the other county exhibits. Of course, such an exhibit has plenty of visitors, and credit for it is due to Senator A. Walrath, of Nevada City.

Shasta county is represented by a small but good fruit collection, sent by F. W. Fish, of Stillwater, Shasta county. There are also large onions—fine specimens. An interesting special feature is the season's growth of a grapevine, the main branch being 22 feet long and the laterals added make a season's growth of 165 feet, without irrigation.

Sonoma county is not officially represented in the pavilion, but W. J. Hunt, of Sebastopol, has a fine display of dried fruit, prepared by his Improved Alden drier, which is as handsome as one can find anywhere.

Moses Wick gives Butte county an entrance by his exhibit of a fine sack of Propo wheat.

Colusa county's wheat crop is represented by good samples of Sonora and Nonpareil by E. G. Morton.

B. N. Bagbey makes the visitor wish there was a general display from Sutter county, because of the excellence of the Indian corn and broom corn which he brings from his ranch at Kirkville.

Yolo county has also a vexing hint of its wealth of production in some grand specimens of King Philip corn in ear and on the stalk; also evergreen millet eight feet high, from the ranch of John G. Silva, on the Yolo side of the Sacramento river.

Hardware and Agricultural Implements.

## "PERFECT" GANG PLOWS,

Manufactured by the BENICIA AGRICULTURAL WORKS,

Are the only Successful BENCH BEAM GANG PLOWS made with STEEL BEAMS, STEEL BOTTOMS and CAST-STEEL SHARES. They have HIGH BEAMS, WIDE TIRE, WROUGHT IRON CARRYING WHEELS.

They are so constructed that there is ample space under the beams and between the bottoms to let the stubble and weeds freely pass through. "Perfect" Gang Plows are made with either three or four bottoms or plows, each cutting eight or ten inches, securely ganged together, making a Gang Plow which is unequalled for Lightness of Draft, strength, durability, and Good Plowing Qualities, and is in reality a "Perfect" Gang Plow.

LANDSIDE VIEW OF "PERFECT" GANG PLOW.

Hubs and Boxes of carrying wheels are detachable, and when worn out can easily be removed to put new ones in their place.

Each carrying wheel is provided with its own Regulating Lever by which the driver can easily adjust either side of the plow to make it run level and true.

The Regulating Levers are very long and securely bolted to the steel frame of the plow, and coupled to the crank axles by a heavy piece of round iron, which is adjustable to the regulating levers at three different holes, enabling the driver to adjust his plow so that he can handle it with the greatest ease.

The "Perfect" Gang Plow is also provided with a long Land Gauge Lever, by which the driver can adjust his plow to take more or less land as he may desire.

There is no danger of breaking the crank axles of the "Perfect" Gang Plows, as they are made of heavy 1 1/2-inch round iron, and are fastened to the frame by wrought iron brackets.

If you contemplate purchasing a Gang Plow, don't fail to call and see the "Perfect" Gang before you purchase.

MOLDBOARD VIEW OF "PERFECT" GANG PLOW.

The "Perfect" Gang Plow will plow in any soil, as the bottoms are shaped after patterns that have been found to work equally well in adobe and free soils. The moldboards are made of the best iron center steel, chemically hardened, and well polished.

### PRICE LIST.

No. 1-3-Gang, 8-inch, with set of extra shares.....	\$75 00
No. 2-3-Gang, 10-inch, with set of extra shares.....	80 00
No. 3-4-Gang, 8-inch, with set of extra shares.....	80 00
No. 4-4-Gang, 10-inch, with set of extra shares.....	90 00

The "Perfect" Gang Plows are lighter draft, stronger, more durable, and do better plowing than any wood frame Bench Beam (commonly called "Stockton Gangs") Gang Plow ever manufactured.

# THE "NEW DEAL" SERIES OF WHEELED WALKING PLOWS.

SINGLE, DOUBLE, TRIPLE AND QUADRUPE FURROW.

Manufactured by **JOHN DEERE & CO., Moline, Ills.**

The Latest and Greatest Improvement of the Age in Plows. One Season's Experience has Thoroughly Demonstrated their Adaptability to the Various Soils of California.

UNIVERSALLY PRONOUNCED AN UNQUALIFIED SUCCESS!

For Lightness of Draft, Ease of Management, Strength, Durability, and Quality of Work,

## THE "NEW DEAL" IS WITHOUT A PARALLEL.

It is much neater in appearance than any wood frame plow, and weighs some 300 pounds less than any other Gang Plow sold in California. The beams are made entirely of steel, which give at once lightness, great strength, and durability. Having no tongue, and the team being hitched close to the work, it can be run as close to the fence as an ordinary single plow.

FOUR GANG.

One of the greatest points in favor of the "New Deal" Plows is their **ECONOMY**, an important feature in these times. They are not expensive, and the amount and quality of work that can be done with them simply cannot be approached by any other plows manufactured. The "New Deal" is no untried experiment, but the outgrowth of years of study and observation, with a full appreciation of the demands of the times, and fully approved by the most rigid tests.

### POINTS OF SIMILARITY:

**DOUBLE CRANK AXLE**, making the plows self-leveling, at any and all depths, requiring not a single lever to raise and lower the plow.

**UNIQUE WINGING DEVICE**, which, by changing one pin, wings the shares up or down.

3-Gang, 8-inch.....\$75 00  
3-Gang, 10-inch.....80 00

4-Gang, 8-inch.....\$80 00  
4-Gang, 10-inch.....90 00

All with Extra Points.

## The Farmers and Dairymen at Philadelphia.

A circular just received from Mr. Reall, president of the American Agricultural and Dairy Association, says that the National Convention of that body, to be held at the Continental hotel, Philadelphia, Sept. 15th and 16th, promises to be largely attended by leading men in agriculture and kindred pursuits from all sections of the Union, and the proceedings will be of much interest. It will be a meeting of congratulation over the success of the oleomargarine law, and practical steps will be taken to secure the re-election of the friends of the measure who served in the last Congress; also, to organize for the protection and advancement of agriculture in all its branches in all sections of the country.

We learn from the *American Dairymen* of the 2d inst. that Mr. Reall visited President Cleveland in the Adirondack mountains and invited him to attend the convention. As a representative of the great agricultural industry of the country, Mr. Reall was very kindly received by the President, who showed a disposition to be present if possible.

Among others whose attendance is expected are Hon. Wm. Mahone, of Va.; Hon. C. E. Atkinson, M. C., and Daniel Ermentrout, M. C., from Penn.; Hon. Columbus Delano, ex-Secretary of the Interior, Ohio; Hon. Wm. Weld, Editor London, Can., *Advocate*; Alex. Charles, Editor Iowa *Farmer*; Judge Cutter, O.; Hon. J. J. Stranahan, O.; Francis B. Thurber, and James H. Seymour, N. Y.; Hon. S. S. Caldwell, Penn.; ex-Gov. Price, of N. J.; Hon. Wm. L. Scott, of Penn.; Hon. Warner Miller, N. Y.; Hon. J. B. Everhart, M. C., of Penn.; Hon. F. C. Bunnell, M. C., of Penn.; Hon. James Buchanan, M. C., N. J.; Hon. A. C. Thompson, M. C., O.; Hon. W. F. Beasley, of Baltimore, and Hon. Beriah Wilkins, of O. All in sympathy with the objects of the association are invited to attend the convention, and will be admitted to all its privileges.

## W. R. Strong & Co.'s Display.

The exhibit of this enterprising Sacramento firm of nurserymen, seedsmen and fruit-shippers occupied a prominent place at the entrance to Horticultural hall. The contents of the booth were many and varied. There was a fine collection of nuts and seeds of all kinds—home-grown and imported; a display of fruits and vegetables grown upon farms in Placer and Sacramento counties belonging to the firm. We noticed especially a large collection of almonds, including two fine seedlings of Senator Roulter. Prominent in the exhibit is a photograph of the first full train of California deciduous fruits ever sent East—an undertaking effected largely through the enterprise of Strong & Co. On one morning of the fair we had a pleasant ride with Robert Williamson to one of the firm's farms, occupying a commanding site about two miles from the city. Here we found 130 acres in a fine state of cultivation, with 90 acres closely set in nursery, and with a large supply of vigorous, healthy trees for this year's trade. They have a Heald centrifugal pump which we saw throwing 1000 gallons of water per minute from an 8 inch bored well, 110 feet deep. Mr. Williamson has just built himself a fine residence on this farm.

## Foot-hill Lands.

While at the State Fair we heard from many parties of the gratifying advancement in the values of agricultural lands. Mr. J. F. Madden, of Newcastle, assured us that lands which were bought of the railway company in 1883, at \$3 per acre, are now worth \$25 to \$50 per acre—wild land upon which no improvements have been made. Much of the bearing orchards and vineyards are paying a good interest on a valuation of \$750 per acre. Sometimes good land can be had cheap owing to the necessity of immediate sales. Such a case, we are informed, is that announced in our advertising columns by S. C. Osborn, of Applegate, Placer county, who has to sell a certain amount to close out an estate, and we are told that only enough will be sold to meet immediate obligations. It seems worth looking into by those who are thinking of foot-hill lands.

## Our Agents.

Price List—also full descriptions of novelties free; GUIDE TO FRUIT CULTURE 10c. ORCHARD & GARDEN, the best horticultural journal 50c. \*Yt. J. T. LOVETT, Little Silver, N. J.

## How to Eradicate from the Soil Mustard, Tar-weed, Cockle, Wild Oats, Etc.

Some Practical Words from a Practical Pacific Coast Farmer. The Farmers of the Pacific Coast Lost Many Thousands of Dollars on the Crop of 1886. Mustard, Tar-weed, Wild Oats and the Numerous Other Weeds do it.

Our present system of summer-fallow cultivates and increases, but does not destroy, these terrible pests. They increase year by year more than 500 fold. It means ruin to the farmers and bankruptcy to every material interest of the country. Can we destroy these weeds and avert this fearful calamity? He who can tell us how to do this confers a great favor on the farmers of this country worth millions of dollars. Well, here now is the benefit without charging a cent for it.

Soon after harvest start an *Acme* harrow through the stubble. Set it to cut three inches deep. One section, three horses and a driver will cut 15 acres a day. Two sections and six horses will cut 30 acres a day. The stubble will not interfere, as the *Acme* never chokes up. One time passing over it will cover all the seed, as the *Acme* turns every particle of the soil. The seed being covered insures its germination with the fall rains, it grows all winter, and in the spring when you summer-fallow you turn the weed, instead of the seed, under and you kill all that has vegetated. Follow this course a few seasons and you have the land cleansed of these fearful pests. The *Acme* harrow will soon supersede all other harrows. In fact, we have no use whatever even now for other harrows except to harrow growing grain. Take your summer-fallow. Set your *Acme* at full depth. It will cut five inches deep, is better than a second plowing, and puts the ground in a splendid condition for seeding. Take sod; plow four inches deep, mash down with roller, pass over both ways with an *Acme*, and you have a seed-bed like a garden. No tool ever invented will prepare ground for wheat, barley or oats, timothy or alfalfa, half so well as the *Acme*. On our mountain and other lands where wild oats and cockle prevail, and where the seed lies on the ground after harvest, if you wish to cultivate the land every year, run the *Acme* over the stubble after harvest, all that seed will come up in the fall and most of it can be killed by your spring plowing.

I have penned these reflections for the good of my fellow-farmers. They are the results of close observation and of actual trial. I firmly believe they are correct and that trial will satisfy the farmer.

**1,300 Engines now in use.**  
**40,000 Horse Power now running.**  
**Sales 2,000 H. P. per month.**

#### LITTLE'S CHEMICAL

#### FLUID SHEEP DIP.

Price Reduced to

\$1.25

PER GALLON.

Twenty gallons of fluid mixed with cold water will make 1,200 gallons of Dip.

It is superior to all Dips and Dressings for SCAB in Sheep; is certain in effect; is easily mixed, and is applied in a cold state. Unlike sulphur or tobacco, or other poisonous Dips, it increases the growth of the wool, stimulates the fleece, and greatly adds to the yield. It destroys all vermin. It is efficacious for almost every disease (in internal and external) sheep are subject to.

FALKNER, BELL & CO.,

San Francisco, Cal.

#### STENCIL PLATES.

## Lands For Sale and To Let. SMALL TRACTS OF LAND FOR HOMES

Are offered for sale in 10 and 20-acre tracts, one mile from Tulare, the most rapidly growing town in the State, at prices ranging from \$15 to \$40 per acre, to those who WILL MAKE HOMES ON THEM.  
The land lies in the northerly limit of the Artesian Belt, and is also easily supplied with ditch water. Soil, sandy loam. Good surface water at 10 to 12 feet.

**ALSO LARGER TRACTS**  
Of 20 to 80 acres, on my home place, 7 miles S. W. of Tulare, 3 miles from Tokay Switch, S. P. R. R., centrally in the

**ARTESIAN BELT,**  
Lying on north side of Elk Bayou. Smooth, clean, alfalfa land; \$15 to \$30 per acre.  
A good flowing well, capable of irrigating 80 to 160 acres, is obtainable here at a cost of about \$500. The soil is dark, ancient lake bottom sediment. The land is fenced and mostly in cultivation; one flowing well on the place and others near by, with growing orchard, vines, grain, alfalfa, etc., showing adaptability of soil. The best of surface water is obtained at 10 feet from surface. Perfectly healthy locality. Plenty of oak timber near by.  
This land, in whole or part, is bound to be sold soon, and rare chances are offered. Address, E. M. DEWEY, Box 27, Tulare, Cal., or call at the home premises.

## FOR LEASE AND FOR SALE, 40,000 ACRES

Of good land in Fresno, near the County Seat. Some of this land is already irrigated, and all can be easily irrigated. It is adapted not only to grain, but also to Alfalfa, Fruit and Vines.

**1000 ACRES**  
Of the above land for sale at the low price of \$20 per acre. Apply to  
E. B. PERRIN,  
402 Kearny St., San Francisco.

## CHEAP LANDS FOR SALE.

**5680 Acres** of rolling adobe hills, situated in Tehama County. Well watered by numerous springs, etc. Several thousand acres suitable for cultivation. Good two-story House, Barn and other out-buildings. Seven miles of fine wire fence.  
**FIRST-CLASS CATTLE OR SHEEP RANGE.** The Cheapest tract of land in Tehama County. Price, \$6.00 per acre. Fair time and interest.  
Also, a tract of 20,000 acres adjoining, can be bought at a great bargain. Title, U. S. Patent.  
For terms, etc., apply to  
J. E. CROOKS, Benicia, Cal.  
N. B.—Upon timely notice, intending purchasers will be taken from Cottonwood to the land and returned free.

## \$500 to \$50,000.

**BARGAINS in ORCHARDS and VINEYARDS, STOCK and Grain Ranches** in every County in the State. Send Stamp for Catalogue. We can find quick sale for your farm, large or small, if it is cheap and you will send us full description. If you want to buy, tell us what you want, and we can suit you.  
**GAMAN & CO.,**  
339 Kearny St., San Francisco.

## CALIFORNIA STATE FAIR—1886. At Sacramento, Sept. 6th to 18th. TWO WEEKS.

**The Attention of the Farming Community** of this State is particularly called to the Liberal Awards, and advantages offered for

**COUNTY EXHIBITS.**  
The importance of an exhibit made by separate counties, showing the productive qualities of the various sections of our State, has become more apparent each year since the system was inaugurated by this Board. Recognizing the interest made manifest in the past by both the public and the exhibitors, through whose energy and enterprise valuable agricultural lands have been brought to the notice of the world, and counties with small populations have increased in a manifold degree, by reason of the producer having come forward with his products that were of such quality as to enable him to meet all competitors, the Board have deemed it proper to increase the premiums in this Department, and to that end have appropriated \$2000 to be distributed among the various counties making displays under the following provisions:  
To those who may have charge of the exhibits, we would call their attention to the fact that these awards will be made for the most extensive, perfect, and varied exhibit of Farm Products (exclusive of live stock) exhibited as a County Production. Thus it will be seen that it is to be wholly devoted to the products of the farms located in the county where the exhibit is made from, and does not include manufactured goods of any kind or character except those grown and raised in the county from whence the display comes.  
For the best display, as per explanation above, First premium of \$500, cash. The remaining exhibits shall receive premiums in proportion to their excellence, as compared with that receiving the First Premium. Competition to be between counties only. That is to say, that the entire exhibit made by one county must compete against the entire exhibit of another county. The premium awarded to each county exhibit will be paid to the committee in charge of said exhibit.  
The State Board of Agriculture earnestly desires the hearty co-operation of the various subordinate Granges throughout the State, in making this exhibition of California's products a success, whereby the varied products of different localities may be fully shown. We would ask the appointment of a committee from the Grange in each county to call upon and urge the patrons to make a display representing their respective counties.  
Address the Secretary at Sacramento for Premium Lists and other information.

**JESSE D. CARR, President.**  
**EDWIN F. SMITH, Sacramento.**

**Poultry and Stock Book**  
Niles's new manual and reference book on subjects connected with successful Poultry and Stock Raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated with handsome, life-like illustrations of the different varieties of Poultry and Live-Stock. Price, postpaid, 50 cts. Address **PACIFIC RURAL PRESS** Office, San Francisco, Cal.

## S. H. MARKET REPORT

NOTE.—Our quotations are for Wednesday, not Saturday, the date the paper bears.

## Weekly Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, Sept. 15, 1886.

The past week an active demand ruled for both wheat and barley at advancing prices up to Tuesday, when a bearish feeling set in. In fruits and the general produce market a fair degree of activity prevailed, with slight fluctuations in prices. Semi-public cables received to-day are as follows:

LIVERPOOL, Sept. 15.—WHEAT—Cargoes off coast: Buyers have made a pause, which will be only temporary; cargo s on passage and for shipment: Buyers hold off, hoping to obtain some concession; Mark Lane, weaker; Cal. wheat, off coast, 34s 6d; Cal. wheat, just shipped, 35s; Cal. wheat, nearly due, 34s 6d; English country market, steady; French country market, quiet; Liverpool wheat, spot, very dull; Liverpool wheat, Cal., 6s 8½d to 6s 11½d; weather in England seems less settled.

## Foreign Review.

LONDON, Sept. 13.—The *Mark Lane Express* in its review of the British grain trade for the past week says: Owing to continued wet weather, it will be impossible to make any early delivery of sound native wheat. For this reason the market points to no such big drop in values as was expected during dry weather. Sales of English wheat during the past week were 31,538 quarters at 34s 5d, against 57,192 quarters at 31s 1d during the corresponding period of last year. Foreign wheat is steadily by bad weather. Trade was slow and tedious. Seven cargoes arrived; 2 were sold, 12 withdrawn and 6 remain—three Chilean, two Californian and one Oregon. Despite large arrivals, English wheat is firm, although slow of sale. Flour is in large supply, and a fraction cheaper. Grinding barley is 3d lower. Beans, peas and corn are unchanged. Oats are dull and 3d cheaper. Linseed is cheaper; Calcutta seed is quoted at 40s 6d, ex ship.

## New York Wheat Market.

NEW YORK, Sept. 11.—Wheat has been comparatively quiet. There have been reports of bad weather in Great Britain, and reports of a purpose to reduce the duty on wheat imported into France, but these had been slight and temporary influences in strengthening values. The export trade was sluggish in the early part of the week, but toward the latter part it improved to a moderate extent. Spot closed ½¢ lower; options, ½¢ lower and heavy, as follows: September, 86½¢; October, 87½¢; November, 89½¢; December, 90½¢; January, 92½¢; and May, 97½¢.

## London Wool Market.

LONDON, Sept. 14.—There was a good attendance at the wool sales to-day. Sales were spirited and prices maintained.

## Eastern Wool Markets.

BOSTON, Sept. 14.—Wool is active and higher. Ohio and Pennsylvania X fleeces, 33¢ lb; XX and XXX and above, 35¢ lb; Michigan X, 32¢. The stock of foreign wool is reduced and holders are very firm under the influence of strong advices from London.

## New York Hop Market.

NEW YORK, Sept. 11.—The market remains quiet, but prices hold firm. The only goods offered are inferior domestic and miscellaneous foreign of 1885, prices ranging between 15¢ to 20¢. Pacific coast, 1886, quoted at 35¢ to 37¢; New York State, 1885, prime, 24¢ to 25¢; medium, 20¢ to 22¢; low grades, 15¢ to 18¢; Pacific, 1885, common to choice, 16¢ to 22¢.

## California Products at the East.

NEW YORK, Sept. 11.—Fruits—Green, dull and tending downward; California peaches, 50¢ to \$1.50 per basket; pears, \$1.25; plums, 75¢ to \$1.50; grapes, 50¢ to \$1.25; raisins, weak.

Canned Goods—The general market is quiet, but steady. Tomatoes, very firm, with light offerings for forward delivery; peaches, dull; corn, steady; salmon, quiet; canned peaches, \$2.25 to \$2.50; pears, \$2.25; plums, \$2; grapes, \$2; apricots, \$2.25; Columbia River salmon, \$1.55.

## Honey—Extracted, 5½¢.

Seeds—Moderately active, at full prices. Sales are reported of three cars California yellow mustard and one car brown do.; both September shipments, on private terms. California yellow quoted at 5½¢ to 6½¢.

## Local Markets.

BAGS—The market is without essential change, as the bulk of the demand has been met, and it is thought that the over-supply in the interior will meet much not yet supplied. Standard Calcutta wheat bags are quoted at 6¢ to 6½¢.

BARLEY—The market gradually advanced up to to-day under well concentrated stocks and a good consumptive demand. To-day the market appeared weaker, under heavy receipts but closed firmer. Call sales to-day were, at the morning session: Buyer season—100 tons, \$1.05; 400, \$1.05½; 100, \$1.05½; 500, \$1.05½; 600, \$1.05½. Buyer 1886—400 tons, \$1.01; 100, \$1.01½. Seller season—100 tons, 92¢; 100, 92¢; 200, 92½¢; 300, 92½¢; 400, 92½¢. Seller 1886—500 tons, 92½¢; 300, 92½¢; 300, 92½¢; 100, 93¢. No. 1 Brewing, buyer season—200 tons, \$1.25; 100, \$1.25. Buyer 1886—100 tons, \$1.01½. Seller season—100 tons, 92½¢; 400, 93¢. Seller 1886—100 tons, 93½¢; 200, 94¢; 300, 93½¢. Seller 3 days—100 tons, 93¢ to 1¢.

BEANS—New are beginning to come forward, causing dealers with stocks of old to exert themselves more, so as to work them off before free receipts of new come forward.

CORN—The market is depressed by heavy supplies of Western on the market.

DAIRY PRODUCE—Free shipments, on orders, of pickled butter is being made by jobbing houses. Gilt-edged in rolls is scarce and slightly higher. Cheese is stronger at a slight advance.

EGGS—The market is the same as reported last week.

FEED—Ground feed is firm. Choice to extra choice hay is in good inquiry at a slight advance. The following is the range for hay: Barley, \$5 to \$8; oats, \$6 to \$10; wheat, \$8 to \$12.50, with something extra selling slightly higher.

FRUIT—Full particulars elsewhere.

DRIED FRUITS—Receipts of this year's curing are coming forward, but for this week's issue it is impossible to obtain correct information regarding the market.

HOPS—Dealers are reticent, but it is claimed that they are in the market for choice; they will not name prices, preferring for sellers to state what they will take.

HONEY—The market continues to hold to strong prices, with receipts barely up to shippers' wants. Quotations are reported unchanged.

OATS—The market is weak under heavy receipts and only a moderate consumptive demand.

WHEAT—The market is reported at a deadlock, as buyers are trying to break prices, but holders will not submit to the lower bids. At to-day's call quite a raid was made by the bears causing quite a drop. Transactions on call were as follows: Morning session:—

Buyer season—100 tons, \$1.45½; 100, \$1.45½; 100, \$1.45½; 200, \$1.45½; 100, \$1.45½; 500, \$1.45; 1000, \$1.44½; 400, \$1.44½; 300, \$1.44½; 200, \$1.44½; 600, \$1.44½; 100, \$1.44½; 700, \$1.44; 400, \$1.43½; 300, \$1.43½; 100, \$1.43½; 1900, \$1.43½. Buyer 1886—100 tons, \$1.40; 100, \$1.39½; 100, \$1.39½; 200, \$1.39½; 100, \$1.39½; 500, \$1.39. Seller 1886—200 tons, \$1.36½; 100, \$1.35½; 1000, \$1.35½; 100, \$1.35½; 100, \$1.35; 200, \$1.34½ per cwt. Afternoon session—Buyer season—200 tons, \$1.44; 100, \$1.43½; 400, \$1.43½; 600, \$1.43½; 2000, \$1.43½; 100, \$1.43½; 1000, \$1.43½; 1200, \$1.43. Buyer 1886—300 tons, \$1.39½; 500, \$1.39½; 700, \$1.39½; 300, \$1.39½; 600, \$1.39½; 400, \$1.39. Seller 1886—300 tons, \$1.35½; 200, \$1.35½; 200, \$1.35½; 100, \$1.35½; 100, \$1.35½ per cwt.

[COMMUNICATED.]

## Market Information.

## Cereals.

Wheat has ruled strong throughout the week and as usual the range of prices paid was higher than quoted by the daily press. The tenacity with which farmers hold and export buyers' necessities create the improvement. It is now admitted that the quantity of bright white and Chili wheat is quite light to what it was last year, but the quantity of Sonora and dark coast is largely in excess of last year. Sonora is fully 2½¢ per cental below the same grade of white wheat, while the dark coast is all of 5 to 10¢ per cental less than bright white.

Oats have ruled weak and in buyers' favor throughout the week, under steady and free receipts from Oregon and Puget sound, and only a moderate consumptive demand in our market.

Throughout the week barley has ruled strong, with some difficulty reported for buyers of bright No. 1 feed in having their wants met at even 97½¢ cts, although the daily papers quoted No. 1 feed at 92½¢ cts; that the latter was wrong and calculated to help buyers can be seen by seller season on call selling at over 93¢ cts, and seller options on call are always from 2 to 4¢ per cental lower than actual sales by sample. Dark feed is steady with a wide range in prices. Brewing barley is very stiff with a growing impression that the quantity in this State is less than heretofore claimed. Shipments to the East continue. A vessel is on the berth taking in Chevalier for Europe, while free shipments are being made to the East, some going forward to Australia. The crop of Chevalier is the largest harvested in this State, with the quality generally good.

Rye is moving off fairly well, but buckwheat is slow, with quotations nominal.

Western corn is still in oversupply with concessions necessary to effect sales, but California corn is virtually out of the market.

The very latest European advices continue to confirm previous reports of short wheat crops in France, England, Germany, Australia-Hungary, Italy and India. The latest mail advices from New York give cable reports to the effect that the shortage in France is much more than thought; and so as not to make bread sell too high, the French Government is considering the advisability of lowering the duty on imported wheat.

Heavy receipts of barley to-day caused a weaker feeling in feed varieties.

The bears on call made a raid on wheat and sent options down from two to three cents. The call board appears to be managed like mining stocks, by what seems to be one or two cliques, who put it up or down as they choose. The clique, it is thought, are short on actual wheat, and are forcing the price down on call to get farmers to sell at lower prices.

## Feedstuff.

Interior advices report a larger consumption of hay than at this time last year, while the shipments by water and also by rail from here are also larger; but owing to the very heavy crop of ordinary qualities poor to good rules very low, but choice to extra is scarce and commands good prices.

Bran and middlings continue in good request at full prices. Cracked corn is a shade lower, but ground barley continues strong, as does oilcake meal.

Carrots are coming in quite freely, yet receipts are cleaned up each day.

## Dairy Produce.

Cheese continues to hold to strong prices, with now and then some consignments placed at a slight advance on current quotations. Stocks are only moderate, with a good trade demand ruling.

The hot weather which obtained up to Monday lessened the receipts of butter, creating a strong and higher market for gilt-edged that was hard. The bulk received was soft and hard to sell. The market is well cleaned up at the close for good to gilt-edged, but poor is in overstock. Pickled butter continues to be taken by the trade, with sales reported to be increasing.

Eggs, like butter, have a wide range. While strictly choice, fresh-laid near-by sells at 30¢ cts and even 32½¢ cts, fair are slow at 20¢ cts, with some poor "as is" sold at 15 and 10¢ cts. The hot weather

of last week caused many consignments to become almost worthless. Receipts of Eastern are less, but the stock is large with the quality poor.

## Fruits.

Table grapes held to strong prices throughout the week, with at the close to-day black varieties under lighter receipts selling for more money. Wine grapes are reported to be doing better, owing to considerable damage claimed to have been done by the hot weather, last week. Peaches under free receipts, and canners not paying over 75¢ cts, have been barely steady. No sales were made on the wharf over \$1 for the more choice varieties.

Berries are going out of market, causing better prices to obtain for strawberries and raspberries.

Apples are in better demand, but no higher yet. Stocks are better cleaned up and an improvement is looked for if receipts are not too large.

Poor pears continue a drug, but choice are scarce and wanted by the trade and also canners.

Figs are in good supply with only a moderate demand ruling, causing all that do not come up to choice to be sold at shaded prices.

Cantaloupes and watermelons, after making quite a sharp advance, fell back under cooler weather, closing barely steady at quotations.

California oranges are in oversupply, with some difficulty met in effecting sales, owing to the slack demand.

Limes and lemons are weak at lower prices.

Some very choice mountain plums came to hand the past week which were sold at from 75 to 85¢ cts a box from stores in a small way to the retail trade. Other plums and also prunes ruled steady, although a better cleanup is reported.

## Hops.

There is nothing new to report. Picking is progressing quite favorably. General reports are to the effect that the quality is not above an average, which will cause choice to fetch extreme prices. Both private and press advices from Europe and the East are of a favorable character for sellers. Buyers report more inquiry from brewers East, with samples wanted.

## Live stock.

Cooler weather since Saturday has stimulated consumption and caused retail butchers to buy more liberally. All the stalls are full, whereas up to Saturday last the stalls were not one-quarter full. Slaughterers report killing from twice to three times as many cattle and sheep since Monday as they did the like days the preceding week. Beef cattle are reported to be in liberal supply at unchanged prices, although a stronger tone is noted. The same remarks apply to mutton sheep. The impression prevails that an improvement in the price of beef cattle is not at all unlikely within the next 20 days. Choice lambs and calves continue scarce. Black hogs are in fair request. Packers with the turn in the weather are beginning to inquire for hogs suitable for their use, but, as yet, have not bought any, preferring to wait until later on in next month. In horses there is no particular change since last week's issue. Work horses and car horses are offering quite freely, but the demand is not active. Carriage horses are inquired for, with several sales, well-matched, kind disposition and having fine appearance, made at from \$600 to \$1000. The latter price appears to an extreme and is only reached in exceptional cases.

The following are to-day's meat prices: Beef—Stall-fed, 7¢ to 7½¢ lb; grass-fed, extra, 6¢ to 6½¢; first quality, 5½¢ to 6¢; second, 5¢ to 5½¢; third, 4¢ to 4½¢. Calves, small, 9¢ to 10¢; larger, 7¢ to 8¢ lb. Mutton—Ewes, 4½¢; wethers, 5¢. Lamb—Spring, 6½¢ to 7¢ lb. Pork—Live hogs on foot, 3½¢ to 4¢ for grain and dairy feed; 2½¢ to 3¢ for soft; dressed, 6¢ for hard, and 5¢ for soft. Grass-fed stock sell on foot, gross weight, at one-half the price they fetch dressed; stall-fed, on foot, fetch one-third less than they sell at dressed.

## Miscellaneous.

The tonnage movement compares with last year at this date as follows:

	1886.	1885.
On the way.....	286,069	225,239
In port, disengaged.....	76,017	109,789
In port, engaged.....	67,260	12,373
Totals.....	429,346	347,401

The above gives a carrying capacity as follows: 1886, 686,962 short tons; 1885, 562,180 short tons; increase over last year, 124,782.

Tonnage on the way to Portland, Oregon, 49,012 tons; same time in 1885, 36,223.

Some time ago mention was made in the PRESS of retail poultry dealers combining to dictate to wholesale dealers, and to-day the latter combined so as to again get better prices for poultry. Which will succeed it is hard to say. The market has held strong throughout the week for choice stock, which has been in light receipt.

Bayos beans of this year's crop were received on Monday last. They sold at \$1.40 on the wharf; the quality was only fair.

Charters for vessels closed very weak yesterday, but ship-owners are trying to get wheat down so as to advance charters.

## Vegetables.

Choice potatoes continue scarce and have fetched high prices throughout the week, but poor to good have been in liberal supply, necessitating concessions to effect sales. Owing to the difference in quality, there is a wide range in values; as an example, while poor Early Rose sold as low as 50¢ cts extra, choice were in active demand at \$1.10 on the wharf. The same range of prices obtained in other varieties.

Pickling onions have ruled steady with receipts cleaned up daily; but silverskins have been slow and heavy under heavy receipts and only a fair demand. The market closed weak.

Sweet potatoes, after advancing to \$1.25 for something extra, fell back under heavy receipts to \$1 on the wharf. The demand continues good.

This year's dried okra was received the past week, but, owing to the liberal supply of green, is unsalable.

Green okra, egg plant and green peppers have ruled steady throughout the week.

Cucumbers advanced to 25¢ cts a box, but closed weaker to-day under free receipts.

Summer squash are scarcer and higher; but mar-

rowfat squash are in excessive supply with sales hard to effect at over \$8 per ton for the best on the wharf.

Tomatoes under lighter receipts moved up to all of 20¢ cts a box, but with more liberal supplies fell back again, with a weak closing to-day.

In cabbages and other vegetable there are no changes to note.

## Wool.

London and Eastern advices report strong markets with higher prices paid, owing to heavy competition between buyers. In our market all fall wools received find a quick and ready market at about the same prices at which spring sold. There is considerable complaint of seeds. Consignors generally claim that there are more seeds in wools this year than for several years past, yet buyers take seeds and all, so anxious are they for wools. Although higher quotations are given this week, yet fancy clips sell at an advance on top prices named. S. F., Sept. 15, 1886.

WEST COAST LAND COMP'Y.

SAN LUIS OBISPO, CAL.

Incorporated March 27, 1886.

CAPITAL, - - - - - \$500,000.

DIRECTORS.  
GEO. C. PERKINS,  
JOHN L. HOWARD,  
ISAAC GOLDTREE,  
R. E. JACK,  
C. H. PHILLIPS.

OFFICERS.  
JOHN L. HOWARD, President.  
ISAAC GOLDTREE, Vice Pres't.  
R. E. JACK, Treasurer.  
C. H. PHILLIPS,  
Secretary and Manager.

THE PASO ROBLES, SANTA YSABEL, and EUREKA RANCHES,

Recently purchased by the West Coast Land Company, are now offered for sale in subdivisions.

This immense body of land, including 12,000 acres unsold of the Huer Huero ranch, belonging to C. H. Phillips, comprises 64,000 acres of rich, virgin soil. It lies in a compact body, in the center of San Luis Obispo county, and is within from 9 to 20 miles of the sea coast. It is covered with white and live oak timber, is one of the most picturesque bodies of land in the State, and requires

NO IRRIGATION.

It has an abundance of living water, and where not sufficient for domestic use, good water can be had at a depth of from 10 to 40 feet. It has an average annual rainfall of 21 inches, exceeding by six inches that of Santa Clara county, one of the most prosperous counties in the State.

The extension of the Southern Pacific Railway from Soledad southward traverses these lands for 15 miles throughout their entire length, placing the property within eight hours of San Francisco.

These lands are offered at from \$10 to \$30 an acre, and are all susceptible of the highest cultivation. In salubrity of climate, productiveness of soil and location as to market, they are equal to lands in Los Angeles and other counties, which readily bring from \$100 to \$200 and upward; and as to price and terms offer the best inducements to those seeking homes on any part of the Pacific Coast.

The field work of the subdivision of the famous

PASO ROBLES RANCH

Has been completed. The maps and catalogues are now being prepared, and will be sent free on application. This ranch, containing 20,400 acres, has been subdivided into 230 lots. It is 12 miles from the sea coast, and is 20 miles north and west from San Luis Obispo city.

This ranch was one of the earliest granted by the Mexican Government and having been held by the same party for 30 years, has never before been offered for sale. It consists exclusively of land of the choicest character, and is second to none in the State for the production of wheat, wine, fruits, raisins and olives.

TERMS OF SALE.

One-third cash; balance in 4 equal payments at 2, 3, 4 and 5 years; interest, 6 per cent per annum. The mortgage tax paid by the mortgagee makes the interest about 4 per cent net to the purchaser. A deposit of \$25 will be required in all cases to cover expenses of sale.

C. H. PHILLIPS, Manager,  
West Coast Land Co., San Luis Obispo, Cal.

Send for Catalogue and Map.

FRESNO COUNTY.

BRIGGS' SELMA TRACT.

This most desirable tract, comprising 1280 acres of first-class gray ash and sandy loam land (situated one and one-half miles from the fast-growing town of Selma, the second in the county, and two miles from Fowler, both being S. P. R. R. towns), has been subdivided and will be sold in 20, 40, 60 or 80-acre farms. The distributing ditches are now being constructed, and convenient roads are laid off. The main canal is 60 feet in the bottom.

THE WATER RIGHTS

Consist of stock in the canals and entitle the owner to one-eighth of 2 feet 6 inches of water, being 2½ times the usual amount supplied to colonies. The owner of the water stock has a pro rata vote in the management of the canal, and the expense per year is about \$3.50 on a 20-acre lot.

A school-house is to be erected on the land this year, and it has two within two miles of it at present. Fresno, Selma, Fowler and Kingsburg are good local markets for produce. Opportunities to labor with or without terms are abundant, and land can be rented for wheat-growing in the neighborhood. The health of this region is perfection, and, in common with the plains generally, is an excellent sanitarium for persons affected with pulmonary and rheumatic complaints.

The best raisins in the world, wines unsurpassed, the finest grapes, the best peaches, apricots, plums, prunes, nectarines, figs and olives, and in fact all the choicest fruits and vegetables of the world are grown in this favored region. Raisin vines three to six years old yield per acre from four to seven tons, and increase to eleven. Wine grapes three to six years old yield from four to eleven tons per acre. Alfalfa is cut from four to six times a year, and yields from one to two tons per acre at each cutting.

Two good cows and 100 hens furnish more than half the living for a family, and can be kept, with a team, on three acres of alfalfa, the growth of which is incredible in this favorable combination of soil and climate.

A comfortable house for a small family can be built for \$150.

The low price, taking into consideration water and transport facilities, should especially recommend this to seekers of homesteads.

Price, \$25 to \$37.50 per acre, on very easy terms to actual settlers.

For further particulars call on or address

## THE ROYAL SINGER!

## NEW SINGING CLASS BOOK BY L. O. EMERSON

THE BEST OF ALL!

Teachers of Singing Schools who examine this, the last of Mr. Emerson's series of successful class-books, will generally concede that it is, in some degree, superior to any of its predecessors. The elementary exercises, the graded easy tunes for practice, the part songs or glees, and the church tunes, anthems and chants, all excel in their selection or arrangement.

With its happily chosen title, good and interesting music and generally attractive character, there is good ground for hope that it will be the "favorite of the season." READY SEPTEMBER 1st. Price, 60 cents; \$6 per dozen.

## PARLOR ORGAN GALAXY.

A good and large collection of Reed Organ music, selected and arranged by W. F. SUMER; 40 good Marches, Galops, Waltzes, Rondos, Schottisches, etc., and 17 popular songs, covering 96 sheet music size pages, yet sold for the very low price of 50 cents.

Remember our superior new Sunday School Song Book, Songs of Promise, 35 cents, and our High School Song Book, Song Greeting, 60 cents.

## CLEAR YOUR LAND WITH JUDSON POWDER.

RAILROAD MEN, FARMERS AND VITICULTURISTS HAVE, by practical experience, found that the JUDSON POWDER especially; is the best adapted to REMOVE STUMPS and TREES. FROM 5 TO 20 POUNDS OF THIS POWDER will always bring any sized stump or tree with roots clear out of the ground. The EXPENSE IS LESS THAN ONE-HALF the cost of Grubbing. In most instances, Giant Powder, or any other "High Explosive," is too quick, and ordinary Blasting Powder not strong enough.

For particulars how to use the same, apply to

**RANDMANN, NIELSEN & CO., General Agents**  
GIANT POWDER COMPANY,  
SAN FRANCISCO, CAL.

## PRICE'S EXCELSIOR SEED SOWER

Sows a strip 100 feet wide at each passage (working width in wheat, 80 feet). Sows as evenly as a Force-feed Drill.

The supply of grain to the distributor is governed by the speed of the team, feeding rapidly when the team walks fast, and slowly when they walk slowly. Will sow an acre of ground as thoroughly with 80 pounds of seed as any other machine of its class will with 100 pounds. Sows 20 acres per hour with ease. Saves its cost in seed grain over any other machine every 200 acres sown. Warranted as above. Order on Trial. Price on board cars, \$40. Send for large, illustrated circular.

JACOB PRICE, San Leandro, Cal.

## DANIEL BEST'S HAND SEPARATOR.

OUR IMPROVED HAND SEPARATOR is a double combined machine, possesses two shoes (instead of one, as in machines of other manufactures), nine riddles and a large independent screen. Each shoe is equal in power and capability to the one in any other mill, and by the operation of the two, double efficiency is secured. Our 28-inch mill will clean from 400 to 600 bushels of seed grain per day, according to the condition of the grain, and we guarantee that all barley, oats, or other foul seed will be thoroughly removed with complete satisfaction.

By an ingenious set of Barley Riddles, which accompanies each mill, wild oats will be separated from barley—a feat which no other machine has yet accomplished. We ask you to give our mills a trial. We guarantee that you will find them precisely as represented.

For full particulars, apply to DANIEL BEST, 513 Fifth Street, Oakland, Cal.

## A. W. LOCKHART'S PATENT AUTOMATIC

## Hoedown & Feeder Works,

Center and Church Sts., Stockton.

## "GARDEN CITY" CLIPPER PLOWS.

Wood Beam Slip Share, Stubble and Sod Plows.  
Hardened Moldboards, Shares and Landsides.

No. 19½, Double Shin Steel Tapering Landside, 12 in. cut, 77 lbs., \$20.  
No. 21, Double Shin Steel Tapering Landside, 14 in. cut, 90 lbs., \$22.

### STUBBLE and SOD PLOW

Sizes, 12 & 14 Inches.

These Plows, as the name indicates, are intended to do old ground plowing. They are a medium between the more bold or abrupt old ground plow and the long, slow-turning breaker. They work nicely in old ground, being preferred by some to the regular Stubble Plow, and turn tame sod, such as Blue Grass, Timothy, or Clover, admirably. They are numbered 19½ and 21. We make with them steel beam, also. The numbers of the steel beam plows of this style are 519½ and 521.

## LA DOW JOINTED PULVERIZING HARROW.

SUPERIOR TO ALL OTHERS, BECAUSE IT IS

**Simple, Durable and Flexible.**

THOUSANDS IN USE GIVING ENTIRE SATISFACTION.

### POINTS OF SUPERIORITY:

It will do better work.  
It is much easier for the team.  
It is easier to manage.  
It has a lever to change the angle.  
It is not heavy on the horses' necks.  
It has no side-draft.  
It leaves no ridge at the center.  
It has a wrought iron frame.  
Its chilled bearings cause it to wear longer and work easier.  
It is easy to ride.  
It conforms to uneven surfaces perfectly.  
It has self-feeding oil cups. Best Disc Harrow in the world.

It can be made rigid if desired.

WE HAVE THE FINEST CARRIAGE REPOSITORY ON THE PACIFIC COAST.

Agents for David Bradley Manufacturing Co. A full stock of Plows, Harrows and Cultivators on hand; also a full line of extras. Agents for the celebrated Milburn Hollow Iron Axle Wagon, McCormick Mowers, Reapers and Twine Binders, and Randolph Headers.

If you have not our Catalogue, send for it. Mailed free to any address.

ADDRESS, **TRUMAN, ISHAM & HOOKER, 421-427 Market St., San Francisco.**

## IMPROVED CHAMPION CIDER MILLS AND PRESSES.

Senior, \$40. Medium, \$30. Junior, \$25.  
MOST EASILY WORKED.

Built Stronger and will Last Longer  
Than any other Cider Mill manufactured.

THEY HAVE AN ADJUSTABLE THROAT,  
Which adapts them to all kinds and sizes of fruit.

The Grinding Rollers are Adjustable.

They Grind Finer than Other Mills.

They are Light, Substantial and Handsomely  
Finished.

## MILBURN HOLLOW IRON AXLE WAGON.

Lightest, Strongest, Cheapest  
Wagon in the world.

Wheels run through boiling oil. Best and  
strongest wagon in the world. Every one  
guaranteed. BUY NO OTHER.

## TRUMAN'S IRON HARROW.

2 5-8  
Steel  
Teeth,  
12 ft.  
\$36.

All Iron and Steel. Takes any-sized Teeth.

All Iron and Steel. Each Harrow will take any  
sized tooth from ½ to 1 inch.

The BEST Harrow in the World for the Farmer  
and the BEST for the Dealer.

### THE BEST SELLING HARROW.

A very light-weight Harrow. A thorough pulverizing Harrow.  
Each section independent. The Merchant, by keeping 10 sections,  
can instantly furnish a Harrow of 30 to 150 teeth, for two to ten  
horses, and any sized teeth. A GREAT CONVENIENCE.  
Send for Prices. Prices Greatly Reduced.

## GRAND SUCCESS OF THE

# Houser Combined Header & Thresher

IN THE HARVEST FIELD FOR 1886.

280 Houser Harvesters in Field Work.  
300,000 Acres of Grain Harvested  
this Season with the Houser  
Machines.

No Failures. No Dissatisfaction. All did  
Good Work. They are Pull Machines.  
Our Standard make is a "Belt," but  
will build them "Geared"  
to Order.

The Houser for 1887 will have an increased capacity of Cylinder and Separator, and the Cleaner will be the BEST that can be made. AN IRON STRAP BRAKE will be put on the Drive Wheel, rendering a runaway impossible, and every improvement added to the Harvester which the experience of the season of 1886 has proved practical.

The Houser Harvester enables the farmer to RAISE WHEAT AT A PROFIT, and do his own harvesting. With 4 men and from 14 to 24 animals will cut, thresh, clean and sack, ready for market, an average of from 20 to 40 acres a day. It is all that can be desired in a Combined Harvester. As light as is consistent with the strength required to cut, thresh and clean heavy or badly-lodged grain. There are a number of Combined Harvesters that will do fair work in average standing, clean grain, but for heavy, weedy, badly-lodged grain, the Houser has no equal. It has never failed to do good work.

BEWARE OF EXPERIMENTS. BUY THE "OLD RELIABLE" HOUSER AND YOU TAKE NO CHANCES.

EXTRAS WILL BE FURNISHED FOR 1887 AT REDUCED PRICES.

WE ALSO BUILD TO ORDER THE MINGES, SHIPPEE, AND POWELL COMBINED HARVESTERS. Send for Circulars, see, or correspond with those who have run the "Houser." Address

STOCKTON COMBINED HARVESTER and AGRICULTURAL WORKS, Stockton, Cal.

## California Fruit at the East.

We publish, upon another page, a letter from Chicago, concerning the condition in which the Eastern sale of California fruit finds itself. The writer is H. Weinstock, of Sacramento, one of our most prominent interior merchants, and who is also a fruit-grower—thus being both directly and indirectly interested in the prosperity of the fruit industry. Hearing that Mr. Weinstock was going East, partly with a view of studying the Eastern marketing of California fruit in his own interest, we asked him to prepare a series of letters, in which his observations and conclusions might be presented to fruit-growers in general. This he consented to do, and we have in this issue of the PRESS his first letter. It describes a condition of affairs which must be considered most deplorable to the fruit-growers, but it is a condition which can be remedied, and it is with reference to such future action on the part of the growers as will prevent a recurrence of the evil that we desire to publish Mr. Weinstock's observations. Our fruit men should have the fullest light on this year's experience at the East, so that something can be done this fall and winter to arrange better methods and policies for next year. To this work let all address themselves. Let all who have valuable information contribute it for the public benefit through our columns. Discussion during the next two months may prepare the fruit-growers for important action at the great Fruit-growers' Convention, in November, or at some other convention which may be called for the purpose. Mr. Weinstock's letters will open the subject, and we invite all who either approve or disapprove of his conclusions to take part in the discussion, so that the best policy can be adopted. It is for the interest of all that this should be done. We cannot see that either growers or shippers can derive much advantage from the conditions which things are in this season.

**GOOD FOR FRESNO RAISIN-MAKERS.**—The *Expositor* of the 4th inst. states that Geo. W. Meade & Co. have secured from the railroad people a reduction of \$45 on the freight rates on carload lots of raisins from Fresno to Stockton—en route for the East. The former rate was \$75 per car, and the future rate will be \$30. This is an important reduction, and we feel assured that the firm's efforts in the premises will be fully appreciated by Fresno raisin-growers. The firm is working for a reduction on Eastern rates and feels quite confident of securing it. Fresno county will ship about 150 carloads of raisins East this year, and this reduction means an increase of \$6750 in the producers' pockets.

**A CUCURBITACEOUS SERPENT.**—One of the vegetable curios at the Mechanics' Fair is a "snake cucumber," shown by F. M. Tenney, of San Jose. At its thickest it is the size of an average man's arm, and if straightened out would measure about seven feet in length; but it winds and twists into the shape of a rudely-formed capital "B."

**EGYPTIAN WINE.**—A German wine-grower has produced an excellent quality of wine from the yield of a vineyard occupying a large tract of land near Cairo, and his success has stimulated the Egyptian Government to give every encouragement to grape culture in Lower Egypt.

## The Bidwell Peach.

We give on this page an engraving of the new peach which was shown at the last meeting of the State Horticultural Society, as described in our report of the meeting which appeared in the RURAL of Sept. 4th. It originated on Rancho Chico, upon a shoot from a seedling peach stock upon which apricot had been

A HILLSIDE RESERVOIR IN BERKELEY.

budded, and when the top died the shoot was allowed to grow and form a tree. In time it bore the peach which was first noticed on the day of General Grant's funeral last year, and which was of such good quality that Mr.

## The San Jose Fair.

The nineteenth annual fair of the Santa Clara Valley District Fair Association will open in San Jose on Monday next, September 26th. This year's fair seems to be under the joint auspices of the San Mateo and Santa Clara Valley Agricultural Association, which will conduct the Pavilion display, and the

Santa Clara Valley Agricultural Society, which will manage the display of live-stock and the racing program at the park. There seemed to be some doubt about obtaining the State appropriation for a fair under joint control of the

A NEW CALIFORNIA PEACH—THE GEN. BIDWELL.

Gray proposed to name it the General Grant peach. When it came before the Horticultural Society last month, it was referred to a committee, who pronounced the variety worthy of propagation and further trial. As there is already a peach named General Grant, the committee advised that the new peach be named the General Bidwell, which was approved by the society. The peach is a handsome, yellow free-stone. It ripens one week later than the late Crawford, and is especially valuable on that account.

MOUNTAIN and forest fires have been of frequent occurrence the past two or three weeks, in the central counties of the State.

## A Hillside Reservoir.

Many people are now deriving their water supply from tunnels in the hillsides. It has been found that water can be thus obtained at an elevation which admits of its being distributed over wide areas either for house use or irrigation. In some places in the southern counties tunnels have been run in near the sources of small streams, and thus a much greater supply has been developed than found its way into the streams originally. In other cases the beds of such streams have been tunneled under and the underground conduits of water cut off, and thus again supplies have been developed. Tunnels into the hillsides nearly always yield water, though the amount differs widely. Sometimes not enough will be obtained to pay for the cost of the tunnel; again, the supply of a town or a considerable area of irrigated land will pour forth and sometimes risk the lives of the workmen who are opening way for it. Many times a man living near the hills can do much better by digging a horizontal well into his hillside, and thus secure running water, than he can by digging a vertical well and then be at the trouble of pumping it to the surface.

The neat little engraving on this page shows one of the hillside reservoirs of the Alameda Water Company, which supplies the town of Berkeley with water. The reservoir is rather more than 350 feet above the sea water, which is but about two and a half miles distant—that is, the sea water which enters the Bay of San Francisco. The tunnel which supplies the reservoir is quite a little higher on the hillside. It was bored about ten years ago, and is now yielding a steady supply of water, which is carried for about two miles south and west to the different parts of the town. The reservoir was made in a natural depression on the hillside, and required but little embankment.

## Polar Cranks.

Two more cranks have started in search of the North Pole. No doubt there is something fascinating in trying to solve the riddle of the veiled Sphinx of the North. No doubt there is a little romance in spending a winter in the Frozen Zone, spearing the walrus, chatting with thick-lipped, blubber-eating Esquimaux, sleighriding under the auroral lights with the thermometer 60° below zero, and coming home and telling long stories in books and magazines about it. But, after all, what right has Colonel Gilder and his companion, or anybody else, to go off and lose themselves in Arctic ice and snow, and expect any one to fit out expeditions to search for them? Let the fools who persist in believing the Pole can be reached, go after it with the assurance that if they are lost nobody will regret it. And if the worn-out hack politicians and captains of the saloon brigade can be induced to undertake the trip, it might be good economy to give them an encouraging outfit, and then pass a law making it a felony for any one to go in search of them.

MYRON H. CRAFTS, a pioneer of San Bernardino valley, died recently of pneumonia, at the age of 69, at his home place near Crafton. He was well known in that region, having lived there since 1859. The land boom had just struck his property, which has lately been cut up into small tracts and much of it is already contracted to the new colony settling there.

## FORESTRY.

### Tree Seeds and the Board of Forestry.

EDITORS PRESS:—Baron Von Muller, a distinguished forester and botanist of Australia, has sent to our board the seeds of the principal forest trees of that island. Among them there are doubtless some much better adapted to our interior climate than is the blue gum. The blue gum (*Eucalyptus Globulus*) is native of a comparatively humid climate, and is therefore better suited to our coast climate than it is to the dryer portions of the country. I have never seen the *E. globulus* reproduce itself—that is, seeds sprouting under the old trees, except at Santa Monica and San Francisco, almost immediately upon the coast. This is an indication as to the climate to which it is best adapted.

I should be glad to furnish some of these seeds to any person who will give reasonable assurance that he will propagate them and give a report of their success. I am inclined to think that the best course for our board will be to have the seeds propagated by a nurseryman and then distribute the trees. I should therefore like to hear from the nurserymen on this subject.

I desire to call the attention of our nurserymen to another point, and that is that one of the provisions of the proposed law setting apart a day for the planting of trees in this State will materially advance their interests. This provision proposes that a prize be given for the best forest plantation brought to the attention of the board, and also making it the duty of every road-master in the State to plant and care for at least 100 trees per annum on such highways as the supervisors may direct. Our board thinks that this will add considerably to the demand for young trees. We need all the help that we can obtain, and we want the nurserymen to put their shoulder to the wheel and aid us in this important movement.

ABBOT KINNEY,  
Chairman State Board of Forestry.

San Gabriel, Cal.

[The blue gum seeds itself freely on the east side of San Francisco bay. The attention of our readers is called to the offer of the board to give tree seeds to those who will try them and report results. The secretary of the board is Sands W. Forman, and the office is room 42, Nevada block, San Francisco.—EDS. PRESS.]

THE FORESTRY COMMISSION'S SURVEY.—Hubert Vischer, whom we have mentioned previously as being connected with the State Board of Forestry Commission, returned from an official visit to Bear river and the southern portion of the county on Saturday. Yesterday afternoon he left on the train for Hydesville, where his conveyance was awaiting him. He has completed his investigations in this county, which he considers the best lumber section of the State, taking all things into consideration. Our splendid harbor, the many and convenient avenues by which rafts of logs are brought to the mills, the convenience of the several railroads, all enter as premises of his complimentary syllogism. The only thing in his estimation which is dwarfing our lumber interests is the dangers which menace vessels in entering our harbor. Deep-sea vessels are virtually precluded from engaging in our commerce. Mr. Vischer further stated that on his next visit he hoped to see Humboldt bay in a greatly improved condition.—*Humboldt Standard*.

## THE DAIRY.

### Carrying Out the Oleomargarine Law.

Dispatches from Washington mention the details being arranged for the enforcement of the new law against bogus butter. A series of oleomargarine stamps have been completed, and they will be supplied to collectors of internal revenue as rapidly as they can be printed. The first series of the denomination of \$6 is for the manufacturer, and bears a picture of the treasury building. The second stamp of the series is intended for packages. The border and ornamentation is printed in bright green, and in the center is a pretty design in black ink representing a farmer and mechanic on either side of a shield bearing the stars and stripes. Attached to the body of the stamp are a number of coupons, each indicating 10 pounds, so that the value of the stamp may be made to correspond to the weight of the package. The last of the series is the export stamp, which is also printed on green and bears a medallion representing a magnificent ocean steamship under full headway. Blanks are left on this stamp to be filled up by the collector, showing the weight and contents of the package and giving any other information required by law. The entire series is characterized by the newness of the design and execution, and meets with approval in official quarters.

Acting Secretary Fairchild has issued a cir-

cular to all custom officers, calling attention to Section 10 of the Oleomargarine Act, making provision for the collection of an internal revenue tax of 15 cents per pound on all imported oleomargarine, in addition to the regular import duty, and also providing that this additional tax must be paid before the removal of the goods from the custody of the Government.

#### What the Manufacturers Say.

Some manufacturers of oleomargarine have protested to the Treasury Department against the construction placed by the Internal Revenue Bureau on the second section of the act regulating the manufacture of that compound. The law imposes on "oleo oil, natural and other articles of like nature," a tax of the same amount as is imposed on oleomargarine. It appears that there are a number of firms engaged in the manufacture of oleomargarine, whose business is to purchase and combine the various ingredients into a marketable article, and if the component articles are subject to tax, as has been held by the Revenue Bureau, the result will be to compel these manufacturers to pay a double tax, as they are also required by law to place stamps on the finished article when compounded.

It is also stated that certain firms are making large quantities of what is known as "oleo oil," which is sold and used solely as a lubricant for machinery. If the strict construction already given to the law by the department is adhered to, this material will also be subjected to the tax imposed on oleomargarine. The matter is now under consideration by the Internal Revenue Bureau, and it is believed that when Commissioner Miller returns the construction that has been placed on the second section of the act will be modified so as to relieve the material of the tax. Circulars have been sent to all collectors, requesting information as to the number of oleomargarine factories in each district, the average production and other information, with a view to adjusting the clerical force of the bureau to meet the demands of business when the act shall go into operation.

## HORTICULTURE.

### What has Horticulture done for California?

By EDWARD J. WICKSON.

[An address delivered at the Contra Costa County Fair at Pacheco, Sept. 8, 1886, and published by request.]

For a number of years the advancement of horticulture has been a favorite theme with California poets and orators, and in general conversation. Many years ago the excellence of California fruit was recognized and the planting of fruit trees was urged, but within the last few years the public has been excited in a far more serious fashion. So great and so general has become the disposition to exalt horticultural industries that perhaps three-quarters of all our agricultural talk and writing is concerning fruit and fruit products. When I received the invitation from your president to address you upon this so popular theme, I was at a loss to know what of novelty could be introduced in the discussion of a matter which has been already so thoroughly presented to the people of California. It has occurred to me, however, that perhaps a short time may be profitably spent in an inquiry as to whether fruit-growing has done enough to warrant its present prominence in the public mind; whether it has justified the intelligent and unselfish efforts to which the pioneers in fruit growing, like your honored Strentzel, have given their valuable lives; and whether it still promises anything to really justify the great expectations which are so freely expressed on every hand. I think perhaps these questions are often answered merely with a reference to our glorious climate and perhaps on account of how much some man or some neighborhood has accomplished. I shall endeavor to find a broader basis upon which to establish an answer to the question: "What has horticulture done for California?"

Different people and different classes of people are apt to look upon a question, to a degree, at least, according to its bearing upon their usual lines of thought and action, or at least, for our own purposes in this discussion, we may consider them as so doing. In each case the investigator brings to light facts which seem to him of the chief importance. Let us, then, summon before us a number of witnesses to testify as to what horticulture has done and is doing for the State. Let the business man declare what it has done for the purse, the doctor recount its influence upon the pulse, the philosopher its services to the head, the preacher its effect upon the heart, and the statesman close the discussion with a word of its influence upon the quality of our citizenship.

First, then, the merchant:

#### What has Horticulture Done for the Purse?

Too many in answering this question cite individual instances of large profits from fruit-growing, and use them as exponents of the general value produced. This is not a safe argument, and it could be met by cases of individual failure and disaster quite as great in their way as the individual successes. We

must find broader, surer ground. It is better to rule out the personal equation and seek an aggregate result. Suppose we allow that all the fruit sold for consumption in this State be set apart as the actual cost of producing the whole crop. It is certainly a liberal estimate of the cost. This would then give us only the horticultural produce which is shipped out of the State as the profits on the year's labor and interest on the capital invested. The accurate records of the railway companies show the following amounts of the different horticultural products shipped out of the State during 1885:

	Pounds.
Citrus fruits.....	22,476,960
Deciduous fruits.....	22,909,780
Dried fruit.....	5,794,160
Raisins.....	6,203,340
Canned fruits and vegetables.....	28,949,380
Nuts.....	1,762,260
Onions.....	521,000
Potatoes.....	6,283,400
Vegetables.....	6,588,800
Wine.....	30,272,600
Brandy.....	2,532,230
Total.....	134,293,940

This amount of horticultural products laden in cars at 11 tons each, which I am told is about the average weight, would require 6104 cars to convey it, and they would make a train nearly 40 miles long.

But there is another way to show the deeds of horticulture to the State, and that is in the increase of the taxable property which can be directly traced to it. Hon. E. W. Maslin, secretary of the State Board of Equalization, has furnished me with the total assessed valuation of certain counties in 1876 and 1886 which show how important the increase is. I choose a few counties where the main interest is horticulture, and to which people have come to make homes because of the fruit resources of the localities. Take the following counties, for the years named, leaving out the assessed value of railways in all cases:

County.	1876.	1886.
Fresno.....	\$ 7,630,431	\$ 14,130,118
Los Angeles.....	14,156,622	37,560,880
Napa.....	7,909,186	11,873,261
San Bernardino.....	2,484,480	8,089,305
San Diego.....	2,409,202	9,961,282
Santa Clara.....	27,294,234	37,929,395
Solano.....	9,117,775	16,799,603
Sonoma.....	14,866,098	25,606,905
Contra Costa.....	6,938,670	14,247,039
Totals.....	\$2,809,698	\$175,797,788

Here is, in nine counties of California, an increased valuation of \$82,988,090 in ten years, which may be traced to the horticultural industry. Certainly it has done something for the public purse.

#### Horticulture and Health.

Let us turn, now, to another measure of the service to the State and to humanity which may be fairly credited to the horticultural industry—its influence upon physical health and the prolongation of life. It is a fact apparent to every observer who directs his attention to it, that thousands have been rescued from untimely graves by enlistment in California horticultural arts. Hither they fly from all the unkind regions of the earth to find, in our outdoor life and delightful horticultural work, a healing balm which brings color to the cheek, strength to the muscles and makes existence a joy and not a burden. It can be clearly shown that California horticulture is reducing the world's death rate, prolonging human life and increasing its effectiveness; filling households with light instead of the shadow of the dark valley. Almost every community has those, and often among its most valued citizens, who have almost experienced a renewal of youth and who can gladly testify that "gold that buys health can never be ill-spent." Opportunities which our State affords for other kinds of profitable work can claim a share in this noble service of prolonging life, because of our beneficent climate; but to horticulture pertains more credit than to all other occupations combined.

But there is another influence which the doctor would attribute to California horticulture, and that is, the general good effect of an abundance of choice fruits and vegetables in building up the general health of the people. It is said that California life stimulates one to undue haste in work and soon wears out the worker. A generous fruit diet, which tends to cool the blood and tone up the system, may enable us to sustain the wear of our rapid style of thought and action. Who can measure the value of the influence which chases the dullness and pain from the brain, banishes dyspepsia, and makes the dull eye and swimming head of biliousness exceedingly rare? It would be hard to prove that the proverbial open-heartedness, cordiality and tireless activity of California is not to some degree due to the contributions which horticulture makes to our diet. The bacon and flapjacks of pioneer times have been largely replaced, or at least attended, by the succulent vegetables and juicy fruits. It is interesting, too, that those regions which in early times poured out in greatest quantity the demoralizing metal, yield now, in rich profusion, "blooming ambrosial fruit of vegetable gold."

#### Horticulture and Intellectual Culture.

Let us turn now to the philosopher and ask him if he finds aught of benefit in the great prevalence of horticultural arts in the commonwealth. Little cares he either for the purse or for the pulse, and counts such judgments far in-

ferior to a standard of his own. It is to the head he directs his inquiry, and in the utterance of words, which are signs of ideas, he will measure the influence of occupation upon the man. What powers of mind does he find awakened and strengthened by thoughtful horticultural work? All agricultural arts thrive by the application of earnest thought. Brains are a good fertilizer, as one has remarked. There are men who merely plow when the ground is soft enough; scatter the seed and reap the crop at some convenient time after the grain is ripe without much thought of improving the quality of the crop or of increasing the yield, and there are men who stick in trees, leave them to struggle with weeds and drouth and bugs, and then gather the little fruit which runs this gauntlet of adversity; but such men are not the best types of grain-growers or horticulturists. The very word *horticulture* conveys the idea of discriminating care, diligent effort—in short, the application of thought as well as force to achieve desirable results. All of our choice fruits are the results of culture, of the arrangement of natural conditions and direction of agencies by the mind of man. The improvement of a choice fruit is analogous to the advancement of the human race—the wild types, both in fruit and in man, are inferior. There is no change in species, but an infinite variation, which extends from worthlessness to the highest utility and nobility. Now, while this great change is being achieved in the fruit, what is the effect upon the mind of man, which is its architect and builder? Most assuredly it is to stimulate it to new activity, to suggest new and progressive ideals of excellence, to awaken a more cultured and refined taste, to increase the appreciation of the beautiful and the love of it—in short, to promote intellectual development. Has it done this in California? It certainly has, and no other industry can rival it in this service. Go into any of our fruit fairs or fruit growers' meetings, or better still, into the orchards of our most careful and successful fruit-growers. Watch these men as they look at a new variety of fruit to make a critical examination of it. See them turn it about and fix their eyes upon it until every hue of the colors is judged according to the high standard of excellence which they have set up—until every curve of its outline is mentally measured. A painter could not do more for his beautiful model than the trained and devoted horticulturist does for his fruit.

Then view him as he shapes his trees in the orchard to attain his idea of symmetry and to secure strength and fruition and just the proper distribution of sunlight and shade, to perfect the fruit and protect the tree. From a switch, fit to dust the jacket of a truant schoolboy, he develops a shapely tree. The sculptor hews down his block of marble until its outline presents to the eye the lovely image he carries in his mind; the horticulturist starts with a single bud and directs the forces of nature until he builds up his tree, causing it to gather strength here and to throw out graceful branches there, until it stands forth, stalwart, symmetrical and peerlessly beautiful with its springtime silver and its autumn gold. What an eye has he for form! What a knowledge of the methods of growth! What an intelligent linking of cause and effect! Indeed our philosopher, inquiring into the intellectual aspects of agricultural arts, will select the wide-awake, enthusiastic, thinking horticulturist as a splendid exemplification of the enlistment of intellect in industry.

#### Horticulture and Morals.

But we have other directions in which to explore the contributions of horticulture toward the advancement of California. We have endeavored to prove it good for the purse, for the pulse, for the head. The preacher might call all these standards of value too low. He would say you must ask if it is good for the heart. The influence of environment in molding character is too well known to need argument. The services of horticulture in beautifying homes and making them more attractive to the young, are generally recognized. There has been enough written on this one subject, from the classic age to the present, to fill a library. I will quote a few sentences from a recent writer:

That which makes the home attractive and beautiful, which furnishes the best models of taste, which appeals to the better nature always, which brings the child continually close to Nature in her perfect forms of tree and plant and flower, is playing no mean part in molding character and shaping the future life. Yet this is the very work horticulture is doing. It surrounds the child with models of grace and beauty—teaching nature's own lessons through the eye, deep down into a human soul. The power of the home life is intensified and strengthened, and the young life thus touched and softened by gentle and refining influences yields more readily to the truth and to proper home-training—for nature, in every form, is reverent, humble and obedient. Have we not a right to expect that manhood will show a higher moral culture, a purer taste and a more symmetrical character as the results of such home influences?

That such has really been the case is the verdict of history. To be impressed with the moral work of horticulture in California one has only to observe the change which is rapidly coming over our ranch homes. The desolate habitation, with its dreary, wind-swept, arid surroundings, is becoming obsolete, and in its place see the tasteful cottage, with its clambering vines, the garden with its wealth of shrub and flower, and beyond them the bowers of orchard bloom, and the vineyards spreading their

rich green carpets over the arid plains and hillsides. Any preacher will tell you that he can easier reach the heart when his flock is sheltered in such homes as these, and the moral tone of the community strengthens and deepens as these homes are multiplied.

Horticulture and Citizenship.

Last of all the statesman: what has horticulture done for the State? It has come down from the fathers of the Republic that the stability of the Government depends upon the character of her sovereign citizens. Give a people industry, which earns prosperity, promotes physical health, fosters intellectual growth, develops true moral sentiment, and you will have a government whose citizens will be contented, strong, progressive, enlightened and upright. Horticulture is now doing more to people this glorious commonwealth of California with such citizens than any other of our industries, and we cannot too highly honor those who, by early deeds, pointed the way for others to follow, or by glowing prophetic words stimulated others to effort and achievement.

The Future of Horticulture.

Granting, then, these services of horticulture to California, are we at the end or still at the beginning of her work? This is a question of the greatest moment. It can be best answered by the logic of facts. We have seen what a vast amount of horticultural products were sent beyond the borders of the State last year. Is it enough for the United States? We can safely say no, and for these reasons: First, the present year has shown an increase of 25 per cent in the shipment of citrus fruits, and yet they have brought better prices than for years. It will show an increase in the shipment of deciduous fruits although it has not been a year of full bearing—in fact, it has in many respects been a very short year in certain fruits. The present year will show a wonderful increase in the shipment of dried fruits because the railroad war brought freights so low that the State was swept clean by the shippers, and they sent a good deal of sweepings along with the good fruit. For all that, the shipments hardly made an impression upon the great Eastern appetite; and Eastern fruit-dealers are writing of the bare condition of their markets and the splendid outlook for California dried fruit. Unfortunately, excepting prunes and raisins, the short fruit crop and the eagerness of the canners will leave comparatively a small amount of fruit for drying this year. California canned fruit is again at flood tide, and this year's product will be large. If the proper standard is maintained in quality, the demand for the fruit will increase rapidly from year to year.

The field toward the South and East for California vegetables is one which promises to be of great importance to our horticulture, providing reasonable rates of freight can be secured.

There has been so much said during the last year of the opportunity for shipping fresh fruits to the East, and of the almost indefinite extension of the business which would be possible if California fruit could be placed within the reach of the middle and lower classes, that I need not enlarge upon that point. It seems unquestioned that if good fruit can be given them at moderate prices, it would tax our producing capacity to supply them. In view of the continued and sweeping disasters to fruit trees in the great Northwestern States, and even farther east, the field seems well opened to California producers, but how to best reach it and profit by it is still an unsettled question, although our constantly increasing shipments seem to fully insure an ultimate solution and one favorable to our interests.

What the East Purchases Abroad.

To give some tangible features of the opportunity at the East for increased supplies of California horticultural produce, I have prepared, from the report of the U. S. Bureau of Statistics, the following statement of the value of imported products for the 11 months ending the first of June, 1886:

Seeds.....	\$1,498,625
Figs.....	595,038
Lemons.....	2,182,186
Oranges.....	1,766,889
Prunes.....	1,998,705
Raisins.....	2,861,619
Preserved fruits.....	797,427
All other fruits.....	1,386,680
Almonds and other nuts.....	1,190,175

Total.....\$14,187,344

Olive oil.....	\$ 593,583
Vegetables.....	2,377,787
Wines.....	6,234,667
Brandy.....	1,040,182

Here is a value of over \$21,000,000, including only articles which we have already demonstrated can be produced in the highest excellence in California, and this value will increase as the country grows.

Collateral Branches.

What we can do in collateral branches of horticulture can hardly be estimated. Let me mention but three items in the production of which a beginning has already been made. Take the camphor tree, a member of the laurel family, a beautiful evergreen, perfectly hardy and a most rapid grower. I hold in my hand a sample of crude gum camphor, made in the University laboratory from leaves and twigs from a tree growing in my own garden in

Berkeley, and which has been twice cut back to a stump to secure material for experiments, and has again made a new top within a year. It is a tree which should be widely distributed in this State for its valuable wood and perhaps for camphor-making. We pay to foreign nations now about \$140,000 per year for crude camphor gum.

I show you also a piece of another plant which we are growing at the University in Berkeley, and distributing to all who desire to test its growth in this State. It is the true Sicilian sumac, used by the tanners, and we paid the people of the Mediterranean \$3,614,503 last year for sumac. And here is still another horticultural product; the boys will recognize it. It is a piece of licorice-root grown in California by Mr. Lea, of Florin, Sacramento county. Last year we imported over 25,000,000 pounds of licorice-root, at a cost of \$1,232,037.

But I will not weary you with sketches of opportunities. These will serve to illustrate the point I would make: that in our climate we can grow what the great Eastern and Western States cannot produce—articles which we can supply them and receive the money which now goes out to foreign nations.

The Application.

Concluding, then, that horticulture has done great things for California, and may do even greater things in the future, it becomes pertinent to inquire what special importance this fact has for the county of Contra Costa. In the first place, you have a county splendidly adapted by nature for growing many kinds of fruit. This is evident to any one who visits your lovely, sheltered valleys, your warm hillsides, and who knows the composition of your soils—of which Professor Hilgard, after careful analysis of samples from the very region in which we now are, says: "Its fruit product cannot fail to be both abundant in quantity and high in quality."

More than this, you have the fullest practical demonstration of horticultural worth, thanks to the pioneers who early planted trees and vines. Another reason for increased horticultural interest in this county is its nearness to the great markets of the State and the prospect that new railway lines will bring its hitherto somewhat isolated valleys within an hour or two of the metropolis.

Means of Advancement.

What ways, then, lie open to secure the fuller development of this favored region, not alone in fruit but in live stock and dairying, for which some of your valleys are already famous? This county agricultural society, under whose auspices we are assembled, is an important agency. Uphold the hands of those who are striving to elevate and improve it. Bring your best produce, and show by your interest and support that you desire that the agricultural features of the fair shall be second to none.

We have State organizations for the advancement of horticulture, but you should have local horticultural societies or clubs, unless your Granges can set apart time for the discussion of such matters. There is a vast amount of valuable local experience which should be brought out for the benefit of all. Local experience is the only sure guide in horticulture in a State where climate and soils are so diverse as in California. Your local papers at Martinez, at Antioch and at Concord are doing much good work and recording experience which is of great value, but they could serve you much better if your enthusiastic horticulturists should meet at stated times to compare products and experience. Such horticultural clubs are now doing excellent work in nearly all the fruit-growing neighborhoods of the State. They are bringing the fruit-growers to a better acquaintance and enabling them to act unitedly and more effectively in the promotion of their industry.

Another piece of advice which I would give you is to make greater use of the University, which is only across the hills from you. The College of Agriculture is well fitted to be of service to you. Send your boys and girls to be trained in horticultural arts and the sciences underlying them. We do not believe, as a general proposition, that a youth can learn too much, but we recognize the fact that all cannot pursue long courses or enter far into abstruse studies. We, in the College of Agriculture, stand ready to teach your young people what they can learn in the time they can command for the purpose. If they cannot come for four years, send them for one; if not for one year, then for three months. They can come without examination and without price, it being only understood that they are taking a special course or pursuing a special study. If you cannot send us pupils, then send us descriptions and samples of things which you wish information about. Send your grapes and wines to be analyzed and tested; send us your bugs, if you are so unfortunate as to have any, and we will try to tell you something more than the Latin names for them; send for our reports, if you desire to read them, and apply for our seeds, scions and plants, if you will faithfully try them and report to us the results for the public benefit. We are set up at Berkeley to make ourselves useful to the agriculture of the State, and how can we be useful to you unless you tell us what you want?

[The address closed with a few general remarks, suggested by the occasion.—EDS. PRESS.]

Nut-growing in California.

EDITORS PRESS:—There are, probably, but few persons in California aware of the State's progress in nut growing, which at no distant day promises to be one of the most remunerative of her many agricultural industries. There is hardly a section of the State where peanuts, walnuts and almonds cannot be grown with a profit. Every requisite condition in soil and climate has been found wherever these crops have been tried, but with other varieties the industry has hardly passed the experimental stage. The growth can be seen by the following comparative crop summary in pounds, for the past three years:

Years.	1883.	1884.	1885.
Walnuts.....	500,000	750,000	1,250,000
Almonds.....	700,000	250,000	1,050,000
Peanuts.....	.....	750,000	518,000

The walnut crop last year showed a most gratifying increase over the productions of former seasons, and this year's crop is estimated to be all of 20 per cent greater than that of 1885. The California walnut is so favorably known on this coast and at the East that it is sought in preference, owing to its freshness and excellence of taste, to the imported. As yet, the principal sources of supply are Los Angeles, Santa Barbara, San Bernardino and Ventura; but the late Northern Citrus Fair, held at Sacramento, brought out samples grown in Northern California which show that, by careful cultivation, that section will take as high a rank as Southern California for the product. The prices obtained are always good, leaving a round profit after the trees come into full bearing. It is not at all likely that the industry can be overdone, for we have the entire United States for a market.

The almond output of the State last year was of a general good quality. The season opened with bright prospects under light stocks, which would, undoubtedly, have been realized but for the ill-advised increase in consignments of large producers to the Eastern distributing points. These free consignments broke the market and brought about a general demoralization of trade in the article, the effects of which have just been lost in the almost total consumption of stocks, so that the incoming season will be entered with a lighter stock than last year, with a larger demand, owing to consumers being better accustomed to the superior quality, on an average, of California almonds over the imported. From all that can be ascertained, producers, or at least the larger proportion, will sell this year's crop for cash here, rather than consign to the East and be subject to delays, heavy expenses, and the general uncertainties that follow shipping to the East on account.

The outlook for the industry is bright, for many of the larger Western cities now draw their supplies wholly from this State, while in the far East the prejudice against California almonds is dying out, giving encouragement to the belief that at no distant day the far East will be an active competitor for our product.

The first place as a peanut-growing State has been, and is still, held by Virginia; but large dealers who handle the peanuts grown in the various Southern States state that those raised in California equal the best. The falling off in last year's crop compared with that of 1884 is accounted for by the low prices that obtained in the season of 1884-85; but as the prices for the season just drawing to a close are said to have been fairly remunerative, more attention, it is claimed, has been given to their cultivation. Probably to produce the best results the same method must be adopted here that obtains in Virginia, where it has been acquired from long years of actual experiments. There the peanuts are generally hand-picked, all the faulty and blemished nuts removed, and the balance cleaned and polished by machinery or a system of revolving brushes, which gives the shells a smooth appearance, greatly adding to their attractiveness and causing them to be purchased at high figures, when the unpicked are neglected even at considerably lower prices. The stock on the market now is light and the incoming crop is likely to meet with a fairly active demand at remunerative prices.

San Francisco, Sept. 11, 1886.

Myrobolan Stock—A Correction.

EDITORS PRESS:—In your report of the proceedings, of August 27th, of the society in the discussions on Myrobolan stock, you say:

"John Rock, in answer to a question, spoke in favor of the Myrobolan stock for low, moist land. The growth on it seems to be good, but usually 10 to 15 per cent will be lost."

Please correct this, and give the question also, which was asked by Mr. A. T. Hatch: "How does the peach succeed on the Myrobolan?" To this I replied that I had peach trees growing on it six years, on wet ground where peach stock had died from too much water in winter. Ten to 15 per cent had been lost in nursery in peach trees worked on Myrobolan stock that had not well united.

San Jose.

JOHN ROCK.

[Mr. Rock is right. We remember the discussion just as he described it. In writing from our notes we must have been guilty of a mental lapse, and unconsciously left out the connecting statements which he mentions. We regret the error, and hope all who read the discussion will note the correction.—EDS. PRESS.]

THE STOCK YARD.

Suggestions for the State Fair Directors.

The following, addressed to the Board of Directors of the State Agricultural Society, was placed before that body last week by the cattle breeders whose names are appended:

GENTLEMEN: The undersigned respectfully represent:

First—That they are breeders of cattle, not "cattle traders."

Second—That they bring their cattle to the State Fair for exhibition purposes and to instruct the public in the merits of the different breeds which they represent and advocate.

Third—That the handling, feeding, transportation and exhibition of said cattle are a matter of great care, serious expense and considerable risk.

Fourth—That the value of the premiums awarded and divided among the several competing herds is not in itself an adequate return for said care, expense and risk.

Fifth—That the breeders look to and consider the opportunity of favorably displaying, and thereby advertising their cattle, as the main recompense for the outlay and risk incurred.

They therefore desire to call your attention to the following facts:

a. A large proportion of the most desirable exhibition stalls have this year been allotted to cattle traders and to cattle breeders who have brought cattle to the fair not to exhibit but to sell.

b. A majority of the breeders of cattle have by this action on the part of the association been crowded into such distant and undesirable stalls that their stock might almost as well have been entirely removed from the premises of the association at all times excepting during the parade.

c. That even without taking into consideration the number of "sale" cattle exposed on the grounds, there would not have been a sufficient number of desirable stalls to accommodate the cattle brought here purely for exhibition purposes.

d. That in charging an entrance fee to "sweepstakes" premiums the association is unnecessarily increasing the breeder's expenses.

The cattle breeders now beg to recommend to the association:

First—That a distinction be recognized and made between cattle sent here for exhibition and those brought on the premises for sale.

Second—That a sufficient number of stalls be built within a reasonable distance from the main entrance and grand stand, and that said stalls be reserved for the use of breeders of cattle.

Third—That breeders be not allowed to exhibit more than 25 head of any one class of cattle.

Fourth—That in the allotment of stalls all herds of one class or breed be kept as close together as practicable, and be set apart from those of another breed.

Fifth—That cattle traders' stock and sale cattle be neither allowed to compete for premiums nor to occupy the same lines of stalls as those of the cattle breeders.

Sixth—That the charge of ten per cent entrance fee to sweepstakes competitions be hereafter abolished.

Seventh—That each exhibitor of cattle be limited to one entry to each sweepstakes premium offered.

Eighth—That Rule 29 be amended to read as follows: "As fast as the judges or Awarding Committee arrive at a decision in each competing lot or ring, they shall instruct the superintendent or his assistant to there and then attach the ribbons to such animal or animals as they may designate. Such ribbons shall be indicative of the premiums awarded, and from said awards there shall be no appeal."

They recommend, gentlemen, that Rule 29, as above amended, be strictly adhered to and enforced. Finally, they ask that the cattle be exhibited during only one week, said week to commence on the Monday next after the close of the Golden Gate District Fair. They remain, gentlemen, respectfully, etc.,

## PATRONS OF HUSBANDRY.

Correspondence on Grange principles and work and reports of transactions of subordinate Granges are respectfully solicited for this department.

### Farmers' Convention.

About 50 farmers, nearly all P. of H., assembled at one o'clock, Wednesday, Sept. 15th, at Grangers' hall, in Sacramento.

Judge W. C. Blackwood, of Haywards, called the meeting to order, and, although at first he declined the nomination, was afterward elected and served as temporary Chairman. A. A. Krull, of Florin, was chosen Vice-President, and E. T. Pettit, of San Jose, temporary Secretary. The following committees were appointed:

On Credentials—Messrs. Hack, Dennis, Anway, Feeley, Donaldson.

On Order of Business—Messrs. Learned, Nelson, Caples, Kelsey, Welty, Brown, Wilson.

On Resolutions—Messrs. Moulton, Taylor, Pomeroy, Jackman, Doty.

The following delegates, members of the Granges named, were reported as entitled to seats:

American River Grange—D. W. Taylor, N. H. Lauridsen, Charles Studerus, A. A. Harris, P. B. Taylor. Alternates—Joseph Routier, William Bryan, J. Cornell, M. Pike, Wm. Gippin.

Eben Grange—W. C. Blackwood, O. Dennis, L. B. Anway, J. E. McDermid.

Elk Grove Grange—Gillis Doty, G. L. Garwood, E. W. Stickney, J. Winkelman, Dr. James Caples, E. H. Kerr, Wm. Bader.

Elmira Grange—G. W. Frazier.

Enterprise Grange—Isaac Lea, A. A. Krull, A. B. Burns, W. A. Birch, John Hanlon, A. M. Plummer, George Wilson.

Florin Grange—F. Perry, A. Stevenson, James Jackson, J. Reese, C. Towle, D. H. Buell.

Lodi Grange—A. J. Woods.

Magnolia Grange—Daniel Bilderback, V. W. Stell, J. W. Gautier.

North Butte Grange—A. D. Nelson.

Sacramento Grange—Myron Smith, E. Greer, George T. Rich, Oscar Flint, Joseph Sims, James Rutter (George W. Hack, proxy), S. H. Jackman, J. H. Hamilton, M. Keefe, George Hack, S. T. Hawson, Henry Watson, C. E. Mack, Jr., J. B. Welty.

San Jose Grange—D. C. Feeley, W. C. Kingsbury, Hiram Pomeroy, S. P. Saunders, E. T. Pettit, G. W. Glendenning, A. R. Woodham, C. T. Settle, S. Newhall, J. K. Holland.

South Sutter Grange—Sister Mahon, Sister Mary Donaldson, R. Mahon, Alex. Donaldson, Charles Brown.

Stockton Grange—D. A. Learned.

Sycamore Grange—L. F. Moulton.

Temescal Grange—A. T. Dewey, E. Kelsey, Newton Sewell (E. Kellogg, proxy).

Wheatland Grange—A. W. Oakley, D. Frazier.

A few who arrived later were duly admitted. James Green, I. B. Wheeler, J. J. Martin and J. C. Buttner, representatives from labor organizations in S. F., were voted honorary seats in the convention.

Four sessions were held, viz.: Wednesday P. M., and Thursday A. M., P. M. and evening, and action was had as follows:

The temporary officers were made permanent; also, Geo. T. Rich, assistant secretary.

### Platform Adopted.

We view with alarm the fact that railroad, telegraph and other monopolies are corrupting and controlling our Government. We, therefore, are in favor of our Government owning and operating all railway, telegraph and telephone lines in the United States.

We favor the limitation of vast accumulations of wealth by a system of graduated income taxation.

We favor an amendment to the Constitution providing for the election of United States senators by the direct vote of the people.

We favor free coinage of gold and silver, the abolition of national banks, the issuance by the Government of its own money, which shall be legal tender for all debts. That the bonds of the Government be paid as fast as under the law may be possible, and that the Government issue no more bonds.

We recognize the vast importance of a system of irrigation for the State of California, and that the ownership of water shall be inalienably vested in the State, and shall be administered and distributed by the State, dividing the State into districts by natural water-sheds or catchments, the expense to be borne by the districts irrigated.

We are in favor of a stringent law to punish for the adulteration of food, drinks and medicines, and the use of short weights and measures.

We are opposed to the adoption of the proposed amendment to the Constitution of the State, commonly known as the "Heath Amendment." Its approval by the people would be in accord with the wishes of the non-taxpaying monopolists of California. Our present system of railroad taxation should not be abandoned unless the Supreme Court of the United States should hold it to be invalid. If the Heath amendment is adopted, the railroad corporations will be their own assessors, and will contribute toward the support of the Government such sums only as, according to their own phrase, they are minded to pay. An examination and comparison of the official returns made for the year 1885 by the railroad corporations to the State Board of Equalization demonstrates the

fact that under the operation of the Heath amendment the State and counties would lose yearly the sum of \$478,067.32. We are opposed to the Heath amendment, which will appear on our ballots as Constitutional Amendment No. 1.

We are opposed to any increase of our standing army in time of peace.

We denounce any movement looking toward any increase of appropriation of State money for maintaining State militia.

We favor the abrogation of the Burlingame treaty and the exclusion of Chinese by all lawful means.

In furtherance of these ends, we ask the co-operation of all fair-minded people. We wage no war against classes, but only against vicious institutions. We are not content to endure further discipline of our present rulers, who, having dominion over money, over transportation, over the press and the machinery of the Government, wield unwarranted power over our free institutions, and our lives, liberty and property.

The transportation question being of the greatest importance to the farmers and manufacturers, and especially in our low-priced staple, wheat, we are in favor of the Eads Ship Railway.

Resolved, That the fees, salaries and emoluments of county officers should be reduced commensurately with the salaries paid for like services in private business.

Resolved, That women shall be placed on an equality with men in clerical employment in official positions.

Resolved, That the Central Committee be authorized to consult with representatives of other industrial organizations, whose leading purposes are in harmony with our own, and co-operate in carrying out those objects and principles.

Sentiments were expressed strongly in favor of keeping all farmers' organizations intact from those of all other industrial occupations, uniting their action only in matters of common benefit to all.

### The Ticket Nominated.

For Governor—Joel Russell, P.

Lieutenant-Governor—J. V. Webster.

Attorney-General—A. L. Hart.

Supreme Judges—Jackson Temple, D., and Jeremiah Sullivan, D. (One to be named by Central Committee.)

Controller—John P. Dunn, D.

State Treasurer—H. S. Graves, P.

Superintendent of Public Instruction—Ira G. Hoitt, R.

Clerk of the Supreme Court—J. D. Spencer, D.

For Congress—Second District, George Ohleyer, Sutter Co.; Third District, W. W. Smith, of Solano, P. (The nominations for the First, Fourth, Fifth and Sixth Districts left to Central Committee.)

State Board of Equalization—C. E. Wilcoxson, D. (Two vacancies to be filled by Central Committee.)

Railroad Commissioners—W. W. Foote, D., J. A. Filcher, D. (One vacancy to be filled by Central Committee.)

The balance of nominations were left for State Central Committee to make on due consideration.

Fifty cents was collected from each delegate to defray expenses of the convention. A balance of \$3.75 was ordered paid to the California Patron for extra copies, to be distributed by the Central Committee.

### State Central Committee.

It was voted that the State Central Committee consist of 31 members, with power to fill vacancies. The following were elected: Judge W. C. Blackwood, Haywards; A. T. Dewey, Oakland; E. Kelsey, North Temescal; L. B. Anway, Haywards; S. P. Sanders, San Jose; D. C. Feeley, San Jose; J. Chester, Alameda; A. A. Krull, Sacramento; A. M. Plummer, Brighton; J. B. Welty, Sacramento; Geo. Rich, Sacramento; Geo. W. Hack, Sacramento; Nelson Carr, Bennett Valley, Santa Rosa; L. F. Moulton, Colusa; C. Brown, Sutter Co.; Geo. Wilson, Florin, Sacramento Co.; D. W. Taylor, Sacramento; A. P. Merritt, Tulare; Henry Wilson, Red Bluff; Dr. J. Strentzel, Martinez; T. T. Hooper, Rio Vista; D. A. Learned, Stockton; O. Dennis, Haywards.

Motions were carried as follows: Nine members shall constitute a quorum of the Central Committee. This shall be called the "Farmers' Convention." The California Patron shall be the organ of the movement. The secretary is authorized to give the proceedings to all newspapers that may wish to publish them. The thanks of the convention are extended to the president and secretary for their faithful and efficient services.

### Central Committee Meetings.

The State Central Committee met at the office of the Patron, in S. F., Tuesday morning, Sept. 21st. A good representation was present.

The Central Committee organized as follows: W. C. Blackwood, Haywards, chairman; S. P. Sanders, San Jose, secretary; W. W. Smith, Vacaville, treasurer.

J. Chester declined from membership of the Central Committee, and his resignation was accepted.

A kindly letter from S. T. Coulters, declining to act on the committee, was received; also a letter from H. C. Wilson, accepting his appointment and giving his hearty indorsement to the movement. Christian Bagge, of Oakland, W. W. Smith, of Vacaville, and Geo. T.

The letters D., R. or P. after names of candidates signifies that they are Democratic, Republican or Prohibition nominees, respectively.

Elliott, of Hollister, all of whom were present, were added to the committee.

An executive committee of seven (four to constitute a quorum) were elected, as follows: Blackwood, Smith, Kelsey, Davis, Anway, Learned, Dewey. Latter declined and asked to be excused, for want of time to serve.

Several sessions were held on Tuesday and Wednesday.

The utmost good feeling existed during the meetings, which seemed to be enjoyed by all present, as is usual at all gatherings of earnest and well-meaning Grangers and farmers.

Further proceedings of interest will be mentioned hereafter.

### Going to the State Grange.

EDITORS PRESS:—Having received letters of inquiry from Patrons and friends in the southern sections of the State who intend visiting the State Grange at the coming session, concerning routes of travel, fares, hotels, etc., all of which has received our attention by letter, and for fear there may be others in doubt as to the best means of reaching our fair neighborhood, I thought it advisable to inform all through your columns.

Our rivers are navigable, but are only navigated by freight craft; hence, travel to Marysville is confined to the railroads, which, as you know, have reduced the fare for that occasion one-third, charging full fare coming and one-third homeward.

Visitors coming from Sacramento and the San Joaquin valley, to make close connections and quick time, will take the trains arriving in Sacramento at 2:30 P. M. Visitors from Santa Clara county and the South will take the local at San Jose for Niles, which connects there with the S. F. train via Livermore and Stockton to Sacramento, arriving there, as before stated, at 2:30. By this route, passengers leaving Monterey in the early morning (at 6 o'clock, I think) will reach Marysville the same day at 5 P. M. (This refers to the standard-gauge roads. I do not understand the time of the narrow-gauge.) Those from that section coming by way of S. F. will have to remain there over night and take the train next morning at 7:30. All changes are made in same station, with no trouble or detention. Baggage is checked to Marysville from all stations, thus relieving the passengers from much care.

A very large attendance is invited and expected. The United States and Golden Eagle hotels are under one management, and have fixed their charges at \$1.25 per day; the Western wants \$1.50 per day. Choice family rooms can be had for \$1.50 single and \$3 double per week. There are also several private boarding and lodging houses charging \$1 per day. I can think of no preference; all are good and convenient to the place of meeting. Everything is being done to insure comfort and convenience to our visitors on that occasion.

GEORGE OHLEYER.

### Alhambra Grange.

EDITORS PRESS:—Alhambra Grange has her regular bi-monthly meetings the whole year, excepting December and January. On December 4th we elect our standard-bearers, have a harvest feast and good social time. The first Saturday in January we delegate these same standard-bearers to their posts through the installation ceremony, giving a lunch with its sequel, a good free and easy time. By common consent, we do not meet again till the first Saturday in February, after which comes our usual routine of two meetings per month. 'Tis then the faithful few hold the fort, are always on hand to sweep and clean up, as well as to keep our byways clear for any wandering worldlings who may wish to cast their lot with us. Monthly socials give opportunity to the young people, and some of the old ones, too, to gratify their love of fun, frolic, music and dancing.

Initiations are not an every-day occurrence, yet we have them now and then, and this brings me to the point. On the first Saturday in October we have a class of seven to take the third and fourth degrees—two sisters and five brothers. We welcome them with a feast, and that they may be ro, ally met I am authorized to invite all Patrons to meet with us on that day. You that have broken bread with us know that our day begins at 10 o'clock in the forenoon and ends when the labors of said day are completed.

Alhambra's household now numbers 109. The 22 charter members of the year 1874 being lessened two by death, the remainder, with the volunteers since added, hold the fort.

Patrons, look for no further or special invitation, but meet with us in response to this call, and you will find our doors and hearts ready to receive you.

MRS. MARIA B. LANDER, Secretary.

Martinez, Sept. 20th.

SACRAMENTO GRANGE.—Bro. G. W. Hack, W. M., writes the Patron that Sacramento Grange had a very interesting session on the 11th. Bro. and Sister H. W. Johnson were chosen alternates to the State Grange. Motion designed to influence the National Grange in favor of cutting down degree work about one-half, was lost by a tie vote. Bro. Hack suggests that those who are dissatisfied with the

ritualistic work in conferring degrees would sooner accomplish their object by revising it themselves, offering it in an improved form to the Grange and asking the Grange to adopt it instead of the present degree work.

### State Grange.

If, after reading Bro. Ohleyer's important letter to-day, any Patrons hesitate about attending the State Grange, let them review Sister Lander's good article of last week and decide to go. We owe it to the Patrons of the north to give them, for the first time, a good turn-out.

Let all officers and committees who have reports to make, and individuals who have business to offer, be fully prepared to present the same at the opening of the session, that the same may be fairly considered, and all work well done without haste or waste.

GRANGE FAIR IN OREGON.—Butte Grange holds its annual fair on Oct. 6, 1886. All members of the Order as well as others are cordially invited to participate. There will be no entrance fees nor any premiums, but all are cordially invited to bring something to exhibit.

The Grange owns the grounds and a fine hall with dining-room attached, on the Taylor Ferry road, about ten miles from Portland, and the exhibit will be arranged in the main hall. In order to relieve the ladies of all care and enable them also to make a full day of recreation and enjoyment, arrangements have been made to furnish a good dinner to all who desire it, at the moderate price of 25 cents for each person. In the evening a ball will be given, for which good music has been engaged.—Willamette Farmer.

W. RENWICK and wife were elected alternate representatives to the State Grange by Temescal Grange last Saturday. The last meeting before the State Grange session occurs Saturday evening, October 1st.

### Stockton Notes.

[Written for the RURAL PRESS by MRS. W. D. A.]

Both the race-track and the pavilion are in the best possible order for a successful opening of the District Fair, September 21st. Space in the pavilion is taken and the dancing hall is likely to be needed. Two exhibits of paintings will come from the Mechanics' Fair, and Orley Miller, Stockton's talented artist, will make a fine showing.

Pomona Grange, No. 3, will rapidly fill their 36x60 feet of space with the most varied exhibits made at the State Fair. Among the industries represented were the City mills, which ships flour to China, Brazil and other lands, and holds the "Germea" trademark; the Crown mills, with a large trade; the paper mills, a successful enterprise; Stockton chicory factory; also, her planing mills by crates of boxes for dried fruit, the workmanship of which could not be excelled; and the indispensable buhach sold here, little boxes of which were furnished visitors by the enterprising Buhach Co.; 10 different kinds of corn, without counting Egyptian or broom-corn, among which was a sample from Kentucky of original "Indian maize," each kernel inclosed in a husk—lost through long cultivation; a large bale of hops from Clement's Station, where, as well as at Lockford, hops are largely raised; a fine cotton-plant with full bolls, unopened, and a little sample bale; also, excellent dried fruit from the Lodi Fruit-packing Co., and Challenge brooms, to delight housekeepers from the broom factories.

The weather is delightful. The 23d is to be "Floral day," when wreaths, bouquets and designs in flowers will regale visitors with grace and perfume. The gates of ingress have been shut by Sheriff Cunningham, who has held the office eight consecutive terms.

S. W. Sperry, of the City mills, a resident for over 30 years, and one of Stockton's most honored citizens, also a member of her Board of Trade and of the S. F. Produce Exchange, died suddenly Sept. 15th.

It is well that miners can be prosecuted for dumping debris into the streams, for the tidal channels of the San Joaquin, below Stockton, are full of mud and only four feet deep, where two years ago they were dredged nine feet, and that \$18,700 was appropriated to clear them and the San Joaquin and Mokelumne. The bids or proposals are out now for dredging.

The "Reform" party hold a mass meeting here on the 26th. It sets people to thinking on crying evils.

Stockton, Sept. 20, 1886.

THE RANCHO CHICO LEASED.—Arrangements have been completed whereby the entire farming land of the Rancho Chico, consisting of between 6000 and 7000 acres, is to be leased out to different parties. The land has all been spoken for, and in all but one or two cases the necessary papers have been made out. The leases are all for one year, and the rentals are all to be shares, but the shares are different on different pieces of the land. We consider this a wise move on the part of General Bidwell. The system of leases is the one employed by Stanford, Judge Pratt and other large land-owners in this section, and has been found to work well.—Chico Enterprise.

AGRICULTURAL NOTES.

CALIFORNIA.

Alameda.

PEPPER WIND-BREAKS.—Livermore Herald, Aug. 26: The best tree for a wind-break in the valley is the pepper. It makes a dense head, grows rapidly and flourishes without much care. Good culture improves its growth, of course, but it will get along very comfortably without it. Trees planted 18 feet apart will soon come together and make a dense wall of bright, light-green foliage, always pleasant to the eye. The pepper is not only a good wind-break, but also an excellent dust-catcher; unlike most trees which are used for this purpose, it does not become laden with dust. The leaves are smooth and glossy, and therefore repel the dust particles, which, stopped in their flight by the dense foliage of the tree, instead of clinging to it, simply drop to the ground. A row of these trees stretching across the valley, along each ranch-line, every half-mile, would add wonderfully to its beauty.

Butte.

SORGHUM SYRUP.—Chico Enterprise, Sept. 6: One of the latest experiments on the Rancho Chico is that of the raising of sugar cane and the manufacture of syrup. Last year a small crop of the cane was planted, but did not thrive. Another crop of 30 acres was then put out on the land just below the bee ranch, about five miles from town. This land is overflowed in the winter time, and the soil is light and sandy. Here the cane has grown well, and from the 30-acre patch it is expected that 5000 gallons of syrup will be obtained. The cane is a Northern variety, different from the Louisiana growth, and is known as the Early Amber. The work of making syrup was begun on Sept. 1st, and is now in progress. We were shown a sample of the product this morning. It is of an amber color, clear and smooth, and has a mild, soft flavor that is very pleasant. Gallon cans to hold the syrup are now being made at the cannery, in which the product will be put on the market as an experiment. It ought to give satisfaction, for it is a first-class article.

Contra Costa.

ALMONDS.—Antioch Ledger, Sept. 11: Mr. Amos Graves has an almond orchard on his place, three miles east of town, which has been bearing for three years past, and this year there is an extra fine crop of nuts, many of them being the size of a half-dollar, and the pods all free from the shell. The rearing of almonds has been considered a failure in this section, but Mr. Graves has demonstrated that, by careful attention and proper cultivation, almonds are a successful crop.

Fresno.

MOUNTAIN CORN.—Republican, Sept. 10: Mr. E. L. Ayres brought down from Pine Ridge, this week, a sack of sweet corn in the roasting ear, which is by all odds the finest corn for table use we have ever seen produced in California. The ears are large and sound and perfectly filled out with large kernels. The flavor is delicious. But very little good corn is raised in this valley, the worst pest being a great drawback, and such corn as the sample left at this office is a great luxury.

Inyo.

A PRUNE OF PROMISE.—The Independent says a prune tree in the orchard of S. A. Densmore, at Camp Independence, proves the adaptability of our soil and climate to fruit raising. This tree is of the Gros variety, was set out last spring, has made very rapid growth, and on its branches now bears 24 well-developed prunes. Mr. Densmore is an experienced orchardist, and not a trace of disease of any kind can be detected on his trees.

OREGON.

BOREAL FIGS.—Willamette Farmer, Aug. 20: In Mr. W. W. Martin's window, on State street, can be seen a ripe fig, also some green ones. This fruit was raised in Salem by Captain L. E. Pratt. He says the tree has had a severe tussle with the elements, but now seems to be fully acclimated. It is a genuine curiosity, and is well worth looking at.

NURSERY AT WOODBURN.—A visit to Settlemeir's farm and nursery is interesting to and one who appreciates forest growths, shrubbery, vines, nut-bearing and fruit-bearing trees. He has among his evergreens and shade trees some handsome varieties that are native to our northwest. Here are also peaches, plums and prunes, that show a growth simply enormous. Near the house we found men budding into peach stock. Beyond the house, down the track of the narrow gauge road, another great section of his nursery work is planted. He has, in all, 40 acres of land in the finest cultivation, devoted to trees and shrubbery—aggregating half a million trees and shrubs. We could hardly believe that a large field, now grown up to grafts 4 to 10 feet high, was level with the surface last spring, with rows of scions planted where now the young trees, thickly growing, hide the view. Good cultivation and rich soil account for the exuberant growth. He showed us 20 acres in corn, saying he had raised three crops of corn and had cultivated it well to prepare for planting out grafts and tree-seed.

FRUIT MARKETING.

The Eastern Fruit Market.

Necessity for Action on the Part of Growers.

EDITORS PRESS:—The year 1885 was one long to be remembered by the fruit-growers of California. Such a combination of unfavorable circumstances had never before been known. First came a drought; then a frost, seriously injuring the grape crop; then grasshoppers; next followed a glutted market, and lastly came very low prices. Thus by the close of the fruit season the growers were distressed and much discouraged. Each looked to his neighbor for a remedy, and all hoped for some permanent method of relief. At last it was suggested that a State convention of fruit-growers be held for the purpose of exchanging ideas and in order that some plan might be evolved that would make a repetition of the sad experience of 1885 less probable.

At this convention, which was held shortly after in San Francisco, many and various causes were ascribed for the poor results of 1885, and many and various plans were offered as remedies.

After much discussion and deliberation it was formally decided that relief depended on the growers forming a union, securing lower freight rates and marketing their own fruits in the East.

It was agreed that if all the California fruit shipped East was placed and sent through one channel, it could be evenly distributed throughout all the States of the East; that thus the fruit would be prevented from coming into competition with itself; and that the profits, which formerly had gone to shippers or middlemen, would be made by the grower himself.

This plan meeting with general favor, a union was accordingly formed, by-laws adopted, officers elected, an Eastern agent appointed, and the railroad company interviewed and reduced freight rates secured on the condition that 15 carloads must be shipped at a time.

Thus far all was well; but when the time arrived for shipping fruit the growers and the management of the union discovered that when they counted upon the old fruit buyers and shippers meekly retiring from the field and leaving the union to reign supreme, they had reckoned without their host.

It was soon found that the old shippers had not been napping, but had been diligently at work buying up large crops. They had organized among themselves and had so perfected their arrangements that they were enabled to dispatch several trainloads of fruit weeks in advance of the Fruit Union, which for a long time found itself unable to ship 15 carloads at once, so as to profit by the reduced freight rates.

Finally, the union began shipping trainloads, and soon, between the union and the private shippers, fruit began piling into the Eastern markets, regardless of quality, regardless of quantity, regardless of demand and regardless of all considerations that should influence intelligent business transactions.

This state of affairs, however, brought joy to the heart and dollars to the purse of the Chicago fruit-peddler and retailer. The petty fruit-huckster became king, and imperiously dictated the prices he was willing to pay, to the very men of whom in the past he had begged the privilege of buying a box of California fruit. From being snubbed and ill-treated by dictatorial fruit-shippers and commission merchants, he suddenly found himself petted and courted by these very men, who must sell their fruits at any price or have them rot on the premises. Such a harvest the street-corner vender had never even dreamt of. Here were piled up in store after store, extending out to the very edge of the sidewalks, thousands of crates of California's choicest fruit, which he could buy for a less price than was being paid by his fellow-hucksters in San Francisco or Sacramento.

Did he propose to share with his customers the good fortune that befell him through the folly of the California growers and shippers? Not if he knew himself! And so the Eastern consumer went on paying as much or nearly as much for his fruit as if the grower was getting a living price for his product, while the railroad companies and the retailers and petty hucksters were reaping a golden harvest at the expense of the poor shipper and still poorer grower. Soon the California growers and shippers began raising a storm about the ears of their Eastern agents, demanding an explanation for such ruinous returns. Every one, however, blamed every one else, and denied all responsibility for the disastrous results. The agents of the shippers laid the blame at the door of Porter Bros. Co., agents for the California Fruit Union, claiming that the latter had brought about this deplorable condition by willfully cutting prices with a view of driving the private shippers from the field.

On the other hand, Porter Brothers Co. as vigorously denied the charge and in turn claimed "it was the other fellows" who did all the damage by cutting prices for the express purpose of destroying the union.

The charges and counter-charges on this and other grounds are thick and numerous, but from the facts at hand it is very evident that willful cutting has been done all round. The Chicago commission men have had their fun, have enjoyed lots of exciting battles, have tried

EXPLANATION.—Cl. for clear; Cy., cloudy; Fr., fair; Hy., foggy; — indicates too small to measure. Temperature Wind and weather at 12:00 m. (Pacific Standard time), with amount of rainfall in the preceding 24 hours.

to "knock out" each other; and the California growers and shippers have had the grim satisfaction of furnishing the ammunition free of cost, in addition to the feeling of war that existed among rival agents and shippers. Much loss has been caused through ignorance on the part of growers. Vast quantities of fruit were shipped that should never have been permitted to leave the State. Much arrived here in an utterly worthless condition and did much, not alone to depress prices of good fruit, but also to injure the fair reputation of California products.

Statements of returns were shown the writer to-day by the agent of the California Fruit Union, and which are being mailed while this letter is under pen, that will make those who receive them despair.

In many instances the returns for double crates of Muscat and Tokay grapes will not exceed 35 cents, which is less than the cost of crates and baskets; and in some cases the net returns for plums are five cents a box, out of which must come the cost of the box.

For the past few days the market has been rather bare and prices better, first-class grapes selling from \$2.50 to \$3.50 a double crate; and yet it was only this morning that over 400 crates of Vacaville grapes, which arrived in bad condition in a \$600-rate car by passenger train, were sold at 90 cents and \$1 per crate, leaving the grower a net return of from 10 to 15 cents per crate, out of which the cost of crates and baskets must be paid. By to-morrow these same grapes would have depreciated so much in quality that half the above price could not have been realized.

A Fruit Union train reached Chicago to-day, and another train, forwarded by the Sacramento shippers, will arrive here to-morrow. This means another glut, more war, more sacrifices, more losses to shippers and growers, and more fun to the Chicago commission men and more dollars in the pockets of peddlers and street hucksters.

Two facts appear to be self-evident: First, that as to being a protection to the grower and securing him living prices for his fruit, the Fruit Union thus far has not been able to realize the expectations of the growers. Second, the policy of dispatching fruit trains of 15-carload lots, one on the heels of the other, which upon arrival are to be disposed of by a few owners or individuals, is ruinous to the grower and a serious blow to the fruit interest of Northern California, from which it may take much time to recover. While the writer is not yet prepared to offer any remedy, it is very evident that present conditions can last only so long as growers and shippers are willing to pay for the privilege of giving their fruit away.

A more thorough and extended inquiry into the Eastern fruit question may enable your correspondent to offer in future letters some hints and suggestions that may be of interest.

For the present he can but say that concerted action on the part of growers and California shippers must be effected. Should both continue their present policy, both must finally be ruined.

H. WEINSTOCK.

Chicago, Sept. 13, 1886.

THE SAN LEANDRO PLOW FACTORY CHANGES OWNER.—An exchange informs us that Daniel Best, widely known as a manufacturer of grain-harvesters and grain cleaners, has lately purchased the San Leandro Plow Company's entire plant. This company was an incorporated joint-stock association, in which S. Huff, Robt. Farrelly, S. Meyers, S. G. Nye and other leading residents of San Leandro held interests. The plant which Mr. Best has bought embraces block 50, in San Leandro, together with the factory and other buildings located upon it. The factory is considered one of the best-equipped for work in the State. It has a splendid Corliss engine and boiler, shafting, saws, planers, a steam-driven trip-hammer, a foundry, emery wheels, grinding apparatus for making plows, and much other necessary tools and machinery. Mr. Best takes immediate possession, but the date of beginning operations is not announced. He goes to Oregon to close up a factory he has been running in that State. He is a "live" business man, and will undoubtedly prove an influential factor in the progress of the ex-county seat. His celebrated grain-cleaners are attached to many a thrashing machine in the State.

LARGE SHIPMENT OF GOATS.—C. P. Bailey, the Angora goat dealer, yesterday shipped three carloads of Angora goats, including 60 head of pure breed bucks, to Texas and New Mexico,

over the Southern Pacific railroad. The total value of the shipment is about \$5000. During the past three years Mr. Bailey has shipped \$16,090 worth of these animals to Texas. He is the heaviest dealer on the coast and has three ranges—one at Battle Mountain, Nev., one in Mariposa county and one in Monterey county. San Jose Mercury.

THE VINEYARD.

Viticultural Work at the University.

A large number of lots of grapes from growers in different parts of the State are now arriving at the viticultural laboratory of the University, and are being vinified in preparation to careful analyses and other tests to determine their special characteristics. Crates, with baskets inclosed, are sent out when application is made for them, to be returned with grapes for examination, and by this precaution the fruit arrives in first-class condition. Prof. Hilgard and his corps of assistants and students in viticulture are all busily engaged in this work, and the viticultural laboratory will be a busy place during the vintage season.

The laboratory has been much enlarged and improved with the money which recently became available under the joint appropriation for the University and the Viticultural Commission. There were not funds enough to complete the superstructure of the building, but there is room enough for this year's work, and the basement rooms and cellars are finished in excellent style. The superstructure can be completed as other money becomes available.

The writer was shown through the building on Tuesday, by Prof. Hilgard, and was gratified to see the excellent way in which the arrangements had been made. Entering by the north door, one comes first into the assistants' laboratory, in which Messrs. Joffa and Colby make their chemical determinations of wines and musts. This room is 20x18 feet, and has the necessary materials for wine analysis, etc. Adjoining is the balance-room, a small apartment, in which the weighings which are all-important in chemical work are done in seclusion. Next is the students' laboratory, 20x28 feet, with fittings sufficient to accommodate 15 students, with opportunities for practical analytical work. This room will be ultimately furnished with a "hood," under which the still, Pasteurizing apparatus, etc., will be set up. Down one flight of stairs at the north side and opening upon the ground level on the south side, is the basement, 45 feet square, which is divided into four rooms, opening into a narrow hallway reaching across the building. One of the rooms opening upon the south side is for the manufacturing room and has a crusher and stemming sieves, two presses and other necessary appliances. The other south room is for storage. The two rooms on the north side of the basement are for fermentations. These rooms are closed and protected all around, and are well adapted for the maintenance of a uniform temperature. On the south side, below the basement and wholly underground, is the cellar proper. It is divided into two apartments, one of which has heating arrangements for securing temperature best for after-fermentations, and the other is for the ordinary maturing of wines. It has been found by careful records of the thermometers, of which there is one in each room, that the underground and basement rooms keep a gratifyingly uniform temperature of about 60°. The south side of the building is shaded by large laurel trees, and thus protected from the direct rays of the sun. Under these trees, also, is a large platform, upon which, during favorable weather, the grapes will be received and crushed. Near the laboratory Strawberry creek runs along and furnishes good conduct to the drainage from the building and its adjuncts. All the rooms are thus well provided with drainage. The cellar work, in brick and cement, seems to have been well done, and the superstructure, when complete, will have quite a respectable appearance, though making no pretensions to architectural effects.

Prof. Hilgard's class in viticulture, which will begin next week, is made up of men young and old, men of business and of the learned professions, who seek knowledge to enable them to understand better the vineyard enterprises they have in hand, and young men who seek to qualify themselves for wine-making. All interested in the grape industry are invited to visit the University and see the work in progress.

## Song of Loyalty.

Courage! List!—the battle rages:  
 Foe and foe the brave engages!  
 Courage!—yonder, peace incloses  
 Bowers charmed with fruits and roses!

By the sun that shines above us—  
 By the Unseen Powers that love us—  
 Let us vow, till night is falling,  
 Tribute meet to duties calling!

On and on—nor heed the bating!  
 On and on—the day is waiting!  
 Feet will urge thee forward never:  
 Heart will lead thee on forever!

We have done with Grecian singing,  
 We have done with Rome, and bringing  
 Springtime arms, are daily serving  
 Springtime lands with hearts unswerving!

O'er the pain there is the healing,  
 On the night the morn is stealing:  
 Though we suffer now, the morrow  
 Shuts its gates to every sorrow!

In the loyalty of grieving—  
 To and fro the shuttle weaving—  
 All the future, dim and tragic,  
 Finds its birth in human magic!

Courage! List!—the battle calls us:  
 What, for life or death, appalls us?  
 Courage!—yonder, 'neath the willow,  
 Comes, at last, the restful pillow!

—Horace L. Traubel.

## Murmurs.

Some murmur when their sky is clear  
 And wholly bright to view,  
 If one small speck of dark appear  
 In their great heaven of blue.  
 And some with thankful love are filled  
 If but one streak of light,  
 One ray of God's good mercy, gild  
 The darkness of their night.

In palaces are hearts that ask,  
 In discontent and pride,  
 Why life is such a dreary task,  
 And all good things denied;  
 And hearts in poorest huts admire  
 How love has in their aid  
 (Love that not ever seems to tire)  
 Such rich provision made.

—R. C. Trench.

## Harvesters' Stories.

[Written for the RURAL PRESS by Mrs. J. HILTON.]

Another season of harvest is past, bringing not only work but relaxation to the farmer and his family. The boisterous laughter of the harvesters and their jolly talk makes an agreeable change from the quiet, monotonous life of a farmer. The good-natured political debates (and, by the way, those who are against prohibition say, "Oh, it don't amount to anything and never will," show those of us who do believe in it that it is amounting to something, for it is in the minds and mouths of all, and keeps cropping out suddenly in all kinds of conversation; it is a *live* issue and will not be put down), the comical, serious and pathetic incidents gathered from many sources, and the good-natured chaff of some one of the band, really make an oasis in the desert of our lives.

One who had lived where a jolly parson used often to visit, recounted some of the odd experiences related by the said parson. One was about when he lived in Louisiana. He was invited to preach at a church in a little village. He got there in time to hear the sermon given by the resident preacher. The service was all through and the people were beginning to file out, when the minister shouted out, with upraised hands, "Oh, there! I maist forgot! There will be service here this evening by a little old Presbyterian preacher. You can come if ye want to, but I won't."

At another town he was called upon to marry a couple. After the ceremony the groom took him to one side and asked how much he expected for the job.

"Oh, just whatever you feel able to give," was the reply.

"Would a dollar do?"

"Oh, yea."

So the dollar was handed over and the merry-making went on. During the afternoon the bridegroom came to him, took him aside, and whispered: "Say, lend me that dollar, will you? They are most out of whisky."

Another told about being at a Methodist prayer-meeting, and after several had told their experience, an old fellow got up who looked as though he had not washed himself or combed his hair for a month. He stood a moment until all eyes were upon him, and clasping his hands together he said: "Bretheren and sis-

tern: I feel awful," and then sat down. A man on the opposite side of the house arose, and looking directly at the first speaker, said: "Brothers and sisters, he *looks* awful."

A hush pervaded the house for a moment, and then, as a ripple of laughter began to break from the young folks, an elder commenced singing "Hark from the Tombs a Doleful Sound."

Then the subject of snoring was started, and the funny man of the crowd told how he and his partner cured a tramp who came along and wanted work. He not only snored but screamed at the top of his voice during the night. The first they knew about it was after supper. They saw him fixing himself a bed out among the brush and asked him why he did not come into the house; so he told them of his infirmity. They told him they could cure him of that, and he told them they might do what they liked with him if they could cure him. So fixing a bed for him between theirs, they each took a piece of bale rope and tied it to each of the fellow's big toes and each thumb. Then the two men took hold of the cords and went to bed. As it was rather a lark for them, they did not get to sleep, but the tramp slept finally. Along toward midnight they had about made up their minds that the fellow had put up a job on them, and were about to give it up and turn over and go to sleep when the fellow gave a grand snore, and then screamed with such force that they both jumped out of bed, stretching the fellow's arms and legs to such an extent that he soon awoke, laughing and calling to them to quit pulling. They wanted to know what under the sun made him screech in that horrible manner, and he said that it always seemed to him in his sleep that some big man was sitting upon his chest, and that screaming was the only thing that would drive him away. They broke him in two or three more nights, but the expectancy of hearing him screech kept them awake a good many more.

Another said he was traveling through a piece of woodland one time, and heard a noise like a child crying. As he had been told that panthers imitated the human cry, he at first moved quickly away from the sound, but hearing the cry again he felt sure it must be a child; so stepping cautiously toward the place where the crying was, he saw a little girl on her knees with her little hands clasped. She was looking upward and crying; between her sobs he could hear her say: "Please, Dod, send some one." Going quickly to her and picking her up, he hugged her to his bosom to quiet her sobs, only saying, "sh-sh, sh-sh." She soon stopped, and looking wonderingly at him, astonished, no doubt, because he did not speak, she said: "Is you one of Dod's angels?"

He had controlled his own feelings by that time, and told her that maybe he was acting for one of them just then. He carried her to her home, which was about half a mile away, much to the surprise of her mother, who thought she was playing in the garden near.

Speaking of panthers reminded another of a story that an old lady told of her experience in the mountain above the village of Santa Ynez. She has a claim on the mountain-side, and when she was alone would go up the mountain and gather acorns for her pigs. About half a mile from the house she left the road and climbed up the bank under a large tree and was filling her apron with acorns. Hearing a noise in the road beneath her, she looked and there was a California lion rubbing itself along the bank. The old lady is very fleshy, and she knew it was no use for her to run, even if she had been in the road, but being on the brushy hillside she gave up the idea of trying to get away. She remembered, too, how often she had packed a great pistol along with her on previous walks, but that as she had never seen anything to use it on she had decided that morning to leave it at home and not bother with it. The animal still kept rubbing itself, first one side and then the other, and she stood and looked at it. She made up her mind that it was not very hungry, and maybe she could scare it away. So taking up the dead branch of a tree near her, she threw it at the beast. It struck it near the head, and with a screech and a bound into the air it stepped on to the other side of the road and commenced rubbing again. She then threw another stick with all her might; but the animal would only bound up and shriek. She had been partly sheltered by the tree and brush, but after throwing five or six sticks without any result, she stepped into plain view with the last stick she could use in her hand. It stopped rubbing then, and faced her. In her excitement she had let the beast do all the shrieking, but now, with the most unearthly scream she could utter, she threw the remaining stick. The shriek and the last stick did the work; for, with a tremendous bound down the mountain, it disappeared from view.

"I felt so weak," said the old lady, "that I trembled in every limb; but thinking it best to get out of there, I scrambled down to the road and went home as fast as I could."

She did not tell her son John when he got home; but about a week afterward he told her that one of their neighbors had killed a lion that morning, that had been stealing pigs. She told him then of her encounter, and all the consolation she got was:

"Well, I told you not to wander about so much alone, for in a mountainous country such animals sometimes will appear near settlements."

Thankful for her deliverance, she decided not to tempt fate again.

## More About Reading.

EDITORS PRESS:—I am glad, for several reasons, that Mr. Berwick criticised my remarks on novel-reading in your issue of August 14th.

First, because I consider him a very worthy and able antagonist; secondly, because it gives me an opportunity to enlarge on what I have already said, and try and make myself clearer on the subject; and thirdly, because different opinions tend to throw light on every topic; for, as a friend once said to me when we were discussing another question, "there is room for honest difference."

"The main characters on history's pages are not to be commended as models," says Mr. Berwick. Who, then, are the main personages? What constitutes true greatness? Some one tells us, and, I think, rightly, that

"That man is great who, conquering first himself,  
 Uplifts his brother to the same high station;  
 And noble, though his lot be lowly cast,  
 Whose heart can make him strong against temptation;  
 And good, who sees the wrong, the woe, the crime,  
 And seeks to move it with a love divine."

A Caesar, an Alexander and a Napoleon have made themselves conspicuous indeed in the annals of the world, and in their characters there is much to be found that is worthy of emulation. Think of Bonaparte, the Corsican plebeian, who, by the power and majesty of his will, and by his undaunted effort, worked his way from the ranks of the people up to the highest position in the land! It makes one thrill to think of him. But place any one of these heroes beside men who figure on the page of history as moral and intellectual giants, and the former appear almost insignificant in comparison.

No, the greatest men are not those whose greatness is measured by the cities they have devastated and desolated and the millions they have caused to be slain. Such as these are prominent figures, but not the main ones in the history of the world.

And who are some of the main ones? Mr. Berwick tells us that "a novel may and should contain a lesson to the reader fully as valuable as any real biography, autobiography or history."

I have never yet on any novelist's page found the portraiture of an ideal character that could so thrill and inspire me as I have seen by the life and death of Socrates, who, as Fenelon says, "has been considered the most virtuous and enlightened of pagan philosophers;" by the life and character of Marcus Aurelius, the Roman Emperor who reigned in the second century of the Christian Era, and that of his adopted father, Antoninus Pius; by Epictetus, the Phrygian slave, for whom was written the epitaph, "I was Epictetus, a slave, and maimed in body, and a beggar for poverty, and dear to the Immortals;" of a Paul, and coming with a great leap down the centuries, of Fichte, the great German philosopher, to whom has been written some of the noblest tributes ever paid to man; of Niebuhr, the historian; of Wilhelm Von Humboldt; of Milton; of Carlyle, whom Emerson called "the manliest man of his time"—I don't care if he was irascible: dyspepsia is enough to make any one so; of Emerson himself; of Thoreau, of Washington and Lincoln. I have specified but a few as they occurred to me. As my pen put them down, many others came into my mind; but enough has been mentioned for my object.

After I had sent my former little article to the RURAL, the thought came to me that in contemplating the lives of men of genius it is too often the case that their hearts are not so great and lofty as their minds. I prefer not to illustrate this lamentable fact. How true it is that "a great man should never do aught that a lesser one could cavil at." But even this has for us a lesson, and a great one, though a sad one. I like what Joaquin Miller recently wrote of John Keats: "Standing in the little room where John Keats died, 'snuffed out by an article,' I resolved that if ever I had authority to forbid it, no unkind word should be uttered of such as he."

According to Mr. Berwick, facts "are not elevating." What is fact? Is it not truth? And if truth be not elevating, what is it? But I know what my critic meant by this, and will acknowledge I sympathize somewhat with him. But there is another kind of reading besides that of either novel-reading or reading to acquire facts and knowledge. It is the reading that broadens our intellectual scope; that helps us "to read here a line and there a line" of the mystery and duties of life; that makes us keener sighted; that ennobles and raises us above mean and petty things.

Of course, as the French say, *chacun a son gout*. I would never think of going to a novel for relaxation and rest. The fact is I have not as much leisure to read as I would like, so when I can, I read something that satisfies and tends to give me wide and clear insight; though I, also, am partial to some novels, and have my favorite characters in them: Maggie Tulliver is one.

"Philosophy practiced is the goal of learning." If facts and study do not make us better, we are indeed little but mere encyclopedias of words and things; and, as one has said, could there be a greater reproach?

Of course it is "important to cultivate sentiment." It is the sweetest thing in the world,

and throws a glamor over the commonest things. I think it can well be styled an off-spring of Poetry. Poetry! Ah, Mr. Berwick, I am at one with you there; it is the fountain-head of beauty, goodness and feeling. But the best poetry is only *fact* embellished. Take away the truth from it and its elevating power is gone. Which would you have, a Moore or a Wordsworth? Though the former has many good axioms, still sentiment preponderates. Give me the latter, if he is a trifle cold. He waves his wand, and lo! one seems to breathe in a world whose air is crystal pure, inspiring noble and lofty thoughts. I would rather have written the following, from the pen of the poet of the Sierras, than volumes of pretty sentiment. It is the second verse of a poem entitled, "The World is a Better World To-day:"

"Aye, the world is a braver world to-day!"  
 For many a hero will bear with wrong—  
 Will laugh at a wrong and will turn away;  
 Will whistle it down the wind with a song—  
 Will slay the wrong with his splendid scorn!  
 The bravest hero that ever was born!

I would like to write more, but don't want to run the gauntlet of the editor's waste-basket, so will close.  
 F. A.  
 San Francisco.

## The Evolution of Mrs. Thomas.

[Written for the RURAL PRESS by M. H. F.]

The whistles blew vigorously for noon in the little California city where Mrs. Thomas lived. Noon to her meant, chiefly, dinner-time. In just ten minutes there would be an irruption into her dining-room of six hungry boys and girls with their father, who, if not equally hungry, was sure to be in as great a hurry for his mid-day meal. Mrs. Thomas therefore made haste to take up her dinner. She was a slight, active woman, with capable, energetic movements, and with a pleasant, matronly face, lit by a pair of fine eyes of that peculiar hazel color which leaves one in doubt as to whether they are gray or brown, and which usually are the windows of a clear and strong spirit. Lines of care and toil marked her forehead, for the half dozen expected young people were all her own, and one doesn't have such possessions without paying the cost, especially where there has not been a full purse to make some of the burden lighter.

The dining-room was simply furnished, and its clean, painted floor uncarpeted; but the table was nicely spread, and as the food was brought in from the adjoining kitchen it looked inviting indeed. Roast lamb with potatoes and turnips, white and brown bread, cabbage salad, and a great dish of fruit for dessert. It was scarcely on the table when in streamed the young folks, ranging downward in ages from 18 to 8—noisy, happy, overflowing with young life.

"Hello, mamma!" shouted little Dick, the youngest and most uproarious. "Is dinner ready? I'm starved to death."

"Don't say 'hello' to mamma," said 16-year-old Mary; "it isn't polite."

"Run out and wash, boys, before you set down," said the mother—a command which she had issued at least ten thousand times before, and as the younger boys reluctantly filed out, the oldest of them, a young grammarian of 12, fired back a parting shot: "It isn't set down, it's *sit*." There was evidently a little western insubordination in the house, or at least a lack of deference, for a moment afterward when the mother said to the eldest boy, "Albert, you'd better carve the meat; pa ain't in sight yet," she was again set right by a young critic—"Pa isn't in sight, you mean." Then, as the good daughter Mary saw a little flush run over her mother's patient face, she came to the rescue. "Who cares whether ma says in't or ain't? She cooks the best dinners in this town. Look at this lovely bread!"

"Fact," said Albert, sententiously; "pass it this way, will you? Good bread's better than grammar any day."

The father came in—a quiet, gray-eyed man with an absorbed, reflective manner. His presence was not the slightest check upon the gay talk of the children, although they made place for him with affectionate eagerness. "You are late, papa," said Mary. "Is everything right at the office?"

"Well, not exactly," he answered. "Some of the men are making a great ado about our giving a job to some Chinamen."

"The selfish, mean things!" cried Mary.

"The wise, far-seeing, hard-working men," retorted Albert.

"I couldn't get along at all with our work," said the mother, "if the Chinese laundry has to go. I believe in living and letting live."

"You haven't read history," said Albert, "nor political economy. You might think as men do if you had;" and the young lord of creation helped himself again to the delicately browned meat and perfectly cooked vegetables.

Mr. Thomas seemed too keenly appreciative of the dinner and too far off in thought to notice his wife's discomfort. But he came back to present company and conversation with some animation when Mary said appealingly, "Papa, I'm going to bring my arithmetic home to-night, and get you to show me about some things in percentage."

"All right, Molly, I'll do it," he said, cheerfully, for if there was anything Mr. Thom-

liked it was "figuring." He had a natural taste for it, and his long experience as book-keeper for a lumber firm had kept him in practice.

When evening came the Thomas household settled down to work in very pleasant fashion. It was December, and the rain was pattering down outside in a soft and steady way, making the cheerful firelight and lamplight within seem all the more delightful. The three little boys, Frank and James and Dick, had a new *RURAL PRESS*, and put their three eager young heads together to look at the Young Folks' Column as it lay spread out on the table. Albert and Mary were working with pencils and notebooks, appealing now and then to their father, whose opinions and explanations they received with great confidence. Albert was in the intricacies of bookkeeping, and they talked about "balancing," and "debtor side" and "credit side," "single entry" and "double entry," with a knowledge which seemed to Mrs. Thomas simply wonderful. Mary propounded her knotty arithmetic questions to her father now and then, while Amy, a 14-year-old girl, was busily diagramming sentences from her little lessons in language. Poor Mrs. Thomas, diligently darning stockings, felt strangely lonely and shut out.

Amy held up her note-book in triumph. "I've got through at last," she said. "Look at them, ma; see how we have to box up the words and hitch them together in this fashion."

Mrs. Thomas surveyed the work in mild astonishment, and Amy, not at all averse to a little display, said: "See, here's the subject with its adjective modifiers, and here's the predicate with its adverbial modifiers, and here is a clause branching off by itself, with its attribute complement, and here at the end of all is the object complement."

"Indeed!" was all that Mrs. Thomas could venture in reply. In her girlhood she had liked grammar and been quite a famous parser, but this new diagram jargon was all Greek to her, and she gave it up as she would a hard conundrum.

The boys Frank and James now clamored for Amy to join them in a game of authors.

"Well, who'll be the fourth one?" she said. "Dick can't play; he is too little, and it's his bedtime, too," she added, as she saw his injured look.

"I should think ma might," said Frank in a reflective tone, "even if she hasn't read the books."

"No," said James; "she'd make as big mistakes as Dick. Let's wait for Mary."

Mrs. Thomas set her work-basket hastily aside. "Come, Dick," she said, "I'll go upstairs with you," and when Dick was tucked up in bed, she stooped over him to kiss him good-night.

"Why, ma," he said, "your cheek is wet; you ain't crying, are you, ma?"

"Never mind, Dick," she answered, "go to sleep." Then she went into her own room for a few moments and "had it out" in a burst of bitter tears. She thought of her youth with its scanty opportunities, so well appreciated and used, of her love of books and intellectual things, which had only been put aside and smothered by the pressing necessities of her married life. How she had gradually suffered herself to lapse into ignorance, scarcely taking time to read the weekly religious paper, and that only because on Sunday the mending basket couldn't be brought out, and so there was an hour or two of time which that blessed newspaper filled. And now her children were getting far beyond her in book knowledge, and in their heedless young fashion they had to-day shown in so many ways their perception of this fact. Was there no help for it? Must she just stay in the kitchen and drudge away her life and let the children drift away from her because she could not be a companion for them? Mrs. Thomas was a clear-headed little woman, not at all given to the blues or to useless tears. She had a way of arriving at conclusions. So she said to herself: "I believe there is no need of this; I am 40 years old, to be sure, but I have good eyes and a good head! I'll see what I can do. These children shall respect their mother for something beside her cookery."

The lines on her face looked very resolute as she brushed away the tears and picked up her little well-worn Bible to get a few words of solace before she went downstairs to spend the last hour of the evening in an entirely new way. She opened very naturally at her favorite sermon on the mount and read with new appreciation: "Be not anxious for your life what ye shall eat or what ye shall drink, nor yet for your body what ye shall put on. Is not the life more than meat and the body more than raiment?"

She bowed her head down over the book a little while, and then she went downstairs with an air of cheerful resolution. She went straight toward her work basket, gathered up and arranged its contents, and put the basket away in its place.

"Going to bed, mamma?" said Mary.

"No, my dear; I'm going to read awhile like the rest of you."

There was a general looking up, and then an outburst of question and congratulation. Albert was on the point of making an ironical remark, but Mary checked him with an eager "That's too nice to believe. Here is the best place, mamma. Albert, bring mamma's chair right here. Now what are you going to read, mamma? Let me get the book, or is it a magazine or paper?"

"I guess the *Advocate* will do for to-night," answered the mother, smiling. "I don't think I'll attack anything very deep just yet."

Mary looked puzzled, and even Mr. Thomas seemed aware of something peculiar in the atmosphere as Mary brought her mother the good old *Christian Advocate*.

Nothing more was said, however, and the family went back to their previous occupations. Not one of them happened to see the mother's sudden start and change of color as she came upon and began to read an article headed with the mysterious letters, C. L. S. C.

## YOUNG FOLKS' COLUMN.

### A Visit to the Fair.

[Written for the *RURAL PRESS* by REIS SAMSON.]

MY DEAR BOYS AND GIRLS:—At present the papers are so busy writing about the terrible earthquakes in Charleston that I am afraid no one will think of telling you about the wonderful fair which is now being held in the city, and I am sure that all you little children who live too far away in the country to pay it a visit must be anxious to hear something about it. Well, I went the other night, and I am going to write you a short description of everything I saw. Of course, you all know why the fair is held, but for fear some of the younger readers do not, I will tell you. It is to encourage home industry; ask your papas to explain what that means.

When I entered the Mechanics' pavilion, where they are holding the fair, it seemed as though I had wandered into fairy land. The whole building was one mass of brilliant colors, the air was heavy with the perfume of flowers. At the farther end of the hall, from the midst of a group of graceful palms, a fountain was throwing its spray almost up to the roof, and all the while a band was playing the most inspiring music.

There were several long tables in the center of the pavilion, on which were placed marvelous floral designs. There were harps, anchors, crosses, ships, in fact almost everything you can imagine. There was even a muskmelon from which the end had been cut and a bunch of flowers put in it, but to tell you the truth, I don't think it was very pretty; it looked too stiff. Then there was the fruit and vegetable exhibit from Sonoma, which took up a large part of the lower floor. There must have been every variety of grapes that grow on the earth; and as for the pumpkins, if not the identical one from which Cinderella had her carriage made, they must be very near relations. There were radishes and turnips so large that they could be used for cannon balls, and even though they are not round, a blow from one could easily kill a man. A lady from Glen Ellen sent a lot of curiosities, and they were all on exhibition.

There was a promissory note which was found in Napoleon's pocket after his death, at St. Helena, which read something like this: "I promise to pay Napoleon Bonaparte the sum of five pounds." It seemed so funny to think of any one giving the great Napoleon a promissory note for such a small sum. There was a large book on "Birds" published some time during the seventeenth century, crazy quilts pieced by an old lady over 80 years old, and all sorts of things from every part of the world. I hardly know whether to tell you anything about the incubators and the dear little yellow chickens, and on second thoughts I don't think I will, because undoubtedly you have seen dozens of them.

The next thing I saw was "The Blindmen's Broom Factory," and there was a blind person there making the brooms just as neatly and quickly as one who sees. In another place young girls were making cigars. It was quite interesting to watch them sorting the tobacco and rolling it into the desired shape. Some one from a brush factory was making dusters of all kinds—big ones, middle-sized ones and little ones. Then came the exhibit of the California Cotton Mills. There we saw towels in abundance, and salt bags and flour bags, cotton rope of all kinds and sizes, from the dainty piece of pink twine to the thick, twisted rope, as large as—well, I don't know what. The next thing was a lot of iron safes, with such wonderful locks that it takes three men to open one.

A little boy from Gilroy sent a frame, in which he had arranged most artistically over 1000 tobacco tags—don't you other little boys envy him, though? There was a revolving window, so arranged that by pressing a button the whole window would turn inside out; this was to facilitate their washing. One manufacturer exhibited soap in the shape of dogs, monkeys, horses, etc., besides presenting each passer-by with a small round cake of soap. Next to this was a booth where they were making popcorn balls, and somewhere else where they were selling hot waffles. Then there were lots of uninteresting things, such as water filters, flat-irons, somebody's everlasting axle-grease and things I never heard of before. There were about 50 carriages on exhibition, pretty dog-carts, comfortable rockaways, stylish buggies, and even a hearse upholstered in white satin. After this I looked at the plows. There was the "Coming Plow," "The Horse's Friend," "The Ideal Plow," and dozens of others, whose names the smallest of you know better than I do. A wholesale druggist had on

exhibition glass jars filled with pills of every description; perhaps he calculated that he would make everybody sick-looking at them, and they would all come to him for medicine to get well again. By the way, somebody did offer me a glass of medicine, a sure cure for ague, but I declined it. There was a printing press getting its papers ready and showing off just as hard as it could. Two beautiful straw arbors covered with hops and wheat, containing gigantic barrels, meant beer; and next to them a lady was giving out temperance tracts. The way an ingenious manufacturer advertises his baking powder was by having some one bake biscuits and give them around.

I can tell you nothing about the machinery, because when I went into that department there was such a roaring and buzzing and hissing I hastened to leave it. Would you believe it, I actually saw a man lying on a bench sound asleep in spite of all the noise. After this I went upstairs to the art gallery, where there was such an array of paintings that, not being an artist, I have only retained the idea of colored quantity. There was a statue which was designed and modeled by a lady in San Mateo. A fur place had a cunning little house made of all the different varieties of fur. Somewhere else there were three handsomely furnished rooms—bedroom, sitting-room and drawing-room. Then there were pretty wicker carriages lined with satin and waiting to give your baby sisters a ride. I couldn't begin to tell you how many pianos and organs there were, but it did look as if there were enough for everybody at the fair. There was a gigantic jumping-jack made of natural flowers, and lots of puppets that danced whenever a certain organ played. A young lady was selling tubs and buckets made of California laurel wood, besides all sorts of curiosities. I must finish my letter now or else it will be too long to publish, but before closing I promise you that whenever I see or hear anything interesting I will write you all about it; so good-bye.

Alameda, Cal.

## GOOD HEALTH.

THE ACTION OF THE HEART.—As with each stroke the heart projects something like six ounces of blood into the conduits of the system, and as it does so some 70 times every minute and 4200 times in an hour this implies that it does the same thing 100,800 times in 24 hours, 30,000,000 times in a year and more than 2,500,000,000 times in a lifetime of 70 years. The mechanical force that is exerted at each stroke amounts to a pressure of 13 pounds upon the entire charge of blood that has to be pressed onward through the branching network of vessels. According to the lowest estimate that has been made, this gives an exertion of force that would be adequate, in another form of application, to lift 120 tons one foot high every 24 hours. Yet the piece of living mechanism that is called upon to do this, and do it without a pause for three score years and ten, without being itself worn out by the effort, is a small bundle of flesh that rarely weighs more than 11 ounces. It is in the nature of the case, also, it must be remembered, that this little vital machine cannot be at any time stopped for repairs. If it gets out of order, it must be set right as it runs. To stop the beating of the heart for more than the briefest interval would be to change life into death. The narrative of what medical science has done to penetrate into the secrets of this delicate force-pump, so jealously guarded from the intrusion of the eye that it cannot even be looked into until its action has ceased, is, nevertheless, a long history of wonders.—*Edinburgh Review*.

A PHYSICIAN'S PREDICTION.—A recently published volume, the work of Dr. Austin Flint, of New York, is said to contain a remarkable prediction respecting the progress likely to be made in medical practice in the next 50 years. A press notice of the book says that the author expresses great confidence that the principle of the telephone will, by and by, be applied to intrathoracic respiratory and heart sounds, so that they will be transmitted to the ear more distinctly than they now are by the stethoscope. As consequences of this advance Dr. Flint points out that not only will these sounds be transmitted from the patient to the physician, no matter how distant the one may be from the other, but also that "the sounds from the chest of a patient may be phonographically registered, transported ever so far, and made available after an indefinite period."

BLINDNESS DUE TO DECAYED TEETH.—Dr. Widmark, a Swedish surgeon, having as a patient a young girl in whom he was unable to detect the slightest pathological changes in the right eye, but who was yet completely blind on that side, observing considerable defects in the teeth, sent her to M. Skogsborg, a dental surgeon, who found that all the upper and lower molars were completely decayed, and that in many of them the roots were inflamed. He extracted the remains of the molars on the right side, and in four days' time the sight of the right eye began to return, and on the eleventh day after the extraction of the teeth it had become quite normal. The diseased fangs on the other side were subsequently removed, lest they should cause a return of the ophthalmic affection.

## DOMESTIC ECONOMY.

BLACKBERRY SHORTCAKE.—Sift half a pound of flour with two teaspoonfuls of baking powder, a heaping teaspoonful of sugar and the same quantity of salt. Mix with this a quarter of a pound of butter, which should be as firm as possible, adding, little by little, half a pint of cold boiled milk. The mixing should be done with a knife, rapidly. Place the paste on a floured pastry board, turning it about until it is covered with the flour. Roll it out to the thickness of half an inch, and cut it in round pieces the size of a breakfast plate. This may be done by inverting a plate on the paste and cutting around it. Lay the pieces on a greased pan and bake. When done, cut around the edge and pull them apart. Lay the blackberries on each half piece, sprinkling them well with sugar. The berries on the top layer should be placed upright. Serve with cream.

A VERY NICE BREAD PUDDING.—Put the inside of a small loaf of bakers' bread into a deep pan, with two ounces of butter; pour over it one pint of boiling milk; let it stand until the bread is perfectly saturated; then mash it up with a wooden spoon until smooth and fine, without a single lump. Whisk six eggs till very stiff and white as snow and then stir them gradually into the bread batter; add to this one quart of rich milk. Beat all very thoroughly together and sweeten it to suit the taste. Pour all into a well-buttered pudding dish; season with a little cinnamon. Bake in a quick oven. When done and cold, have ready some very fine, ripe peaches; pare them, slice and sugar. Just before sending to the table, place as much of the peaches on top as the pudding can conveniently hold, and sift over as much white sugar as is needed. Eat with thick cream sauce.

BUTTERMILK BISCUIT.—One quart of flour, one teaspoonful of soda sifted three times with the flour and a teaspoonful of salt, one pint of really sour buttermilk, one tablespoonful of melted butter. Sift flour, soda and salt into a bowl, stir butter and milk together and pour into a hole in the flour. Mix quickly and with as little handling as possible. Be careful on this point, also, not to get the dough too stiff. Have your oven ready and hot. As soon as the biscuits are cut out put them in and bake. They are excellent if mixed—as the successful painter did his colors—"with brains." A heavy hand and heavy wits can result in nothing but sodden solidity.

LENTIL SOUP.—Take one pound of lentils and wash them in many waters, until thoroughly clean and free from weeds. Soak all night, then add as much more water as will make 2½ quarts. When this boils, add carrot, turnip, parsnip, two onions and small pinch of carbonate of soda. Boil two hours, then strain, washing all thoroughly except the skins of the lentils; season, and serve. Lentil soup requires no meat, but a small piece of butter mixed with flour is an improvement, and serves to bind the soup together instead of separating into thick and thin.

BEEF STEW.—Cut underdone roast beef or steak into inch-long pieces. Have ready in a saucepan a cupful of skimmed gravy or broth, a quarter onion, minced very fine, a teaspoonful of minced parsley, a pinch of mace and a tablespoonful chopped cucumber pickle. Let it come to a boil, season well, thicken with a tablespoonful of browned flour, put in the meat and set in boiling water, closely covered, at the side of the range, for 20 minutes. If the meat be tough, chop it instead of cutting it up, then proceed as directed. Serve hot.

LEMON JELLY CAKE.—One cup of sugar, mixed with butter the size of an egg, one cup of milk, one egg, well beaten, and flour enough to make rather stiff, sifted with a heaping teaspoonful of baking powder, and bake in three jelly-cake tins. For the jelly, take the juice and grated rind of one lemon, one small cup of sugar, three teaspoonfuls of cornstarch, mixed smoothly with a little water, and one cup of hot water. Let all boil together until thick, and spread on the cakes. This quantity makes two layers.

CORN OYSTERS.—One cupful of flour, half a cupful of melted butter, three tablespoonfuls of milk, two teaspoonfuls of salt, one fourth of a teaspoonful of pepper, one pint of grated corn. Pour the corn on the flour and beat well; then add the other ingredients and beat rapidly for three minutes. Have fat in the frying-pan to the depth of about two inches. When smoking hot, put in the batter by the spoonful. Hold the spoon close to the fat and the shape of the oyster will be good. Fry five minutes.

RAW TOMATOES.—Peel with a sharp blade, slice and season on the table with sugar, salt, pepper, oil and vinegar; sprinkle bits of ice between the layers when you dish it, draining off the water before seasoning. The colder raw tomatoes are, the more delicious they will prove.

APPLE PUDDING.—Pulp of two or three large baked apples, white of one egg, one cup powdered sugar. Beat the ingredients half an hour, and serve with boiled custard poured over it. This is very nice.

## Business Announcements.

Agricultural Implements—Hawley Bros.  
Agricultural Implements—Baker & Hamilton.  
Agricultural Implements—Truman, Isham & Hooker.  
New Music—Oliver Ditson & Co., Boston.  
Agricultural Implements—Arthur W. Bull.  
Wind-mills and Pumps—Woodin & Little.  
Sheep—G. N. Whitaker, Santa Rosa, Cal.  
Fruit Trees—G. Tosetti, San Leandro, Cal.  
Fruit Trees—J. S. Collins, Moorestown, N. J.  
Purchasing Agent—Thomas Powell.  
Pencils—J. G. Allen.  
Clematis—W. A. T. Stratton, Petaluma, Cal.  
Cattle—Stinson & Marsh, Dayton, Nev.  
Cattle—P. H. Murphy, Brighton, Perkins P. O.  
Cattle—P. S. Chiles, Davisville, Cal.  
Windmills—Pacific Manufacturing Co.

## The Week.

Our paper this week is also given largely to fairs and rumors of fairs, and yet we have to leave many features of the exhibitions for future treatment. The State Fair, which closed last Saturday night, was on the whole a good exhibition. We have given an outline of most of its departments. The literary features are still untouched, and of the good addresses given by Hon. T. H. Laine and Gen. Chipman we shall endeavor to select salient points hereafter. Next week we hope to have the corrected premium list. The Mechanics' Fair is now well along on its last week, and we give this week some further account of the county displays. Some others, like the very choice display brought down from Contra Costa, we must leave for another time.

The season is drawing along. The vintage season is now well under way and will occupy the vintners for the next few weeks. So, too, the raisin harvest, and the anxiety will be that the rains may delay their coming until

this year's large crop can be secured. Politics are warming up the people in city and country, and it promises to be a campaign of the usual fire—and mud.

## Improved Merino Sheep.

The condition in which the wool industry now stands seems to warrant the producers in renewing efforts for the improvement of their product. It could be well shown that even in times of depression it will pay to strive for the best product and the greatest amount of it from an animal, and that the comparatively small outlay required for pure-bred sires is the best investment a wool-grower can make, even in a dull time. But, though this is so, it is very hard to convince many growers that it is wise to spend money for an improved product while prices are low and the market is dull. Fortunately, we have now an easier task, for the wool market is in quite a satisfactory condition. The quick sales and fairly good prices of the last year or more have changed the aspect of the wool industry, and have given growers new heart and confidence. Not only is the present condition much improved, but the outlook is promising. The tariff-tinkers, who have been striving for the last few years to still further reduce the import duties on foreign wools, have made no headway; on the other hand, the wool interest has continually gained strength by united effort to make the legislators and the people generally understand its importance and the general loss which would be occasioned by its downfall. In the wool-growing States the matter of suitable protection to wool has risen above party and is recognized as something higher than a political question. In this State both political conventions pronounced clearly in favor of the re-enactment of the tariff of 1867, as follows:

We demand in behalf of the great wool-growing interest of our State a restoration of the wool tariff of 1867, and denounce the recent attempt of the Democratic majority in the national House of Representatives to pass the Morrison bill, reducing tariff duties and placing wool on the free list.—*Republican Platform, Los Angeles Convention.*

Resolved, That the present tariff on wool prepared by a Republican commission appointed by a Republican President is an unjust discrimination against a great industry, and we denounce the same and demand the restoration of the tariff of 1867.—*Democratic Platform, San Francisco Convention.*

There is a little political spice in both utterances, but the demand is the same in each case.

These thoughts came to mind as we were looking over the improved Merino sheep at the State Fair last week. The contrast between the improved Spanish Merino sheep exhibited by Mr. Frank Bullard, of Woodland, and the common sheep of the State, is so marked, and the improvement which results from using the potent blood of these thoroughbred sires upon the common ewes so evident, that they would convince any one, it would seem, of the advantage of putting forth some effort for the improvement of their flocks. It is undoubtedly true that California has improved Merinos as fine as any in the world, if not finer than any other. It has been the experience of many breeders that the best improved Merinos which can be purchased at the East exhibit still further improvement when skillfully handled in California. It is admitted, too, that the Eastern improved Merinos are better than any of the foundation stock in Spain. Thus, with California improving on Eastern standards, and Eastern standards being so much higher than Spanish that no one now thinks of going abroad for stock, it is clear that California can show against the world for eminence in fine woolled sheep. Flock owners should take the hint from this achievement of California Merino breeders and gain the advantage of the introduction of such blood into their flocks. Where is the economy of feeding and protecting an animal which shears from one and a half to two pounds of wool, when, with no more cost, you can support one which shears from four to seven pounds of better wool? It is a good time now to think of these things and arrange to bring into the flocks next spring a class of males which will from the first contact start the flock upon a rapid improvement in yield and quality. These ideas are not new. We have expressed them time and again during the last few years, and there has been much improvement gained. But times are now propitious for generous enterprise in improvement, and we hope the disposition toward such improvement will be more general than ever before.

## Tree-Planting.

The custom of appointing a tree-planting day now prevails in eight States and should find favor in every State and Territory. There is no State in the Union that needs trees more than California. We are glad to see the question again agitated. It cannot be too often and earnestly insisted upon. Were the farmers on the treeless plains of this State, in addition to their orchards and vineyards, to plant a few acres of forest trees, they would not only in the near future receive a rich reward in the shape of timber, but would largely solve the irrigation question.

History will vindicate the statement that one of the causes of the impoverishment of a country and the extinction of civilization has been the destruction of forests. The cutting down of trees means exhaustion of springs, changing the climate and producing arid desert wastes and excessive alternations of heat and cold. With the disappearance of trees, men vanish. This is the reason why Syria, Greece, Asia Minor and parts of Africa are so largely abandoned. The result of cutting mountain forests is that the surface water, produced by snow and ice, instead of being absorbed and retained by the vegetable coating, rushes down the valleys in tremendous torrents, and instead of penetrating and fertilizing the soil becomes the agent of devastation. We have one familiar illustration. The Ohio river overflows with almost every rainfall. The clearings on the slopes of the Alleghanies are said by those who have made a study of the problem to be the cause of this immense volume of water. In some sections of New York, where the forest trees have been cut away, it is said that wheat now often fails, from winter killing, although the soil is of excellent quality.

The plains west of the Missouri are now a promising theater of the tree-planting experiment. It is claimed that in some localities where farms have been made, villages built and trees planted, the dry, parched soil of 20 years ago is clothed with a rich verdure, and river-beds that were half the year dry are now constantly covered with running water. It is well known that the city of Denver was built on one of these ancient river-beds, where it was supposed water would never again flow; but there is now a permanently running stream, so large that it has been found necessary to bridge it.

If such is the value of trees and their effect upon climate, the subject of forest culture demands the attention of all cultivators of the soil. And nowhere is this claim more imperative than upon the farmers of California. The uninterrupted rays of the sun falling upon these plains, covered as they are in the late summer only by a dried vegetation, heat the atmosphere to such a degree that it is able to contain an unusual amount of uncondensed moisture. The consequence is, the moisture in the atmosphere is carried by the prevailing winds over the Sierra Nevada range until it reaches the Rocky mountains, where, being condensed, it falls in abundance of rain. The very nakedness of the earth's surface becomes the cause of perpetuating this condition from year to year. Nature has no power to arrest this evil. It must be done by artificial agency if it is ever done, and Nature kindly suggests the remedy. No well-wooded country ever suffers from a long continued dry season. And who can doubt that if the plains and deserts of California were liberally covered with clumps of trees there would not be a greater condensation of moisture, and rain-showers would keep up a growth of vegetation later in the season? It may be as we have suggested, that forest culture on these dry and parched lands would tend to solve the vexed irrigation question to some extent. At all events, it is time our farmers were urged to preserve a portion of their forests and plant forest trees where they have none.

**BROOM CORN.**—We alluded briefly last week to the exhibit of broom corn made by B. N. Bugbey, of Sacramento, from his ranch in Kirkville, Sutter county. The brush of the corn shown by Mr. Bugbey was three feet in length, and its quality was well shown by a number of brooms and dust brushes made from it. It was as fine broom corn as we ever saw.

THE second crop of figs in Santa Barbara county promises to be plentiful.

## Death of S. W. Sperry.

The death of S. W. Sperry, the well-known head of the corporation of Sperry & Co.'s flour mills, at Stockton, has taken the public by surprise. Though he has for a year or more been afflicted with heart disease and spent much time the past season at several health resorts, still his death was unexpected to his family and friends. But death is always a surprise. It is as common as birth, but we never get used to its visit. Though it come in youth, in the noon of manhood, in old age, or after weeks of languishing illness, still we are never quite ready to give it a welcome.

Simon Willard Sperry was a native of New Hampshire and was about 64 years old at the time of his death. He came to California in 1856 and may be put in the pantheon of pioneers. Soon after his arrival he, in company with his cousin, Austin Sperry (now deceased), engaged in the flouring business with a small mill, at the corner of Commercial and Maine streets, Stockton. The capacity of the mill gradually increased till it reached 600 barrels of flour per day. Austin Sperry died in 1881, and the business was continued by S. W. Sperry until April, 1882, when the mill was destroyed by fire. It was immediately rebuilt on a more extended and improved plan. Steel rollers were introduced. This mill has the capacity of producing 1000 barrels of flour per day.

The deceased leaves a wife and two daughters and three sons and a brother, James Sperry, of Calaveras county. He was, in many respects, more than an average man of business. He was never given to venture or speculation, or smitten by the inordinate desire to make money fast and become rich in a few months. His fortune is the legitimate growth of time—built up slowly but surely by prudent foresight and economy. Few men have been more noted for business integrity and unostentatious charity. He was public-spirited, and did much toward developing Stockton and advancing its commercial interests. In him the laboring man found a sincere and sympathetic friend. In the language of the Stockton Independent: "No citizen could stand higher in the estimation of any community than the subject of this brief notice stood in this community, where he moved in the front rank of business circles for nearly a third of a century."

## Contra Costa Fair.

The Twenty-sixth Annual Fair of the Contra Costa Agricultural, Horticultural and Mechanical Society, which was held near Pacheco, from the 6th to 10th instant, proved one of the most successful that has taken place in the county for years. The *Gazette* congratulates the officers and members on having demonstrated that a good exhibition can be made without the accessories of gambling and whisky, and in having placed the fair on a basis that will prove enduring, attractive and in many indirect ways remunerative to every individual farmer and to the county in general.

The display of horses was large and fine. The fewness of the cattle shown was partly compensated by the presence of several Polled Angus and Devons, all splendid animals from the Cook Stock Farm in Green Valley. Mr. A. M. Hill, of Martinez, exhibited three Jerseys; Mr. J. R. Minaker, of Pacheco, a young Holstein bull; Mr. A. L. Foote, of Concord, a graded bull; and Mr. L. H. Grewell, of Pacheco, a half Durham and half Devon cow. South-down bucks and ewes were shown by Mr. H. M. Gregory, of Ygnacio valley, and Mr. Charles Wood, of Danville. The swine exhibit was limited but good. Mr. Seth Cook's two handsome Cleveland Bays were a marked feature of the daily parade.

In the pavilion, the display of grapes was marvelous for its variety, size and perfection, showing that Contra Costa as a viticultural district is unsurpassed.

The exhibit of fruit, although somewhat limited in quantity, was excellent in quality. The showing of vegetables, melons, etc., was admirable for size and general merit—none the less so when it is considered that irrigation is but little practiced in this county. A considerable portion of the fruit and vegetable display was afterward transferred to the Mechanics' Fair in S. F.

We publish in another column the condensed list of awards, and regret that we cannot give space to a more detailed account of the horticultural and floral exhibits.

Entertaining and practical addresses were delivered during the week by Hon. C. Wood, Hon. D. N. Sherburne, Gen. Theo. Wagner and others, to which we may make further reference hereafter.

### The Castle at the State Fair.

The most elaborate exhibit in the State Fair pavilion this year was the castle constructed wholly of dry goods, excepting, of course, the floors and frame. This exhibit was the cynosure of all eyes during the fair and has, no doubt, been talked about from end to end of the State. We are glad to be able to give our readers a good engraving of the castle, as seen from its north side, and showing the two entrances, each guarded by a sentinel in armor. The engraving will aid those who saw the castle to give their friends intelligible descriptions of it.

The castle was constructed by Weinstock & Lubin, who are famous for the novelty and ingenuity shown in their exhibitions. At this year's fair the firm have surpassed all their previous attempts, having succeeded in depicting with wonderful skill and effect the chief tower of the famous castle of Heidelberg, one of the grandest ruins of the feudal times. This curious and interesting structure, with its portals, courts and battlements, strictly patterned after the original architecture, occupied a commanding position in the center of the art gallery, and, viewed from the main floor, the aspect of the frowning towers, covered with ivy, formed such a perfect illusion that the spectator could not conceive that the building was covered merely with domestic textiles. On a closer approach it was seen that this effect of heavy masonry was skillfully secured by means of ladies' cloth of dark gray, the mortise work being shown by white braid. To enhance the illusion, the portals were guarded by men at arms in full armor, and in the interior were attendants in quaint antique costumes, who gave every information to visitors.

On entering the main portals, one passed from the main corridor through a circular archway into the anteroom, the walls of which were covered with bright cretonne of lovely designs, while the ceiling was ornamented with napkins of varied colors skillfully formed into shapes of stars, fans and rosettes. The floors were of polished oak, partly covered with Turkish rugs of exquisite design. The furniture was massive and old fashioned, and the light came gleaming through heavy portieres and casements of stained glass that lightened the ideal in a marvelous manner. One of the chief features was the huge fireplace, back in an arcade, which was profusely decorated with napkins in various designs and colors, the mantel especially being a model of the designer's art. Around the fireplace were suits of armor and weapons that seemingly dated from the days of the Crusaders, and on the walls were plaques of bronze, representing scenes of the days of yore. The furnishing would be incomplete without the massive sideboard, on which are the wassail bowl and other vessels through which the lordly Barons dispensed their lavish hospitality. From this room a spiral stairway led to the sleeping apartments, in which the architect deftly availed himself of the circular formation in constructing niches that contain stands, etc. The interior was also richly furnished, while the lace curtains, the flowers, pictures and various pretty devices show the tasteful hand of the fair chatelaine. On the fourth floor was the armory, in which were antique weapons and coats of mail, and thence a stairway led to the top of the tower, where, at stated intervals, came the blast of the bugle from the sentinels on guard.

A description of this curious edifice would be incomplete without a brief account of how this strange illusion was carried out. The structure occupied an area of 26x36 feet, and the extreme height of the castle was 45 feet. The battlements were made with woolen cloths, muslins, quilts, toweling and shirtings in bolts laid in panels that imparted a solid appearance. The outer walls were constructed with crinoline on bolts of flannel, bound with black tape, that also secured a massive effect. A huge chimney ran up from the base to the utmost tower. It was composed of red flannel, pointed with white tape, giving to it a semblance of brick-work, while the copings were imitated with ladies' gray cloth. A faint idea of the magnitude of the work may be gained when it is stated that in the construction of the building 3,000,000 pins and almost as many tacks were used in fastening the various textiles together. The building was designed by W. H. Hamilton, a well-known architect of Sacramento, and the structure was completed under the super-

intendence of S. B. Suits, of Philadelphia, who came from the East expressly for that purpose.

The building was thronged with ladies and children from morning to night. A beautiful view of the pavilion was gained from the courtyard walks, on which were quaint seats and medallion pots of fragrant flowers, and at each quarter of this unique building were beautiful satin banners bearing the name of the firm who conceived and carried out these unique designs—Weinstock & Lubin.

### Poultry at the State Fair.

The poultry exhibits at the State Fair were not so large as usual this year, but there was some very fine stock shown. The following is a sketch of the exhibitors and the selection they presented:

E. I. Robinson, Sacramento, had four coops white-faced Black Spanish, one coop of Buff Cochins.

M. W. Parker, Biggs, had two pens of Light Brahmas and one pen of Buff Cochins.

Jasper J. Jones, Martinez, had two coops of White Leghorns, one of Brown Leghorns, one of Crevecoeurs, one of Houdans, one of Buff Cochins, one of Wyandottes, one of Partridge

NORTH VIEW OF THE FEUDAL CASTLE AT THE STATE FAIR.

Cochins, one of Light Brahmas, one of Langshans and two of Plymouth Rocks.

S. Tryon, Sacramento, had four coops of White Leghorns.

Geo. B. Bayley, Oakland, had one coop of Partridge Cochins, one of Dark Brahmas, one of Golden-spangled Polands, one of Houdans, one of Game Bantams, one of Golden Seabright Bantams, one of White guinea hens and one of homing Antwerp pigeons.

T. Waite, Brighton, had one coop of Wyandottes, two coops of Plymouth Rocks, two of Light Brahmas, two of Hamburgs, of Partridge Cochins, two of Dark Brahmas, two of Brown Leghorns, two of White Leghorns, two of White-crested Black Polands, two of Bronze turkeys, two of Toulouse geese and two of Pekin ducks.

We expect to give the premium awards next week.

CINCHONAS IN CALIFORNIA.—The Stockton Independent asks about the success of cinchona trees in California. Some interesting statements will be given, no doubt, in the forthcoming report of the College of Agriculture. The trees in the Garden of Economic Plants, in Berkeley, are growing well, but they are protected in winter. Young trees were sent out to various parts of the State where there was thought to be little or no frost, and probably some reports from the growers will be received in time for this year's report.

### Agricultural Implements and Machines at the State Fair.

The display of agricultural implements and machines at the State Fair this year did not include as many exhibitors as have come forward on some occasions, but the displays were well made and there was no lack of valuable and interesting material.

The largest display in the department devoted to machinery in motion was by G. G. Wickson & Co., of San Francisco, and their large square of space was well filled. There were Stoddard churns of several sizes in motion, also the Ross feed-cutter, with elevator attachment, the St. Albans Horse-power, Separator and Cleaner, adapted to the use of farmers who wish to do their own thrashing and cleaning or to custom thrashing in the hilly portions of the State. There was also the "Scientific Feed Mill," busily engaged in grinding barley. Other items were the De Lavel cream separator, the American churns, the "Scientific Ranch Blacksmith" outfit, and an almost endless assortment of dairy tools and appliances, including pails, strainers and pans, dairy scales, calf-feeders, thermometers, cream gauges, etc. The exhibit was the most complete display of dairy goods we have ever seen on this coast, and was

mense stream of water. They were awarded the premium for irrigating apparatus and for the largest display of machinery from one shop.

Stanton, Thompson & Co., Sacramento, showed a horse-power pump claimed to be of 2000 and 3000 gallons capacity per hour, with easy work for the horse. It is the invention of R. M. Beebe, of Gridley. The same firm also showed White, Cooley & Cutts' (Marysville) feed-cutters.

Daniel Best's hand separators for cleaning seed grains were shown in operation, and presented strong claims of excellence.

C. T. Settle, of San Jose, representing the Farmers' Union, of San Jose, showed the Standard wide-cut mower. Its chief claim is a spring that lifts the cutter-bar and eases it over irregularities of the ground, lifting either end of the bar. There are other claims of merit made for it. The Farmers' Union has been on the lookout for some time for a satisfactory reaper which they could handle direct from the manufacturer, and from trial of the Standard this year gained so much confidence in it that they took the general agency. It is represented as running very lightly, being without side-draft, etc. We expect to have an engraving and description of the machine in due time.

J. Klees & Co., Sacramento, showed the California reformed grain separator, a well-known machine, which has often been mentioned in the RURAL.

Another interesting exhibit was a sack elevator, made and shown by J. H. Wisheart, of Chico, who has received a patent for it. He claims that with this simple machine four men can pile more grain in a warehouse than 10 men can carry up. Baled hay, cotton, boxes, barrels or any packages can be elevated to any desired height with little or no exertion. It is quite automatic, its action being adjustable, so as to land its load at any point on the upward incline, as desired.

Lambert & Deming, whose factory is in the rear of the Grangers' store, on Tenth street, Sacramento, showed their machine manufacturing the wire and picket fence, which is now becoming so popular in this State. They have secured the right to manufacture and sell the fence in Sacramento, Placer and El Dorado counties.

### Implement Hall.

Walking from the apartment devoted to machinery in motion, one comes into the large annex lately constructed for the display of agricultural implements. Here were found the largest general exhibits of farm appliances.

On the left of the entrance was the display of Baker & Hamilton, covering at least 50 feet square of floor with a grand assortment of agricultural goods, beautifully finished and tastefully arranged. Both the floor and wall were occupied, and we never saw handsomer effects produced with hardware than the lettering done with mower-knives, whose bevel edges produced a most exquisite shading effect. Baker & Hamilton, of course, have nearly everything used upon a farm, from the mammoth separators to the simplest hand-tools. Hall's bean thrasher attracted much attention. The Benicia mower, which is deserving of so much credit as a home-made machine, was also shown, as well as a fine lot of Bain wagons.

On the left of the entrance was a floor space of similar size occupied by A. & A. Heilbron, of Sacramento. Among the leading articles shown are the McCormick reaper and binder, Cassidy gang and sulky plows, Peoria steel plows, improved Hoosier gang drill, Victor mowing machines, Cadwell farm wagon; also a covered spring wagon, a pleasure cart, besides a large collection of minor agricultural implements. The display was very creditable.

Near by was the Eclipse cultivator, a combined chisel cultivator, weed cutter and plow for orchard and vineyard purposes. Its claims are durability, light draft, ease of adjustment and operation, freedom from clogging, etc. It is the patent of G. W. Forbes, and is manufactured by Wm. Forbes & Son, Guberville, Santa Clara county. It was well shown at the fair by Mr. Bowdish, of Los Gatos.

Another large exhibitor was H. H. Linnell, of Sacramento. He exhibited a host of things. One was the "Havana Press Seed Drill," to sow and cover the seed at one passage over the ground. He had also the well-known Acme cultivator, the J. I. C. steel plows, the Lansing spring-tooth, broadcast seeder, etc. The Stockton (Houser) combined harvester, for which Mr.

awarded a special silver medal.

P. D. Poole, of Alameda, exhibited a lath and wire-fence machine in operation. By this device one weaves his lath and wire right where the fence is to stand, and the structure is strong and true to the line. Mr. Poole has also a road-grader or road machine which seemed to be admirably contrived for doing good work. The Sacramento Supervisors have purchased three for use on the Sacramento county roads.

Jacob Price showed his Excelsior seed-sower, of which we have already had descriptions in the RURAL, and which is winning an excellent name for speed and capacity, showing a width of 100 feet and covering the ground evenly.

W. F. Jeans, of Woodland, Yolo county, showed his new sack-holder, which has been thoroughly tried during the last summer and given good satisfaction. By this machine the sack is suspended. The bottom never rests on the ground or floor—thus the sack is stretched to its full length, allowing it to be filled with every pound of grain it will hold without using a stick. It is especially adapted to filling old sacks, as it grips the sack all around the top, putting an equal strain on the sack, allowing it to be well filled without tearing. It is claimed that from eight to ten pounds more can be put in a sack than with any other sack-holder. It can be used on a frame in the warehouse or can be attached to a separator or combined harvester.

The S. F. Tool Co. had in operation one of their steam irrigating pumps, throwing an im-

Linnell is agent, formed part of this collection. Mr. Linnell makes a specialty of windmills, pumps and irrigating outfits. The cyclone and Althouse stand at the head of his list of mills. Among other prominent exhibits are the Giant mower, hollow-axle wagons, steel harness, spring whiffletree, etc. The Houser combined harvester shown had harvested 500 acres of grain before coming to the fair. Mr. Linnell has long been in the implement trade, having occupied responsible positions with old-established firms. As he sets up for himself in the same line, his many friends wish him well.

Matteson & Williamson, of Stockton, the old-established firm of manufacturers, showed the Matteson & Patterson Combined Harvester, "Harvest Queen," which they confidently bring forward as the regent in its class of machines. It is certainly a very comely machine, and will, we trust, receive the attention due it by those examining combined harvesters. Mr. Matteson showed us a new design of what must be called an "agricultural revolver," for it seems to hit in every direction. It is a single plow, a gang plow, a reversible or sidehill plow; a ditcher, a hiller, a potato-digger, and a number of other things by very simple adjustments. Mr. Matteson promises to give us a written account of the uses to which his wonderful invention can be put. The firm also show their famous gang plows, which are known all over the Pacific Coast and beyond.

John McCarthy was exhibiting for the manufacturer, E. E. Krause's Montezuma cultivator—a most efficient machine, and adapted to work successfully in most unkind soils. It is adjustable to sidehill or level land by the independent elevation or depression of the wheels at each end. It is adjustable, also, to depth of cut; has shovels which will scour bright in adobe, and is made in different sizes—from 8 to 14 shovels, as desired. He had also a sidehill gang plow, adjustable just as the cultivator is, and can also be adjusted to take much or little land. It has a fingered mold-board, which works well in adobe.

There was on exhibition a fine specimen of Young's Combined Harvester, which is now made at the Benicia Agricultural Works. It is claimed for Mr. Young that he built and patented the first combined harvester which was successfully operated in this State, and the pattern which is now manufactured is claimed to have superior advantages.

Stanton, Thompson & Co., in addition to their exhibit in Machinery hall, which we have mentioned, had a fine general exhibit in the implement department.

Prominent in the center of the floor was the S. Pennock & Sons Co. road machine, which we illustrated in the RURAL some months ago. The manufacturers are now represented by W. Zartman & Co., of Petaluma, as agents, who are ready to supply the Pennock machines in California. There are three styles offered, as follows: Improved Pennock, with Giant levers, \$210; Victor Reversible, \$275; Daisy (two-wheeled), with steel bar, \$125. The Pennock machines have achieved a fine reputation, and will no doubt be popular in California, where there is so great need of effective road machinery.

John Bean, Los Gatos, showed a spray pump for orchards, of his own invention. It is operated by air pressure from a charged cylinder and gives any density of spray desired.

#### Carriages and Wagons.

We doubt if there was ever a better display made of carriages and wagons than at this year's State Fair. We have not space at command to do the exhibitors full justice.

Studebaker Bros. are entitled to leading mention. Their display was made with their usual good taste and was comprehensive, from their standard farm wagon, which is so popular and widely used, up to a \$2000 outfit for a millionaire. Almost everything in the shape of running gear was included in their display. They also showed one of their vehicles before it went to the paint shop, so the public could see clearly the material and style of workmanship, and that they use paint as a preservative of good work and not to conceal poor work. Our readers know our opinion of Studebakers' vehicles, from the frequent allusion we have occasion to make to them. The display was in charge of the local agent, Mr. Lander.

Another leading exhibitor was J. F. Hill, proprietor of the Pacific Wheel and Carriage Works, operating so long and successfully at 1012 and

1014 Second street, with business offices at 301 and 1323 J street, Sacramento. Mr. Hill had three exhibits in the main hall and one in the machinery department. In the latter there were some finely-built fruit wagons, and on the main floor of the pavilion there was every style of vehicle which could be suggested.

A. Meister, Sacramento, showed some very handsome buggies, carriages and other vehicles, 15 in number. They are of excellent style and workmanship.

J. F. Davis & Son, Sacramento, made a fine large display of buggies in variety, double and single phaetons, etc.

W. L. Walker, of Brooks, Yolo county, had on exhibition in the pavilion what he called "the easiest riding cart in the world." It was manipulated by Mr. Brooks, and is known as the Champion road and pleasure cart. It is handsomely made.

A. Meister's (Sacramento) display of fine vehicles, carriages, buggies, etc., on the main floor, were especially deserving of notice.

Neilsen Bros., Sacramento, on the main floor, made a very fine exhibit of road vehicles, and attracted much attention.

#### Contra Costa Fair Premium List.

Following are the awards at the recent Contra Costa County Fair for products of agricultural and allied industries:

##### Horses.

Thoroughbred—B. Clark, best stallion, 4 years old; best filly.  
Roadsters—S. Hodges, best suckling colt; A. M. Hill, best stallion, 4 years old; best suckling colt; A. L. Foote, best single carriage horse; S. Soto, 2d best single carriage horse; D. M. Ayres, best stallion, 4 years old; Thos. Nottingham, best mare, 4 years old; C. S. Lohse, best span matched carriage horses; A. L. Foote, best 2-year-old mare.  
Draft horses—H. S. Shuey, best 2-year-old stallion; 2d best 2-year-old mare; Philip Wells, best 3-year-old stallion; S. P. Martin, best 2-year-old colt; best one-year-old mare.  
Sweepstakes—Seth Cook, 2d best 3-year-old stallion; best 3-year-old stallion; Philip Wells, 2d best 4-year-old brood mare; D. P. Griffin, best 2-year-old colt; A. Boss, 2d best 4-year-old mare; best span work horses; B. Webb, best 4-year-old mare; W. K. Daley, best 2-year-old colt; B. Webb, best suckling colt; C. S. Whitcomb, best family of horses; N. Jones, 2d best 4-year-old stallion.

##### Cattle.

Devons—Seth Cook, all awards.  
Angus—Seth Cook, all awards.  
Galloways—Seth Cook, best bull, best robe.  
Jerseys—A. M. Hill, all awards.  
Graded and Cross Breeds—A. L. Foote, best 3-year-old bull; L. H. Grewell, best 3-year-old cow; J. R. Minaker, best 1-year-old bull.

##### Sheep.

H. M. Gregory, best buck; best ewe; C. Wood, 2d best Southdown buck; 2d best Southdown ewe.

##### Swine.

B. Hodges, 2d best Berkshire boar; best Berkshire sow; Philip Wells, best Berkshire boar; A. L. Foote, 2d best Berkshire sow.

##### Poultry.

D. B. Dudley, best pair ducks; W. Billings, best pair fowls.

##### Dairy Products.

Theo. Wagner, best butter; Miss Nellie Simpson, 2d best do.

##### Grain, Flour, Vegetables, etc.

T. Simpson, best sack potatoes; P. Wells, 2d best do.; D. P. Griffin, best sack flour; S. B. Robinson, best sack pumpkins; Thos. Simpson, 2d best do.; D. B. Dudley, best sack corn; S. B. Robinson, 2d best do.; M. W. Hall, best sack mangel wurtzel; S. B. Robinson, 2d best do.; D. B. Dudley, best sack squashes; Thos. Simpson, 2d best do.; E. W. Williams, best sack sugar beets; best machine-thrashed wheat; H. Richardson, 2d best do.

##### Fruit, Grapes, Nuts, etc.

John Gambs, best collection table grapes; P. Wells, best exhibit watermelons; Theo. Wagner, largest and best collection fruits; H. Raap, 2d best do.; Theo. Wagner, best collection pears; best 6 varieties peaches; best 6 quinces; Thos. Simpson, best exhibit muskmelons; R. O. Baldwin, best single variety apples; best collection pears; H. Raap, best collection peaches; best collection plums; best collection table grapes; A. M. Hill, best collection wine grapes; M. W. Hall, best collection almonds.

##### House Plants.

\* Miss Ellen Frazer, 2d best collection house plants; John Gambs, best exhibit geraniums; best pair vase bouquets; Miss L. Whitman, 2d best exhibit geraniums; Theo. Wagner, best collection house plants.

##### Wine, Canned Goods, etc.

John Gambs, best exhibit white wine; best exhibit red wine; A. M. Hill, best exhibit native wine; Theo. Wagner, best exhibit canned peaches; F. Loucks, 2d best do.; Theo. Wagner, best exhibit cucumber pickles; best collection pickles; best exhibit honey in comb; F. Langencamp, 2d best do.; Theo. Wagner, best exhibit smoked bacon; F. Langencamp, best exhibit strained honey; best exhibit raisins.

S. H. Bradley, Eastern harrow, honorable mention; 1st on road cart; 1st on spring wagon. Hughes & Pexley, two-horse family carriage. Chas. Raish, honorable mention for a safety yoke and attachments. Hampton Hardware Co., 2d on washing machine; 2d on gopher trap; honorable mention for Deal gang plow. Seymour Marcuse, 1st on silk cocoons, moths and eggs.

#### Sonoma County Notes.

EDITORS PRESS:—After many days your correspondent finds time to drop you a few "notes." The hay and grain crops are all harvested. There is more good hay in Sonoma county this season than has been matured in any one season for many a year. Thousands of tons of good hay are yet out of doors, awaiting the arrival of the hay press and its force of men. Should the rains commence early this fall there will be much hay unhoused, and therefore spoiled.

The potato crop, and you know Sonoma county is famous for fine potatoes, will not be more than an ordinary yield, but the quality will be excellent. In fact, we rejoice as much in the quality of our productions as some people in California do in the quantity of theirs.

Hops are mostly picked, dried, and, in some sections of the county, baled. The yield has been about 35 per cent below the calculations made. We hope the price may advance accordingly, so that the hop grower may have enough money in his pocket-book to make business hop before long.

Wine-making has commenced. The grape crop will be fairly good in yield and quality. The fabulous prices reported being paid elsewhere for grapes are not verified by the prices actually paid here. The writer knows of his own knowledge that the Zinfandel grape, the best wine grape for all purposes grown in Sonoma county, is selling at Santa Rosa for \$15 and \$16 per ton. There may have been a few tons of choice white grapes sold for \$20, or possibly for \$25, but that price, if paid, is not any indication of the real price paid for ordinary crops. Sonoma county grapes rank as high, and our wine ranks higher, than any wine-making portion of the State. Yet our wine-makers declare that they cannot afford to pay the high prices which are reported as ruling in other portions of the State.

Sonoma County Pomona Grange has added another laurel to her already large crown of jewels. The exhibit made by the Granges at the Grand Army Encampment, Santa Rosa and Petaluma Fairs, and now on exhibition at the Mechanics' Fair in San Francisco, has done much to advertise the true worth of the county, as well as to do honor to that worthy fraternity—the Patrons of Husbandry. Messrs. G. N. Whitaker, John Adams, E. A. Rogers and L. J. Hawkins, the committee who have had the management of this exhibit, deserve unbounded praise for the energy, ability and devotion they have shown. They have proven themselves citizens of whom any county ought to be proud, and any fraternity more than proud. They are each one and all Grangers in the true sense. All honor them for service and devotion in a good cause, where faith, hope, charity and fidelity are taught and practiced as cardinal virtues.

Santa Rosa has a new bank; much of the stock is held by farmers.

"The melancholy days have come, the saddest of the year," and dried and falling leaves are everywhere.

Sheep-shearing is about done for the fall. The yield is not large.

There is some talk of a railroad from Santa Rosa to Benicia.

The political pot is boiling over; somebody may get scalded.

Dusty roads; foggy weather; busy people; numerous tramps; and no further news from OCCASIONAL.

### FARMERS' FRIEND GANG PLOW. KILGORE SIDE-HILL PLOW.

For Orchards and Vineyards, Large and Small Ranches.

Manufactured by Benicia Agricultural Works.

THREE-PLOW GANG WITH STEEL SHARES, PRICE, \$55 00.

The above is a cut of our three-plov gang, and consists of three 10-inch plows securely fastened to a wrought iron frame, and easily adjusted by a lever to plow from 3 to 9 inches deep. We desire to call the attention of Agriculturists to a few of its advantages over other plows.

1. **Its Superior Work.**—The soil being thoroughly cut up and the furrows turned completely over, effectually covering all trash and weeds.
2. **Its Success as a Side-hill Plow.**—The team being fastened direct to the plow frame, enables the plow to follow the team same as in single plows and without use of a pole.
3. **Its Great Strength and Durability.**—The plow bottoms are of the best of hardened plow steel with either or chilled iron shares, as desired.
4. **Its Economy** in the saving of time and horse-flesh. Our three-plov gang, cutting 30 inches, is used with two average farm horses. No other plow, gang or single, yet invented will do as effective work and with as little horse-flesh as the "Farmers' Friend."
5. **Its Special Adaptation to Orchards and Vineyards,** where it will work without injuring the trees or vines. By a simple attachment, we can either remove the furrow from or throw it against the trees. We can also adjust the plows so as to allow the plow nearest the tree to turn a depth of only one and one-half inches, while the other two plows will break respectively from 2 1/2 to 6 inches. The "Farmers' Friend" gangs will skin sod 2 to 4 inches deep; plow corn, wheat or oat stubble from 2 to 9 inches deep, and in working summer fallow, are very effective in killing weeds and preparing the ground for seed.

No. 1. ONE-HORSE PLOW, WEIGHT 64 POUNDS.....	PRICE, \$17 00
No. 2. TWO-HORSE PLOW, WEIGHT 90 POUNDS WITH WHEEL.....	20 00
EXTRA SHARE FOR No. 1.....	8 00
EXTRA SHARE FOR No. 2.....	8 50

PATENTED JULY 22, 1884.

It has Received the First Premium wherever Exhibited, viz:

MECHANICS' INSTITUTE, SANTA CLARA CO. FAIR and ALAMEDA CO. FAIR.

Guaranteed to be the Strongest Side-hill Plow in Proportion to its Weight.

ABSOLUTELY THE EASIEST PLOW TO MANAGE.

This Plow has the best mold-board fastening ever devised for side-hill plows. It consists of a square linked chain attached to the rear-end of the mold-board, and is fastened by simply dropping one of the links in a clutch that is on the plow handle. It cannot be broken, neither can it get out of order. It does not matter how much adobe or rocks, sticks, roots, etc., may get on the plow bottom, the fastening will always work. The style of the plow is the best that can be made. The beam is nearly straight, hence the greatest degree of strength. The handles are plain and easily replaced if broken. They are long and set so as to give the operator perfect control of the plow. There are two standards, both being made solid with the landside.

The handles are secured to the front standard, one on either side, forming a brace to the standards, preventing breaking from side strains. The landside is solid, the wearing surfaces are of ample size, and chilled to prevent rapid wear.

Note carefully the following points:

The Kilgore Plow will run steadier without a wheel than any other side-hill plow with a wheel. It is the strongest steel side-hill plow made, the easiest handled, the lightest draft, the most simple, easiest repaired, made of the best material, and will out-last any other steel side hill in the market.

### ARE YOU USING Wellington's Improved Egg Food For Poultry?

IF NOT, WHY NOT?

NOTE.—Eggs have now doubled in price and will continue to advance to 50 or 60 cents per dozen, and from this time on every one should feed this Egg Food in order to have plenty of Eggs to sell at those profitable prices.

### Excelsior Improved Hot Water Incubator.

NOTE.—This is the only Incubator in the world which is run literally without any expense whatever, saving the full price of the machine every year used—in oil alone. We use no LAMP, no oil, no heating apparatus with the machine, and guarantee it to run strictly to any degree.

**EGG TESTER.** The long-needed Tester just patented. Testing six eggs at a time, as quick as one at a time by the usual process, and six times as effectually.

**SEEDS.** Alfalfa, Grass, Clover, Vegetable, Flower, Fruit, and Seeds of every variety.

### Situation Wanted.

A married man, recently from the East, wishes a situation as coachman or to do general work. Understands management of horses thoroughly. Best of references given. Address, JOHN CRANDALL, Davisville, Cal.

Improved ALTHOUSE Wind-Mill.  
A Perfect Self-Regulator.

We guarantee our Improved Mill to run in the lightest winds and not to blow down in the most severe gale. Its chief points of merit are: Its ability to take care of itself in the most severe gale—being so arranged that no increase of wind increases its speed. The quality of material used in its construction and the workmanship being the best.

Star Deep Well Standard.

The above cut shows one of our numerous styles of Wind-mill Force Pump Standards. It is the easiest working Pump Standard in use, and is complete in every particular.

Gould's House Force Pump.

This Pump is adapted to every conceivable use so far as is practical to use a Pump of this class. Send for Prices.

## Rural Health Retreat (Crystal Springs,) St. Helena, Cal.

Among the many delightful places for rest, recreation and restoration of mind and frame in California, is the "Crystal Springs Rural Health Retreat," shown in above engraving on this page. The Retreat is situated on the slope of Howell mountain, 1200 feet above tide level, 500 above and overlooking Napa valley, and two and a half miles from St. Helena, in Napa county. Among the natural advantages are stated: "Pure water, dry atmosphere, balmy sunshine, even temperature, mild breezes and the absence of high winds. Across the valley lies the Sonoma mountain range, breaking the sea breeze and shielding the Retreat from the chilling atmosphere of the coast, and presenting a safeguard against catarrh and lung diseases. The grandeur of its mountain ranges, with shrubby canyons lying in beauty at their feet, the famous Mt. St. Helena rearing its lofty head to the clouds, the grassy plain lying beneath, reflecting the sunbeams like a grand mirror before the Retreat, all perfumed with a variety of wild flowers, lend an enchantment to the scene. There are no stagnant pools or marshes within range; rainfall is plentiful, rendering irrigation unnecessary, and malaria is a stranger at the Retreat, and in all this beautiful valley. In fact, the purity of the air on this hillside and in the upper valley is a

specific for malaria, and all diseases affecting the head, throat and lungs, producing a healthy circulation through the mucous passages generally."

The Rural Health Retreat is twofold in its character. In the first place it undertakes to do direct work in the cure of diseases by hygienic and rational practice, by thoroughly competent physicians resident in the Retreat. While a radical table is furnished for invalids, and proper diet prescribed for each individual case, no one is confined to a starvation diet, and better and more ample variety is furnished at meals than is usually found upon invalid tables elsewhere. The managers have the services of two thoroughly competent physicians from Eastern cities of many years' experience in practice. They are assisted by two lady attendants having a two-years' course at one of the largest hygienic and surgical sanitariums in the world, with five years' subsequent practice.
